The President also stated that the work of reorganizing the municipal courts had begun. He recommended reorganization of the administrative structure through elimination of some unnecessary municipalities and a modification of Panama's drastic immigration laws. In the field of education, he reported the modification of the primary school curriculum to make it more effective and the abolition of matriculation fees for secondary schools.

Responding to protests by native fishermen that Japanese fishing vessels were dynamiting fish and to charges that Japanese fishermen were spying on the defenses of the Panama Canal, the President,

on January 12, signed a decree reserving fishing grounds in Panama's territorial waters to citizens of the republic.

The National Assembly on October 24 passed a banking law, effective early in December, that forbade private banks to accept deposits of residents under the jurisdiction of Panama unless they agreed to purchase Guarantee Bonds (from a \$6,000,000 internal bond issue) in an amount equal to 20 per cent of their deposits. Following the President's signature of the law on October 25, the three foreign banks in Panama ceased granting new credits, either by loan, discount, or other means, but continued to make collections and sell New York drafts and foreign exchange. They announced that they would cease accepting deposits on the date the law went into effect and repay all existing deposits within six months rather than purchase the bonds. As 85 to 90 per cent of all commercial discounting was done through the three foreign banks, their action seriously depressed wholesale and other business. The only other bank in Panama was the government-owned Banco Nacional, which was not in a position to meet the country's credit requirements. Consequently President Arosemena late in November issued a decree exempting the foreign banks from the purchase of the Guarantee Bonds. Subsequently (December 9) a new banking bill, superseding the measure passed October 24 and eliminating the bond purchase provision, was enacted.

The long delay by the U.S. Senate in acting upon the treaty with Panama signed Mar. 2, 1936 (see 1936 YEAR BOOK, p. 572), aroused growing criticism in Panama during 1938. President Arosemena on January 20 again gave assurances that Panama was ready to co-operate with the United States forces in defense of the canal. On May 24 he announced that the government would pay no interest on Panama's 5½ per cent bonds of 1923 until the United States paid the arrears due on canal annuities. Under the 1936 treaty, these annuities were to be paid in the equivalent of former gold dollars instead of in depreciated United States dollars, which Panama had refused to accept. In his message of September 1 to Congress, President Arosemena, intimated that relations with the United States would be more cordial once the treaty was ratified. He said that Panama would then receive 2,150,000 balboas from the United States, which would be applied to paying the interest in arrears on the foreign debt. President Roosevelt visited Panama on August 5 en route home in the cruiser *Houston* from his fishing trip to the Galapagos Islands. He toured Canal Zone defense projects and neighboring Panamanian territory in company with President Arosemena and other officials. In a press interview he indicated that the United States would aid Panama in the construction of strategic highways in Panamanian territory which would strengthen the canal defenses.

A new effort to settle Panama's old boundary dispute with Costa Rica failed when the Costa Rican Government was forced by demonstrations of protest to withdraw the treaty from the Congress, where it awaited ratification (see COSTA RICA under *History*). Panama had already ratified the agreement. In view of the possibility of a renewal of border clashes over the disputed territory, President Arosemena on October 13 asked the National Assembly for a \$1,000,000 appropriation for the purchase of arms and munitions. The bill was passed October 18.

See PANAMA CANAL ZONE.

PANAMA CANAL. According to the annual report of the Governor of the Panama Canal, C. S. Ridley, for the fiscal year ending June 30, 1938, the number of ocean-going commercial vessels making transit of the Panama Canal in 1938 aggregated 5524 in comparison with 5387 in 1937, an increase of 137 or 2.5 per cent. This represents a daily average of 15.13, as compared with 14.76 in 1937, 14.70 in 1936, 14.19 in 1935, and 14.34 in 1934. With respect to the number of transits, the fiscal year 1938 was the fourth highest in the history of the Canal, being exceeded only by a total of 6289 in 1929 (the peak year), 6253 in 1928, and 6027 in 1930. Tolls on the 5524 transits in 1938 totaled \$23,169,888, in comparison with \$23,102,137 in 1937, an increase of \$67,751 or 0.29 per cent. Cargo tonnage amounted to 27,385,924 in 1938 in comparison with 28,108,375 in 1937, a decrease of 722,451 tons, or 2.6 per cent. The tonnage figure for 1938 indicates the net tonnage as determined under the rules of measurement in effect prior to Mar. 1, 1938. In accordance with the prescribed legislation and Presidential proclamations, new rules and toll rates were placed in effect on that date. In the new measurement rules certain exemptions are made which have the effect of reducing tonnage on which tolls are paid as compared with the tonnage under the measurement rules which were in effect prior to March 1. Figures for the four months, March to June, indicate that the Panama Canal net tonnage, as determined under the new rules, is about 7.5 per cent less than if determined under the old rules, and that tolls are about 3.5 per cent less. While traffic for 1938 made a slight increase in comparison with 1937 (with the exception of the tonnage of cargo carried), the traffic in 1937 had been seriously affected by a maritime strike in the United States for a period of over three months. Had there been no strike, traffic for 1938 would have been substantially lower than for the previous year. A decline in the movement of cargo in both directions contributed to the decrease in cargo tonnage in 1938 as compared with 1937. West-bound shipments declined 207,072 tons, or 2.1 per cent, while those in the opposite direction fell off 515,379 tons, or 2.8 per cent. Segregating the traffic through the Canal by nationality of vessels, the following table shows the aggregate cargo carried by ships of the leading maritime nations during the past three fiscal years. For the year 1938 the percentage of total cargo carried by ships of each nationality is also shown:

Nationality	1936 Tons	1937 Tons	1938 Tons	Percent- age
United States .	10,700,535	9,844,254	9,892,619	36.1
British	6,181,571	7,179,136	6,417,016	23.4
Norwegian	2,717,860	3,506,109	3,433,571	12.5
Japanese	1,697,880	1,789,178	1,877,502	6.9
German	1,305,090	1,496,084	1,518,593	5.5
Danish	627,407	757,379	865,235	3.2
Swedish	855,409	775,800	763,049	2.8
Netherlands ...	511,620	700,725	749,642	2.7
French	544,343	542,539	567,288	2.1
All remaining .	1,364,228	1,517,171	1,301,409	4.8
Total	26,505,943	28,108,375	27,385,924	100.0

PANAMA CANAL ZONE. A strip of territory extending for five miles on each side of the Panama Canal, the use of which was granted to the United States in perpetuity by the Panama-United States Treaty of 1903. Area, 552.8 square miles (land area, 361.86 square miles). The civil population on June 30, 1938, excluding only commissioned, warrant, and enlisted personnel, was 29,063, of whom 7146 were employed by the Pan-

ama Canal and Panama Railroad Co. Of these employees, 2601 were United States citizens and 4545 were aliens. About 700 Americans and approximately 5000 aliens employed by the Panama Canal and the Panama Railroad Co. live outside the Canal Zone in the Republic of Panama. The death rate per 1000 of population in the Canal Zone in the calendar year 1938 was 6.24. The live birth rate per 1000 white residents was 7.18; Negro residents, 15.88. The enrollment in public elementary schools for white children at the end of February, 1938, was 3061; in schools for colored children, 3099. The enrollment in colored schools had declined steadily from the peak of 4149 in 1932. The junior college enrolled 117 pupils in 1938. The La Boca normal training school for colored teachers, established in January, 1935, graduated its first class of 37 on July 2, 1938, and was then closed until more teachers were required.

The net revenues from Canal operations proper were \$13,909,903 in 1937-38 as compared with \$13,136,585 in 1936-37. Net revenues from business operations under the Panama Canal for 1937-38 were \$824,612, as compared with \$917,360 in 1936-37. The combined net revenues accruing from the Canal and its business units totaled \$14,734,515, as compared with \$14,053,945 in 1936-37. The gross capital investment as of the beginning of the 1937-38 fiscal year was \$538,160,473 and the net investment \$507,666,409. Net revenue for the year 1937-38 produced a return of 2.90 per cent on this net investment as against 2.77 for the previous year.

The foregoing figures do not include the Isthmian operations carried on by the Panama Railroad Co., which yielded a net profit of \$1,183,453 for 1937-38, as compared with \$1,358,596 for the previous fiscal year, a decrease of \$175,142, or 12.9 per cent.

For transits through the Canal, see PANAMA CANAL.

The status of the Canal Zone is that of a military reservation under a Governor appointed by the President of the United States. In his capacity as Governor of the Panama Canal and as President of the Panama Railroad Co., a government-owned adjunct of the Canal, the governor supervises the operation and maintenance of the Canal itself, the operation of the auxiliary enterprises necessary to provide for the needs of shipping and of the Canal operating forces, and the government of the Canal Zone. In this he is assisted by the heads of nine major departments and divisions. The Canal administration controls sanitation and quarantine in the cities and harbors of Panamá and Colón, although they remain within the political jurisdiction of the Government of Panama. The U.S. Army maintains airports at France Field, at the Atlantic entrance to the Canal, and at Albrook Field on the Pacific side. There is a Pan American Airways marine base at Folks River inlet, Cristóbal. Airlines touching the Canal Zone carried 3660 incoming and 4274 outgoing passengers during the fiscal year 1937-38, exclusive of inter-Canal Zone passengers numbering 4947. Air express and mail carried totaled 242,948 lb. Governor in 1938, Col. C. S. Ridley, who assumed charge Aug. 27, 1936.

History. The Munich accord and other developments in world politics during 1938 strongly emphasized the strategic importance of the Panama Canal in the naval defense of both coasts of the United States with a single fleet. The Annual Report of Secretary of War Woodring for 1938 declared that the Canal "must be made impregnable." It called for the bombproofing of all locks and

dams, complete elimination of the possibility of sabotage by crews of ships transiting the canal, and the strengthening of air forces and anti-aircraft equipment. It was announced late in 1938 that legislation to carry out these recommendations would be introduced into the U.S. Congress in 1939 with administration support.

Meanwhile military measures for the protection of the Canal were tightened in October following the arrest of four Germans at Fort Randolph for attempted espionage. One of the prisoners, Hans Heinrich Schackow, was convicted by a jury of American employees of the Panama Canal and Panama Railroad Co. at Cristóbal on December 14. He was charged specifically with unlawfully photographing the Canal coast defenses. Trials of the three remaining defendants, including one woman, were set for January, 1939. Immediately after the arrests, army post commanders in the Canal Zone began to dismiss civilian employees of German and Italian nationality. See PANAMA under *History* for curb on Japanese activities in Panamanian territorial waters.

Testifying before a House sub-committee in Washington in April, Governor Ridley declared that studies indicated that the Canal would need enlarging to handle the larger volume of shipping traffic expected between 1950 and 1960. He asked for special appropriations to carry forward the engineering and other studies preparatory to increasing the Canal's capacity. In his Annual Report for 1937-38, issued later in the year, Governor Ridley reported:

Studies have progressed to the point where it is clear that this project (enlargement of the Canal's capacity) is closely related to the defense of the Canal. Consequently, it is of the upmost importance that a determination be made as early as possible, as to whether it is feasible to construct additional locks at a much greater distance from the present locks than has heretofore been contemplated.

As a possible alternative to enlargement of the Panama Canal's capacity, legislators and officials at Washington were studying the project for construction of another inter-oceanic canal across Nicaragua (see NICARAGUA under *History*). Legislation affecting the Canal Zone passed by the U.S. Congress in 1938 included a law extending the term of the judge of the U.S. District Court from four to eight years, and a measure increasing to \$160,000 the amount authorized to be spent for a memorial to Maj. Gen. George W. Goethals within the Canal Zone.

The first lawsuit involving the personal responsibility of Canal employees in connection with their official duties was filed in the Canal Zone District Court in November by the *Compagnie Générale Transatlantique* against George V. Hawes, pilot in charge of the freighter *Wisconsin*, which grounded in the Canal in 1935.

PAN AMERICAN CONFERENCE. The Eighth International Conference of American States was held at Lima, Peru, Dec. 9-27, 1938, with representatives of all 21 American republics in attendance. Among the delegates were the Foreign Ministers of ten countries—Bolivia, Colombia, Costa Rica, Cuba, Ecuador, Guatemala, Nicaragua, Panama, Peru and the United States. The first plenary session was addressed by Foreign Minister José María Cantilo of Argentina, who was in Lima on an official visit to the Peruvian Government when the Conference opened. The United States delegation was headed by Secretary of State Hull and included former Gov. Alfred M. Landon, Republican candidate for President in 1936.

Background of Conference. Most of the fac-

tors that had led President Franklin D. Roosevelt to suggest the Inter-American Conference for the Maintenance of Peace, held in Buenos Aires in 1936 (see 1936 YEAR BOOK, p. 574), had assumed an even more menacing aspect when the Lima Conference convened. The sensational triumph registered by the Nazi-Fascist states of Europe at Munich and the impending victory of the Insurgent cause in Spain appeared likely to extend the influence of Fascist and totalitarian principles in the Americas. Earlier in 1938 there had been abortive Fascist revolts in Brazil and Chile (q.v.) while friction between the United States and Mexico over the Cárdenas Government's expropriation policy had caused a rift among the anti-Fascist forces in the New World. The final settlement of the Chaco dispute between Bolivia and Paraguay on July 21 (see CHACO DISPUTE, SETTLEMENT OF) had eliminated a dangerous irritant to inter-American relations, but the boundary controversy between Ecuador and Peru had inflamed opinion in both countries and only the friendly persuasion of a group of states led by Colombia and the United States induced the Government of Ecuador to send a delegation to the Lima Conference. The importance of the Conference was emphasized by President Roosevelt's proposal of November 15 for a continental defense program.

The Agenda. The program of the Conference, drawn up on the basis of measures and resolutions passed by previous Pan American Conferences and of observations made by the various governments, was finally approved by the Governing Board of the Pan American Union at Washington on June 1, as follows:

I. ORGANIZATION OF PEACE

1. Perfecting and co-ordination of inter-American peace instruments. (Including topics on investigation, conciliation and arbitration, and the Code of Peace; definition of the aggressor, sanctions, and the strengthening of means for the prevention of war.)
2. Creation of an Inter-American Court of International Justice.
3. Creation of a League or Association of American Nations.
4. Declaration with respect to the American doctrine of nonrecognition of territory acquired by force, embodying the declaration made at the Second and Sixth International Conferences of American States, the Inter-American Conference for the Maintenance of Peace, and in the Declaration signed at Washington on Aug. 3, 1932.

II. INTERNATIONAL LAW

5. Consideration of rules relative to the codification of international law in America.
6. Consideration of reports and projects formulated by the Committee of Experts on the Codification of International Law, on the following subjects:
 - (a) Pecuniary Claims.
 - (b) Nationality.
 - (c) Immunity of Government Vessels.
7. Nationality of Juristic Persons.
8. Uniformity and perfection of the methods of drafting multilateral treaties, including the form of the instruments, adherence, accession, deposit of ratifications, etc., and means to facilitate ratifications.
9. Principles relative to the recognition of belligerency.

III. ECONOMIC PROBLEMS

10. Inter-American commercial policy.
 - (a) Elimination of restrictions and limitations on international trade.
 - (b) Application of the most favored nation clause.
11. Creation of an Inter-American Institute of Economics and Finance.
12. Inter-American communication facilities.
 - (a) Continental and insular maritime communications and port facilities.
 - (b) The Pan American Highway.
 - (c) Other measures.
13. Appointment of a commission of jurists to study and formulate a plan to bring about uniformity of commercial law and, as far as it may be possible, of civil law.
14. Immigration.
15. Consideration of the status of the Indian and rural populations, and the adoption of labor regulations.

IV. POLITICAL AND CIVIL RIGHTS OF WOMEN

16. Report of the Inter-American Commission of Women.

V. INTELLECTUAL CO-OPERATION AND MORAL DISARMAMENT

17. Means of promoting inter-American intellectual and technical co-operation, and the spirit of moral disarmament.

18. Consideration of the project of convention on intellectual property drafted by the Inter-American Commission on Intellectual Property of Montevideo.

19. Conservation and preservation of natural regions and historic sites.

VI. THE PAN AMERICAN UNION AND THE INTERNATIONAL CONFERENCES OF AMERICAN STATES

20. Functions of the Pan American Union and co-operation of the Union and the International Conferences of American States with other international entities.

21. Future International Conferences of American States.

VII. REPORTS

22. Consideration of the report on the status of treaties and conventions signed at previous conferences.

23. Consideration of the results of inter-American conferences held since the Seventh International Conference of American States.

Declaration of Solidarity. The United States delegation at Lima proposed a definite commitment for united opposition to political and cultural penetration and possible armed aggression by the totalitarian states. In his opening address Secretary Hull declared that "there must not be a shadow of a doubt anywhere as to the determination of the American nations not to permit the invasion of this hemisphere by the armed forces of any power or any possible combination of powers." He also urged common action against totalitarian doctrines and activities "utilized for the purpose of undermining and destroying in other nations established institutions of government and basic social order." His proposal was supported by a bloc of Caribbean states, including Mexico, the Central American countries, Panama, Colombia, Venezuela, Cuba, Haiti and the Dominican Republic.

However a bloc of South American states led by Argentina refused to accept specific commitments to oppose aggression from overseas. In an address before the Conference on December 10 the Argentine Foreign Minister declared that American solidarity "is a fact which no one does or can place in doubt. All and each one of us are disposed to sustain and to prove such solidarity in the face of any danger, come whence it may, which might threaten the independence or the sovereignty of any state in this part of the world. For that we do not need special pacts. The pact is already made in our history."

The viewpoints of the two groups of states were reconciled after extended negotiation and on December 24 all 21 delegations signed the "Declaration of Lima," which follows, with the preamble omitted:

The governments of the American States declare:

First, that they reaffirm their continental solidarity and their purpose to collaborate in the maintenance of principles upon which said solidarity is based;

Second, that faithful to the above-mentioned principles and to their absolute sovereignty they reaffirm their decision to maintain them and defend them against all foreign intervention or activity that may threaten them;

Third, and in case the peace, security or territorial integrity of any American republic is thus threatened by acts of any nature that may impair them, they proclaim their common concern and their determination to make effective their solidarity, co-ordinating their respective sovereign wills by means of the procedure of consultation established by the conventions in force and by declarations of inter-American conferences, using measures that in each case circumstances may make advisable.

It is understood that the governments of the American republics will act independently in their individual capacities, recognizing fully their juridical equality as sovereign states.

Fourth, that in order to facilitate the consultations established in this and other American peace instruments, the Ministers of Foreign Affairs of the American republics,

when deemed desirable and at the initiative of any one of them, will meet in their several capitals by rotation and without protocolary character.

Each government may, under special circumstances or for special reasons, designate a representative as a substitute for its Minister of Foreign Affairs.

Fifth, this declaration shall be known as the Declaration of Lima.

This most significant achievement of the Conference amplified and implemented the Declaration of Principles of Inter-American Solidarity and Co-operation, adopted at the Buenos Aires Conference in 1936. Another project approved at Lima provided that consultations among the American governments might take place to deal with economic, cultural and other questions, as well as political issues. Still other resolutions and declarations were adopted to check the organization of political minorities in the Western Hemisphere by the totalitarian states of Europe. On the initiative of Brazil, the Conference resolved that "residents who, according to domestic law, are considered aliens, cannot claim collectively the condition of minorities." Prohibition by the American states of the collective exercise by aliens of political rights conferred by the laws of their respective countries was recommended by another resolution, initiated by Argentina and Uruguay. Both countries had been aroused by the formal participation of German residents in the plebiscite on Austro-German *Anschluss* held in April, 1938. At the request of Cuba, the Conference formally declared "that, in accordance with the fundamental principle of equality before the Law, any persecution on account of racial or religious motives which makes it impossible for a group of human beings to live decently, is contrary to the political and juridical systems of America." Another resolution on immigration urged that no distinction be made on the basis of "nationality, creed or race."

Declaration of American Principles. On December 24 the Conference also adopted unanimously the following Declaration of American Principles:

WHEREAS, The need for keeping alive the fundamental principles of relations among nations was never greater than today; and

Each state is interested in the preservation of world order under law, in peace with justice, and in the social and economic welfare of mankind,

The Governments of the American Republics

RESOLVE:

To proclaim, support, and recommend, once again, the following principles, as essential to the achievement of the aforesaid objectives:

1. The intervention of any state in the internal or external affairs of another is inadmissible.

2. All differences of international character should be settled by peaceful means.

3. The use of force as an instrument of national or international policy is proscribed.

4. Relations between states should be governed by the precepts of international law.

5. Respect for and the faithful observance of treaties constitute the indispensable rule for the development of peaceful relations between states, and treaties can only be revised by agreement of the contracting parties.

6. Peaceful collaboration between representatives of the various states and the development of intellectual interchange among their peoples is conducive to an understanding by each of the problems of the other as well as of problems common to all, and makes more readily possible the peaceful adjustment of international controversies.

7. Economic reconstruction contributes to national and international well-being, as well as to peace among nations.

8. International co-operation is a necessary condition to the maintenance of the aforementioned principles.

Organization of Peace. Contrary to expectations, little progress was made in the considerations of the subjects listed under this heading in the Conference agenda. The delegates had before them the Mexican Peace Code which drew together in a single document provisions in existing treaties for

investigation, conciliation and arbitration of disputes, adding to them a definition of the aggressor, a procedure for the application of sanctions, and a statute for an Inter-American Court of Justice. This had been first presented at the Montevideo Conference in 1933 and, in revised form, to the Buenos Aires Conference, so that the governments had had much time to study it. The United States also presented at Lima a draft treaty consolidating and integrating the existing inter-American peace treaties—Gondra Conciliation Treaty of 1923, the Kellogg-Briand Pact, the 1929 Pan American Conciliation and Arbitration Treaties, the Argentine Anti-War Treaty of 1933, the Convention on Rights and Duties of States signed at Montevideo in 1933, and the treaties on Prevention of Conflicts and on Good Offices and Mediation signed at Buenos Aires in 1936.

The Conference postponed consideration of these and other projects for the consolidation of inter-American peace machinery, referring them to the International Conference of American Jurists, which was charged with the task of formulating a comprehensive Peace Code for the consideration of the Ninth Pan American Conference, to be held at Bogotá, Colombia, within five years. Proposals for defining aggressor states and applying sanctions against them were likewise referred to the Conference of Jurists for study in relation to "a general plan for continental juridical organization." The same disposition was made of the project jointly presented by Colombia and the Dominican Republic for the establishment of a League of American Nations. The project for an Inter-American Court of Justice, first introduced at the Santiago (Chile) Conference in 1923, again failed to win the unanimous approval necessary to its adoption.

The only positive action of the Lima Conference with regard to the further organization of peace among the American states was the adoption of a declaration reaffirming that "as a fundamental principle of the Public Law of America, the occupation or acquisition of territory or any other modification or territorial or boundary arrangement obtained through conquest by force or by non-pacific means shall not be valid or have legal effect. The pledge of non-recognition of situations arising from the foregoing conditions is an obligation which cannot be avoided either unilaterally or collectively."

Codification of International Law. The Conference took steps to co-ordinate the work of the various agencies at work on the codification of American international law. To avoid a threatened controversy between the United States, Chilean, Mexican and other delegations on the issue of pecuniary claims, projects for the codification of the law on this and other specified topics were referred by the Conference back to the Commission of Experts for further study. Discussion of the project on pecuniary claims had indicated substantial agreement among most of the delegations against the use of force or diplomatic intervention for the collection of debts, provided arbitration could be invoked to settle cases of alleged denial of justice and bad faith.

Economic Problems. At the instance of Secretary Hull, the Conference unanimously approved a resolution recommending "reasonable tariffs in lieu of other forms of trade restrictions" and "the negotiation of trade agreements, embodying the principle of non-discrimination." The resolution was largely an affirmation of similar declarations approved by the Montevideo and Buenos Aires Conferences, and was aimed especially at German trade

methods in Latin America. The Conference also recommended periodic meetings of Treasury representatives of the American republics, adopted a program for unification of civil and mercantile law, and instructed the Pan American Union to study the feasibility of convening a World Economic Conference.

Rights of Women. In the Declaration on Women's Rights, the Conference adopted a policy that sought to reconcile the advocates of "equal rights" and those favoring special protective legislation for women. It declared that women were entitled not only to equal political and civil status with men, but also to the "most ample opportunities for work and to be protected therein." Special safeguards for mothers were recommended. The Inter-American Commission of Women, established by the Havana Conference in 1928 as an autonomous agency, was transformed into an official consultative body, to which each of the American governments was to name one representative. The chairman was to be chosen from this group by the Pan American Union.

In all, the Conference approved 110 resolutions, recommendations and agreements, while failing to conclude a single treaty or convention. While the gathering was declared a failure by the anti-democratic world press and was widely criticized for its lack of more definite accomplishment, authorities on inter-American relations generally considered it "a definite step forward on the road to more effective inter-American co-operation." All of the resolutions and projects approved had the support of all 21 delegations. It was generally considered that the great gains made at the Montevideo and Buenos Aires Conferences in the development of mutual comprehension and friendly collaboration were conserved and advanced at Lima.

Consult Charles A. Thomson, "Results of the Lima Conference," *Foreign Policy Reports*, Mar. 15, 1939.

PAN AMERICAN UNION. The Pan American Union is an official international organization founded in 1890 as the International Bureau of American Republics and maintained by the 21 republics of the Western Hemisphere for the development among them of good understanding, friendly intercourse, commerce, and peace. It is controlled by a Governing Board, composed of the Secretary of State of the United States and the diplomatic representatives in Washington of the other republics, and is administered by a Director General and an Assistant Director chosen by the Board.

The Union published a monthly *Bulletin* which is issued in three editions, English, Spanish, and Portuguese, as well as numerous special reports on the countries which are members of the Union. These are widely distributed in all the republics of the American continent and are intended to make available information on the various aspects of inter-American activity.

The Pan American Union acts as the permanent organ of the International Conferences of American States which meet at intervals of five years. The last or Eighth of these Conferences was held at Lima, Peru, Dec. 9-27, 1938. The program and regulations of each Conference are prepared by the Governing Board of the Union, and in the interval between the Conferences the organization is engaged in giving effect to the resolutions adopted and also co-operates in securing the ratification of the treaties and conventions signed at each Conference.

During 1938 the Pan American Union was also

engaged in drawing up the program and regulations and in making preparations for the Eighth International Conference of American States, which assembled at Lima, on December 9, and continued in session until December 27. All the American Republics were represented at the Conference, which made important contributions in strengthening the spirit of continental solidarity and in formulating a comprehensive program of co-operative action in the economic, juridical, cultural, and social fields. See **PAN AMERICAN CONFERENCE**.

Immediately prior to the Lima Conference the Committee of Experts on the Codification of International Law met at Lima and formulated reports and projects on a number of topics appearing in the agenda. These were submitted to the Conference and served as a basis of discussion. The Conference also adopted a comprehensive resolution reorganizing the future methods for carrying on the work of codification.

From Sept. 4 to 14, 1938, the Tenth Pan American Sanitary Conference met in Bogotá, Colombia, with 19 countries in attendance. The Conference approved a series of resolutions on various subjects of public health and sanitation and also provided for an enlargement of the scope and activities of the Pan American Sanitary Bureau.

As in previous years, Pan American Day was again observed on April 14, and reflecting the general increase in interest in Pan American relations, the eighth anniversary of the celebration of the Day was observed more widely than on any previous occasion. In all countries of the Continent government officials took an active part in the celebration of the Day, while schools and colleges, commercial organizations, and study groups presented programs appropriate to the occasion. The number of requests received by the Pan American Union for Pan American Day material was greater than ever before, and it is evident that the annual celebration of this Day has become one of the outstanding events in all the countries of the Continent. As a feature of the observance of Pan American Day in Washington a special session of the Governing Board was held at the Union at which President Roosevelt delivered an address. A concert of Latin American music was also presented at the Union in the evening by the United Service Orchestra at which time a brief address was delivered by the Chairman of the Board, Hon. Cordell Hull. The program, in addition to being broadcast in the United States over a nation-wide chain of stations, was also sent by short wave to Latin America.

At the meeting of the Governing Board of the Pan American Union held on Nov. 2, 1938, Cordell Hull, Secretary of State of the United States, was re-elected Chairman of the Board for the ensuing year. J. Richling, Minister of Uruguay, was at the same time elected Vice-Chairman to succeed Manuel Trucco, Ambassador of Chile. Headquarters of the Union are at the Pan American Building, Washington, D. C.; L. S. Rowe, Director General; Pedro de Alba, Assistant Director.

PAN-PACIFIC UNION, THE. An organization founded in 1907 for the purpose of bettering relations among Pacific peoples, chiefly through the calling of frequent conferences in all lines of thought and action in the Pacific area. It has been supported in part by appropriations from the governments of the Pacific—the United States, Canada, Australia, New Zealand, Japan, China, Siam, the Netherlands East Indies, French Indo-China, and Mexico. It is now urged that these governments take over the machinery of the Pan-Pacific

Union, financing it as their official mouthpiece, and that the Union's honorary heads, the presidents, premiers, and governors of Pacific lands, gather periodically in Honolulu for a friendly conference on Pacific affairs.

During 1938 the director of the Union, Alexander Hume Ford, continued his travels in China, Japan, and the Philippines, organizing student and adult Pan-Pacific clubs which function as open forums for the peoples themselves. Early in 1939 the Pan-Pacific Union is preparing to send a Goodwill Tour through the United States. Included in the party will be a distinguished race biologist presenting an illustrated lecture on the happy racial combinations in Hawaii, and a group of entertainers (all American citizens) of Chinese, Filipino, Japanese, Korean, Portuguese, and Samoan parentage, all of whom are prepared to present their own national folk dance and music and, at the same time, join with the Hawaiian members in presenting a short pageant of Hawaii, past and present.

During Sept. 15-28, 1938, there will be held in Honolulu the 3d Pan-Pacific Surgical Conference, and in January, 1940, at Wellington, N. Z., the 5th Pan-Pacific Women's Conference, the first conferences in both cases having been called and financed by the Pan-Pacific Union. Members of the Union receive its magazine or official publication, *Pan-Pacific*, the last two issues of which, the Philippines and Indo-China, were given financial assistance by these respective governments. Oren E. Long, Superintendent of Schools for the Territory of Hawaii, is president. The central executive office is in Honolulu at 1023 Alakea Street.

PANTELLARIA, pan-tél'lá-ré'a. An Italian island (area, 32 sq. miles; population, 9082) situated in the Mediterranean 45 miles from the coast of Tunis and 62 miles from the Sicilian coast. Strategically situated to dominate the only shipping route between the eastern and western Mediterranean, it was fortified by Italy during the crisis of 1935-37 in Anglo-Italian relations. It thus served as a counterweight to the British base at Malta (q.v.). The island has two small ports said to be suitable for use as auxiliary submarine bases.

PAPER AND PULP. Based upon paper production reports to the American Paper and Pulp Association, the yearly monthly average for 1938 was 72.3 per cent of mill capacity, against 80.6 per cent in 1937. Comparative production and consumption in the United States of various grades in 1937 and 1938 (estimated), in tons of 2000 lb., are shown in the accompanying table.

	Production	
	1937 ^a	1938 ^b
Newsprint, standard	960,663	832,895
Book paper (uncoated)	1,561,074	1,295,691
Cover paper	24,437	23,166
Writing paper	578,147	500,675
Wrapping paper	2,053,387	1,896,988
Tissue paper	540,152	499,641
Paperboards	5,802,036	5,384,289
All other paper	1,317,107	1,132,795
Total	12,837,003	11,566,140
	Consumption	
	1937 ^a	1938 ^b
All paper and paperboard	16,035,365	13,727,440

^a Bureau of the Census figures for 1937.

^b American Paper and Pulp Association estimate for 1938.

The U.S. Bureau of Foreign and Domestic Commerce reported for 1938 (1937 figures in parentheses), exports of paper and manufactures valued at \$25,913,234 (\$31,088,199) and paper base stocks, \$11,654,690 (\$22,987,498); U.S. imports of paper

and manufactures, \$112,978,458 (\$137,069,991) and paper base stocks, \$86,254,332 (\$117,852,607).

Wood-pulp production in the United States in 1938 was estimated at 6,000,000 tons of 2000 lb., against 6,664,100 tons in 1937. Exports in 1938 were 140,484 tons, and imports largely from Sweden and Canada amounted to 1,722,346 tons compared to 2,394,539 tons in 1937.

PAPUA, pāp'ū-a; pā'pōō-ā, TERRITORY OF. A territory (formerly called British New Guinea) of Australia, comprising the southeastern part of the island of New Guinea (87,786 sq. mi.) and the Woodlark, Louisiade, Trobriand, and D'Entrecasteaux groups of islands (2754 sq. mi.). Total area, 90,540 square miles; total population (1938), 277,401 including 1488 whites and some 275,000 Papuans. Capital, Port Moresby.

Production and Trade. Coconuts and rubber are the main agricultural crops. Sisal hemp, coffee, kapok, and Mauritius beans were also grown. Pearl fishing is an important industry. Many minerals exist but gold, silver, and osmiridium are the only minerals exported. The copper mines suspended operations in 1927 because of the low price of copper. Gold produced in 1936-37 was valued at £A91,775 (£A was valued at \$3,9394 for 1937). In 1937-38 imports were valued at £A631,497 (£A452,056 for 1936-37); exports, £A435,593 (£A524,001).

Government. For 1937-38 revenue totaled £A182,808; expenditure, £A183,403; 1936-37, revenue, £A171,791; expenditure, £A171,959. The territory is administered by a lieutenant-governor, aided by an executive council, 9 members, and a legislative council composed of the 9 councilors and 5 nonofficial members. Lieutenant-Governor, Sir J. H. P. Murray.

PARAGUAY, pār'a-gwā. An inland republic of South America. Capital, Asunción.

Area and Population. The area of Paraguay proper (east of the Paraguay River) is 61,647 square miles; the area of the Chaco territory (west of the river) awarded to Paraguay by the arbitral decision of Oct. 10, 1938, was estimated at 91,120 square miles, making a total area of 152,767 square miles. The population, estimated at about 900,000, is predominantly of mixed Spanish and Guaraní Indian blood, but the small ruling class is mainly white. Spanish and Guaraní are the spoken languages; Spanish is the language of government and commerce. Estimated populations of the chief cities are: Asunción, 95,000; Villarrica, 30,000; Encarnación, 15,000; Concepción, 12,000. About 30 per cent of the inhabitants reside in urban communities. A total of 2484 immigrants arrived in 1936.

Education and Religion. Illiteracy is widespread. The school enrollment in 1937 was 139,466; there were in 1936, 830 government and 56 private elementary schools, with 115,349 pupils, and 1690 pupils in secondary schools. The National University had 445 students in 1935. The Roman Catholic faith is recognized as the official religion, but freedom of worship is granted other faiths.

Production. Agriculture, stock raising, and the exploitation of forests are the chief occupations. About 550,000 acres are under cultivation. Estimated production of the chief crops in 1937 was: Mandioca, 1,100,000,000 lb.; sugar cane, 689,250,000 lb.; sweet potatoes, 198,900,000 lb.; corn, 144,300,000 lb.; cotton, 90,160,000 lb.; yerba maté (native tea), 38,400,000 lb.; peanuts, 19,000,000 lb.; beans, 44,100,000 lb.; tobacco, 19,500,000 lb.; rice, 18,300,000 lb.; castor seed, 21,100,000 lb. Oranges and bananas are widely grown. The Dec. 31, 1936,

livestock estimates showed 3,750,000 cattle, 25,000 swine, 140,000 sheep, 125,000 horses, and (1935), 11,000 goats. The forests yield about 55,000 metric tons of quebracho extract annually as well as petitgrain oil and hardwoods. Export industry is confined to plants for the production of quebracho extract, meat-packing, cotton ginning, and preparation of yerba maté. Sugar refining, flour and rice milling, and the production of cheap textiles, shoes, leather goods, soap, furniture, matches, cigarettes, foodstuffs, and beverages are carried on for the domestic market.

Foreign Trade. Total imports in 1937 were valued at 12,401,000 Paraguayan gold pesos (\$8,500,000 in U.S. currency) and exports at 12,066,000 gold pesos (\$8,270,000). Leading 1937 imports were: Foodstuffs, beverages, and tobacco, \$2,096,000; cotton and manufactures thereof, \$1,466,000; metals, manufactures, and jewelry, \$1,190,000. Leading exports were: Cotton, ginned, \$3,040,000; quebracho extract, \$1,579,000; cattle hides, \$771,000; meat extracts and concentrates, \$552,000. Argentina supplied 39.7 per cent of the 1937 imports; Germany, 14; Japan, 13.7; United Kingdom, 8.9; United States, 7.6. Of the exports, Argentina took 19.1 per cent; Germany, 17.5; United Kingdom, 10.7; United States, 7.9.

Finance. Up to the end of 1938, no complete report on public finances had been made public since the outbreak of the Chaco War with Bolivia in 1932. The external debt on Dec. 31, 1936, was 7,301,743 gold pesos while the consolidated internal debt was 3,217,972 gold and 35,804,550 paper pesos. Figures on the floating debt were not available. The net cost of the war with Bolivia (1932-35) was estimated at \$10,000,000 U.S. currency. In 1937 the average official selling rate evaluated the Paraguayan paper peso at \$0.005 U.S. currency (\$0.0058 in 1936) and the average free rate was \$0.004 (\$0.0038 in 1936).

Transportation. There were, in 1937, 309 miles of common carrier railways and 440 miles of private lines (mostly lumbering railways). Highways and roads in 1937 extended 3728 miles (number of automobiles, 2000). The first regular air services in Paraguay were opened in 1938. In February Pan American Airways opened a weekly two-way service between Rio de Janeiro and Buenos Aires via Asunción. In June the Aero Club of Paraguay inaugurated its own airport at Campo Grande, just outside Asunción, and started a charter service operating throughout the republic. In September the Aero Club launched a special tourist service between Asunción and San Bernardino. Asunción, 950 miles from the sea, is accessible to vessels of 12 foot draft at all times of the year. In 1936, 4568 vessels of 298,827 tons entered the port.

Government. Following the military revolt of Feb. 17, 1936, the Constitution of 1870 was suspended and on Mar. 10, 1936, Provisional President Rafael Franco, who assumed office February 19, issued a decree establishing a "totalitarian state." Military pressure overthrew Franco's cabinet on Aug. 13, 1937, and on August 15 he resigned and was succeeded by Dr. Felix Paiva (see 1937 YEAR Book, p. 574). A member of the Liberal party that had ruled Paraguay from 1904 to 1936, Dr. Paiva promised early restoration of the Constitution of 1870 and to call elections within six months. For developments in 1938, see *History*.

HISTORY

Political Developments. The outstanding development in Paraguayan history during 1938 was

the final settlement of the Chaco dispute with Bolivia by the peace treaty signed July 21 in Buenos Aires (see CHACO DISPUTE, SETTLEMENT OF, for the peace negotiations and terms of the treaty). The critical nature of the Chaco negotiations, the threat of a renewal of the Chaco War, and the persistence of revolutionary agitation within Paraguayan military circles caused the Paiva Government to postpone the Congressional elections beyond the six months' limit fixed upon its assumption of power. Nevertheless, popular unrest at the continuance of the military dictatorship exercised by Lieut. Col. Arturo Bray, commander-in-chief of the army, naval, and police forces, on behalf of the Paiva regime convinced the dominant military clique of the necessity of restoring civilian government.

Accordingly, Congressional elections were called for Sept. 25, 1938, with the understanding that Geronimo Zubizarreta, chief of the Paraguayan delegation at the Chaco Peace Conference, would be the next President. Zubizarreta was elected president of the dominant Liberal party at its national convention on May 31. But his subsequent opposition to the Chaco peace agreement reached at Buenos Aires and his quarrel with Gen. José Felix Estigarribia on this issue upset these arrangements. General Estigarribia, the commander-in-chief of Paraguay's armies during the Chaco War, was imprisoned and then exiled by Provisional President Franco. Under an amnesty decreed by the Paiva Government Estigarribia returned to Asunción amid the cheers of the populace on Feb. 9, 1938. On March 9 President Paiva appointed him Minister to the United States.

The following June General Estigarribia prevented the collapse of the Chaco peace negotiations by flying from Washington to Buenos Aires and inducing the Paraguayan military and governmental leaders to compromise their Chaco claims. Dr. Zubizarreta resigned as chairman of the Paraguayan Chaco delegation in protest against both Estigarribia's intervention and the final terms of the peace treaty. The treaty was supported by the Liberal party, however, and was approved by a vote of 113,309 to 11,825 in a plebiscite held in Paraguay August 10. On August 17 Zubizarreta resigned the presidency of the Liberals. A special convention of the party on August 22 refused to accept his resignation and he was named a candidate for senator on the party's electoral list.

Meanwhile, the only organized opposition to the Liberals, the National Republican (Colorado) party, had voted on August 2 to oppose ratification of the Chaco peace treaty. Later it decided to boycott the elections. Consequently, an overwhelmingly Liberal Congress of 20 senators and 40 deputies was elected on September 25 by the 167,000 registered voters. It was announced September 22 that election of a constitutional President would take place the following March and that he would assume office on Aug. 15, 1939. However, when the new Congress assembled on October 11, it immediately elected Provisional President Paiva as constitutional President to serve until a new general election was called by Congress.

Upon Dr. Paiva's inauguration October 12 the cabinet resigned to give him a free hand to reorganize it. He invited the Liberal party to participate in the new government but on October 14 it voted to refuse the offer of representation in the cabinet while collaborating with the regime in Congress in order to speed the early restoration of full constitutional government. In accordance with this resolution, Dr. Justo Pastor Benítez, Liberal lead-

er in the Senate, withdrew his prior acceptance of the post of Minister to Bolivia. A political crisis threatening internal peace resulted, but this was ended on November 1 when President Paiva reached an agreement with the Liberals under which they agreed to participate in the government. A new cabinet was announced on the same date with Col. Arturo Bray and Dr. Enrique Bordenave, former Minister to the United States, holding the key posts of Interior and Hacienda. Dr. Pastor Benítez then agreed to accept the post as Minister to Bolivia and the restoration of diplomatic relations took place on November 26 when he presented his credentials at La Paz and Dr. Fabián Vaca Chávez presented his credentials as Minister to Paraguay.

The press censorship in Paraguay was relaxed somewhat with the opening of the first business session of Congress since the Chaco War on October 17. However, the state of siege, in effect almost continuously since the outbreak of the Chaco conflict in 1932, was maintained and in November was extended for an additional four months at President Paiva's request.

Other Events. Signs multiplied during the year that Paraguay was seeking to counter the Bolivian-Argentine rapprochement (see BOLIVIA under *History*), which threatened to deprive her of Argentine diplomatic and moral support, by establishing closer political and economic relations with Brazil. Despite its straitened finances, the Paiva Government on January 9 authorized a North American engineering firm to make surveys for the proposed automobile highway linking Asunción with an extension of the Brazilian highway system at the Iguazu Falls. This would provide Paraguay for the first time with an overland outlet to the Atlantic, through Curitiba.

The mixed Brazilian-Paraguayan commission for the promotion of cultural and economic relations, authorized by notes exchanged Apr. 17, 1937, was constituted early in 1938. It was engaged during the remainder of the year in studying projects for a commercial treaty, improved transportation facilities, etc., between the two countries. On August 17 the Asunción Government made the teaching of Portuguese compulsory in all primary schools. On the other hand, Paraguay was adversely affected and further alienated from Argentina by Argentine monetary developments and a regulation prohibiting European immigrants into Paraguay from crossing Argentine territory en route to their new home. With the settlement of the Chaco dispute, Paraguay's controversy with Argentina over the Pilcomayo boundary was revived.

In the economic field the Paiva Government returned to orthodox methods to restore trade, set its war-strained finances in order, and check the flight of capital. In March it resumed payments on the foreign debt, suspended since July 1, 1933. In April steps were taken to resume payment of interest and amortization on the gold bonds issued in 1935.

The Paiva Government also sought to mollify the discontented working masses by the decree of Jan. 6, 1938. This established a maximum 8-hour day and 48-hour week for salaried and wage-earning employees of both sexes in industry, commerce, banking, state and municipal public works, construction, transportation, dock work, lumbering, and in the quebracho (tannin) and yerba maté enterprises.

A French military mission of five officers arrived

in Asunción April 13 to train the Paraguayan army.

PARAPSYCHOLOGY, or EXPERIMENTAL PSYCHICAL RESEARCH. Investigations in this field assumed, in 1938, the proportions of a definite research movement, a movement growing out of the work in extra-sensory perception first reported from Duke University in 1934 and still in progress there in the Parapsychology Laboratory. Many psychological laboratories have reported research in ESP, as extra-sensory perception is called for brevity. (See the *Journal of Parapsychology*, Vol. II, 1938.)

The general case for the occurrence of ESP was strengthened by several bodies of new evidence. Martin and Stribic (University of Colorado) reported highly significant results from 50,000 trials with ESP cards in tests carefully guarded against sensory cues and clerical errors. Humphrey and Clark (Earlham College) presented the work of a subject who averaged nearly twice chance expectation in a series of 50 consecutive ESP packs with the cards completely removed from sight and touch. Other reports which were primarily concerned with some special problem about ESP incidentally strengthened the evidence that ESP occurs.

That the experimenter may unwittingly be a factor making for or against the subject's success in an ESP test has been the impression of several investigators. The first clear-cut experimental demonstration of this effect was made by Pratt and Price (Duke University) and this evidence was strengthened by the report of MacFarland (Tarkio College).

Preliminary investigations dealing with the hypothesis of precognition, an hypothesis logically suggested by the apparent freedom of ESP from spatial limitations, were reported during the year. Rhine (Duke University) found that subjects could register more than the chance number of successes in "pre-shuffle calling" tests when the shuffling was done by hand. This raised the question: Was the extra-chance factor in the calling or in the shuffling? In a report dealing with this question, Rhine, Smith, and Woodruff (Duke University) found that ESP may be a factor in card shuffling. With the requirements for an adequate test of precognition thus clearly demonstrated by these preliminary experiments, the year ended without producing a crucial experiment on this important hypothesis.

Possible ways in which ESP is related to better-known psychological functions were suggested by the work of several investigators. Stuart (Duke University) found that ESP occurs if the subject responds to the test items at his "normal" rate, and is inhibited if he is forced to adopt an unnatural frequency. Shulman (Bard College) suggested as a highly tentative conclusion that ESP may occur among psychotic patients of one class (manic-depressive depressed) and not among others. Drake (Wesleyan College, Ga.) studied an 11-year-old feeble-minded child who appeared to "receive" impressions from his mother as "sender."

A number of investigators reported failure to find extra-chance scoring in tests for ESP. These reports, appearing in the *Journal of Parapsychology* and elsewhere, recognizably are of great importance in charting our ignorance of the *modus operandi* of this function but do not discredit the positive evidence.

On the statistical side of the research, it was clear at the close of 1937 that the best mathematical authority had approved in general the numerical foot-
rules used in measuring the results. However, in

1938, several contributions were made in the direction of refining further the general evaluative technique, particularly such refinements as might influence the interpretation to be placed upon borderline cases. Greenwood (Duke University) constructed a "chance" series of 500,000 trials, making it similar in every respect to the actual experiments except that ESP was carefully ruled out, and found that the average was insignificantly different from the most probable number (five) and the frequency of run scores approximated most closely the binomial distribution. This mammoth series lent full support to the use of the statistical practices actually followed in the research since 1934. For the first time, the exact probabilities for scores from 0 to 25 matching one shuffled ESP pack against another were calculated by Greville (University of Michigan). Bubbs (Washington University, St. Louis) evolved a formula for the combination of critical ratios for a series of experiments.

The work of René Warcollier, translated from the French, was published in America by the Boston Society for Psychic Research (*Experimental Telepathy*) and in an abbreviated edition by Harpers (*Experiments in Telepathy*). In England, G. N. M. Tyrrell published an important survey of the field (*Science and Psychological Phenomena*, Methuen).

The controversy over ESP continued, marked in particular during 1938 by the attention given to this subject at psychological conventions. In the United States, a number of the regional conventions each had at least one paper on the subject, and the interest shown by the psychologists is inferable from the public press accounts of these discussions. True to the controversial atmosphere now prevailing, both favorable and critical points of view were represented.

The annual meeting of the American Psychological Association was the occasion for the first national symposium on ESP. The speakers discussed, *pro* and *con*, the evidence as it bears upon the hypotheses of sensory cues, on the one hand, and errors in recording, on the other. Furthermore, the recent progress on the statistical side, which, it was agreed, had removed that part of the ESP research methods from legitimate controversy, was reviewed impartially by a professional mathematician.

If students of the subject were in the least inclined too quickly to take these happenings as evidence of a general acceptance of ESP into the body of established scientific fact, the results of two questionnaires (Warner, New York City, and Crumbaugh, Southern Methodist University) sent out to representative psychologists should have a sobering effect. The answers given show that more psychologists are becoming aware of the research and are keeping open minds to the results. Few, however, put themselves on record as convinced that ESP occurs, and many actually deride such investigations altogether. As far as comparisons are possible, definite progress has been made in the last few years toward getting a hearing for the evidence that ESP occurs.

PARK COLLEGE. A nonsectarian institution for the higher education of men and women at Parkville, Mo., founded in 1875 and co-operating with the Presbyterian Church in the United States of America. The enrollment for 1938-39 totaled 529; the faculty numbered 45. Endowment funds totaled \$1,728,000, from which the income was \$49,000. Tuition and fees amounted to \$120,000, donations to \$58,900, and the grounds, buildings,

and equipment were valued at \$1,491,000. The library contained 30,000 volumes. President, William Lindsay Young, D.D., LL.D.

PARKS, NATIONAL. Tourist travel to the numerous units of the Federal park system mounted to more than sixteen and a quarter million during the travel year ended Sept. 30, 1938, the National Park Service reported. This represents an increase of more than a million over the preceding travel year. As the mood of the American tourist changes from year to year so do the attendance figures show a shifting from one national park to another, or from one type of area to another. These are reflected in the record of visitors to the federally administered areas. The great increase of travel this year over last was represented largely in the number of visitors going to the national military parks scattered chiefly over the eastern seaboard and east of the Mississippi. These parks showed an increase of more than one million.

Travel to the 27 national parks, the scenic wonderlands which formed the nucleus for the present Federal park system, fell off a few thousand from the previous travel year. Withal, tourist travel was just under the seven million mark, or slightly less than half of the total for all types of areas dedicated to the public. In 1938, 6,976,296 visitors went to the national parks proper, compared with 7,012,803 during the 1937 travel year. The figures for the 19,000,000 and more acres in the system showed a total of 16,233,688 as against 15,133,432 in 1937. Shenandoah National Park, in Virginia's Blue Ridge, led the country in the number of visitors to the national parks with 954,967; this figure was below that of 1937 when 1,041,204 visitors entered the park's gateways. Great Smoky Mountains National Park, North Carolina-Tennessee, was second, with 694,634 compared with 727,243 for 1937.

The 61 national monuments of the Federal park system reporting, set a travel record of 2,029,808 compared with 1,770,486 for 1937, but the greatest increase was in the number of visitors to the national military parks and cemeteries, where tribute was paid to the soldier dead.

Military parks and cemeteries had 2,877,655 visitors, a jump of more than a million from 1937 when 1,692,237 were recorded. To Gettysburg, Penn., where the decisive battle of the Civil War was fought, went 1,554,234 visitors compared to 622,384 in 1937. Much of this increase was on the occasion of the five-day celebration of the 75th anniversary of the battle held in early July, 1938.

Boulder Dam Recreational Area reported 564,800 visitors during the 1938 travel year as compared with the 389,294 persons who visited there the last six months in the 1937 season.

Proclamations issued by the President in 1938 established national monument areas at Fort Laramie, Wyo., and near Tupelo, Miss. The one at Fort Laramie covers about 214 acres, and includes an old fort and other buildings which formed an outpost for fur traders and miners on the Oregon Trail during the California gold-rush days. The Ackia Battleground National Monument near Tupelo, Miss., covers approximately 50 acres, and the site of the battle for the palisaded Indian village of the Chickasaws of Ackia. Here was fought, May 26, 1736, a battle between the French and the English, each with their Indian allies, which checked the French movement to control what is now the Southeastern United States from the Mississippi River to the Appalachian Mountains (see MISSISSIPPI). An act passed in the closing hours of the 75th Congress gave the nation the new Olympic

National Park of approximately 624,000 acres, including the former Mount Olympus National Monument, Wash. The measure, approved by the President June 29, 1938, authorized him to add to the park a maximum of 262,292 acres so that the final boundaries may include a total of 898,292 acres.

PAROLE SYSTEM. See CRIME.

PEABODY, GEORGE FOSTER. An American banker and philanthropist, died at Warm Springs, Ga., Mar. 4, 1938. Born in Columbus, Ga., July 27, 1852, he was educated privately and at Deerhill Institute, Danbury, Conn. (1865-66). Entering a wholesale drygoods commission firm as a clerk in 1866, in 1880 he joined Spencer Trask, the banker, and in the following year they formed Spencer Trask & Co. Subsequently Mr. Peabody became active in the development of railroad properties and electricity and was vice-president and director of many railroads and business corporations, including the St. Louis, Alton & Terre Haute R.R., the Mexican National R.R. Co., the Rio Grande-Western R.R., the Edison Electrical Illuminating Co., and the General Electric Co. At one time he held membership in the New York Stock Exchange. In 1906 at the peak of his career he retired from business and devoted himself thereafter to the various philanthropies and activities in which he was interested.

An advocate of the single tax; a free trader, serving as treasurer of the American Free Trade League in 1880; a believer in government ownership of railroads, Mr. Peabody favored also woman suffrage and opposed national prohibition. A Democrat in his political belief, he was treasurer of the Democratic National Committee in 1904-05, and upon the establishment of the Federal Reserve Bank in 1914 was appointed chairman and government director of the New York bank, from which he resigned in 1921. He supported Franklin D. Roosevelt's candidacy for the presidency in 1932 and in the campaign of 1936 aided in the formation of the Good Neighbor League. On Feb. 3, 1934, he was appointed a member of the advisory council on the Virgin Islands.

Long interested in the conservation of natural resources, Governor Hughes of New York appointed him, in 1910, chairman of the State Reservation Commission at Saratoga Springs, his duties being to supervise the purchase, restoration, and utilization of the springs at Saratoga. When the reservation was placed under the direction of the State Conservation Commission in 1915, he retired. It was at his suggestion that a large State forest nursery was established on the Saratoga reservation, and the dedication of the State's \$10,000,000 spa there in 1936 was a culmination of his efforts to save the place from commercial exploitation. In 1925 he donated valuable land, including Prospect Mountain, near Lake George, for a State park.

Other of Mr. Peabody's interests included the Negro, in the improvement of whose conditions he was a pioneer, and he was a trustee of the American Church Institute for Negroes and of the Hampton Normal and Agricultural Institute. He was generous in his support of the Penn Normal and Industrial School, the Fort Valley High and Industrial School, Colorado College, and Skidmore College, of all of which he was a trustee. One of the earliest enthusiasts for Warm Springs, Ga., as a health resort for poliomyelitis victims, he was instrumental in bringing the spa to the attention of Franklin D. Roosevelt, and with the establishment of the Warm Springs Foundation, was ap-

pointed a trustee. Also, he established at his estate, Yaddo, at Saratoga, a retreat for artists and literateurs, and gave his home in that city as a memorial to his wife, Katrina Trask. From 1901 to 1910 he was treasurer of the General Education Board.

PEACE. On the initiative of the Department of International Justice and Goodwill of the Federal Council of Churches, the moderators or other heads of 21 of the leading religious bodies of the nation united in an appeal to the President of the United States to take the leadership in convening an international conference "looking toward the removal of the causes of war, the facilitating of economic intercourse between nations, the building of agencies to maintain order and promote peaceful change, and the reduction and limitation of armaments." This statement was presented at the White House on November 17 by a delegation of four persons representing the signatories. The group which held the conference with the President consisted of Dr. Edgar DeWitt Jones, of Detroit, President of the Federal Council; Dr. Albert W. Palmer, President of the Chicago Theological Seminary; Dr. James H. Franklin, President of Croser Seminary, and Rev. Roswell P. Barnes, of the Federal Council's staff.

The letter, as presented to President Roosevelt, was as follows:

We desire to express our deep appreciation for the timely and tactful leadership initiated by you and Secretary of State Hull in exercising the moral influence of the United States on the side of peace during the recent international crisis. The people of our churches have experienced a sense of profound relief that a general European war was averted. Differences of opinion may exist with respect to the precise terms and ultimate results of the Munich agreement. But a breathing spell has been provided during which time, if ever, the foundation should be laid for an enduring peace with justice.

If, however, the Munich agreement is made the occasion for a renewed race of armaments and an acceleration of war preparations in our own and other countries, the future can result only in recurring threats to the world's peace.

We believe, Mr. President, that the time has come for the world's statesmen to make a supreme effort to initiate negotiations looking toward the removal of the causes of war, the facilitating of economic intercourse between nations, the building of agencies to maintain order and promote peaceful change, and the reduction and limitation of armaments.

We, therefore, respectfully urge you to collaborate with the heads of other States to the end that there may be convened at the earliest possible moment a world conference designed to achieve these objectives.

We are aware of the difficulties which stand in the way. We are convinced that these difficulties can and will be overcome if the leaders of our own and other countries will but implement the known desire for peace which exists among all peoples.

A Committee of experts, set up to make practical suggestions on the use of broadcasting in the cause of peace, met from June 17 to 18 at Geneva. It was composed of representatives of the national broadcasting companies and of persons especially interested in the intellectual and educational aspects of broadcasting.

In 1936 the Assembly of the League of Nations, on a proposal by the British and Danish delegations, had instructed the International Committee on Intellectual Co-operation to study the use of modern means of spreading information utilized in the cause of peace. This investigation was intended to bring out chiefly the means by which, and the conditions in which, these new methods of propagation might encourage between nations a mutual exchange of information on their culture and institutions. The work was to be completely free from political consideration or propagandist tendencies.

Preliminary investigation led to a meeting of experts in July, 1937, at which a skeleton program

was drawn up. This program was laid before the Assembly in September, 1937, and the latter considered that, if the Intellectual Co-operation Organization were to be able to put it into practice, the opinion of an ad hoc Committee should be obtained whose duty would be to complete the suggested program. The Committee's agenda followed the lines laid down by the Eighteenth Assembly and dealt chiefly with information and documentary material on the work of the League and its various bodies for the use of the national broadcasting companies. This Committee of Experts reported to the Intellectual Co-operation Committee at its July meeting as follows:

The Committee took the view that the most effective way of obtaining new adhesions or ratifications to the Convention was for the official bodies of the League to approach the Governments, such action being supported by the press, the large international associations, the national Intellectual Co-operation Committees, etc. The Committee considered that the broadcasting stations of those countries in which the Convention had already entered into force might perhaps point out to the public the basic principles of its application. In this connection it drew attention to the South American regional broadcasting Agreement signed at Buenos Aires, in 1935, and revised in 1937 at Rio de Janeiro.

The Committee sought out ways of improving this information service and considered it advisable to ask the national broadcasting undertakings for their requirements and to send to them and to the other great private undertakings a periodical information bulletin on the work of the League and the Intellectual Co-operation Organization.

Washington Conference on Cause and Cure of War. The thirteenth national conference on the cause and cure of war was held at Washington, D. C., January 18-21. Over a thousand delegates, representing 11 national organizations of women, were in attendance, Miss Josephine Schain, active head of the conference, making the opening address. Others who spoke before the conference included: Dr. Henry A. Atkinson, of Atlantic Theological Seminary; Dr. Isaiah Bowman, president of Johns Hopkins University; Clark M. Eichelberger, National Director of the League of Nations Association; Prof. Harry G. Gideons, of the University of Chicago; Henry F. Grady, chairman of the Tariff Commission; Dr. Manley O. Hudson, of the Harvard Law School; James G. McDonald, of the *New York Times*; Felix Morley, Editor of the *Washington Post*; Prof. James T. Shotwell, of Columbia University; Prof. Eugene Staley, of the Fletcher School of Law; and Sen. Elbert D. Thomas of Utah. The following program was approved at the final session:

1. More adequate appropriations for the Department of State.
2. Support of the reciprocal trade agreement program.
3. Adoption of a permanent policy of consultation with other signatory States in the event of the violation of the Pact of Paris.
4. Provision for co-operation with other nations in financial and economic measures, not including war, designed to withhold aid to a treaty-breaking nation.
5. Legislation to give effect to the present policy of the United States to withhold recognition of any situation brought about by means contrary to the Kellogg-Briand pact, through placing conditions upon or prohibiting financial transactions with the violating State.

Washington Economic Conference. The Washington Conference on World Economic Co-operation was sponsored by many of the organizations represented in the National Peace Conference and several others. The Conference was based upon the idea that world peace is dependent, in part, upon the renunciation of economic warfare and the development of policies of international economic co-operation.

In preparation for the Washington gathering, a Committee of Experts was appointed by the National Peace Conference to draft a report on the general subject of world economic co-operation. The Chairman of this Committee was James T. Shotwell, Director, Division of Economics and History of the Carnegie Endowment for International Peace, and the Rapporteur was Eugene Staley, Associate Professor of International Economic Relations, Fletcher School of Law and Diplomacy.

More than 600 delegates attended the Washington Conference. These delegates were drawn from all parts of the country. They represented all shades of opinion within the American peace movement. A large number of local peace councils were also represented. Despite differences of opinion regarding political insecurity, a remarkable degree of unanimity prevailed throughout the Conference, with respect to the economic requirements of a peaceful world order.

Included in this report of the proceedings of the Conference are the following: (1) The findings of the Conference, (2) the report of the Committee of experts, (3) a statement drafted by the Steering Committee of the National Peace Conference, (4) statements prepared by representatives of the groups having opposing views on the problem of political security, and (5) a selected bibliography on materials for world economic co-operation.

Clark M. Eichelberger of the League of Nations Association served as the Director of the first phase of the Campaign for World Economic Co-operation which came to an end with the Washington Conference. Recognition was also made of the service rendered by the Assistant Director, Richard R. Wood, of the Friends' Peace Committee of Philadelphia. The second phase of the Campaign is now in progress and will continue until January, 1939.

Bristol Peace Conference. The 28th National Peace Congress (British) met in Bristol—after an interval of 13 years. Delegates to the Congress were appointed by 69 national and 405 local organizations—the total number of representatives of organizations amounting to 700. In addition, 100 persons attended as observers and a considerable number of visitors attended individual sessions. Among the national organizations represented were the Co-operative Party, the Co-operative Union, the Civil Service Clerical Association, the Independent Labour Party, the International Peace Campaign, the Liberal Party Organization, National Adult School Union, National Union of Clerks, the National Association of School-masters, National Council for Civil Liberties, the National Free Church Council, National Union of Distributive and Allied Workers, National Union of Journalists, National Union of Students, National Union of Women Teachers, Peace Pledge Union, the Railway Clerks' Association, The South Wales Miners' Federation, the Union of Post Office Workers, and the Women's International League.

Sessions of the Congress were devoted to an international economic and social policy, the Colonial question, the current international situation, the problem of Minorities as an aspect of social justice, the future of the League of Nations, the effect of war preparation on social welfare and civil liberties, the teachers' contribution to peace, the local peace movement and political action, the local peace movement and Air Raid Precautions, and other questions.

At the final session the Congress rejected, by 105 votes to 73, a general statement of policy in relation

to the current situation which the representative General Purposes Committee had, by majority, decided to offer and commend to the Congress, as a statement likely to reflect the greatest common measure of agreement within the Congress. The statement dealt both with the problems of social justice in relation to peace and the question of "aggression." The main reason for the rejection of the statement lay in the dissatisfaction of a considerable section of the Congress at the refusal of the General Purposes Committee to divide the Congress on the issue of pacifism versus collective security or to incorporate in the "agreed" statement the full current interpretation of the "collective security" position. Following the rejection of the general statement, the Congress adopted with small dissentient minorities four resolutions relating to Spain and China, Abyssinia, Czecho-Slovakia, and Refugees, which had been intended to supplement the more comprehensive manifesto, and unanimously adopted two resolutions dealing with the West Indies and International Voluntary Service for Peace.

Catholic Association for Peace. The following statement was released October 6, by the Rt. Rev. John A. Ryan, D.D., Charles G. Fenwick, Ph.D., and the Rev. R. A. McGowan, as chairmen of the Ethics, the International Law and Organization, and the Joint Policy Committees, respectively, of the Roman Catholic Association for International Peace. Twenty-four other members of these committees and of the Executive Committee signed the statement.

In the presence of the grave crisis through which Europe has been passing, the undersigned members of the Ethics, the International Law and Organization, and the Joint Policy Committees of the Catholic Association for International Peace, and of its Executive Committee, believe that it is imperative to affirm certain principles upon which the future peace of the world must necessarily rest.

(1) The moral unity of mankind should be reaffirmed. An injustice done to one nation is an injustice done to all. No nation may assume an attitude of indifference toward the fate of another nation on the ground that its own national interests are not directly affected. The national interests of each country comprehend the welfare of every other country. While it may not, in all cases, be practically feasible to take steps to prevent international injustices from being done in other parts of the world, in principle those injustices are a violation of the moral order of the world; and, in consequence, they constitute a challenge to the whole family of nations to consider possible ways and means of redressing them.

(2) Nations are bound by the moral law no less than individuals. There is no exemption of any group, or class, or community, or state from the fundamental principles of justice and fair dealing. The suggestion that nations have certain duties to their national development which justify them in pursuing their national interests at the price of a wrong to their neighbors is condemned no less by reason than by repeated teaching of the doctors of the Church and recent Papal encyclicals.

(3) It is wrong for a nation to resort to violence to attain its objects when there are peaceful methods of settlement available. The use of intimidation, the threat of armed force, the issuance of ultimatums are to be condemned in the strongest terms when one side offers arbitration, mediation, or other method of conference and conciliation. A nation has no more right to take the law into its own hands than an individual has. Even if its cause appears to it unmistakably just, it may not force its will upon another State which offers to submit the controversy to the whole family of nations or to a smaller international conference or commission. The conduct of any Government is to be condemned if it employs unjust methods, and that is so quite apart from the merits of its claim that a minority group of another State wishes to unite with it.

(4) The desire for racial unity is not an end that may be used to justify ways and means of any kind to attain it. Yet such is the cruel and evil practice of the new "racism." Assuming that the entire body of a minority group desired to be annexed to another country and to be subjected to its authority, nevertheless, that would not, of itself, be justification for the economic injury that might be inflicted upon the State in which the minority resides if, in consequence of the partition, the latter were reduced to a condition of economic servitude. A minority

is entitled to the full protection of its rights as a minority; it is also entitled to leave the area and settle elsewhere; it is not entitled to demand the economic disruption of another minority with which it has constituted a unit of work and livelihood over a long period of time.

(5) The proper solution for such a controversy should be found in an international conference in which neutral States may contribute plans for a just settlement. As reason proclaims and the Church teaches, all nations are collectively responsible to promote peace to the full extent of practical possibilities. There is every reason to have the light of neutral opinion thrown upon the dispute. The machinery for peaceful settlement is available. Consultation and conference, not by two or three nations thinking in the terms of their own national interest, but by the whole family of nations, will in all probability find a solution that will do justice to both sides. Certainly, greater justice is likely to result from conference and agreement than from surrender to the threats of force coming from a single powerful State.

(6) In considering the claims of a State to the annexation of a neighboring minority, account must be taken of the character of its own domestic government. When freedom of speech is denied and religion is persecuted by a State, it loses in large degree the rights which it might otherwise claim, apart from the extravagant and false assumptions of "racism," to take under its rule its racial elements in another State. The demands of such a State lose much of their moral value by reason of the fact that each accession of territory puts the Government in a stronger position to enforce its will upon other States in the future. The open avowal of a belief in the use of force and in the right of a particular State to take the law into its own hands weakens its claim to what might otherwise be fairly granted to it.

(7) During these past years it seems to us that the United States has failed to assume the responsibility incumbent upon it as a member of the family of nations. We have denounced acts of lawlessness and aggression, but we have not enacted legislation which would enable us to take part effectively in the councils of the nations. Our neutrality legislation, now in force, requires us to treat both parties alike, irrespective of the fact that one may commit acts of violence and the other be its innocent victim. It is not conducive to international morality to make no distinction between right and wrong, to apply the same rule to the treaty-breaking State and to the State observing its obligations. Such an attitude of isolation and indifference does not keep us out of war; it encourages the lawbreaker and makes it almost certain that the spread of lawlessness will in the end touch our own shores. The best way to keep out of war is to help prevent it. It is a narrow conception of national defense to be indifferent to acts of lawlessness in other parts of the world and hope that the attack will not be directed against us.

(8) We must look beyond the immediate problems to the danger of war in the future. More and more it becomes clear that if permanent peace is to be obtained, the machinery of international co-operation must be developed so as to remove the causes of war. Greater efforts must be made to build up a body of common interests which may offset the present tendency toward intensified nationalism. The economic barriers between nations must be lowered and access given to the raw materials of industrial life and to the markets for manufactured products. In thus helping to remove the causes of war, the United States can make a most effective contribution to peace. We must not only pray for peace but must in every practical way work to restrain violence and to promote justice between nations as the condition of peace.

Peace Programs. Walter W. Van Kirk, Director of the National Peace Conference, summarized the results of the first year of the conference's organized activity. Membership now includes 34 national organizations in a new unifying agency prepared to speak and act at appropriate times for the peace forces of the nation. Programs were cleared among the 34 co-operating organizations, to aid each in contributing its maximum in influence. Speakers were made available for mass meetings in strategic centers. Radio presentations of the peace issues were broadcast to the nation. Seven hundred prominent speakers were mobilized to protest greatly increased appropriations for military purposes. The conference is now appraising the peace resources of the country, with a view to putting them into action in accumulating force.

"By the united front," Dr. Van Kirk declared, "the national peace organizations form a single cause that will appeal with greater force to local individuals to organize by groups, to share facts

and interpretations with their neighbors, and to arouse for action peace-loving Americans who are now too seldom informed on militarism's tactics."

Special committees of experienced observers of world affairs are preparing reports for the conference. Subjects first chosen for study and interpretation include: Neutrality, economics and peace, the Far East, military training in schools and colleges, and national defense policies. The conference will issue a series of eight small books a year, dealing with such topics as the economic necessity for an orderly world, and the case for and against war as a "biological necessity."

The Canadian Government will contribute to the international peace gesture which has its expression in the Peace Garden on the boundary of Manitoba and North Dakota to the extent of \$10,000, according to the supplementary estimates of the House. This area is in the Turtle Mountain Forest Reserve, with the international frontier traversing it. The site was selected some years ago by a committee of members of the National Association of Gardeners of America.

The World Conference for Action on the Bombardment of Open Towns and the Restoration of Peace, held in Paris, July 23-24, 1938, was called by the International Peace Campaign, a private group with headquarters at Geneva, Switzerland. Viscount Cecil of Chelwood, winner of the 1937 Nobel Peace Prize, and Pierre Cot, former Air Minister of France, presided over the Conference, which was attended by 1000 delegates from 34 countries. Dr. Henry A. Atkinson, president of the United States section of the International Peace Campaign, headed the group from this country. The Conference implored the great States to safeguard peace while there is still time and thus to assure their own security.

It noted that world policy is more and more departing from the four principles on which the International Peace Campaign was based—respect for treaties, universal limitation of armaments, collective security, and machinery to allow of the peaceful solution of all international problems—and that this departure had resulted in wars of aggression, the barbarity of which increased daily and which it would be in vain to attempt to humanize.

The Conference was of opinion that the weakness of acquiescence of certain great States with regard to the aggressor States had made these States stronger, both in the eyes of international public opinion and of their own people; it felt that this weakness had created the illusion that the real strength of the great democracies was unequal to that of the aggressor States.

The commission to investigate measures to be taken against the bombardment of open towns recommended that organizations and individuals should press their governments to:

- (1) Remove immediately every ban on the supply of weapons and apparatus of defense against air attacks,
- (2) grant financial aid to countries victims of aggression to enable them to purchase supplies of weapons and apparatus to defend their civilian populations from bombardment,
- (3) place an embargo on the supply of gasoline, metal, and other material, and also on financial aid to the aggressors responsible for bombardments,
- (4) organize the evacuation, in agreement with the governments of Spain and China, of their populations menaced by bombardments, using for this purpose their own mercantile marine and rail services and affording the refugee transports protection by their own armed forces.

The Board of Trustees of the Church Peace Union adopted a resolution at its semi-annual meeting on May 25-26 to the following effect:

In view of the chaotic conditions which exist throughout the world today, with the general breakdown of international morality, the staggering burden of increasing armaments, and the threat of war and revolution: We sincerely believe that the only way out is for all the nations to meet and confer on their essential problems and difficulties in a spirit of conciliation and willingness to co-operate, in framing measures for the elimination of the causes of conflict and lay anew the foundations of a more effective international community of nations; We therefore appeal to our Government to take advantage of the precedent created by the Hague Conferences and under the provisions voted at the Second Conference held in 1907 join with other member States in calling the Third Hague Conference to convene at an early date.

It was felt by the Board that the Third Hague Conference which was to have been called in 1914, but which was postponed by the outbreak of the World War, would offer a convenient, timely, and hopeful occasion for a general conference on eliminating causes of international conflict. A conference at The Hague would lack some of the handicaps of a conference at Geneva because of the post-war history of the League. Moreover, there would not be the same barriers to American participation in the Third Hague Conference that there would be to a conference convened by the League of Nations, since the United States attended the two previous Hague Conventions.

Secretary of State Hull, at Nashville on June 3d, said that the United States was "prepared to join with other nations in resuming and vigorously carrying forward the work so auspiciously begun at The Hague two generations ago, of humanizing by common agreement the rules and practices of warfare." This is a short step in the direction of international collaboration, for such a conference would mean little in the present crisis. War may be abolished, but the World War and the present wars have proved that it cannot be humanized.

Mr. Hull's reference to The Hague, however, suggests the possibility that the American Government would be willing to participate in a thoroughgoing conference to eliminate the causes of conflict. Premier Eamon de Valera, of Ireland, said before the Assembly of the League of Nations: "Why cannot the peace conference which will meet in Europe when the next conflict has decimated the nations, and disaster and exhaustion have tamed some of them into temporary submission—why cannot this conference be convened now when calm reason might have a chance to bring the nations into friendly cooperation and a lasting association of mutual help?"

PELLAGRA. See **MEDICINE AND SURGERY** under *Brief Notices*.

PEMBA. See **ZANZIBAR PROTECTORATE**.

PENANG. See **STRAITS SETTLEMENTS**.

PENNSYLVANIA. Area and Population. Area, 45,126 square miles, exclusive of State's waters in Lake Erie, but including (1930) other waters, 294 square miles. Population: Apr. 1, 1930 (census), 9,631,350; July 1, 1937 (Federal estimate), 10,176,000; 1920 (census), 8,720,017. Philadelphia (1930) had 1,950,961 inhabitants; Pittsburgh, 669,817; Scranton, 143,433; Reading, 111,171; Harrisburg, the capital, 80,339.

Agriculture. Acreage, production, and value of the chief crops of Pennsylvania, for 1938 and 1937, appear in the table in next column.

Mineral Production. Pennsylvania again ran a close second to Texas in the yearly total value of the States' production of native minerals; its total for 1936 was \$617,138,041, to which anthracite and bituminous coal, in almost equal shares, contributed more than two-thirds, while petroleum, natural gas, and cement made up the greater part of the

Crop	Year	Acreage	Prod. Bu.	Value
Hay (tame) .	1938	2,418,000	3,283,000 ^a	\$31,517,000
	1937	2,465,000	3,251,000 ^a	35,436,000
Corn	1938	1,368,000	59,508,000	36,300,000
	1937	1,368,000	62,928,000	40,274,000
Potatoes	1938	193,000	22,002,000	15,401,000
	1937	205,000	25,215,000	16,390,000
Wheat	1938	1,050,000	22,032,000	14,100,000
	1937	1,073,000	23,573,000	22,866,000
Oats	1938	915,000	30,652,000	10,115,000
	1937	915,000	24,705,000	10,623,000
Apples	1938	9,338,000	7,470,000
	1937	16,728,000	10,535,000
Tobacco	1938	24,200	32,690,000 ^b	3,269,000
	1937	23,700	28,990,000 ^b	3,016,000
Buckwheat ..	1938	140,000	2,170,000	1,172,000
	1937	130,000	2,275,000	1,456,000

^a Tons. ^b Pounds.

remainder. The output of anthracite diminished to 51,856,000 net tons for 1937, from 54,579,535 for 1936 (in value, \$227,003,538). Except for an aggregate of about half a million tons a year mined in Arkansas, Virginia, and three other States, Pennsylvania produced all the anthracite mined in the Union. The so-called unauthorized or bootleg mining (abstraction of coal from the owners' ground by individuals) continued in 1937 and 1938; it was supposed that two or three million tons of anthracite, not in the totals above, were thus produced in 1937. The production of bituminous coal rose slightly to 110,160,000 net tons for 1937, from 109,887,450 tons (value, \$207,548,000) for 1936. The State led the Union in the value of bituminous coal produced in 1936, but West Virginia produced a somewhat greater tonnage.

Natural gas produced in the State in 1936 totaled 110,362 million cu. ft. in quantity and \$42,874,000 in value. The quantity of petroleum produced yearly continued its rise, to 19,155,000 bbl. for 1937, from 17,070,000 bbl. (value, \$41,450,000) for 1936. The producers' shipments of cement increased to 22,952,603 bbl. (1937), from 22,527,491 (1936), but diminished in yearly value to \$31,917,831 (1937), from \$33,235,017 (1936). Clay products (1936) totaled \$29,975,442.

The production of coke rose to 16,140,501 net tons for 1937, from 13,784,110 tons (value, \$54,209,549) for 1936. Blast furnaces' shipments of pig iron increased to 11,036,467 gross tons for 1937, from 9,379,615 tons for 1936; by value, to \$239,838,942, from \$176,552,170. The output of open-hearth steel mounted to 14,561,700 gross tons (1937), from 12,913,903 tons (1936).

Education. For the academic year 1936-37, the latest for which totals were supplied, inhabitants of school age (from 6 to 16 years) numbered 1,936,046. The enrollments of pupils in public schools totaled 1,945,901; they comprised 1,306,798 in elementary study and 639,103 in high schools. In addition, kindergartens had an enrollment of 36,814. The year's expenditures for public-school education totaled \$219,587,669. The public-school system had 63,309 teachers.

Charities and Corrections. Under legislation changing the assignment of functions relating to the public support, care, and custody of persons, in effect in 1938, the Department of Public Assistance administered the dispensation of public support under the system of Social Security, to the needy blind, aged, and children. It also handled general poor-relief, dispensed by the State on a great scale. Political occurrences, as noted under *Events*, below, affected this Department. Supervision over State-maintained institutions for the care and custody of persons was exercised by the Department of Welfare, which also supervised the care of per-

sons in county institutions. The State-owned institutions contained, as reported about the end of 1938, 35,178 inmates. Of these persons, 20,788 were in nine mental hospitals, at Allentown, Danville, Farview, Harrisburg, Norristown, Torrance, Warren, Wernersville, and Philadelphia (added in 1938). The penal and correctional institutions, containing 7531 inmates, were: Eastern State Penitentiary, Philadelphia; New Eastern State Penitentiary, Graterford; Western State Penitentiary, Pittsburgh; New Western State Penitentiary, Bellefonte; Industrial School, Huntingdon; Training School, Morganza; and State Industrial Home for Women, Muncy. Institutions for the feeble-minded and epileptic, containing 5915 inmates, were: Laurelton State Village, Laurelton; Pennhurst State School, Pennhurst; Polk State School, Polk; and State Colony for Epileptics, Selinsgrove. Ten State medical and surgical hospitals had among them 944 patients; these hospitals were at Ashland, Blossburg, Coaldale, Connellsville, Hazleton, Shenandoah, Nanticoke, Philipsburg, Scranton, and Shamokin.

Legislation. Convening in special session on July 25 at the summons of Governor Earle, the Legislature rapidly passed a group of acts by which he designed to change the course of proceedings on charges that had been brought against his administration by former Attorney-General Charles J. Margiotti and others (see *Events*, below). These bills, four in number, gave the lower house of the Legislature sole jurisdiction as to charges against State officers, forbidding any court to hold an inquiry unless the Governor had failed to convene the Legislature within 90 days after the appearance of charges, or unless the Legislature, if sitting, had failed to act or had completed its inquiry; permitted the lower house of the Legislature to investigate through a committee and required that hearings be public; allowed the Attorney-General to supersede any district attorney in conducting an investigation of a State officer before a grand jury; and suspended any grand jury's inquiry that had already begun. A committee of the House was commissioned to hear Margiotti's and other charges.

Toward the cost of supplying the State's poor-relief after October 1, \$25,000,000 additional was appropriated.

Political and Other Events. Governor Earle, throughout the months of his candidacy for the U.S. Senate, was beset with criticism and accusations as to his official conduct. On January 5 Secretary of Public Assistance de Schweinitz resigned and charged that Earle was using the State's poor-relief administration to further his own political advancement. Mayor Wilson of Philadelphia called upon Attorney-General Margiotti (April 18) to investigate an assertion that Earle had borrowed \$30,000 from Matthew H. McCloskey, who held contracts for construction for the State amounting to millions of dollars. Wilson, at the time when he brought this matter up, was seeking the Democratic nomination for Senator, and he had been at odds with Earle in 1937. Margiotti acted promptly on Wilson's request by starting to investigate the General State Authority, a body that had assigned to McCloskey State contracts said to total more than \$9,000,000. The Governor declared without delay (April 23) that while he had borrowed from McCloskey, the loans had been made in 1935 and 1936, before the possibility of contracts for "McCloskey or any one else" had arisen, and he exhibited 35 checks, by which he said that he had repaid all the borrowed money except about \$6000.

Margiotti, almost simultaneously with the Wilson revelation, uttered charges (April 21) of venality among Legislators in the session of 1937. Margiotti, who at the time sought the Democratic nomination for Governor, proceeded (April 25) to declare that architects engaged by the General State Authority had been solicited to turn in \$1,200,000, for the benefit of leading Democrats, out of the commissions paid them at 6 per cent of the cost of buildings designed; he also accused specified members of the same political group (April 26) of having received \$20,000 from brewing interests for the enactment of favorable legislation in 1935.

Earle thereupon removed Margiotti from office (April 27), for the alleged reason that Margiotti had refused to submit to him the evidence to support the charges, which Margiotti intended to put before a grand jury. The Dauphin County Court directed a grand jury (April 29) to investigate Margiotti's accusations and any evidence of other charges against State officials. Earle's new appointee, Attorney-General Bard, brought proceedings in the State Supreme Court to stop the grand jury's investigation. The Court suspended the inquiry until May 18, the day succeeding the primary elections, and thereafter ordered further temporary suspension; but it decided (June 20) to allow the grand jury to go on and put an outside Judge, Paul N. Schaeffer of Reading, in charge of it. Schaeffer refused (June 27) a petition of Attorney-General Bard, to be allowed to supersede the county's District Attorney, Carl B. Shelley, in the conduct of the investigation.

Failing in further efforts to halt or control this investigation through court action, Governor Earle summoned a special session (see *Legislation*, above), which hurriedly passed laws to remove the whole matter from the judicial field and substitute a friendly legislative investigation. The new acts were contested in the courts, as unconstitutional; while the contests went on, both investigations—that before Judge Schaeffer and likewise that which had started before a legislative committee—were suspended by court orders for a time, so that little progress was made by either before the general election in November.

Unemployment. The dependence of great numbers on steel-making, coal-mining, and other industries sensitive to bad times caused the number of the destitute unemployed to rise sharply early in the year. In January, 1,454,000 persons, housewives and children included, or virtually 15 per cent of the population, depended on public support, whether from the State or through the jobs supplied for the purpose by the WPA. The new post of Secretary of Public Assistance, held by Karl de Schweinitz, carried the duty of administering the distribution of a great sum of State money among a considerable part of the voters. Pressure brought on de Schweinitz to resign and leave his post to be filled by some other person more thoroughly in sympathy with the political considerations of the group in power was alleged in the press around the opening of the year. Charges were brought against him, but the proceeding stirred up opposition in the State and was abandoned. De Schweinitz, however, resigned (January 6), blaming Governor Earle for lack of support. Arthur W. Howe, Jr., a personal friend of Earle, took the post. The payment of unemployment compensation, or sums for the support of persons losing employment, was begun in January. As the money came from a special fund that had accumulated from a tax on payrolls, such payment helped keep down the number

of those dependent on other kinds of public assistance, without draining the State's treasury.

Nothing definite resulted in 1938 from the efforts of Governor Earle to effect the re-employment of many thousands of idle and partly idle workers in the anthracite mining industry. The final report of the Governor's commission of inquiry into the anthracite industry suggested legislation to subject the mines' operations to public authority by giving them the status of public utilities, but Earle did not ask the Legislature to carry out the plan.

Other State Matters. The State's act of 1937 limiting the time of industrial employment for hire to 44 hours a week and to 5½ 8-hour days as maxima was declared (June 30) by the State Supreme Court to be unconstitutional. Its application had previously been impeded by the need to grant, at the discretion of the State's Department of Labor and Industry, a great number of exceptions. The Court found that the statutory bestowal of the authority to grant such exceptions violated the prohibition against the delegation of the legislative power. An act of Congress, signed June 27, gave permission for the Delaware River Tunnel Corporation to construct a tunnel under the Delaware River between the New Jersey shore and Hog Island. See CHILD LABOR; TUNNELS.

Municipal Affairs of Philadelphia. Running short of means in January, Philadelphia was unable to pay its employees for nearly two weeks. The trouble was brought to a head by a decision of the State Supreme Court (January 5) holding the sinking-fund-consolidation act of 1937 invalid. The savings in charges for sinking funds had helped balance the budget for 1938. The decision had the effect of preventing these savings, amounting to \$7,343,000, and the budget was made invalid. The means for paying 19,000 employees of the city their semi-monthly salaries were thus removed, and it became needful to impose new taxation immediately in order to make up the needed revenue and render the budget effective. The State Supreme Court ordered (January 24) that the budget be balanced and adopted within a week. This impelled the City Council to enact in haste (January 27) a municipal sales tax of 2 per cent, amid uproarious protest from thousands of persons about the City Hall. The Supreme Court then issued an order releasing funds for the payroll. Mayor Wilson vetoed (February 1) the ordinance for the sales tax, but the Council repassed it over his veto (February 8), and it remained in force thereafter. Toward the close of the year the Council had to prepare a budget for 1939 in which it was necessary to make good a considerable part of a deficit of some \$40,000,000 that had accumulated in the course of several years. An income tax at a flat rate of 2 per cent, applying to all persons gainfully employed in the city, servants of the State and of the Federal Government excepted, was enacted (November 26).

The draft of a new municipal charter for Philadelphia, prepared by a committee appointed by Governor Earle in accordance with a legislative act of 1937, was completed and delivered (September 1) to the Governor for submission to the Legislature in 1939. It provided for a City Council of 11 members to be elected by proportional representation, and for a city manager; it extended civil-service status to all departments of the city and county authority; to some degree it unified the functions of city and county.

A grand jury of Philadelphia County indicted Mayor Wilson (September 9) on charges of failure to suppress gambling, misbehavior in office,

dissuading witnesses called by a legislative commission, and demotion and removal of policemen and firemen. Wilson, who had prevented the renewal of the lease of the municipal gas works to the Philadelphia Gas Company, made charges of mismanagement in that company; the charges were dismissed (May 4) by Judge Finletter, who declared the old lease still provisionally in effect. Proceedings for the reorganization of the Philadelphia Rapid Transit Company were marked by the Public Utility Commission's putting a current value of \$4,217,438 on the original properties of the underlying lines (lines that had existed separately before the consolidation of 1902). The figure contrasted with a total of \$18,266,038 of their bonds, issued before the consolidation. The underlying interests endeavored to have their 999-year leases confirmed as a condition of reorganization and as an alternative to foreclosure. An extension of the Broad Street subway from South Street to Snyder Avenue, begun in the easier times of 1931, was at last finished, at a cost of \$8,000,000, and opened (September 18).

Two Philadelphia institutions, the Hospital for Mental Diseases at Byberry and the County Prison at Holmesburg, were subjects of evil revelations: A legislative committee submitted to Governor Earle (July 21) a report indicating mismanagement, harsh measures, and insufficient treatment of inmates at Byberry; at Holmesburg, the deaths (August 22) of four prisoners, among 23 locked in a special set of cells after a hunger-strike, were investigated, and the men were found to have been subjected to intense heat from steam radiators turned on in warm weather; two prison guards were charged with homicide, and accusations were made against the warden and other officials of the prison.

Elections. At the general election (November 8) Arthur H. James (Rep.) was elected Governor by a margin of not far from 300,000 votes over Charles Alvin Jones (Dem.). James J. Davis (Rep.) won re-election to the U.S. Senate, receiving some 400,000 votes more than his opponent, Gov. George H. Earle (Dem.). Samuel S. Lewis (Rep.) was elected Lieutenant-Governor; William S. Livengood (Rep.) was elected Secretary of Internal Affairs. Twenty Republicans and 14 Democrats were elected to the U.S. House of Representatives; this made a net gain of 13 seats on the Republican side. In the Legislature, the Republicans elected an ample majority to the lower house and about half of the members of the State Senate.

The sweeping Republican victory in November followed a campaign in which the Democratic party was handicapped by discord, discredit brought upon it by numerous charges of official misconduct (see above), and the injection of the C.I.O. into the situation by John L. Lewis's unsuccessful effort to name the candidate for Governor, followed by discontent with the Democratic ticket in the C.I.O.

Officers. The chief officers of Pennsylvania, serving in 1938, were: Governor, George H. Earle (Dem.); Lieutenant-Governor, Thomas Kennedy; Secretary of Internal Affairs, Thomas A. Logue; Secretary of the Commonwealth, David L. Lawrence; Auditor-General, Warren R. Roberts; Treasurer, F. Clair Ross; Attorney-General, Charles J. Margiotti and (succeeding him) Guy K. Bard; Superintendent of Public Instruction, Lester K. Ade.

Judiciary. Supreme Court: Chief Justice, John W. Kephart; Associate Judges, William I. Schaf-

fer, George W. Maxey, James B. Drew, William B. Linn, Horace Stern, H. Edgar Barnes.

PENNSYLVANIA, UNIVERSITY OF. A non-sectarian institution of higher education in Philadelphia, founded in 1740. It is composed of the college of arts and sciences, the college of liberal arts for women, the Towne Scientific School (engineering and chemistry), the Moore School of Electrical Engineering, the Wharton School of Finance and Commerce, the school of fine arts (architecture, fine arts, music), the school of education, the graduate school, and the professional schools of medicine, graduate medicine, law, dentistry, veterinary medicine. An affiliation exists with the Pennsylvania School of Social Work under which students in that School may, under certain conditions, receive University certificates and degrees. The 1937 autumn enrollment was 16,230, including all schools and departments. Of those enrolled 7058 were registered in the undergraduate schools, 3235 were registered in the graduate and professional schools, 6670 were registered in the evening, extension, and summer schools. The enrollment of the 1938 summer school was 1901. The faculty numbered 1530. The productive funds amounted to \$20,758,094. The income for the year from all sources, exclusive of hospitals and museums, was \$6,569,896. The library contained 881,781 bound volumes and 199,000 pamphlets. President, Thomas S. Gates, Ph.B., LL.B., LL.D.

PENNSYLVANIA STATE COLLEGE, THE. A State-supported nonsectarian institution for the higher education of men and women at State College, Pa., founded in 1855. On Nov. 1, 1938, the undergraduate enrollment totaled 6282 and the graduate and special enrollments, 707. The 1938 summer-session enrollment was 3503 (net). The resident faculty numbered 763; the extension faculty numbered 677, of whom 302 were full-time instructors. The productive funds amounted to approximately \$517,000, and the income for operation for the previous fiscal year was \$5,393,894. The library contained 184,836 volumes. Resident instruction is supervised by the following seven undergraduate schools and the Graduate School. The undergraduate schools are: Agriculture, Chemistry and Physics, Education, Engineering, Liberal Arts, Mineral Industries, and Physical Education and Athletics. During the academic year 1937-38, Frances Atherton Hall, a new women's dormitory, and Mary Beaver White Hall, a new women's gymnasium, were completed. The General State Authority of Pennsylvania and the Public Works Administration are constructing 10 new buildings and additions to major buildings on the campus at a cost of \$5,000,000. President, Ralph D. Hetzel, LL.D.

PERLEY, SIR GEORGE HALSEY. A Canadian statesman, died at Ottawa, Jan. 4, 1938. Born in Lebanon, N. H., Sept. 12, 1857, the son of William G. Perley, M.P., he was educated at St. Paul's School, Concord, N. H., and at Harvard University (A.B., 1878). Upon graduation he returned to Ottawa and became associated with his father's lumber interests. About this time he became a naturalized Canadian citizen to allay all doubts as to his nationality. Subsequently he became president of The Hull Lumber Co., G. H. Perley & Co., Arundel Lumber Co., Argenteuil Lumber Co., and vice-president of the Riordon Pulp and Paper Co., and a director of the Bank of Ottawa.

Entering politics as a Conservative, he was defeated in his efforts to become a member of the House in 1900 and 1902, but in 1904 he was elected as a member from Argenteuil Co., and was re-elected again in 1908 and 1911, and after 1925. Appointed chief whip of the Conservative party in 1910, during 1911-12 he accompanied Premier Borden on a tour throughout the West, and on the defeat of the Laurier government by Borden in 1912, was appointed Minister without Portfolio in the Canadian Privy Council. During 1912 and 1913 he was Acting Premier. He served without portfolio until 1916, when on October 31 he was made first minister of overseas forces in the United Kingdom in the cabinet, serving until November, 1917. Previously he was given charge of the Office of High Commissioner for Canada in London in June, 1914, and in October, 1917, was himself appointed High Commissioner, an office he held until 1922. In 1915 he was knighted. Also, Perley was a member of the First Imperial War Cabinet in 1917 and of the Imperial Conference (1917), and was one of Canada's plenipotentiaries for signing treaties at the conclusion of the World War, and in 1921 was a Canadian delegate to the Assembly of the League of Nations at Geneva.

In the Conservative government of Arthur Meighen in 1926, Sir George served as Secretary of State from July to September. On Aug. 7, 1930, he was appointed to the Bennett cabinet as Minister without Portfolio, and in Premier Bennett's absence at the World Economic Congress in 1933, was Acting Premier as well as holding the offices of Minister of External Affairs and Minister of Finance. He served in this cabinet until 1935 when the Liberal Party came into power. He was a member of the Imperial Privy Council in 1931 and a delegate to the disarmament conference at Geneva in 1932.

One of Canada's leading philanthropists, Sir George, in association with other members of his family, assisted in the formation of the Perley Home for Incurables (1897) by giving the family homestead and property to them in memory of his father. In 1912 he donated to the city of Ottawa a Tuberculosis Hospital building, and in 1920, with Lady Perley, gave the May Court Club a building for their Convalescent home. He was chairman of the Prescott and Russell Fire Relief Fund in 1897 and president of the Ottawa and Hull Fire Relief which distributed about \$1,900,000 among the sufferers from the fire of Apr. 29, 1900. Sir George was made a Knight Grand Cross of St. Michael and St. George in 1933 and received the Order of the Couronne from the Belgian government.

PERLIS. See UNFEDERATED MALAY STATES.

PERSIA. See IRAN.

PERU. A republic on the west central coast of South America, comprising 23 departments. Capital, Lima.

Area and Population. The boundary with Ecuador remains in dispute. Official estimates based upon Peruvian claims as against Ecuador placed the total area at 482,258 square miles. The Peruvian Geographical Society estimated the population at 6,500,000 in 1936. With the exception of about 600,000 whites and a few Asiatics, the population is of Indian and mixed Indian and white blood. Registered living births in 1936 numbered 155,000; deaths, 80,000; marriages, 19,000. In August, 1936, there were 48,317 foreigners in Peru (22,560 Japanese, 5852 Italians, 4900 Chinese, 3229 United States citizens, 2242 Germans, 2031 British, and 1584 Spaniards). During 1937, 294 Japanese

entered the country and 940 departed. The population of Lima at the municipal census of Dec. 31, 1935, was 284,839; of other cities (estimated in 1934): Arequipa, 70,000; Cusco, 40,000; Chiclayo, 35,000; Trujillo, 30,000; Iquitos, 25,000; Huanayo, 25,000; Ica, 20,000; Ayacucho, 20,000; Huáras, 20,000; Piura, 18,354.

Education and Religion. About 50 per cent of the adult population is estimated to be illiterate. The appropriation for education in 1937 was 16,835,000 soles, a 60 per cent increase over 1933. There were in 1937 4697 primary schools, with 471,304 pupils and 9104 teachers. In 1936 there were 47 state secondary schools with 12,474 pupils and about 100 religious secondary schools with some 10,000 pupils. The five universities (four state and one private) have about 2000 students. The Roman Catholic religion is protected by the state and only Catholic religious instruction is permitted in the state and private schools. In other respects there is freedom of worship.

Production. Agriculture, stock raising, and mining are the principal occupations. Yields of the chief crops in 1936-37 were: Wheat, 3,029,000 bu.; rough rice, 5,152,000 bu.; sugar cane, 3,321,000 metric tons; raw sugar, 410,000 metric tons; cotton, 184,342,000 lb. valued at 94,487,000 soles (198,483,000 lb. valued at 98,330,000 soles in 1937-38). Livestock statistics for 1937 showed 2,310,000 cattle, 12,000,000 sheep, 934,000 swine, 1,500,000 llamas, alpacas, vicuñas, and huarizos; 965,000 horses, mules, and asses. Production of sheep's wool in 1936-37 was about 7,352,000 lb.; llama, alpaca, etc., 8,082,000 lb. Guano production for the year ended Mar. 31, 1938, was 159,138 metric tons (136,056 in 1936-37).

Mineral output in 1936 was valued at 265,756,000 soles. Production of the chief minerals in 1937 was (preliminary, in metric tons): Copper (metal content), 36,649 valued at 29,819,000 soles; lead (metal content), 38,731; zinc (metal content), 15,999; coal, 90,000 (1936); vanadium ore, 1041 valued at 2,214,000 soles. The output of gold was 168,665 troy oz., worth 23,614,000 soles; silver, 36,094,000 troy oz.; petroleum, 16,569,000 bbl. (16,707,000 bbl. worth 137,433,000 soles in 1936). The principal industrial establishments, besides petroleum and ore refining plants, produce wool and cotton textiles, knit goods, hats, food products, beverages, furniture, leather, shoes, glass, soap, candles, cement.

Foreign Trade. Preliminary 1938 trade figures placed imports at 260,159,000 soles (235,206,000 in 1937) and exports at 342,129,000 soles (365,440,000 in 1937). In U.S. currency, the 1937 imports totaled \$59,271,000; exports, \$92,091,000. The chief 1937 imports were machinery and vehicles, foodstuffs and spices, metals and their manufactures, cotton and manufactures, lumber and manufactures. The value of the leading 1937 exports was: Raw cotton, \$22,387,000; crude petroleum, \$21,009,000; copper bars, \$12,818,000; raw sugar, \$8,003,000; gasoline, \$6,930,000. Of the 1937 imports, the United States supplied 35.3 per cent; Germany, 19.7; United Kingdom, 10.2; Argentina, 8.1. Of the exports, the United Kingdom took 22.7 per cent; United States, 22.1; Germany, 13.4; France and Canada, 7.2 each. Excluding gold and silver, United States merchandise exports to Peru in 1938 were \$16,892,803 (\$19,001,492 in 1937); imports from Peru, \$12,813,297 (\$16,524,501 in 1937).

Finance. The budget for the calendar year 1939 estimated revenues and expenditures at 174,701,-

000 soles (165,546,000 in 1938). According to preliminary returns budgetary collections in 1938 were 174,300,000 soles. The public debt on June 30, 1938, totaled 749,074,000 soles (external, 493,261,000; internal funded, 72,945,000; floating and short-term, 182,868,000), as against 706,963,000 on Dec. 31, 1936. The sol (nominal value, \$0.474 U.S. currency) exchanged at an average of 3.96 pesos to the U.S. dollar in 1937 and 4.46 to the dollar in 1938.

Transportation. Peru in 1936 had 2624 miles of railway line of which 579 miles were government owned. In 1936 all lines carried 4,218,000 passengers and 2,986,000 metric tons of freight, excluding 37,999,753 passengers and 6431 tons of freight representing short-distance traffic on electric lines. Gross receipts were 30,070,000 soles. Highways and roads extended 14,074 miles in October, 1938 (number of automobiles on Jan. 1, 1938, 20,682). For highway and port construction during 1938, see *History*. There were 6041 miles of airlines under the national flag in 1938 in addition to the international Panagra and Condor lines. Operating statistics for all five air systems (Faucett, Aerovías, Panagra, Nacional, and Condor) in 1937 were: Miles flown, 2,136,830; passengers, 34,571; freight, 871 tons; mail, 108,775 lb.; parcel post, 16,450 lb. The German-owned Condor system opened a weekly air-mail and passenger service linking Lima and Arequipa with Rio de Janeiro and the transatlantic Lufthansa service via La Paz, Bolivia, in May, 1938. The Faucett system and Aerovías Peruanas were merged in May, 1938, and their existing routes combined. The Peruvian merchant marine in 1938 comprised 33 vessels of 40,943 gross tons. The capacity of vessels entering Peruvian ports (including Lake Titicaca and the Amazon) was 17,285,214 net registered tons in 1936.

Government. The Constitution of Apr. 9, 1933, vested executive power in a President elected for five years and ineligible for re-election. Legislative power was to rest in a Congress of two chambers—a Chamber of Deputies of 120 members elected for five years and a Senate of 40 members elected for six years, with one-third of the Senate renewed every two years. The suffrage was restricted to literate males 21 years or more of age. The Constituent Assembly elected Oct. 11, 1931, continued in session until the Congressional and Presidential elections of Oct. 11, 1936. On October 22, when the partly completed electoral count showed the government's candidate for President trailing the Social Democratic candidate supported by the outlawed radical Apra movement, the government suspended further computation of the votes and convoked the old Constituent Assembly in special session. On Nov. 3, 1936, the Constituent Assembly nullified the election of October 11. On November 14 it extended President Oscar R. Benavides' term of office for three years to Dec. 8, 1939. On Dec. 8, 1936, the Constituent Assembly was permanently dissolved, leaving President Benavides with dictatorial powers. General Benavides had been elected President by the Constituent Assembly on Apr. 30, 1933, to complete the term of his predecessor, Col. Luis M. Sánchez Cerro, who assumed office Dec. 8, 1931, for five years and was assassinated Apr. 30, 1933.

HISTORY

Internal Affairs. The internal situation in Peru remained relatively quiet during 1938 and the military dictatorship of President Benavides maintained unquestioned control. Members of the outlawed Apra party made an effort to seize the

cavalry barracks at San Pedro de Lloc about 350 miles north of Lima on October 22, apparently in an attempt to capture arms and ammunition. Loyal troops frustrated the coup, killing two Apristas and wounding one. According to the Apristas, more than 5000 of their adherents were being held in jails and jungle concentration camps.

Public Works Program. During the year the government accelerated its extensive public works program that served as a check upon the growth of political unrest. A contract was signed with a United States corporation for the construction of a new port at Matarani to replace Mollendo as the terminus of the Southern Railway of Peru and for the extension of existing port works at Callao. About \$4,000,000 was appropriated for the Matarani project, which was designed to provide a sheltered harbor where ships could dock in place of the open roadstead at Mollendo where all passengers and freight were handled by lighters. The project, including warehouses, customs offices, etc., was to be completed in three years. An additional \$1,500,000 was allotted to the Callao dock works, on which \$8,750,000 had been spent in the preceding 10 years. This later project did not include the new \$1,500,000 graving dock and naval arsenal at Callao opened by President Benavides on July 31, the 107th anniversary of Peru's independence. With these improvements, Callao became one of the best-equipped harbors on the west coast of South America.

The government's three-year road construction program, estimated to cost 50,000,000 soles, was amplified so as to cost about 75,000,000 soles, of which about 28,000,000 soles were expended in 1938. On April 3, the sum of 1,550,000 soles was appropriated for an avenue linking the port of Callao with the business center of that city and with Lima, and for the completion of street projects in the capital. More than 36,000 laborers were engaged on 63 different sections of road projects in both the coastal and mountain zones in August, 1938. Important progress was made on the Pan American Highway. The section from Lima southward to Ica (212 miles) was asphalted and opened to traffic early in June. The section between Ica and Arequipa was scheduled for completion early in 1939. On November 20, President Benavides opened the 100-mile section of the Pan American Highway northward from Lima to Huacho, which opened up a large farming section in Lima and Ancachs Provinces. The trans-Andean highway was being pushed eastward from Huanuco to Pucallpa on the lower Ucayali River to connect with the Amazon waterways system.

The Benavides Government secured aid in financing its highway program in July through an agreement with the International Petroleum Co., a Standard Oil subsidiary, whereby the company granted two loans to the government, one for 33,600,000 soles (about \$7,813,950 U.S.) and the other for \$850,000, both sums to be utilized exclusively for road building during 1938 and 1939. Interest was fixed at 3 per cent annually and the maximum term for amortization was set at eight years. The loans were to be repaid from taxes on oil products, the royalty on crude petroleum produced by the subsidiary *Compañía Petrolera Lobitos*, and the petroleum export tax. The government agreed not to change the export tax or raise other taxes on the petroleum industry until the loans were repaid in full. To stimulate tourist travel along the new highway network, a decree of July 21 allotted

4,000,000 soles for the construction of tourist hotels and cabins.

On November 6 President Benavides left the capital on an air tour of Arequipa, Tacna, and the new port project at Matarani to inaugurate an 18,000-acre irrigation project, an airport, and other public works. A building for the newly established National Institute of Hygiene and Public Health was opened in Lima on February 12.

The Economic Slump. Despite heavy expenditures on public works, the economic prosperity on which the stability of the Benavides regime was largely based slumped badly during 1938. The key cotton and sugar industries were adversely affected by lower world prices. In addition the cotton crop was short and of unusually poor quality, reducing the nation's normal income from this important source by about 20,000,000 soles, or 20 per cent. The delayed movement of cotton, sugar, and other exports drained the country of its foreign exchange reserves and caused the sol to depreciate. In April Finance Minister Benjamin Roca urged Peru's foreign creditors to scale down outstanding foreign debts in proportion to the depreciation of her currency. In August the exchange situation became so critical that government control of exchange transactions was narrowly averted.

The government took various other steps designed to stabilize economic conditions. Effective June 9 importation of textile machinery was prohibited for one year to prevent excess production of textiles. A law of July 31 forbade increases in prices of primary necessities without government permission. In an effort to encourage the investment of foreign capital, the inheritance tax was made the same for both Peruvians and non-resident foreigners by a decree of October 25. A decree of October 28 prohibited any increase in rents of tenants paying less than 100 soles monthly and limited increases in rents for tenants paying between 100 and 150 soles monthly.

Foreign Relations. Peru's boundary dispute with Ecuador occupied first place in the nation's foreign relations during 1938 (see *ECUADOR* under *History* for details). As a result of this dispute, Ecuador threatened to boycott the Eighth International Conference of American States held in Lima during December, but was finally persuaded to attend by the Colombian and other neutral American governments. Peru's relations with all the other American republics remained highly satisfactory. She aided in the settlement of the Chaco Dispute (q.v.) between Bolivia and Paraguay; concluded a convention with Colombia (May 10) for the promotion of trade across their Amazonian boundaries; arranged an exchange of territories on the Copacabana peninsula in Lake Titicaca with Bolivia; carried on negotiations for a new trade treaty with Chile, meanwhile extending the existing treaty for six months; and agreed with Colombia to raise their respective legations in Bogotá and Lima to the status of embassies. The cordial relations existing between Peru and the United States, despite anti-democratic influences in Peru, was emphasized by the engagement of a United States naval mission in February.

See *BOLIVIA* and *CHILE* under *History*; *PAN AMERICAN CONFERENCE*.

PETROLEUM. Crude oil production in fields outside of the United States in 1938 exceeded that of any previous year in the history of the petroleum industry, according to the annual review of the *Oil and Gas Journal*. While a substantial decrease in the crude output of the United States more than

offset the gains in other oil countries, the latter areas considered as a unit continued the upward trend which has been underway for several years. The world crude oil output for 1938 is estimated at 1,991,673,000 bbl., or 5,546,600 daily. This is a decrease of 54,870,000 bbl. (150,400 daily) or 2.6 per cent compared with the 1937 figure, which was the industry's largest yearly total. The reduction of 65,123,000 bbl. (178,400 daily) in the production of the United States, exceeds by 10,253,000 bbl. the decline in world output.

PHILADELPHIA. See PENNSYLVANIA.

PHILIPPINES. A group of islands in the northern part of the Malay Archipelago; formerly a possession of the United States; transformed (Nov. 15, 1935), into a self-governing commonwealth destined by statute of the United States to become independent in 1946. Capital, Manila.

Area and Population. The Philippine Islands number 7083, including numerous islets; 466 of the group have areas as great as one square mile. The combined area of the islands is 114,800 square miles. Their population was estimated in 1937 as 13,439,000; according to the census of 1918, it was 10,314,310. The principal islands and their areas in square miles are: Luzon, 40,814; Mindanao, 36,906; Samar, 5124; Negros, 4903; Palawan, 4500; Panay, 4448; Mindoro, 3794; Leyte, 2799; Cebu, 1695; Bohol, 1534; Masbate, 1255. The chief cities and their populations (estimated, 1935) were: Manila, 353,418; Cebu, 82,032; Iloilo, 45,236; Laoag, 42,901; and Legaspi (formerly Albay), 35,694. There were (1930) 45,208 Filipinos in the United States and 63,052 in Hawaii. Taga-

log, which was made the "national" language in 1937, is spoken by approximately one-half of the inhabitants of the islands. English and Spanish, used for divers official purposes, are each understood by a considerable part of the population; the teaching of English in the public schools is compulsory during the period of Philippine dependency on the United States.

Education and Religion. The public schools numbered 7938 in the academic year 1935-36. They reported a total registration of 1,262,353 pupils. These were estimated to come to less than 37 per cent of all the inhabitants of school-age. Primary education in these schools was free, secular, and coeducational. Apart from the regular public schools, there were 175 farm-settlement schools, 13 agricultural schools, 25 trade schools, 10 normal schools, and a State-supported institution of higher education, the University of the Philippines, which had (1938) 6733 students and a teaching staff of 637. Such statistics on religious affiliation as were available indicated that 9,925,479 of the inhabitants were Roman Catholics, that possibly 4,000,000 were members of the Independent Filipino Church, and that 150,000 were Protestants, 443,037 Mohammedans, and 24,263 Buddhists; these figures, however, gave a total in excess of the latest estimate of the population, and it appeared that part of the inhabitants must have been counted more than once in the aggregate.

Production. The industry of the Philippines is chiefly agricultural but includes mining, lumbering, fishing, and manufacturing. Agriculture is, moreover, the mainspring of the islands' external trade. The production of cane sugar has regularly afforded the greatest single component of both total yearly output and listed exports. The growing of sugar cane is for practical purposes limited by the imposition of a yearly quota as the allowable maximum of the United States imports of sugar from the Philippines, and by corresponding allotments, among farmers, of sugar cane to be grown. The quota set for 1938 was 1,057,416 short tons. Coconut products ranked second among the commercial crops; they were chiefly copra, copra meal and cake, coconut oil, and desiccated coconut. Abaca, or Manila hemp was produced (1937) to the quantity of 1,304,000 bales of 278 lb., in farm value about \$12,000,000. The crop of tobacco attained, for 1937, 725,200 quintals of 46 kilograms, in farm value, \$2,046,000. Maguey also was grown for exportation on a substantial scale. Apart from the crops dependent on a foreign market, the islands grew, for their own inhabitants' food, unhusked rice, or palay, to the quantity (1937) of 55,015,730 cavans of 44 kilograms, in value, \$67,200,000; 7,124,540 cavans of corn, value \$8,200,000; and much cacao and coffee. The growing industry of gold-mining rose to a yearly production of 716,967 ounces of gold (1937), from 621,968 for 1936; by value, to \$25,093,845, from \$21,768,880. Iron ore, silver, chromite, and copper all were produced in 1937, but iron only in excess of \$1,000,000 of value for the year's total. Industrial enterprises in some fields are conducted or aided by the Commonwealth, but in most fields private enterprise is active. Americans, according to an estimate in 1937, were the greatest owners of outside capital already employed in the islands.

Overseas Trade. The bulk of Philippine trade with other lands continued to be with the United States. Philippine imports from the United States attained a total value of \$86,471,842 for the calendar year 1938; exports to the United States came

to \$94,263,171. Though the trade fell below that of 1937, the Philippine excess of exports over imports, as between the two countries, was nearly \$8,000,000, not to count net exports of \$27,880,212 of gold, separately tabulated. For 1937 the corresponding figures were: General imports from the United States, \$85,031,884; exports thereto, \$126,061,188; the balance of exports to the United States (1937) thus exceeded \$41,000,000, exclusive of shipments of gold. The further credit balance (1937) from exportation of gold was \$25,426,721. The Philippine foreign trade with all countries, exclusive of monetary transfers, amounted (1937) to \$151,266,250 of exports and \$109,025,745 of imports. To Japan, whose trade was next largest after that of the United States, that year's exports totaled \$10,014,880; imports from Japan, \$16,102,007. Germany and Great Britain also did a large yearly trade with the Philippines.

The yearly total, by value, of each of the principal exports, by commodities, was, for 1937, as follows: Sugar, \$67,706,193; coconut products, \$45,694,911; abaca, or Manila hemp, \$21,639,686; tobacco and cigars, \$4,983,108. Shipments of sugar to the United States attained for the calendar year 1938, 892,465 short tons, in value \$46,169,082.

Finance. The Philippine Commonwealth issues money, of which the unit is the peso, equal in value (1938) to 50 cents in U.S. money. It derives its yearly revenue chiefly from duties on imports, excise, licenses, business taxes, and an income tax. Its revenue from these and minor taxes totaled, for the calendar year 1937, 78,475,510 pesos. From the United States Government it received also 113,825,828 pesos, representing money that had accrued, under the Federal law to pay the Philippine Government the equivalent of taxes collected upon vegetable oil from the islands. This item, however, did not represent an annual sum in any such amount, since the sum in question had been accruing for over three years. The total receipts, thus augmented, and with some minor entries, were 210,072,791 pesos, for 1937, as against 84,927,916 for 1936. Disbursements from the Commonwealth's general fund totaled, for 1937, 92,552,979 pesos; this included 12,435,495 pesos in contributions to local governments, 8,065,084 for the service of the public debt, 14,139,726 in outlays and investments, and 29,004,479 pesos paid out in salaries and wages. The Commonwealth's government began the calendar year 1938 with current liabilities of 17,365,098 pesos, a current accumulated surplus of 165,427,481, and cash totaling 177,076,202 pesos; the cash item was about thrice what it had been a year earlier, its rise reflecting the receipt of proceeds of the United States Government's collections of the tax on vegetable oils, mentioned above, as diminished by appropriations made in 1937. Further appropriations out of the vegetable-oil moneys, subsequently made, carried the total of such appropriations by the end of August, 1938, to some 6,000,000 pesos in excess of the total that had been received. The money thus appropriated was destined in general for public works, stock in companies closely connected with the Commonwealth's government, and enterprises for social betterment. The public bonded debt of the Commonwealth at the close of 1937 totaled 150,437,000 pesos; net of sinking funds, it stood at 86,321,178 pesos.

Transportation. Of the 875 miles of railway line in the Philippines, the chief part was in Luzon; the Manila Railroad Company, of which the Commonwealth owned the common stock, operated 677 miles in 1937; in January, 1938, an extension of

this railway's southern line, closing the gap over Ragay Gulf, began regular operation. The Philippine Railway Company, operating divisions in Iloilo and Cebu, though not owned by the Commonwealth, went into receivership in 1937 and the government, its chief creditor, took over the operation of the line. The mileage of highway (1937) was 10,104. About 930 miles of new highways were built in 1938, and the mileage of national highways at the end of 1938 was estimated as over 6000. An extensive rise in the use of trucks and busses on the highways was reported in 1938 as having continued, but at a much reduced rate. There were, in 1937, 10,198 private and 1856 public motor trucks and 3906 motor busses. Manila had regular transportation by airplane for mail and passengers to and from the United States after 1936 and was similarly connected with China, from 1937 on, by a route operated by Pan American Airways. Two insular companies operated, respectively, airplanes over two routes from Manila and three from Iloilo, in 1937. Passengers carried by commercial airplanes in the islands in 1937 numbered 22,384, and 1,699,627 passenger-miles were flown, in 844,003 flight-miles.

Government. The constitution of 1935, created by a convention elected by the people of the islands, under authority of an act of the United States, was approved in that year by President Roosevelt and ratified by a Philippine plebiscite; on it is founded the government, styled the Commonwealth of the Philippines, which came into effect Nov. 15, 1935. This government, while designed to function after the Philippines shall obtain their independence, exerts during the transitional period preliminary to the attainment of independence (from Nov. 15, 1935, until July 4, 1946, as set by the act of Congress of Mar. 24, 1934), an authority limited in some respects: The United States reserves authority over defense, foreign relations, and some features of finance; it reserves authority to intervene in order to preserve the Commonwealth government, protect life, individual liberty, and property, and meet governmental obligations under the Constitution. The President of the United States may accordingly veto any Philippine law or executive order judged to violate a contract of the Commonwealth or an international obligation of the United States, and the United States Supreme Court remains the final authority for determining litigation involving the insular constitution and laws. The chief representative of the authority of the United States in the islands is the United States High Commissioner to the Philippine Islands; similarly a Philippine Commissioner resides in the United States. The executive head of the government is a President, elected by the popular vote for a term of six years and barred from reelection to an immediately successive term. The President has a limited veto over legislation and considerable control over provincial and municipal authorities. A Vice-President, also, is elected to serve for six years. The legislative power resides in a unicameral National Assembly, which has 98 members; the seats are filled every three years by popular vote. The Assembly may override the Commonwealth President's veto by a vote of two-thirds. All men and (since December, 1938) all women over 21 years of age and able to read and write English, Spanish, or a native language are entitled to vote.

In 1938 the President of the Commonwealth was Manuel Quezon (elected Sept. 17, 1935); Vice-President, Sergio Osmeña; United States High

Commissioner, Paul V. McNutt (took office Feb. 27, 1937); Resident Commissioner to the United States, Quintin Paredes (resigned Sept. 29, 1938) and Joaquin Miquel Elizalde (successor).

HISTORY

Relations with the United States. The main motif in the political relations between Washington and Manila was in 1938, as in earlier years, the issue of Philippine independence. The efforts to deal with this issue were swayed in one direction and another by strong opposite influences; the progress of the Japanese arms in China steadily reduced the expectation of economic and political security for the Philippines after their severing the tie with the United States. Demand on the part of tropical lands under the American flag for greater quotas of exportation of sugar to the American market served as reminders that the Philippine product might not retain ease of access to that market after political independence had been achieved; and a substantial cash balance in favor of the islands resulted yearly from the trade with the United States. The Joint Preparatory Committee of Filipino and American members, which had held hearings in the islands in 1937 on the economic bearings of independence, returned to the United States in November. Its report, issued a year later (Nov. 28, 1938), recommended that the gradual imposition of taxes on Philippine imports, already provided for the years from 1941 to 1946, should continue after the islands' attainment of independence in the latter year, so that the Philippines would not become subject to the full American tariffs until 1960. President Roosevelt at the time gave his approval to the report. This further extension, on a diminishing scale, of preferences to Philippine goods would, if adopted, involve the amendment of the Independence act of 1934, which had provided for the lapse of the preferences in 1946.

President Quezon, had for some 30 years, and notably as recently as early in 1937, urged that the Philippines be made independent at the earliest possible moment. However, High Commissioner McNutt having made in March, 1938, a statement favorable to indefinite postponement of entire independence for the islands, Quezon went so far as to approve "a re-examination of the whole subject (of Philippine-American relations) at once." The Popular Front, a political group of liberal principles, met McNutt's suggestion by sending President Roosevelt (March 28) a message asking that McNutt be recalled, and by urging (April 11) in another petition to Roosevelt, that independence be made complete before 1946; but later this party, in issuing its program for the election of members of the Assembly omitted in October any mention of independence prior to the statutory date.

Elections. Closely connected with the developments of sentiment as to relations with the United States was the election of members of the National Assembly. At this election, held on November 8, the Nationalist party, headed by President Quezon, won the great majority of the seats. The opposition consisted of the Popular Front, an alliance of several parties considered as more advanced in liberalism than the Nationalists. These parties included the Sakdalistas, Radicals, and Youth Party. They accused the administration of tending toward fascism, of violating the guarantees of freedom of speech and of assembly, and of failure to solve agricultural problems. This was the first general election, to legislative office under the Common-

wealth government, in which women had voted. With regard to the electioneering charges of infringement of civil rights, made by Quezon's opponents, he was reported to have put several provinces under the control of the constabulary early in November, after word of political disorders in the areas involved.

Internal Matters. Encounters between Moros and Philippine troops from time to time indicated that efforts to keep the province of Lanao in order had not yet fully succeeded. President Quezon's veto, in June, of a bill designed to require the public schools to set aside time in which pupils could receive religious instruction, brought out distinctly a difference of views on the subject of church and state; Quezon, criticized by Mgr. Reyes, Archbishop of Cebu, charged interference of the Church in state affairs.

Legislation. A regular session of the Assembly, which adjourned late in May, was followed by a special session which adjourned on August 14. The regular session enacted, in addition to the regular budget calling for 75,600,000 pesos, a measure appropriating 96,400,000 pesos for public works to be carried out in the course of four years. An act passed in May created a National Abaca Company and provided 10,000,000 pesos toward this company's capital, leaving the remaining 10,000,000 to be provided by provincial and municipal governments; this company was to stabilize the marketing and production of abaca, or Manila hemp, a function similar to that already served, as to rice, by the National Rice and Corn Corporation; but as abaca went mainly into the foreign market, the enterprise of stabilizing its price presented a problem of a different order. Special appropriations were made for public markets and slaughter houses (10,000,000 pesos), systems of irrigation (4,500,000 pesos), and for the National Merchandising Corporation (2,000,000 pesos), but these were vetoed, in accordance with a declared intention of President Quezon to shun avoidable deficits. The wages of those employed in public works were required by statute to be at least 1 peso a day in the provinces and 1¼ in Manila. A unit of fixed weight was established for leaf tobacco. Bills to create additional taxes failed to pass.

The subsequent special session made appropriations totaling about 30,000,000 pesos; these included a number of the appropriations that had been vetoed after passage by the earlier session; in addition, 2,100,000 pesos were appropriated for taking a census and 1,500,000 for use in leasing, from extensive estates, land to be sublet to poor persons. The appropriation bills of this session all bore clauses requiring certification from the Financial Secretary that funds required under their terms were available. In this form the appropriations received the presidential approval.

PHILLIPS UNIVERSITY. A coeducational institution of higher learning at Enid, Okla., founded in 1907. The enrollment for the year 1938-39 was 590. The attendance at the 1938 summer session was 256. The faculty numbered 38. The productive endowment amounted to \$677,982, and the income for the year was \$149,162. The library contained 28,493 volumes. During the year, plans were made for the erection of three new buildings: A student union building, a gymnasium and swimming pool, and a dormitory for women. President, Eugene S. Briggs, Ph.D., inducted Feb. 1, 1938.

PHILOLOGY, CLASSICAL. As long as opportunities for teaching dictated such a choice, Latin studies were more cultivated than Greek. Now that

Latin is approaching Greek in obsolescence in the secondary school and even in the college curriculum, the practical consideration tends to disappear, and the relative significance of the ancient literatures and civilizations becomes the basis for preference. This has resulted in a stronger position for Greek (relatively, not absolutely) as compared to Latin. Furthermore, a renaissance of interest in classical literature in translation, as shown in the contents of certain newly required college courses at such universities as Chicago and Columbia, tends to focus interest on Greek rather than Latin studies. It is in keeping with this tendency that the activity of classical scholars, in Europe as in America, seems to be in the direction of investigations in the history of ideas, applied to authors, periods, and verbal concepts—what the Germans style *Begriffsforschung*. Grammatical and syntactical studies are quite neglected. Textual criticism has resolved itself into recording the minutest variations in the poorest manuscripts; emendation is a rejected art. In papyrology there have been no considerable publications of literary texts; the increment is chiefly of economic interest, chiefly of the Ptolemaic period in Egypt. Through the influence of archaeology, as, for example, in the newly completed researches at Troy, the upper limit of the classical student's period is being further extended. Archaeological work also, especially in the Athenian Agora, has quickened interest in epigraphical studies. It is worth mentioning that J. Kirchner, the German master of Greek epigraphy, complains that he has no followers in his own country; the center for these studies is now in the United States. Latin epigraphy has received a set-back in the second suspension of the publication of the *Olcott Epigraphical Lexicon* at Columbia University after only a few fascicles were produced. The retrogression of German scholarship has continued; the influence of the dominant political viewpoint is everywhere apparent. An example may be cited. In a new volume of the monumental encyclopedia of Pauly-Wissowa-Kroll, universally regarded as the most authoritative reference work in classical philology, the article on Peisistratos, done by a reputable scholar, contains the sentence "Peisistratos belonged indubitably to the Leader figures of the Nordic type" (*P. gehört zweifellos zu den Führergestalten nordischer Art*).

Orientation in the progress and direction of the field as a whole is best provided by the four principal bibliographies. These are: (1) *Jahresbericht über die Fortschritte der Klassischen Altertumswissenschaft*. This appears annually and carries in each volume extensive summaries of scholarly activity in selected ancient authors or subjects over a period of several years; it also carries obituaries of prominent classical scholars. As a supplement to the *Jahresbericht* there appears the *Bibliotheca Philologica Classica*, which lists, without evaluations, all classical books and articles appearing during the preceding year. (2) J. Marouzeau, *L'Année Philologique* is an annual catalogue, with brief summaries of books, articles, and reviews, including those on classical archaeology. (3) *Klassieke Bibliographie* (Utrecht) provides cumulative index cards of books and articles. (4) *The Year's Work in Classical Studies* gives summaries and criticisms by outstanding British scholars of progress in their respective fields of Greek Literature, Latin Literature, Greek History, Roman History, Greek and Roman Religion, Ancient Philosophy, Greek Archaeology, Italian Archaeology, and occasionally other subjects.

Certain periodicals devote themselves almost exclusively to critical reviews of work in classical philology. The most extensive and thorough reviews are in the German *Gnomon*; this journal also provides the most complete listing of new books in a bi-monthly supplement. *Philologische Wochenschrift*, in addition to its own reviews, summarizes critical opinion from all the other classical periodicals. The British *Classical Review*, in addition to thorough reviews, provides summaries of articles in other philological journals. The American *Classical Weekly* carries numerous brief but scholarly reviews, summaries of articles, and lists of new books. In this group should be mentioned also *Revue de Philologie*, *Rivista di Filologia e d'Istruzione Classica*, and *Supplement Critique au Bulletin de l'Association Guillaume Budé*. Most of the other periodicals in the field carry reviews as well as substantive articles. The principal ones are: *The American Journal of Philology*, *L'Antiquité Classique*, *Atene e Roma*, *Bollettino di Filologia Classica*, *The Classical Journal*, *Classical Philology*, *The Classical Quarterly*, *Les Études Classiques*, *Hermes*, *Hermeneus*, *The Journal of Hellenic Studies*, *The Journal of Roman Studies*, *Klio*, *Language*, *Latomus*, *Mnemosyne*, *Il Mondo Classico*, *Philological Quarterly*, *Philologus*, *Revue Belge de Philologie et d'Histoire*, *Revue des Études Grecques*, *Revue des Études Latines*, *Rheinisches Museum für Philologie*. In addition there are numerous serial and occasional publications of Universities and Academies. The organs of the various national archaeological institutes and the publications of the national schools at Rome and Athens always contain matter of philological interest. So also do the journals which deal with medieval and with Byzantine studies.

A guide to the amount, direction, merit, and personnel of American work in Classical Philology is provided by the *Transactions and Proceedings of the American Philological Association*. Vol. lxxviii (for 1937, published 1938) contains the following papers: "Suggestions for Guidance in the Preparation of a Critical *Index Verborum* for Latin and Greek Authors," W. A. Oldfather; "Homer's Gods—Prolegomena," G. M. Calhoun; "A Sixth-Century Epitome of Seneca, *De Ira*," C. W. Barlow; "Two Curse Tablets from Beisan," H. C. Youtie and C. Bonner; "A Choragic Epigram from Athens," M. MacLaren, Jr.; "Notes on the Text of Aristotle's *Poetics*," W. N. Bates; "Theognis and the Persian Wars," E. L. Highbarger; "The Greek Smooth Breathing," E. H. Sturtevant; "Initial Indo-European γ in Greek," C. E. Finch; "Notes on the Apparatus of Leo's Edition of Persius," D. M. Robathan; "A Prelude to Speech in Homer," H. N. Couch; "Malalas on the History of Antioch under Severus and Caracalla," G. Downey; "The Expiatory Rites of 207 B.C.," A. A. Boyce; "The Basic Critical Doctrine of 'Longinus,' *On the Sublime*," F. R. B. Godolphin; "The Platonic Scholia," W. C. Greene; "The Erinys in Aeschylus' *Septem*," F. Solmsen; "The Organization of Gilds in Greco-Roman Egypt," A. E. R. Boak; "The *Continuatio Theophrasti*," H. G. Nickles; "Horace's Influence on American Criticism," J. P. Pritchard; "A Greek Hagiologic Manuscript in Philadelphia," E. C. Tappert; "The Role of Eight Batavian Cohorts in the Events of 68-69 A.D.," M. St. A. Woodside; "The Opportunities for Dramatic Performances in the Time of Plautus and Terence," L. R. Taylor; "The Structure and Proportion of Catullus LXIV," C. Murley; "Contributions of the Herculanean Papyri to Our

Knowledge of Epicurean Logic," P. H. DeLacy; "The Later *Paideia* of Epicurus," N. W. DeWitt; "Plato's Ideas in the Light of Early Scholasticism," G. J. Ryan; "*Heredis Institutio ex Re Certa* and a New Will of the Roman Type," L. Cohen; "A Referee's Hearing on Ownership," C. J. Kraemer, Jr., and N. Lewis; "Hittite *kwis kwis*," E. A. Hahn; "The Early Greek Capacity for Viewing Things Separately," B. E. Perry; "The Shrine of the *Lares Compitales*," L. A. Holland; "The Iuvenes and Roman Education," S. L. Mohler; "The Life of Juvenal," G. Highet. There are abstracts of 18 other papers, and data on the Association, including the names and addresses of the members (over 1000) and their bibliographical record.

In the American periodicals mentioned in the list above, the more important papers in 1938 were the following: In *The American Journal of Philology*, lix, appeared "Enslaved Persons Who Are Free," W. L. Westermann; "Dramatic Uses of the Greek Imperative," L. A. Post; "Notes on the Laws of Motion in Aristotle," I. E. Drabkin; "An Unreported *Culex* Manuscript," D. M. Robathan; "Heracleitus on the Notion of a Generation," H. Fränkel; "Augustus, Vergil, and the Augustan Elogia," T. Frank; "Two Notes on Theopompus, Philippic X," H. T. Wade-Gery; "The Chronology of Aeneid VIII-X," G. E. Duckworth; "The Last Campaign of Kleon and the Athenian Calendar in 422/1 B.C.," M. F. McGregor; "The Terminal Date of Caesar's Command," C. E. Stevens; "Possible Elliptical Compounds in Old English Glosses," H. Merritt; "Zu einigen Wiederholungen bei Lukrez," A. Raubitschek; "Breviora," T. Frank; "Xenophanes and the Olympic Games," C. M. Bowra; "Maenianum and Basilica," K. Lehmann-Hartleben; "A Note on Kleon's Assessment," B. D. Merritt; "The Nationality of the Poet Caecilius Statius," D. O. Robson; "A Thought Pattern in Heracleitus," H. Fränkel; "The New Inscription of the Salaminioi," M. P. Nilsson; "Plato's Epigram on Dion's Death," C. M. Bowra; "The Pentathlon Jump," W. W. Hyde; "Census and Poll-Tax in Ptolemaic Egypt," S. L. Wallace; "Apollonius Rhodius and the Old Geographers," L. Pearson; "Concerning Gothic Intransitive Verbs," A. M. Sturtevant; "The Islands of Peisistratos," H. T. Wade-Gery; "BGU II, 475," H. C. Youtie; "De Attio et Praxidico," W. Kroll.

In *Classical Philology*, xxxiii, appeared "Parody in Achilles Tatius," D. B. Durham; "The Technical Device of Direct Description of Character in Roman Comedy," O. L. Wilner; "The Epigrams of Theocritus," W. C. Helmbold; "Rhodes and Pergamum, 201-200 B.C.," C. G. Starr, Jr.; "Folklore in the *Scriptores Historiae Augustae*," M. L. Trowbridge; "Speeches VIII and X of the Demosthenic Corpus," C. D. Adams; "Horace I. 14," C. W. Mendell; "The Poet and the Muses in Homer," G. M. Calhoun; "On the Friendship of Lucretius with Memmius," W. Allen, Jr.; "Passive Verbs *Sentiendi et Dicendi* with Declarative Infinitive," W. H. Kirk; "The Missing Folios of the Paris Florilegium 15155," D. M. Robathan; "Dionysius of Halicarnassus and the Peripatetic Mean of Style," S. F. Bonner; "The Unnamed Characters in the Plays of Plautus," G. E. Duckworth; "Equites and Celeres," H. Hill; "Was Demosthenes a Panhellenist?" H. B. Dunkel.

The Classical Journal has a more popular and pedagogic character; *Classical Weekly* is devoted chiefly to reviews. Of the studies published in series by various American universities the oldest and

steadiest are the *Harvard Studies in Classical Philology*. Vol. xlix contains "Herbert Weir Smyth," C. N. Jackson; "Euripides and Thucydides," J. H. Finley, Jr.; "Aristophanes and the Art of Rhetoric," C. T. Murphy; "Pliny the Younger's Views of Government," M. Hammond; "Letters and Speeches of the Emperor Hadrian," P. J. Alexander; "Aristotle on the Beauty of Tragedy," G. F. Else; "Plautus and Popular Drama," A. McN. G. Little; "A Fragment of Juvenal in a Manuscript of Orléans," A. P. McKinlay and E. K. Rand. Classical contributions appear also in *Speculum*, *Language*, *The American Historical Review*, organs, respectively, of The Medieval Academy of America, The Linguistic Society of America, and The American Historical Association.

The various series which present scholarly recensions of the texts of Greek and Latin authors continue to add to their lists. The principal series are: *Bibliotheca Scriptorum Graecorum et Latinorum Teubneriana* (Leipzig; various revisions); *Scriptorum Classicorum Bibliotheca Oxoniensis* (Oxford; G. Murray's Aeschylus); *Corpus Scriptorum Romanorum Paravianum* (Turin; Livius Andronicus and parts of Cicero); *Collection des Universités de France publiée sous le patronage de l'Association Guillaume Budé* (Paris; with parallel French translations; parts of Cicero, Heliodorus, Plautus, Plotinus); *The Loeb Classical Library* (Cambridge, Mass.; with parallel English translations). New Latin volumes in this series are Ammianus Marcellinus, vol. iii, J. C. Rolfe; Celsus, vols. ii and iii, W. G. Spencer; Livy, vol. xii, E. T. Sage and A. C. Schlesinger; Plautus, vol. v, P. Nixon; Pliny, *Natural History*, vol. i, H. Rackham; Varro, *De Lingua Latina*, vols. i and ii, R. G. Kent; *Remains of Old Latin*, vol. iii, E. H. Warmington. New Greek volumes are Aristotle, *Organon*, vol. i, H. P. Cooke and H. Tredennick; Aristotle, *On the Heavens*, W. K. C. Guthrie.

A half dozen of the important books of the year must be mentioned: E. Boisacque, *Dictionnaire Étymologique de la Langue Grecque*; H. Diels, *Die Fragmente der Vorsokratiker*, revised by W. Kranz; T. Frank (editor), *Economic Survey of Ancient Rome*, vol. iv; O. Kern, *Die Religion der Griechen*, vol. iii; A. Schmekel, *Forschungen zur Philosophie des Hellenismus*; W. W. Tarn, *The Greeks in Bactria and India*.

PHILOLOGY, MODERN. When Americans attempt to understand the antipathy that European nations bear toward one another, they are frankly baffled, and rightly so, for these mutual dislikes are almost innate, going back many centuries in time. Thus, England and France are at present friends, but this amicable feeling is one rather born of necessity, for beneath the surface there lingers a mutual suspicion dating from the Hundred Years' War (1338-1453), when England was France's pet aversion. Similarly, Italy and France have been more or less at loggerheads ever since the French King, Charles VIII, made the first of a series of invasions of the peninsula in 1494. But the hostility between Germany and France is even more remarkable in its antiquity, being almost consecrated by time. That there is little doubt that it goes back to 486, when the Frankish German leader, Clovis, won a final victory over Syagrius, the last Roman governor of Gaul, near Soissons, is evident from a verse in the Old French poem, *Li Roumans de Berte aus grans Piés*, written by Adenet le Roi in 1270, which reads: "Adonc tenoient Franc les Tiois por amis," or "Then the French considered the Germans as friends." Thus, one can see that

the Franco-German mutual hatred not only antedated Adenet by many centuries, but that it was so deeply embedded in the hearts of both peoples that men of letters and scholars underwent its influence.

We are not astonished, therefore, to note that the present-day military offensive of the Germans against the French should be accompanied by a similar one in the literary and, especially, scholarly fields. Ever since the late Joseph Bédier (q.v.) published before the War his famous four-volume work, *Les Légendes épiques*, with the avowed intention, as he stated in a more recent contribution, of claiming for France alone—and that, be it said, contrary to the advice of his master, Gaston Paris—the glory of having given to the world in the 12th century the most beautiful literature produced in the entire Middle Ages, German scholars have taken offense, accusing him of seeking, as a consequence of nationalistic impulses, to deprive their nation of its just share in that honor. During the past year, this quarrel, which had been simmering during the post-War period, was revived in a very acute manner by the publication of two works, each averaging a thousand or more pages, notably *Germania romanica* (Berlin), by F. Gamillscheg, professor in the University of Berlin, and *Germanisches in Wallonien und Nordfrankreich* (Bonn), whose author is Franz Petri, professor in the University of Cologne.

Both of these authors attempt to prove,—and in this their reasoning is as unsound as that used by Bédier to confirm his interesting hypotheses,—by a meticulous study of patronymics, place-names, agricultural terms, etc., that the whole basis of Merovingian and Carolingian society was Germanic—which is probably true, to a great extent—and that, therefore, the *Chansons de Geste* and other forms of literature are of the same source—which does not necessarily follow.

But even if one admits the truth of the contentions of the German scholars, what difference does that make? The probabilities are that not only are both Bédier and his adversaries right, but that there is also an important Celtic element in this literature. The works themselves, however, are the creations of the literary artists of that time, and to them alone belongs the credit of their existence. One might as well attempt to prove that Shakespeare, Montaigne, Corneille, or any other great writer belongs to some other country than his own because he borrowed from all sources. On the contrary, one is inclined to consider this fusion of all foreign elements into their work a trait of the genius of the above-mentioned authors, giving to their masterpieces a universal appeal.

Indeed, such a discussion as the one mentioned above would be most welcome for all the valuable data it supplies, were it not for the fact that it also reveals the sad state into which modern scholarship has fallen, for herein one can see that our most eminent savants are actuated by a desire, not to get at the truth, but to prove a preconceived hypothesis, no matter how improbable it may be.

Sir Richard Paget, who seems to have a penchant for making sensational discoveries that invariably turn out to be of little, if any, worth, has now invented a talking machine which, he claims, reproduces "all the sounds of human speech." As he defines talking, according to the *New York Times*, as "only the natural result of the gestures of our mouths and the motions of our jaws," his most recent theory is that gestures are "20,000 times more effective than is customary speech." Hence, his machine is said to emphasize the latter. Sir Richard's

contributions would not deserve attention here were they not so widely diffused over the radio and through the public press; so, in order to correct any inaccurate ideas that the reader or auditor may have formed, it may be said that the British phonetician seems totally unaware of the valuable scientific investigations that are being made in laboratories both here and abroad.

The Third International Congress of Phonetic Sciences was held from the 18th to the 22d of July at the University of Ghent in Belgium. Of the six general subjects on the program of the meeting, three were considered as of vital importance, as follows: Methods of improving the language and pronunciation of broadcasting; the anthropological differences between the speech-sounds of different races,—especially those of the Armanoid, Hottentot, and Caffer races,—with emphasis upon the connections between the oldest human speech-sounds; and, finally, the introduction of various new phonetic methods and techniques as demonstrated from the point of view of linguistics, physiology, pathology, pedagogy, psychology, and acoustics. That more than 70 lectures, dealing with practically all of the aspects of the researches being made in phonetics, were given at the same time is an indication of the vitality of the subject as well as of the widespread interest in its problems. In the United States this was especially evident during 1938 from the unusually large number of contributions and letters to reviews and newspapers, dealing with the correct use and pronunciation of the English language.

An interesting innovation that bids fair to have marked influence on the literary criticism of the future was made by Yves Gandon in his *Le Démon du Style* (Paris). From a careful analysis of vocabulary, word-associations, sentence-flow, color, artistic texture, etc., of style used by different authors, he attempts to characterize and classify each of them according to a certain definite standard. Thus, his chapter on André Gide bears the sub-heading, "the style without style"; Paul Claudel, "the style in the state of grace"; François Mauriac, "the feverish style"; Jules Romains, "the unanimist style"; Georges Duhamel, "the luscious style"; Jean Giraudoux, "the pleasures and sports of style"; Francis Carco, "the felicitous style"; Roland Dorgelès, "the oral style"; Henry de Montherlant, "the horsewhip style"; Colette, "the sanctity of style"; etc. As Prof. Charles Cestre remarks in *The New York Times* of October 9, literary criticism has too long neglected to grant necessary attention to this important subject, using only two very general terms, good and bad, without in any way attempting to establish precisely the meaning of either. Henceforth, critics should be expected to supply the reader with some aesthetic criterion by which he may judge for himself whether or not to accept the conclusions presented.

General. Among the many interesting titles relating to primitive man, ancient languages and history, the following may be mentioned: F. Boas, *The Mind of Primitive Man* (New York), a revised edition of this suggestive study; P. E. Raymond, *Prehistoric Life* (Cambridge, Mass.), a useful survey; F. Boas, *General Anthropology* (Boston), an introductory work; *Universal World History* (10 vols.; New York), contributions of 150 historians, edited by J. A. Hammerton; J. Girault, *Album graphique d'Alphabets: Français, Étrangers et Ornés* (ib.), a collection of early calligraphy, French and foreign alphabets, etc.; Sir James G. Frazer, *Totemica* (ib.), a valuable supplement to *Totemism and Exogamy*; C. Wissler,

Man and Culture (ib.), a sixth edition of these lectures; A. C. Woolner, *Languages in History and Politics* (ib.), the place of languages in the history of human society; T. Fitzhugh, *The Indo-European Accent* (Charlottesville, Va.), a study of the voice of speech and song; F. Sommer and A. Falkenstein, *Die hehitisch-akkadische Bilingue des Hattušili I (Labarna II)* (Munich), Hittite text and Akkadian translation of a document relating to Hattusilis I, who lived about 1800 B.C. and who was also known as Labarnas II; W. Nestle, *Der Friedensgedanke in der antiken Welt* (Leipzig), a study of the peace-idea in the ancient world; G. Devoto, *Tabulae Iguvinae* (Rome), a study of the Umbrian Tables of Iguvium, giving the ritual of the Atiedian Brotherhood, originally discovered in 1444; F. Butavand, *L'Enigme Ibère* (Paris), a discussion of the Iberian problem; *The Family, Past and Present* (New York), selected writings, tracing the history of the family, edited by B. J. Stern; H. Belloc, *The Great Heresies* (ib.), an account of heresies, such as Mohammedanism, Albigenianism, etc., through 1700 years of history; *European Civilization: Its Origin and Development* (vol. vi; ib.), of which the present volume contains contributions on the political and cultural history of Europe since the Reformation, edited by E. Eyre; S. G. Champion, *Racial Proverbs* (ib.), 26,000 proverbs selected from 186 languages and dialects; W. E. Bush, *1,800 Selected Proverbs of the World* (Boston), from ancient to modern times; D. S. Davidson, *A Preliminary Consideration of Original Australian Decorative Art* (Philadelphia), a study issued by the American Philosophical Society; M. F. Ashley-Montagu, *Coming into Being among the Australian Aborigines* (New York), a study of the procreative beliefs of the native tribes; P. H. Buck, *Vikings of the Sunrise* (ib.), a history of the settlement of the Pacific Islands; V. Quinn, *Roots: Their Place in Life and Legend* (ib.), the role of herbs in history; D. M. Liddell, G. A. Pfeiffer, and J. Maunoury, *Chessmen* (ib.), a history of their design; B. A. G. Fuller, *History of Philosophy* (ib.), a one-volume history of ancient, medieval, and modern philosophy; G. Spearman, *Psychology Down the Ages* (2 vols.; ib.), its history through 3000 years; C. A. Ellwood, *The Story of Social Philosophy* (ib.), a study of social thought from Plato to Lester F. Ward; Marion Lockwood and A. Draper, *The Story of Astronomy* (ib.), its history from the earliest times; A. Einstein and L. Infeld, *The Evolution of Physics* (ib.), the growth of ideas from early concepts to the present; Sir B. Fletcher, *A History of Architecture* (ib.), the tenth edition, revised; J. C. Webster, *The Labors of the Months in Antique and Medieval Art* (Princeton, N. J.), a survey; Lillian Moore, *Artists of the Dance* (New York), biographical studies from ancient times to the present; and H. Leichtentritt, *Music and Civilization* (Cambridge, Mass.), the development of Western music from the Greeks to modern times in relation to its social and cultural background.

The medieval and Renaissance periods are represented by V. F. Hopper, *Medieval Number Symbolism* (New York), its source, meaning, and influence on thought and expression; G. G. Coulton, *Medieval Panorama* (ib.), a complete survey of the Middle Ages, with special reference to England; G. Kirby, *The Medieval Conception of Law* (ib.), its history; Eva M. Sanford, *The Mediterranean World in Ancient Times* (ib.), a volume in the Ronald Series in History; L. C. MacKinney, *The Medieval World* (vol. ii; ib.), a survey; J. W.

Thompson, *Medieval Libraries* (Chicago), the history of manuscripts and libraries from the beginning of the Christian era to the invention of printing; S. Prentice, *The Voices of the Cathedral* (New York), a study of the art of the cathedral; J. T. McNeill and Helena M. Gamer, *Medieval Handbooks of Penance* (ib.), a translation of the principal *Libri poenitentiales* and selections from documents; G. G. Coulton, *Inquisition and Liberty* (ib.), a social history of the Inquisition in Europe; A. S. Keller, O. J. Lissitzyn, and F. J. Mann, *Creation of Rights of Sovereignty Through Symbolic Acts, 1400-1800* (ib.), a study of the practice of the leading European maritime powers of the time; G. A. Campbell, *The Knights Templars: Their Rise and Fall* (ib.), a history of the order; and *Tobacco, Its History, Illustrated by the Books, Manuscripts and Engravings in the Library of George Arents Jr.* (vol. ii, 1615-98; ib.), a bibliographical survey, compiled by J. E. Brooks.

African. Among the contributions to this interesting field, which is, fortunately, being more and more studied, the following may be mentioned: E. B. Smith, *Egyptian Architecture as Cultural Expression* (New York), its development from beginnings through the Roman domination; Josephine Mayer and T. Prideaux, *Never to Die: The Egyptians in Their Own Words* (ib.), translated selections from early Egyptian writings giving a picture of their life; F. Cumont, *L'Égypte des Astrologues* (Brussels), ancient Egypt as presented by the history of its astrologists; S. L. Wallace, *Taxation in Egypt from Augustus to Diocletian* (Princeton, N. J.), a survey of Roman occupation; M. M. Knight, *Morocco as a French Economic Venture* (New York), an account of French occupation; M. Fortie, *Black and Beautiful* (Indianapolis, Ind.), the story of a life in Safari Land; W. D. Hamby, *Anthropometry of the Ovim-Bundu Angola* (Chicago), a study in African ethnology; Isak Dinesen, *Out of Africa* (New York), a description of plantation-life in Kenya; M. J. Herskovits, *Dahomey* (2 vols.; ib.), a study of the culture of the ancient West African kingdom; J. Lukas, *Zentralsudanische Studien* (Hamburg), studies on the culture of Central Sudan; R. Henriques, *Death by Moonlight* (New York), an account of lion-shooting in Sudan; H. Melzian, *A Concise Dictionary of the Bini Language of Southern Nigeria* (London), the first dictionary in English; I. Schapera, *A Handbook of Tswana Law and Custom* (New York), compiled for the Bechuanaland Protectorate Administration; L. Fouche, *Mapungubwe* (ib.), an archaeological study of primitive Bantu civilization on the Limpopo; and B. J. F. Laubscher, *Sex, Custom and Psychopathology* (ib.), a study of South African pagan natives.

Chinese and Japanese. Contributions to Chinese include C. S. Gardner, *Chinese Traditional Historiography* (Cambridge, Mass.), the first attempt in any language to supply a comprehensive description of the textual and historical criticism, style, etc., that have dominated Chinese historical scholarship for over 2000 years; L. Warner, *Buddhist Wall Paintings: A Study of a Ninth Century Grotto at Wan Fo Hsia* (ib.), a study in early Chinese painting, devoted to the twelfth cave of the Myriad Buddhas; B. Rowland, Jr., *Outline and Bibliographies of Oriental Art* (ib.), intended for teachers; Louise Crane, *The Magic Spear and Other Stories of China's Famous Heroes* (New York), a collection of Chinese folk-tales; *Chinese Fairy Tales and Folk Tales* (ib.), collected and

translated by W. Eberhard; C. P. Fitzgerald, *China: A Short Cultural History* (ib.), covering 3000 years; G. H. Danton, *The Chinese People: New Problems and Old Backgrounds* (Boston), a discussion of the problems of China in relation to its historic culture; *The Wisdom of Confucius* (New York), a new English version, translated and edited by Lin Yutang; C. Crow, *Master Kung: The Story of Confucius* (ib.), a biography of the sage; Shui Hu Chuan, *All Men Are Brothers* (ib.), a new one-volume edition of this 15th-century classic, translated by Pearl Buck; S. Hedin, *The Silk Road* (ib.), an account of an expedition to Sinkiang, translated from the Swedish; Dorothy Graham, *Chinese Gardens* (ib.), a history of their development in form and design; D. S. Dye, *A Grammar of Chinese Lattice* (Cambridge, Mass.), a study of the designs of 2500 lattice-windows in old Chinese buildings; and H. G. W. Woodhead, *The China Year Book, 1937* (Chicago), a reference work.

On Japanese we have Marion M. Dilts, *The Pageant of Japanese History* (New York), an introductory survey; K. S. Latourette, *The Development of Japan* (ib.), a fourth revised edition; J. Harada, *A Glimpse of Japanese Ideals* (ib.), lectures on Japanese art and culture; E. Steinilber-Oberlin, *The Buddhist Sects of Japan* (ib.), their history, philosophical doctrines, and sanctuaries; B. Taut, *Houses and People of Japan* (ib.), a study of domestic architecture and customs; W. Price, *Children of the Rising Sun* (ib.), a study of the Japanese people; S. Sakanishi, *Kyogen: Comic Interludes of Japan* (Boston), translations of brief Japanese comedies; and E. Lederer and Emy Lederer-Seidler, *Japan in Transition* (New Haven, Conn.), an interpretation of Japan in the light of its tradition and national characteristics.

Indo-Iranian, Armenian, and Tibetan. A very interesting contribution to the history of Hindu philosophy is *The Secret of Recognition* (*Pratyabhijnāhrdayam*) (Adyar, Madras), composed by Ksemarāja, who lived in the first half of the 11th century. The Sanskrit text of this reviving doctrine of salvation was edited by the staff of the Adyar Library under the supervision of G. S. Murti, with German translation and notes by Rev. E. Baer and authorized translation into English by Dr. K. F. Leidecker. Other works include H. G. Rawlinson, *India: A Short Cultural History* (New York), an account extending from the Indus valley civilization of 2500 B.C. to the present, edited by C. G. Seligman; H. Oertel, *Zu den Kasusvariationen in der vedischen Prosa* (Munich), a study of case-forms in Vedic prose; J. Mascaro, *Himalayas of the Soul* (New York), the principal Upanishads, translated from the Sanskrit; *Hindu Scriptures* (ib.), containing hymns from the Rig-veda, five Upanishads and the Bhagavadgita, edited and translated by N. MacNicol; B. Rowland, Jr., *The Wall-Paintings of India, Central Asia and Ceylon* (Boston), a comparative study, with an introductory essay on "The Nature of Buddhist Art," by A. K. Coomaraswamy; R. LeMay, *A Concise History of Buddhist Art in Siam* (New York), from the beginning of the Christian era to the end of the 16th century; E. C. Dewick, *The Indwelling God* (ib.), studies in the conceptions of divine indwelling in Hindu and Moslem thought; Elizabeth S. MacDonald, *Hinduism* (Boston), a brief exposition; W. A. Stanton, *Out of the East* (New York), a history of Christianity in India; Ruth I. Seabury, *Dinabandhu* (ib.), a background work on India; D. S. Hatch, *Further Upward in Rural In-*

dia (ib.), a survey of rural reconstruction; F. H. Beckmann, *Dust of India* (Boston), an account of a sojourn in India; S. Hossain, *Gandhi: The Saint as Statesman* (Los Angeles, Calif.), a biographical study; Mary P. Jeffery, *Dr. Ida: India* (New York), a life of Dr. Ida S. Scudder, medical missionary to India; *A Handbook for Travelers in India, Burma and Ceylon* (ib.), a new edition of this guide; and D. L. R. Lorimer, *The Burushaski Language* (vol. iii; Cambridge, Mass.), containing vocabularies of Burushaski and Wershikwar, two unclassified languages spoken north of Kashmir.

On Persian we have G. Morgenstierne, *Indo-Iranian Frontier Languages* (vol. ii; Cambridge, Mass.), a study of the little-known Iranian Pamir languages, such as Yidgha-Munji, Sanglechi-Ishkashmi, and Wakhii, spoken by small and isolated communities; M. N. Dhalla, *History of Zoroastrianism* (New York), a revised and enlarged edition of the author's *Zoroastrian Theology*; A. U. Pope, *A Survey of Persian Art: From Pre-historic Times to the Present* (ib.), of which the regular edition will be in seven volumes; E. S. Drower, *The Mandaeans of Iraq and Iran* (ib.), their cults, customs, magic, legends, and folklore; and *Oriental Manuscripts of the John Frederick Lewis Collection in the Free Library of Philadelphia* (Philadelphia), a descriptive catalogue.

Armenian is represented by A. Mahdesian, *Armenia, Her Culture and Aspirations* (Fresno, Calif.), an exposition of Armenian history; *The Armenians in Massachusetts* (Boston), a WPA survey.

On Tibetan, which may be entered here for geographical reasons, we have W. E. Clark, *Two Lamaistic Pantheons* (Cambridge, Mass.), a study of Tibetan statuettes, manuscript figures, and bronzes; L. M. King, *The Warden of the Marches* (Boston), an account of adventure in Tibet; and F. K. Ward, *Plant Hunter's Paradise* (New York), a record of journeys on the Burma-Tibet frontier.

Albanian, Finnish, and Hungarian. In regard to these languages, it should be noted that Albanian belongs to the Indo-European family, with which we are concerned at present, though there is much doubt as to where it is to be placed precisely, for most scholars are inclined to consider it a sort of linguistic oasis, classifying it by itself. Hence, S. E. Mann's *A Historical Albanian and English Dictionary* (1496-1938) (London, Eng.), which has reached the word *bagá*, is most welcome, for it throws much light on the numerous loan-words that have entered into this interesting tongue.

Finnish and Hungarian may be classed here merely for geographical reasons, since they have no connection whatever with the above-mentioned family, being members, along with their sister-language, Turkish, of the Ural-Altaic family. On these languages we have J. H. Wuorinen, *The Finns on the Delaware, 1638-55* (New York), a study of the role played by the Finns in the creation of New Sweden; T. D. Rosvall, *The Very Stupid Folk* (ib.), a collection of folk tales from the Finnish; J. L. Runeberg, *The Tales of Ensign Stal* (Princeton, N. J.), a 19th-century poem-cycle of Russia's conquest of Finland, selected and translated from the Swedish by C. W. Stork; K. Ekman, *Jean Sibelius: His Life and Personality* (New York), a new edition of the biographical study of the great composer, translated from the Finnish; S. A. Clark, *Finland on Fifty Dollars* (ib.), a new guide-book; H. Sutherland, *Lapland Journey* (ib.), an account of a journey through Finland and Lapland; and R. A. Hall, Jr., *An*

Analytical Grammar of the Hungarian Language (Baltimore), a detailed study, issued by the Linguistic Society of America. Mention may also be made here of the opening of the Hungarian Reference Library at 19 West 44th Street, New York City. This collection, which consists of books, reviews, etc., in both English and Hungarian, dealing with Hungary and its problems, was gathered through 30 years by the late Charles Feleky, a scholar and bibliophile. In 1937 it was purchased by the Hungarian National Museum in Budapest for the purpose of creating in the United States a reference library for the use of students and others.

Slavic. Notwithstanding the political, literary, and linguistic importance of the Slavonic nations, little significant attention was paid to them during the past year. Among the few works dealing with Russian that may be of interest to both students and general readers the following may be noted: I. Spector, *College Russian* (Portland, Ore.), a textbook; the same author's *The Golden Age of Russian Literature* (Seattle, Wash.), a survey of representative authors; D. T. Rice, *The Beginnings of Russian Icon Painting* (New York), the Ilchester Lecture, delivered at Oxford University, England; Anna M. Babey, *Americans in Russia, 1776-1917* (Brooklyn, N. Y.), an account of American travelers in Russia; A. S. Pushkin, *The Captain's Daughter* (New York), edited with notes and vocabulary by Anna H. Semeonoff; M. Paléologue, *The Enigmatic Czar* (ib.), a life of Alexander I, translated from the French; L. Tolstoy, *War and Peace* (vols. iv, v, and vi; ib.), the final volumes of the series issued by the Limited Editions Club; M. Gorky, *Collected Essays* (ib.), studies on various cultural subjects; Baroness Sophie Buxhoeveden, *Before the Storm* (ib.), recollections of country life in Russia in pre-War years; P. Kerzhentsev, *Life of Lenin* (ib.), translated from the Russian; M. J. Olgin, *Russian Revolution: A Story of Twenty Years* (ib.), a history; *History of the Civil War in the U.S.S.R.* (ib.), an account from 1914 to 1917, edited by Joseph Stalin and others; K. London, *The Seven Soviet Arts* (New Haven, Conn.), a survey of the work of the Soviets in the various fields of art; A. Gide, *Afterthoughts on the U.S.S.R.* (New York), in which the famous French writer tells of his conversion to an anti-Soviet belief; *The Man in the Panther Skin* (ib.), an epic poem by S. Rustaveli, a Georgian poet of the 12th century, whose 800th anniversary was celebrated in the Soviet Union recently; and J. Lehmann, *Prometheus and the Bolsheviks* (ib.), a travel book on Soviet Georgia.

A Caraitic Museum, the only one of its kind in existence, is being erected at Troki, near Wilno, Poland, for the purpose of housing the ethnographical and historical records relating to this Semitic sect. The Caraites or Caraims, who do not accept the Talmud, originated in the Crimea and came to Poland with the Tartars, whose language they speak. The 1500 or more members of this sect now living in Poland are engaged mainly in handicrafts, agriculture, and commerce and have at their head a religious leader called the *Hachan*.

Works dealing with the Polish language and culture include M. Rettinger, *Poles in the Civilization of the World* (Washington, D. C.), relating their history in many countries from the 13th century to the present day; R. Dyboski, *Ten Centuries of Poland's History* (ib.), a short survey; J. Statkowski, *Poland, Old and New* (ib.), a brief cultural and literary history and description; Charlotte Kellogg, *The Girl Who Ruled a King-*

dom (New York), a biography of Jadwiga, who was Queen of Poland in the latter part of the 14th century; M. Haiman, *Poles in New York in the 17th and 18th Centuries* (Chicago), biographical sketches of prominent Colonial Poles; R. M. McBride, *Towns and People of Modern Poland* (New York), a historical and cultural survey; *Contemporary Poland* (Washington, D. C.), an account of its life and development, reprinted from the 1937 *Handbook of Central and Eastern Europe*; and I. J. Paderewski and Mary Lawton, *The Paderewski Memoirs* (New York), the autobiography of the pianist and patriot.

Czecho-Slovakia is represented by R. Freund, *Watch Czechoslovakia* (New York), an account of the country and its people; Elizabeth Wiske-mann, *Czechs and Germans* (ib.), the historical background of the German minority problem; K. Capek, *Masaryk on Thought and Life* (ib.), philosophical and cultural discussions; and F. H. Stuermer, *Training in Democracy* (ib.), a study of the new school of Czecho-Slovakia.

Germanic and Scandinavian. The September issue of the *Deutsches Haus Bulletin* of Columbia University (New York) consisted of a catalogue of some 1500 German books recently exhibited there. Contributions on Germanic include S. Fairbanks, *The Old Frisian Skeltana-Riucht* (Cambridge, Mass.), an edition of an old Germanic law of the 10th century, with translation; M. Bues, *Die Versportung der deutschen Sprache im 20. Jahrhundert* (Greifswald), a study on the influence of the language of sport on German; *Kleiner Liederfreund* (New York), a collection of 202 popular German songs, edited by G. O. Arlt and C. B. Schomaker; Elizabeth Burchenal, *Folk-Dances of Germany* (ib.), containing 29 dances and singing games; H. Reinhardt, *Holbein* (ib.), reproductions of his paintings and engravings, with critical comments; F. Watson, *Wallenstein: Soldier under Saturn* (ib.), a biography of Albrecht von Wallenstein, a general of the Thirty Years' War; F. Meh-ring, *The Lessing Legend* (ib.), an abridged translation from the German of this critical study; L. W. Kahn, *Social Ideals in German Literature, 1770-1830* (ib.), a thesis on their character and development; Bertha Meyer, *Salon Sketches* (ib.), an account of the influence of three famous Jewesses on German literary and social life in the early 19th century; P. A. Schilp, *Kant's Pre-Critical Ethics* (Northwestern University, Ill.), a critical investigation; H. S. Borneman, *Pennsylvania German Illuminated Manuscripts* (Norristown, Pa.), a study of the history and art of the *Frakturschriften*; R. J. Sontag, *Germany and England: Background of Conflict, 1848-1894* (New York), a study of the sources of present-day antagonisms; B. Menne, *Blood and Steel* (ib.), a history of the House of Krupp; D. Nobbs, *Theocracy and Toleration* (ib.), an account of the disputes in Dutch Calvinism, 1600-50; and M. Jagendorf, *Tyll Ulen-spiegel's Merry Pranks* (ib.), a translation of a famous Flemish folk book of the 15th century.

Scandinavian, as usual, is well represented by interesting and scholarly contributions. Among them we may note G. Bach, *The History of Scandinavian Literatures* (New York), a general account, with additional sections by R. Bech, A. B. Benson, A. J. Uppvall, and others; H. Arntz, *Bibliographie der Runenkunde* (Leipzig), a bibliography of studies on the Runic inscriptions; G. L. White, Jr., *Scandinavian Themes in American Fiction* (Philadelphia), a doctoral dissertation; T. Knudsen and A. Sommerfelt, *Norsk Riksmål-*

sordbok (Oslo), an excellent dictionary of Norwegian, which has now reached the letter P; Sir Wm. A. Craigie, *The Art of Poetry in Iceland* (New York), the Taylorian Lecture at Oxford; *East of the Sun and West of the Moon* (ib.), a new selection of 21 stories from the Norwegian folk tales collected many years ago by P. C. Asbjørnsen and J. Moe and translated into English by G. W. Dasent, edited by Ingri and E. P. d'Aulaire; C. C. Qualey, *Norwegian Settlement in the United States* (Northfield, Minn.), a historical survey; E. Gordon, *Wergeland, the Prophet* (New York), explaining the prophetic vision of a 19th-century Norwegian poet; O. J. Falnes, *Norway and the Nobel Peace Prize* (ib.), a historical study; A. J. Uppvall, *Manual of Swedish Phonology* (ib.), presented in international phonetic symbols; A. J. Uppvall and G. R. Stene, *Swedish Grammar and Reader* (ib.), a textbook; C. de Lannoy, *A History of Swedish Colonial Expansion* (Newark, Del.), translated from the French; *The Magician's Cloak* (New York), four Swedish folk tales, translated and adapted by Margaret Sperry; C. Ward, *New Sweden on the Delaware* (Philadelphia), a brief account of the early Swedish settlements, taken from the author's earlier volume, *The Dutch and Swedes on the Delaware, 1609-64; New Sweden, 1638-1938* (Ann Arbor, Mich.), a catalogue of the exhibition in the Wm. L. Clements Library, organized in commemoration of the tercentenary of the Swedish settlements on the Delaware; *Books, Maps and Prints Relating to New Sweden* (Washington, D. C.), an exhibition at the Library of Congress; J. C. Clay, *Annals of the Swedes on the Delaware* (Chicago), a fourth edition; *Swedes in America, 1638-1938* (New Haven, Conn.), various contributions on the role of Swedes in American history, thought, and life, edited by A. B. Benson and N. Hedin; A. Martinet, *La Phonologie du Mot en Danois* (Paris), a study of the phonology of Danish words; and H. C. Anderson, *It's Perfectly True, and Other Stories* (New York), a new translation by P. Leyssac.

Celtic. The annual Celtic Congress, which is noteworthy for the reason that—besides the International Congress of Phonetic Sciences mentioned above—it is the sole international linguistic, literary, musical, and folklore body that continues to meet in war-clouded Europe, was held in 1938 at Douglas, capital of the Isle of Man, from June 29 to July 6, with an unusually large attendance. Mr. Sean O'Sullivan, Archivist of the Irish Folklore Commission, announced that, although the Commission had thus far collected more than a million manuscript-pages of folklore material, "they had only scratched the surface of the problem," because Ireland is unbelievably rich in tradition, having escaped the great cultural waves that spread over Europe from time to time in the past. Among other papers read were the following: Rev. S. J. M. Compton, "The Celtic Spirit in History and Art"; Marquis of Ailsa, "Scotland's Share in the Magna Charta"; Rev. John MacKechie, "The Language Movement among Gaelic Youth"; Dr. J. Cameron, "The Celtic Land in Scotland"; Rev. J. Burke, "Irish Church Music in the Middle Ages"; L. S. Gogan, "The Continental Origins of Irish Literature"; Rev. K. MacLeod, "Songs of the Hebrides"; etc.

Among many indications of a cultural renaissance in the Celtic lands were the announcements of extensive undertakings in their history and the founding of reviews. Thus, the famous old Cymm-dorion Society voted at the 1938 Eisteddfod the

creation of a *Dictionary of Welsh Biography*, to be edited by Prof. R. T. Jenkins of Bangor University College, with the collaboration of Sir John E. Lloyd, the most distinguished living authority on Welsh history, as consulting editor. After much discussion as to the language to be used in the *Dictionary*, it was decided to publish the first edition in English, to be followed by a Welsh version. As for reviews, attention was called last year to the creation of *The Celtic Digest*, issued by the Celtic Society of Columbia University, which published in March the first scholarly contribution by President Douglas Hyde of Eire to appear in America. Other new reviews include the semi-annual *Irish Historical Studies* (Dublin), published by the Historical Societies of Dublin and Belfast, which bids fair to be the most scholarly journal on Irish history yet to appear; *The Dublin Historical Record* (ib.), issued by the Old Dublin Society, containing studies on the local history and traditions of Dublin; *The Irish Digest* (ib.), a digest of all books and articles dealing with Ireland; and *The Ireland-American Review* (ib.), intended to improve cultural relations between the two countries.

Contributions to the study of Irish include A. J. Goedheer, *Irish and Norse Traditions about the Battle of Clontarf* (Haarlem, Holland), showing that the famous battle of 1014, which ended the glorious reign of Brian Bóramha, was neither a national victory of the Irish over the Norsemen nor a victory of Christianity over paganism, as has been claimed, but merely an event in a series of organized invasions ending in 1103; P. Grosjean, *Hagiographica Celtica* (parts ii-v; Brussels), biographical notes on Celtic saints, published in the *Analecta Bollandiana*; the same author's *Gloria postuma S. Martini Turonensis apud Scottos et Britannos* (ib.), an excellent scholarly survey of the posthumous fame of St. Martin of Tours in the British Isles; J. Hornell, *British Coracles and Irish Currachs* (London), an account of wicker and hide-covered boats from the 1st century B.C. to the present; A. Tommasini, *Irish Saints in Italy* (ib.), their history from the early centuries of the Christian era; Capt. F. C. Hitchcock, *To Horse* (Dublin), an account of horses and horsemanship from the 11th century to the present; E. B. Barrett, *The Great O'Neill* (New York), a newly discovered biography of the last of the Celtic chiefs; J. C. Develin, *The Story of an Irish Sept* (Rutland, Vt.), a history of the O'Develins of Tyrone; O. St. J. Gogarty, *I Follow St. Patrick* (New York), a witty descriptive book about Ireland in which the author attempts to prove that the Saint was not a Gaul, a Roman, a Spaniard, a Cornishman, or an Englishman, as various other authorities have maintained, but a South Welshman; S. Gwynn, *Dublin, Old and New* (ib.), a historical, social, and architectural study; W. Love, *Roadside and Fireside Irish Folk Tales* (Boston), a collection of 23 tales; S. O'Faolain, *The Silver Branch* (New York), an anthology of old Irish poetry; the same author's *King of the Beggars* (ib.), a life of Daniel O'Connell, the Liberator; S. Rynne, *Green Fields* (ib.), a day-by-day journal of farm life in Kildare; L. Edwards, *My Irish Sketch Book* (ib.), sketches of hunting in Ireland; J. L. Hammond, *Gladstone and the Irish Nation* (ib.), a historical study; *The Autobiography of William Butler Yeats* (ib.), a reprint of three sketches; H. Gorman, *James Joyce* (ib.), an intimate, detailed biography; Lord Dunsany, *Patches of Sunlight* (ib.), an autobiography revealing the origins of his fanciful works; Doro-

thy Macardle, *The Irish Republic* (London), a history of the Anglo-Irish conflict; M. J. O'Brien, *Pioneer Irish in New England* (New York), a study of the Irish immigrants in the 17th century; the same author's *George Washington's Association with the Irish* (ib.), a historical account; and his *Hercules Mulligan, Confidential Correspondent of General Washington* (ib.), a biography. Final mention should be reserved for President Douglas Hyde's delightful *Mise agus an Conradh* (Dublin), which is, at the same time, a history of the language movement in Ireland from the 17th century on and an autobiography relating the development of the Gaelic League down to 1905.

The language and history of Scotland are studied in *Poems from the Book of the Dean of Lismore* (Cambridge, Eng.), compiled by J. MacGregor, with a catalogue of the Book and Indexes by the late E. C. Quiggin, and edited by J. Fraser; A. MacBain, *Etymological Dictionary of the Gaelic Language* (Stirling), containing chapters on outlines of Gaelic etymology, national and personal names and surnames; C. MacPharlain, *Gaelic-English Dictionary* (ib.), intended for the ordinary reader; T. D. MacDonald, *Gaelic Proverbs and Proverbial Sayings* (ib.), with English translations; A. MacGregor, *Highland Superstitions* (ib.), dealing with Druids, fairies, witchcraft, sacred wells, etc.; *Highland Lore and Legend* (New York), West Highland ballads, paraphrased from Gaelic into English verse by I. Malcolm; N. MacNeill, *The Literature of the Highlanders* (Stirling), a survey from the earliest times to the present; *The Songs of Skye* (ib.), folk songs, collected by B. H. Humble; A. MacBain, *Celtic Mythology and Religion* (ib.), a new edition, with a chapter on "Druid Circles and Celtic Burial"; the same author's *Place-Names of the Highlands and Islands of Scotland* (ib.), an analysis of "Pictish," Celtic, and Norse sources; *The Stones of Scotland* (New York), a history of Scottish architecture from prehistoric times, written by five scholars and edited by a sixth, G. Scott-Moncrieff; J. G. Mackay, *The Romantic Story of the Highland Garb and the Tartan* (Stirling), the story of Highland dress from the earliest times; *Scottish Diaries and Memoirs, 1550-1746* (ib.), extracts giving pictures of life, arranged and edited by J. G. Fyfe; *A Calendar of Cases of Witchcraft in Scotland, 1510-1727* (New York), compiled by G. F. Black and published by the New York Public Library; J. B. Nolan, *Benjamin Franklin in Scotland, 1759 and 1771* (Philadelphia), a record of these two tours; M. Martin, *A Description of the Western Islands of Scotland* (Stirling), a reprint of a work, published in 1703, which decided Dr. Johnson to undertake his famous journey to the Isles, edited by D. J. MacLeod; A. MacGregor, *The Feuds of the Clans* (ib.), an account of clan life of which the first part was written in 1875 and the second taken from a MS. of 1764; W. Murison, *Sir David Lyndsay* (New York), the life and works of a poet and satirist of the Old Church; Sir Herbert J. C. Grierson, *Sir Walter Scott* (ib.), an excellent biography, which corrects and supplements Lockhart's famous work; E. Muir, *Scott and Scotland* (ib.), a comparison of the predicament of the Scottish writer in Scott's time and today; and D. C. Cuthbertson, *Romantic Scotland* (Stirling), the history, legends, and romance of Scotland, shire by shire.

Studies dealing with Wales and Cornwall include B. G. Charles, *Non-Celtic Place Names of Wales* (London), a study of such names of Old

English, Norman, Scandinavian, or Flemish origin; A. S. Davies, *The Ballads of Montgomeryshire* (Welshpool), biographies and bibliographies of ballad-writers from the 18th century on, including specimens of their work; R. Davies, *My Wales* (New York), a delightful description of the country, the people, and their activities; R. S. and Laura H. Loomis, *Arthurian Legends in Medieval Art* (ib.), a study of Arthurian iconography in the decorative arts and book-illustration; P. T. Jones, *Welsh Border Country* (ib.), a description and history; and Margaret Leigh, *Harvest of the Moor* (ib.), an account of farming in Cornwall.

Romance Languages. Although these languages, as their name indicates, are modern offshoots of the popular or vulgar Latin as spoken at Rome, they may be placed here—since Latin is not considered in this survey—by reason of their indebtedness to Frankish German, on the one hand, and to Celtic, on the other. In fact, the late Henri Hubert went so far as to state in his monumental posthumous work, *Les Celtes et l'Expansion celtique jusqu'à l'Époque de la Tène* (Paris, 1932), edited and approved by four well-known scholars, that "le français est du latin prononcé par des Celtes et mis au service d'esprits celtiques," etc. (p. 19). In other words, modern French is merely Latin as pronounced by the Gauls and their—mainly Irish—teachers, and its syntax is due to their knowledge and interpretation of Latin syntax. That Professor Hubert's conclusion is valid is obvious from the similarity of vowel, consonant, and other phonetic changes in the development of both Irish and French as well as in the parallel evolution of syntax in these two languages. It is, therefore, more than passing strange that French philologists have entirely neglected to consider the historical development of Irish or Welsh in order to comprehend better the concomitant course of their own tongue. But this seems to be merely another example of the nationalism in scholarship mentioned at the outset of this survey, for the French do not wish to have for their ancestors a people whom they have heretofore considered as ignorant and uncultured.

French. That the *Chanson de Roland*, the most beautiful epic left from the Middle Ages, has also a strong appeal for the modern reader is evident from the fact that two translations of it were issued in New York during the past year, notably *The Song of Roland*, translated into English metrics by C. S. Moncrieff, with illustrations by V. Angelo, and published by the Limited Editions Club; and Merriam Sherwood's beautiful prose version under the same title, illustrated by Edith Emerson. The latter is especially recommended to the reader, for not only does Miss Sherwood's smoothly flowing prose approach more closely to the Old French of the 11th-century author, but it also retains all the naïve spirit, poetic atmosphere, and vigor of the original.

Dr. Marcel Françon, who is probably the leading living authority on the literature and language of France during the transition period in the late 15th and early 16th centuries, issued a most valuable and interesting volume, entitled *Poèmes de Transition* (Cambridge, Mass.), containing some 600 *rondeaux* found in MS. 402 of Lille. These quaintly beautiful poems, by many authors, not only reflect the various traditions and artistic movements of the time, but likewise shed much light on social conditions, studied methods of versification, trends in language and thought, music, and art in an age that gave us the elegant chateaux that

still remain. Other works included W. von Wartburg, *Evolution et Structure de la Langue française* (Chicago), a new edition, published for the first time in America; U. T. Holmes, Jr., *A History of Old French Literature* (New York), a survey from its origins to 1300; E. Gilson, *Reason and Revelation in the Middle Ages* (ib.), being the Richards Lectures at the University of Virginia; Sister Mary V. Gripkey, *The Blessed Virgin Mary as Mediatrix in the Latin and Old French Legend Prior to the Fourteenth Century* (Washington, D. C.), an interesting study of theocentrism beginning with Gregory of Tours in the 6th century; *Le Manuscrit du Roi* (2 vols.; Philadelphia), a photographic reproduction of an Old French MS., with an introduction by J. Beck; Jean, Sire de Joinville, *The History of Saint Louis* (New York), translated from the 13th-century French by Joan Evans; E. Gilson, *The Philosophy of St. Bonaventure* (ib.), an analytical study of the 13th-century churchman, translated from the French; V. L. Dedek-Héry, *Jean de Meun et Chaucer, Traducteurs de la Consolation de Boèce* (ib.), a study on Chaucer's indebtedness to the French version of Jean de Meun, reprinted from *Publications of the Modern Language Association of America*; *Old French Lives of Saint Agnes* (Cambridge, Mass.), an edition of a 13th-century poem, with studies on some 15 other versions, prepared by A. J. Denomy; *Aucassin et Nicolette* (Chapel Hill, N. C.), translated into English by E. F. Moyer and C. D. Eldridge; G. Hanoteaux, *Jeanne d'Arc* (Paris), a biographical study from the Catholic point of view; H. D. Sedgwick, *The House of Guise* (Indianapolis, Ind.), a history of a powerful family in the 16th century; *The Works of Guillaume de Salluste Sieur du Bartas* (vol. ii; Chapel Hill, N. C.), an edition of the works of a famous 16th-century epic poet; Janet Doe, *A Bibliography of the Works of Ambrose Paré* (Chicago), the first critical bibliography ever made of the works of the great 16th-century surgeon; and Q. Hurst, *Henry of Navarre* (New York), a biography.

On the 17th and 18th centuries we have C. F. McCombs, *French Printing Through 1650: Mazarinades* (New York), a check list of books and pamphlets in the New York Public Library; *Selected Letters of Mme de Sévigné* (2 vols.; ib.), taken from the nine-volume English edition of 1811; *The Journal of Jean Cavalier* (Chicago), the journal of a survivor of La Salle's Texas expedition, 1684-88, translated by J. Delanglez; L. P. Courtines, *Bayle's Relations with England and the English* (New York), a detailed study of Pierre Bayle, 1647-1706; J. Wilcox, *The Relation of Molière to Restoration Comedy* (ib.), a useful study of the great dramatist's influence in England; N. L. Torrey, *The Spirit of Voltaire* (ib.), a valuable and well-presented study of Voltaire's character and ideas; *Voltaire's Philosophical Dictionary* (ib.), selections, translated by H. I. Woolf; *Diderot, Selected Writings* (ib.), translated by Jean Stewart and J. Kemp; G. Morris, *A Diary of the French Revolution* (Boston), written while the author was U.S. Minister to France; Georgia Robison, *Revellière-Lepeaux, Citizen Director, 1753-1824* (New York), a life of the Revolutionary; and J. M. Eagan, *Maximilien Robespierre: Nationalist Dictator* (ib.), a study of him as a Jacobin.

The 19th century is represented by O. Aubry, *Napoleon: Soldier and Emperor* (Philadelphia), a biography; G. W. Pierson, *Tocqueville and Beaumont in America* (New York), a narrative of their

journey, in honor of the centenary of *Democracy in America*; A. Maurois, *Chateaubriand* (*ib.*), a biography; K. W. Hooker, *The Fortunes of Victor Hugo in England* (*ib.*), a study of the vicissitudes of his fame in England; and R. L. Hawkins, *Positivism in the United States (1853-1861)* (Cambridge, Mass.), a careful study of the influence of Comte's philosophy.

Finally, two works on language and architecture may be mentioned, as follows: J. G. Anderson, *Le Mot juste* (New York), a new edition of this dictionary of English and French homonyms, revised by L. C. Harmer; and A. Gardner, *An Introduction to French Church Architecture* (*ib.*), a survey.

Italian. Among the few contributions to this field are Dante's *Purgatorio* (New York), an edition, with an English version in *terza rima*, by L. Binyon; *The Comedy of Dante Alighieri, Part II, Purgatory* (*ib.*), an American translation by L. How; *The Most Noble and Famous Travels of Marco Polo, Together with the Travels of Nicolo de' Conti* (*ib.*), a second edition of this Elizabethan translation of John Frampton, edited by N. M. Penzer; J. Pope-Hennessy, *Giovanni di Paolo, 1403-1483* (*ib.*), an interpretation of the artist's personality and work; Antonina Vallentin, *Leonardo Da Vinci: The Tragic Pursuit of Perfection* (*ib.*), a biography, translated from the German; *The Notebooks of Leonardo Da Vinci* (2 vols.; *ib.*), a definitive edition, translated by E. MacCurdy; A. H. Gilbert, *Machiavelli's Prince and Its Forerunners* (Durham, N. C.), a study in origins; H. Coates, *Palestrina* (New York), a biographical and critical study; *The Defense of Galileo of Thomas Campanella* (Northampton, Mass.), translated for the first time by G. McColley; L. Da Ponte, *The Marriage of Figaro* (New York), the libretto of Mozart's opera, translated by E. J. Dent; C. Colodi, *Pinocchio* (*ib.*), a new edition of Carlo Lorenzini's classic, issued by the Limited Editions Club; J. Bernhart, *The Vatican as a World Power* (Boston), a history; T. Antongini, *D'Annunzio* (*ib.*), a biography by the poet's secretary, translated from the Italian; V. Seligman, *Puccini among Friends* (New York), a selection of the composer's letters; and *The Italians of New York* (*ib.*), a historical study prepared by the WPA.

Portuguese, Provençal, and Rumanian. On Portuguese we have E. B. Williams, *From Latin to Portuguese* (Philadelphia), a historical survey of the phonology and morphology of the Portuguese language; V. McNabb, *St. Elizabeth of Portugal* (New York), a short biography of the early 14th-century saint; and S. Zweig, *Conqueror of the Seas* (*ib.*), a life of Magellan. Provençal is represented by B. Collier, *To Meet the Spring* (New York), a journey through Langue-doc and Provence; and Lady Fortescue, *Sunset House* (Boston), a description of Provence and its inhabitants.

Transylvania, which was incorporated into Rumania after the War, is now the subject of much anxiety in the latter country because both Germany and Hungary are casting covetous eyes upon it. For this reason the very extensive and detailed *Bibliographie de la Transylvanie roumaine* (Cluj), issued by the *Revue de Transylvanie*, is very apropos, since it contains a list of some 4056 titles—not counting the large number of book-reviews mentioned after each book—which were published from 1916 to 1936. Of special interest are the sections on history (containing archaeology, documents, inscriptions, culture, etc.), literature, philology,

linguistics, customs, folklore, drama, and music. Other useful works include *Metamorphosis Transylvanica, 1918-1936* (Cluj), consisting of contributions by some 10 authorities on literature, art, drama, etc.; *Les Français et la Roumanie* (Bucharest), texts selected by P. Desfeuilles and J. Lassaigne, dealing with French opinion of Rumania from the middle of the 18th century to the present; R. Seişanu, *La Roumanie, Pays latin* (*ib.*), a survey, showing the Latin origin of the Rumanian people and their language; and S. Sitwell, *Roumanian Journey* (New York), a travel record.

Spanish. The Hispanic Society of America, founded and directed by Dr. Archer M. Huntington and located at Broadway and 157th St., New York City, is without doubt the outstanding scholarly Spanish society of the world, not even excluding similar organizations in Spain and South America. Its art collection is unique and one of rare value, while its library, consisting of more than 125,000—mainly rare—volumes, along with countless catalogued and uncatalogued MSS., is not only the largest, but also the most valuable, collection of Spanish works in existence, outside of the Biblioteca Nacional of Madrid. Therefore, any reference work relating to this monumental collection should be of special interest to all readers; and we fortunately have such a work, issued by the Society itself and modestly entitled *Handbook, Museum and Library Collections* (New York), containing many beautiful illustrations. It is divided into the following sections: Paintings, Sculpture, Ceramics, Glass, Gold- and Silver-work, Iron-work, Furniture, Textiles, Laces and Embroideries, Manuscript Maps, Prints, Manuscripts and Books, and a detailed index.

Other works dealing with Spanish include G. Tislander, *Los Fueros de Aragón* (Lund, Sweden), a study of the language of the ancient Aragonese laws; B. Bevan, *A History of Spanish Architecture* (New York), profusely illustrated; C. R. Post, *A History of Spanish Painting* (vol. vii, parts i and ii; 2 vols.; Cambridge, Mass.), a study of the Gothic phases of the Catalan school in the later 15th century; A. F. G. Bell, *Castilian Literature* (New York), a historical and critical study; *Translations from Hispanic Poets* (*ib.*), issued by the Hispanic Society of America; R. T. Davies, *The Golden Century of Spain, 1501-1621* (*ib.*), a social and cultural history; L. Marcuse, *Ignatius Loyola* (*ib.*), a biography of the founder of the Jesuit Order; Concepción Casanova, *Luis de León como traductor de los clásicos* (London, Eng.), a thorough study of the terms found in the translations of the great 16th-century scholar; Delphine F. Darby, *Francisco Ribalta and His School* (Cambridge, Mass.), a critical study of the work and influence of a 16th-century painter; H. Keniston, *The Syntax of Castilian Prose: The Sixteenth Century* (Chicago), a chronological survey; Mary E. Hough, *Santa Teresa in America* (New York), a study of American opinion of the 16th-century saint; Mary N. Hamilton, *Music in Eighteenth-Century Spain* (Urbana, Ill.), a survey; *California in 1792: The Expedition of José Longines Martínez* (San Marino, Calif.), translated from an 18th-century MS. by L. B. Simpson; G. Zellers, *La novela histórica en España, 1828-1850* (New York), a study of the sources of the early historical novels; and R. L. Guinle, *A Modern Spanish-English and English-Spanish Technical and Engineering Dictionary* (*ib.*), the first technical dictionary to be issued since the German work of Tolhausen about 40 years ago.

Catalan is represented by the late A. M. Alcover and F. de B. Moll, *Diccionari Català-Valencià-Balear* (Fasc. 34-38; Palma de Mallorca), which is now about through the letter C; and E. A. Peers, *Catalonia Infelix* (New York), a history of the State.

Finally, a few characteristic works on Latin America may be mentioned: J. W. Vandercook, *Caribee Cruise* (New York), a book of history and data on the West Indies; E. S. Whitman, *Those Wild West Indies* (ib.), a description and guide; T. White, *Puerto Rico and Its People* (ib.), a political and social study; E. Entralgo, M. Vitier, and R. Agramonte, *Enrique José Varona: su vida, su obra y su influencia* (Havana), an official study of the great Cuban thinker, writer, and leader; E. B. Echeverría, *Lectura de Pascuas* (ib.), selections from his works, published by La Secretaria de Educación de Cuba; C. L. R. James, *The Black Jacobins* (New York), a history of Toussaint l'Ouverture and the San Domingo Revolution; Edna Taft, *A Puritan in Voodoo-Land* (ib.), an account of voodooism; J. A. Jarvis, *Brief History of the Virgin Islands* (St. Thomas, V. I.), from their discovery to the present; S. G. Inman, *Latin America* (Chicago), a survey of its history; C. E. Chapman, *Republican Hispanic America* (New York), a general history; E. H. Thompson, *The High Priest's Grave, Chichen Itza, Yucatan, Mexico* (Chicago), a record of an investigation made in 1896, edited for the Field Museum by J. E. Thompson; Josephina Nigeli, *Mexican Folk Plays* (Chapel Hill, N. C.), five brief plays; B. Nordang, *Patagonian Year* (New York), a Norwegian engineer's experiences in the jungles of Argentina; J. P. Calogeras, *A History of Brazil* (Chapel Hill, N. C.), from its founding to 1889; A. F. Zimmerman, *Francisco de Toledo, Fifth Vice-Roy of Peru, 1569-81* (Caldwell, Idaho), a biography; and M. Poindexter, *Peruvian Pharaohs* (Boston), an account of Inca culture and its origins.

English Language. In the United States, the vogue of the cross-word puzzle, during the past few years, has tended to increase considerably the sale of dictionaries. In England, on the other hand, the old-fashioned American spelling bee became so popular in 1938 that even publishers and authors took part in such competitions—without either side, it may be said, showing any special brilliancy. However, the humble dictionary has consequently become a "best-seller" in both countries, and so it is but fitting that it should be given pre-eminence here, as follows: *Roget's International Thesaurus of English Words and Phrases* (New York), a revised and enlarged edition by the late C. O. S. Mawson; H. L. Shatford, *The Elements of Thought* (Washington, D. C.), a chart illustrating the 1000 categories of Peter Mark Roget; F. S. Allen, *Allen's Synonyms and Antonyms* (ib.), a new edition, containing slang, colloquialisms, and technological expressions, by T. H. Vail Motter; R. Soule, *A Dictionary of English Synonyms and Synonymous Expressions* (Boston), a new edition, revised and enlarged by A. D. Sheffield; Bessie G. Redfield, *Aid to Rhyme* (New York), a third enlarged edition; W. K. L. Clarke, *A Little Dictionary of Bible Phrases* (ib.), containing the derivations and meanings of nearly 350 words; D. G. Kittel, *Lexicographia Sacra* (ib.), two lectures on the making of the *Theologisches Wörterbuch zum Neuen Testament*; Sir W. A. Craigie and J. R. Hulbert, *A Dictionary of American English on Historical Principles* (parts iii, iv; Chicago), going as far as Chubby; *Webster's Students Dic-*

tionary (New York), intended for the young; B. Overton, *Macmillan's Modern Dictionary* (ib.), a ready-reference work; A. D. Baten, *The Language of Life* (Dallas, Tex.), containing more than 100,000 words, phrases, similes, and metaphors; E. Partridge, *A Dictionary of Slang and Unconventional English* (New York), a second edition, revised and enlarged; W. H. Fletcher, *Vocabulary Building* (parts i, ii; Los Angeles, Calif.), containing sociology and physical geography terms, derived from Greek and Latin; J. I. Rodale, *The King's English on Horseback* (Emaus, Pa.), a dictionary of humorous terms; J. R. Carpenter, *An Ecological Glossary* (Norman, Okla.), definitions of ecological terms; *Draft Customs Nomenclature* (vol. ii; New York), a League of Nations report on the unification of such terms; Lulu G. Graves and C. W. Taber, *A Dictionary of Food and Nutrition* (Philadelphia), terms relating to dietetics and nutrition; and L. Lewis, *Radio Dictionary* (Stamford, Conn.), terms used in broadcasting.

Scientific nomenclature is growing so apace that even specialists in the various fields are having difficulty in keeping in touch with the neologisms that are being created from day to day. A few years ago, for example, the London Authors Club invited a young psychological expert to explain to the older professors in the same field the meanings of the terms recently introduced by his colleagues. Since it is obviously impossible for even our large general dictionaries to list such words, specialized vocabularies are coming more and more into vogue. Thus, it was announced in the *New York Times* on December 4 that five experts are preparing a dictionary of scientific educational expressions to be completed in four or five years; and one of them, Prof. H. D. Rinsland of the University of Oklahoma, has already assembled 18,000 terms in the single field of educational measurements. Likewise, Prof. E. Kasner's *New Names in Mathematics* (New York) supplies for his colleagues definitions for the neologisms resulting from recent researches in that science. And the same holds true in other lines of investigation.

Syntax, etymology, dialectology, and kindred subjects are represented by E. Clodd, *The Story of the Alphabet* (New York), a new edition of a study first published in 1900; V. Engblom, *On the Origin and Early Development of the Auxiliary Do* (Lund, Sweden), a syntactical investigation; H. Gehse, *Die Kontaminationen in der englischen Syntax* (Breslau), a historical study; B. J. Whiting, *Proverbs in the Earlier English Drama* (Cambridge, Mass.), culled from almost 90 plays or groups of plays of the 15th and 16th centuries; A. W. Dellquest, *These Names of Ours* (New York), supplying derivations of some surnames; A. H. Holt, *American Place Names* (ib.), giving meanings and pronunciations of such names; G. E. Shankle, *American Nicknames* (ib.), an interesting, though at times trivial, study of some 4000 sobriquets; I. Goldberg, *The Wonder of Words* (ib.), an introduction to the study of language; and W. Matthews, *Cockney, Past and Present* (ib.), a short history of the London dialect from the 16th century.

Grammar, composition, etc., are studied in the following: J. B. Opdycke, *Don't Say It!* (New York), intended to correct errors and clarify doubts about the use, meanings, spelling, and pronunciation of words; and Aline E. Hower, *Successful Letter Writing: Business and Personal* (ib.), a psychological approach to correspondence.

Collections of folk songs and American dialect

tology and folklore include Grace Castagnetta and H. W. van Loon, *Folk Songs of Many Lands* (New York), 24 songs, with music; Elsie G. Eells, *Tales from the Amazon* (ib.), a new edition of this book of folklore originally published as *The Magic Tooth*; M. L. Hanley, *Dialect Notes* (vol. vi, part xv; New Haven, Conn.), containing also vol. iii, part xiii of R. H. Thornton's *An American Glossary*; *Folk Hymns of America* (New York), native American hymns, collected by Annabel M. Buchanan; B. F. Crawford, *Religious Trends in a Century of Hymns* (Carnegie, Pa.), a Ph.D. thesis in Methodist hymnology; G. Korson, *Minstrels of the Mine Patch* (Philadelphia), ballads and stories of the mining industry; *Folk Songs from the Southern Highlands* (New York), 200 songs, collected and edited by M. E. Henry; R. W. Neeser, *American Naval Songs and Ballads* (New Haven, Conn.), from the Revolution to 1882; Joanna C. Colcord, *Songs of American Sailor Men* (New York), a collection of sea chanties; J. A. and A. Lomax, *Cowboy Songs, and Other Frontier Ballads* (ib.), a new and enlarged edition; Eloise H. Linscott, *Folksongs of Old New England* (ib.), with words and music; J. C. Allen, *Tales and Trails of Martha's Vineyard* (Boston), the history and folklore of the island; D. Doten, *The Art of Bundling* (Weston, Vt.), the nature, origins, and practice of the custom; Ann Hark, *Hex Marks the Spot* (Philadelphia), an account of the Pennsylvania Dutch; *Aus Pennsylvania* (ib.), an anthology of translations into the Pennsylvania German dialect, edited by W. S. Troxell; Jean Thomas, *The Singin' Fiddler of Lost Hope Hollow* (New York), a portrayal of Kentucky mountaineers; *Tales and Songs of Southern Illinois* (Menasha, Wis.), collected by C. Neely; J. M. Carrière, *Tales from the French Folklore of Missouri* (Columbia, Mo.), stories from "Pawpaw" French; *Coyote Wisdom* (Austin, Tex.), folktales from the southwest about the coyote, edited by J. F. Dobie; M. C. Boatright, and H. H. Ransom; C. Hallenbeck and Juanita H. Williams, *Legends of the Spanish Southwest* (Glendale, Calif.), Spanish legends of Colonial times; D. Coolidge, *Arizona Cowboys* (New York), authentic stories; C. B. Rousseve, *The Negro in Louisiana* (New Orleans), aspects of his history and his literature; Kate M. Crady, *Free Steppin'* (Dallas, Tex.), a volume of Negro verse; Lucy Cobb and Mary Hicks, *Animal Tales from the Old North State* (New York), a collection of Negro folk tales; W. Murrell, *A History of American Graphic Humor: 1865-1938* (ib.), an account of all phases of humorous art; and J. Blanck, *Peter Parley to Penrod* (ib.), a bibliographical survey of famous American juvenile books.

Phonetics and speech are represented by C. Battisti, *Fonetica generale* (Milan), the fundamentals of research in phonetics; R. T. Holbrook and F. J. Carmody, *X-Ray Studies of Speech Articulations* (Berkeley, Calif.), a physiological investigation; J. F. Bender and V. M. Kleinfeld, *Principles and Practices of Speech Correction* (New York), with a glossary of 500 technical terms; A. H. Kanter and A. S. Kohn, . . . *And the Stutterer Talked* (Boston), a study of stuttering; C. F. Wedberg, *The Stutterer Speaks* (ib.), a second edition; D. E. Watkins, *The Convincing Word* (New York), methods of improving one's speech; and Margaret A. Stanger and Ellen K. Donohue, *Prediction and Prevention of Reading Difficulties* (ib.), an educational study.

England. H. W. Nevinson and Harold Nicolson

both agree in affirming that mathematicians always write good English, as well as in placing Bertrand Russell among the most conspicuous stylists of today.

Interesting surveys of work in this field may be found in T. P. Cross' *Bibliographical Guide to English Studies* (Chicago), an enlarged seventh edition; and *Essays and Studies* (vol. xxiii; New York), papers by members of the English Association, collected by S. C. Roberts.

General works include N. Denholm-Young, *Seignorial Administration in England* (New York), its history; J. E. A. Jolliffe, *The Constitutional History of Medieval England* (ib.), from the English settlement to 1485; D. C. Calthrop, *English Costume, 1066-1830* (ib.), a new edition; and R. Dutton, *The English Garden* (ib.), a history of its development.

On the Middle Ages and the 16th century we have G. G. Coulton, *Medieval Panorama* (New York), a survey of English life from the Conquest to the Reformation; F. D. Kershner, *Those Gay Middle Ages* (Chicago), an account of the filth, superstition, and cruelty of the period; *Frivolities of Courtiers and Footprints of Philosophers* (Minneapolis, Minn.), selections from John of Salisbury's *Policraticus*, the 12th-century survey of culture, translated by J. B. Pike; *Amis and Amiloun* (New York), a medieval romance, edited by M. Leach; C. Sturge, *Cuthbert Tunstal* (ib.), a biography of the 16th-century churchman and scholar; *Elizabethan and Seventeenth-Century Lyrics* (Philadelphia), edited by M. W. Black; W. Haller, *The Rise of Puritanism* (New York), studies on the writings and sermons of 1570-1643; Lisle C. John, *The Elizabethan Sonnet Sequences* (ib.), an excellent study of sonnet collections; J. A. Williamson, *The Age of Drake* (ib.), a survey of Elizabethan life; R. W. Chambers, *The Place of Saint Thomas More in English Literature and History* (ib.), an evaluation of his work and influence; M. M. Kastendieck, *England's Musical Poet, Thomas Campion* (ib.), a study of his work and his influence on the lyric; and *Ben Jonson* (vol. vi; ib.), works of the dramatist, edited by C. H. Herford and P. and E. Simpson.

The following centuries are represented by Thomas Fuller's *The Holy State and the Profane State* (2 vols.; New York), a splendid edition, with introduction, notes, and appendix, prepared by M. G. Walten; *Complaint and Reform in England, 1436-1714* (ib.), 50 contemporary writings, dealing with social, religious, educational, and other subjects, arranged by W. H. Dunham, Jr. and S. Pargellis; L. Hotson, *I, William Shakespeare* (ib.), an account of the poet's relations with certain friends and associates; *A New Variorum Edition of Shakespeare* (vol. xxii; Philadelphia), his poems, edited by H. E. Rollins; J. D. Wilson, *What Happens in Hamlet* (New York), a second edition; *The Works of John Milton* (vol. xviii; ib.), the final volume of the Columbia University edition, begun in 1908; Rosamond Bayne-Powell, *Eighteenth-Century London Life* (ib.), a social history; A. B. Tourtellot, *Be Loved No More* (Boston), a life of Fanny Burney, the novelist; J. Sutherland, *Defoe* (Philadelphia), a biography; G. Tillotson, *On the Poetry of Pope* (New York), a critical study; J. Boswell, *The Life of Samuel Johnson, LL.D.* (3 vols.; ib.), edited, from the annotations of Mrs. Thrale, by E. G. Fletcher; Elizabeth P. Stein, *David Garrick, Dramatist* (ib.), a study of the actor's plays; *The Torrington Diaries of the Hon. John Byng* (vol. iv; ib.), the

final volume, describing a journey through England and Wales, 1781-94, edited by C. B. Andrews; Sir Herbert J. C. Grierson, *Sir Walter Scott, Bart.* (ib.), an excellent and authoritative biography, supplementing and correcting Lockhart's long-standard work; Sir E. K. Chambers, *S. T. Coleridge* (ib.), a critical biography; Dorothy Hewlett, *Adonais* (Indianapolis, Ind.), a new life of John Keats; *Victorian Street Ballads* (New York), popular songs sold in the London Streets throughout the 19th century, edited by W. Henderson; and M. Elwin, *Old Gods Falling* (ib.), a survey of popular English literature from 1887 to 1914.

Americana. Since much material relating to this subject has already been given under the heading, *English Language*, we shall limit ourselves here to a few characteristic titles. Thus, on the American Indian, we have C. W. Wissler, *The American Indian* (New York), a third edition of this archaeological study; H. R. Sass, *Hear Me, My Chiefs* (ib.), a volume of Indian legends; A. Britt, *Great Indian Chiefs* (ib.), studies of eight chiefs during 200 years; J. W. Lydekker, *The Faithful Mohawks* (ib.), a history of the tribe; J. J. Cornplanter, *Legends of the Longhouse* (Philadelphia), myths of the Senecas; C. C. Trowbridge, *Meacamecar Traditions* (Ann Arbor, Mich.), legends of the Miami Indians, edited from the 19th-century manuscript by V. Kintetz; J. B. Davis, *Cherokee Fables* (Siloam Springs, Ark.), a folklore collection; C. C. Uhlenbeck, *A Concise Blackfoot Grammar* (Amsterdam, Holland), a speech manual; Cora Du Bois, *The Feather Cult of the Middle Columbia* (Menasha, Wis.), a study in tribal customs; *General Series in Anthropology* (No. 6; ib.), studies of the Sinkaietk or Southern Okanagon of Washington, by W. Cline and others; Therese O. Deming, *Indians of the Wigwams* (Chicago), a legend of the Leni-Lenapé tribe; A. E. Hudson, *Kazak Social Structure* (New Haven, Conn.), an account of tribal life; W. La Barre, *The Peyote Cult* (ib.), tribal worship; J. W. Caughey, *McGillivray of the Creeks* (Norman, Okla.), a biography of the leader; Belle S. Sullivan, *The Unvanishing Navajos* (Philadelphia), a study of their life; A. T. Jackson, *Picture-Writing of Texas Indians* (Austin), an interpretative study; F. C. Lockwood, *The Apache Indians* (New York), their history from the Spanish Conquest; H. Hoiyer and M. E. Opler, *Chiricahua and Mescalero Apache Texts* (Chicago), folklore texts with English translations; J. C. McGregor, *Winona Village* (Flagstaff, Ariz.), a description of a 12th-century settlement in Arizona; Ruth M. Underhill, *Singing for Power* (Berkeley, Calif.), a study of the song magic of the Papago Indians of Arizona; Frances Densmore, *Music of Santo Domingo Pueblo, New Mexico* (Los Angeles, Calif.), with translations of poems and a study of Pueblo ritual; and Alice A. Lide, *Aztec Drums* (New York), with drawings by C. M. Sanchez.

Canada is represented by G. M. Wrong, *The Canadians: The Story of a People* (New York), a popular history; and *Premier Bulletin bibliographique de la Société des Écrivains canadiens* (Montreal), an annotated bibliography.

D. W. Brogan waxed enthusiastic in the *London Spectator* over the WPA guide books, which, he said, "illustrate the richness of American life." Among the most characteristic general works on our life and culture, we may mention C. P. Nettels, *The Roots of American Civilization* (New York), a history of Colonial life; T. J. Wertenbaker, *The*

Founding of American Civilization: The Middle Colonies (ib.), the language, religion, and other cultural traits of these racial groups; *The Oxford Anthology of American Literature* (ib.), selections from John Smith to the present, edited by W. R. Benét and N. H. Pearson; J. Anderson, *The American Theatre* (ib.), an illustrated history; R. A. Billington, *The Protestant Crusade* (ib.), a study of the genesis of American nativism; H. P. Beers, *Bibliographies in American History* (ib.), a guide to materials for research; *American Authors, 1600-1900* (ib.), a biographical dictionary, edited by S. J. Kunitz and H. Haycraft; Marion N. Rawson, *Candleday Art* (ib.), a history of arts and crafts; M. R. Eppse, *A Guide to the Study of the Negro in American History* (Nashville, Tenn.), a sociological study; S. N. Holbrook, *Holy Old Mackinaw* (New York), a history of the lumberjack; L. R. Wilson, *The Geography of Reading* (Chicago), a study of the distribution of libraries in the United States; and, finally, the tenth volume (1875-79) of G. C. D. Odell's excellent *Annals of the New York Stage* (New York).

Dr. Frank H. Vizetelly (q.v.), whose untimely death occurred on Dec. 20, 1938, contributed to the review, *Better English* (New York), two articles which may serve as a fitting epitaph to a most industrious life, for they constitute a kind of résumé of the principles that guided him throughout his extensive lexicographical work that covered a half-century or more. In the first essay, entitled "Which Shall It Be? Quality or Quantity" (November), this gifted genius—whose love for historical philology, it may be added, did not stifle, but on the contrary, stimulated his enthusiastic interest in language as a living dynamic force—points out how, through the aid of research, the number of words listed in dictionaries increased, from the 50,000 contained in Johnson's *Dictionary*, published in England in 1755, as well as the 70,000 found in Webster's *American Dictionary* of 1828, to 225,000 in Whitney's *Century*, 301,000—further augmented to more than 455,000—in Funk's *Standard*, and finally, to over 550,000 in the recent Second Edition of the *New International*. And he concludes with the remark that, notwithstanding preposterous claims to the contrary, "all told the reputable and disreputable words in the language do not total more than a million."

In his second article, "Uses and Abuses of Words" (January, 1939), Dr. Vizetelly first inveighs against the reprehensible "modern practise . . . to create new words with no other apparent object than to avoid the known, usual, and appropriate term," and then makes the following significant statement, which, as noted above, was the lexicographical dictum that he always observed, to wit: "Today we need quality rather than quantity and fewer but fitter words." Much the same theory was also held some 40 years ago by Adolphe Hatzfeld, Arsène Darmesteter, and Antoine Thomas in the famous *Dictionnaire général de la Langue française* (Paris), which has been of incalculable benefit to the French language of today. So, American writers and scholars of the future can do no better than to heed these final words of advice from one of the most practical and far-seeing lexicographers this country has ever produced.

PHILOSOPHY. The various currents of contemporary American philosophy were fairly well represented by the papers read this year at the meeting of the Eastern Division of the American Philosophical Association at Wesleyan University. There were papers on symbolic logic, scientific

method, philosophy of history, pragmatism, and ethics, and several discussions were presented on Aristotle and on the Danish philosopher, Kierkegaard. Special interest was attracted by three papers on history. Arthur O. Lovejoy pointed out that while philosophers have been too exclusively interested in the logical connection of historical theories, historians have laid too much stress upon their mere chronological order. Although he admitted the value of the chronological arrangement of material for the first stage of inquiry, he nevertheless insisted that far greater clarity would result if historical materials, such as ideas and theories, were studied in the order of their step-by-step development. It follows that the history of philosophy should be written, not as a chronicle of "systems," but as a biography of the component ideas, which often have a life of their own so that the investigator has to trace their development, not only in philosophical works but also in science, literature, and politics. Sterling P. Lamprecht, in another paper, discussed the subjective and objective factors in the history of philosophy. An understanding and respect for clashing points of view in the history of philosophy is possible, he claimed, if one studies them historically in the light of their cultural emergence and reference. John Herman Randall, Jr., in contrast to Lovejoy, stressed the integration of theories and institutions within a given historical period or within a great tradition. "Philosophic problems emerge whenever the strife of ideas and experience forces men back to fundamental assumptions in any field," he said. "They are to be understood only as expressions of the basic conflict within a civilization that drive men to thoroughgoing criticism. Philosophy is the expression in thought of the process of cultural change itself."

Maurice Mandelbaum, in a paper on ethics, criticized the notion of "value-blindness" as developed in the works of Scheler, Hartmann, and Hildebrand. He suggested that calling people blind who fail to accept your own specific values is of less value than tracing the origin of values in general would be. David F. Swenson described the "existential dialectic" of Kierkegaard, a philosopher who has been recently very influential, especially in Germany. His philosophy, said Swenson, is an instrument of the "subjective existing thinker," who is confronted with the need of deciding upon a most radical change, a change, that is, from one subjective pole of experience to its opposite. John Wild, in another paper on Kierkegaard, maintained the paradoxical opinion that while the 19th-century Danish philosopher thought he had broken with the classic tradition of Plato and Aristotle, his philosophy is, in point of fact, a return to this tradition.

In a session of the meeting devoted to Aristotle, Werner Jaeger contributed valuable information on the connection between Aristotelian philosophy and Greek medicine of the 4th century B.C., while W. D. Ross, the well-known English scholar, discussed "the discovery of the syllogism," and Isaac Husik attempted to prove the genuineness of Aristotle's treatise, *The Categories*.

Probably the most widely discussed book of the year was John Dewey's *Logic, the Theory of Inquiry*. Representing the summation of theories which have matured through a long career of study and reflection, it is remarkable in a number of respects. In the first place, it makes logic primarily the theory of inquiry and consequently relegates the formal aspect of the science, the doctrine of the

syllogism, for example, to secondary importance. Formal logic and specific accounts of scientific procedures and discoveries are all but missing, while hundreds of pages are devoted to the philosophical, psychological, and sociological aspects of the process of scientific inquiry. Although little scholarship is brought to bear upon the point, Dewey argues persuasively the importance of the unity of theory and practice and of the interdependence of science and society. Since logic is construed as the theory of inquiry, all the customary topics of logic (terms, propositions, arguments, facts, truth, etc.) are described as segments or aspects of the particular procedural processes in which they occur. Terms of language, judgments, arguments, and facts are mere tools of particular inquiries. Isolated from these inquiries terms have no meaning, propositions no truth, arguments no validity, facts no standing, for they are all mere stages of inquiry. Since propositions are means to an end, that is, to the attainment of a further stage of the inquiry, they are neither true nor false in any sense, but strong or effective, weak or inadequate (p. 287). Truth is an ideal limit which we never reach even in a modest way, and perhaps, do not even approach. This pragmatic emphasis is accompanied, as would be expected, by an operationalism which, however, is not as extreme as that of the physicist, P. W. Bridgman, in his *The Intelligent Individual and Society* (1938). Scientific laws are if-then propositions, according to Dewey. The law of gravitation, for example, reduces to statements such as: If certain observations of the mass, velocity, and position of certain bodies are made, other observation can be made in the future. On the other hand, Dewey will not go so far as to identify a quality with its function (p. 147). One other interesting feature of the book is the rejection of Aristotelian logic as an ontological doctrine and the occasional recognition of the value of dialectic for the prosecution of scientific inquiry. The book of 1938, which gives the most revealing account of Dewey's philosophy as a whole, relating it to social and cultural movements in this country, oddly enough, comes from Germany. It is Eduard Baumgarten's *Der Pragmatismus*. R. W. Emerson—W. James—J. Dewey. It is worth noting that Franz Böhme in his *Anti-Cartesianismus. Deutsche Philosophie im Widerstand*. (Leipzig, 1938) defines truth as fruitfulness (or efficacy) for the purposes of the German community. Other National Socialists have also embraced a kind of pragmatism, showing that pragmatism in general has no necessary connection with democracy.

Two other American philosophers, almost as well-known as John Dewey, went to press this year, but their books are slighter and less ambitious. Alfred North Whitehead's *Modes of Thought* is an eloquent reconsideration of the subtleties of "creative impulse," activity, nature, and life, and it is worthwhile to see how far he agrees with Dewey, with whom he is sometimes compared. Like Dewey, he goes part way with dialectic in maintaining that: "Both in science and in logic you have only to develop your argument sufficiently, and sooner or later you are bound to arrive at a contradiction, either internally within the argument, or externally in its reference to fact" (p. 14). Moreover, "complete self-identity can never be preserved in any advance to novelty" (p. 146). Likewise, while Dewey holds that all thinking, and therefore logic, begins with an inconsistency or frustration of habitual response, Whitehead makes inconsistency (i.e. Sheffer's "stroke")

function) the starting point from which the whole of logic can be derived. Whitehead's genial disrespect for "clear-headedness" is also reminiscent of Dewey. "The importance of clarity does not arise," he declares, "until we have interpreted it in terms of the vast issues vaguely haunting the fullness of existence" (p. 148). But the difference between the two philosophers is perhaps more important. For example, Dewey's dialectic, what there is of it, is subjective; Whitehead's objective, asserting "necessary connections" in nature.

Whitehead, rejecting Dewey's pragmatism, remains a realist and so does George Santayana in his new volume, *The Realm of Truth*. The "practice" of the pragmatists and the "coherence" of the idealists are tests of truth, he contends, but not its essence. Truth is a correspondence of our ideas with reality. Only the material, temporal world, however, is real. Hence, "truth never enters the field of mathematics at all," nor has it anything to do with morals. Unfortunately, truth is difficult to obtain in the material world for reasons stated by Hume, and Santayana feels obliged to accept it on faith ("animal faith"). The belief in the uniform order of nature he finds irresistible. The law of uniformity, however, is not necessary. Facts being contingent, and knowledge a mere reflection of them, no knowledge is necessary. This skepticism of Santayana is accompanied, of course, by much gentle irony, mockery, and urbane pathos. Truth is tragic, he explains, by its very nature, and "the keen air of truth is not for all lungs." He ridicules those who are dazzled by Truth. The purer truth is, the duller. "Happiness in truth is like happiness in marriage, fruitful, lasting, and ironical. You could not have chosen better, yet this is not what you dreamed of." The reader is tempted to think that had not Santayana himself been dazzled by Truth, he would have devoted this book to the theory of probability and thus given it some relevance to science. Another volume on truth published this year, *"Truth" as Conceived by Those Who Are Not Professional Philosophers* by Arne Ness, represents the contemporary debunking attitude of the logical positivists. After submitting hundreds of people to questionnaires on the nature of "truth," he concluded that there is no such thing as the common-sense view of truth.

While Santayana despairs of finding truth and says nothing of probability, H. Levy in his *A Philosophy for a Modern Man* gives a popular but penetrating account of probability and its growing importance for science and for social progress. His leading concept is that of the "isolate," an isolate being "any part of the universe that is the subject of examination." The isolation of the isolate is, however, never complete. Experiments attempt to isolate a subject with only partial success. Through "the theory of errors" its connection with the rest of nature is disclosed, and progress in science is often the result. Isolates are of two kinds, atomic isolates, such as an apple off the tree, a man out of society, or a hydrogen atom, and statistical isolates, which are groups of atomic isolates, such as the pressure of a gas or the morale of a group. The statistical isolate, Levy argues, is just as objectively real as the atomic isolate. The fact that the behavior of individual electrons, atoms, or molecules cannot always be predicted is no ground for skepticism, for in these cases the behavior of statistical isolates can be predicted with great accuracy. Levy inveighs against those modern scientists who, when the increase of poverty and unemployment become embarrassing and when the help of

science is imperative, argue wistfully and invalidly from the incidents of scientific advance to a kind of supernaturalism and irrationalism which relieves them of responsibility and reconciles them, however regretfully, with the world as it is. Levy, like so many distinguished British scientists (Haldane, Bernal, and others), is a materialist, a temporalist, and a realist in politics. He believes that the remedy of our social problems is an uncompromising struggle for peace and democracy and for socialism in the future, and he attempts to demonstrate how science can contribute. Another book making a strong plea for the preservation of democracy is *Social Philosophies in Conflict* by the American philosopher, Joseph A. Leighton.

Many books analyzing and defending democratic institutions have appeared this year, called forth by the growing threat of fascism. Likewise, an excellent account of National Socialist philosophy and political theory came out. This is Aurel Kolnai's *The War against the West*. Representing the democratic Catholic center, the approach of this book to Nazism is analytical, hostile, mordantly satirical. The author does not confine himself to the writings of the official Nazi spokesmen such as Alfred Rosenberg, Hermann Koellreutter, and Carl Schmitt, but discusses the views of many literary men and philosophers, such as Nietzsche, Ludwig Klages, Max Scheler, and Werner Jaeger, who, even if they have not accepted National Socialism, have provided its atmosphere or psychologically prepared the way for it by their teachings. Nietzsche's anticipation of Fascist doctrines is well-known. That of Scheler and Klages, less so. Although Scheler died before the advent of National Socialism, philosophical ideas perfectly in harmony with it may be discovered in his *Genius des Kriegers* (1915) and in his major work on ethics. Kolnai's inclusion of Heidegger in this list of pro-Nazi philosophers on the basis of one public address delivered in 1933 is a doubtful matter.

While National Socialism has found many philosophic defenders, Fascist Italy has not had such success. Two books published this year on Giovanni Gentile, usually regarded as the spokesman of Fascist philosophy, show how little relevance this philosophy has to political practice. (These books are: *The Idealism of Giovanni Gentile* by Roger W. Holmes, and *Gentile: The Philosophy of Giovanni Gentile* by Pasquale Romanelli.) Thus, while philosophy for Gentile is its own justification and provides its own criterion of truth, philosophy, according to the current National Socialist view, is an instrument of the "German community"; and the needs of this community, as interpreted by the Leader, determine its truth.

Several good philosophical books, however, were published in Germany this year. Baumgarten's volume *Pragmatismus* has already been mentioned. Nicolai Hartmann's *Möglichkeit und Wirklichkeit*, a very abstract and elaborate analysis of the relation of the modalities, is also a serious and important work. One of his conclusions is that the modalities, i.e. impossibility, non-existence, chance, possibility, existence, and necessity do not form a single hierarchy, that possibility and impossibility are relative to existence and non-existence. In his *Ethics* Hartmann denied the hierarchy of virtues, and recognized horizontal dimensions. In his analysis of the modalities he follows the same complex method. *Existenzphilosophie* by Karl Jaspers is also notable. Although the philosophy it advocates is esoteric, pompous, eccentric in the extreme, and certainly remote from practical interest, it has

great prestige not only in Germany, but also in France and the United States. The most ambitious German publication of the year was perhaps Wilhelm Burkamp's *Wirklichkeit und Sinn*, an immense two-volume work, covering a great range of philosophical subjects with especial emphasis upon biological and psychological problems and long discussions of modern mathematical and logistic philosophy. All the trends of modern philosophy, not only those which have been felt in Germany, but also French and Anglo-American developments, are carefully evaluated. The author can not be assigned to any school of philosophy. Rather, his sympathy with many schools results in an eclecticism which is not always free from contradiction. Although he rejects the *a priori* trends in philosophy and states against Husserl that "today it does not suffice to go back to phenomena. We must go back to the earth, to life," he also opposes the present positivistic movements. For example, he insists upon absolute ethical values and a self, or an "I," which is over and above all empirical experience. Yet he is not willing to reduce the "I" to a mere bloodless logical or transcendental subject, and insists against Husserl that it is active. The same eclecticism and indecision can be seen in his treatment of "race." Although he makes much of the distinction between pure and mixed races, he is obliged in fairness to admit that all races (including the German) are mixed. Again, although he affirms absolute values, he reduces virtue, under the influence of Nietzsche, to mere affirmation and consistency of will.

Another important event in the philosophical world was the publication this year of the first installments of vols. i and ii of the *International Encyclopedia of Unified Science*. Otto Neurath, the editor in chief, leads off the series with a rather diffuse but provocative article on "Unified Science as Encyclopedic Integration." In an effort to give breadth to this international movement Neurath describes it not only as "logical positivism" but also, and preferably, as "logical empiricism" and "empirical rationalism." He is followed by Niels Bohr, Dewey, Russell, Carnap, Morris, and Lenzen, whose articles (though some of them are very slight) succeed to some extent in popularizing the essentials of scientific methodology. Victor F. Lenzen's *Procedures of Empirical Science* and Charles W. Morris' *Foundations of the Theory of Signs* illustrate the serious type of popular analysis the "Encyclopedia" is undertaking.

This brief review of the philosophy of 1938 would not be complete without the mention of the English translation of the most important work of Jacques Maritain, the outstanding Catholic philosopher of Europe. His book, *The Degrees of Knowledge*, though it holds firmly to the strict Thomist position, nevertheless shows great understanding of rival systems. It is bound to foster better reciprocation between the Thomists and other philosophers.

In addition to the books listed above in the text, the following are important: Peter Anthony Bertocci, *The Empirical Argument for God in Late British Thought*; Rasvihary Das, *The Philosophy of Whitehead*; Albert Einstein and Leopold Infeld, *Physik als Abenteuer der Erkenntnis*; Prossor Hall Frye, Plato; B. A. G. Fuller, *A History of Philosophy*; D. Hilbert and W. Ackermann, *Grundzüge der theoretischen Logik*; Otto Janssen, *Dasein und Wirklichkeit*; Karl Jaspers, *Existenzphilosophie*; Peter Kamm, *Philosophie und Pädagogik Paul Häberlins in ihren Wandlungen*;

Benjamin Evans Lippincott, *Victorian Critics of Democracy*; Hélène Metzger, *Attraction universelle et religion naturelle chez quelques commentateurs anglais de Newton*; Ralph Barton Perry, *In the Spirit of William James*; W. H. V. Reade, *The Problem of Inference*; Hans Reichenbach, *Experience and Prediction*; Bertrand Russell, *The Principles of Mathematics*; René Schaerer, *La question platonicienne*; Moritz Schlick, *Gesammelte Aufsätze 1926-1936*; Howard Selsam, *What Is Philosophy?*; *Sixième Semaine Internationale de Synthèse, La notion de progrès devant la science actuelle*; M. A. R. Tucker, *Past and Future of Ethics*; *University of California Associates, Knowledge and Society*; Jean Wahl, *Études Kierkegaardianes*.

PHOENIX (fē'niks) ISLANDS. A group of eight islands—Canton (Mary), Enderbury, Phoenix, Birney, Gardner, McKean, Hull, and Sidney—in the central Pacific (2° 30' to 4° 30' S. and 171° to 174° 30' W.), belonging to Great Britain and included in the Gilbert and Ellice Islands colony by Order in Council of Mar. 18, 1937. Total area, 16 square miles; population, 59. During 1938 it was announced that the British government had decided to colonize the islands and thus relieve the overpopulation of the Gilbert Islands.

History. A settlement in part of the rival claims of Great Britain and the United States to the ownership of the islands of Canton and Enderbury was announced by U.S. Secretary of State Hull in a statement from Washington, issued simultaneously in London, on Aug. 10, 1938. The statement follows: "The governments of the United States and of the United Kingdom have agreed to set up a regime for use in common of the islands of Canton and Enderbury in the Phoenix group and for the employment of these islands for purposes connected with international aviation and communication, with equal facilities for each party. The details of the region will be determined in notes to be exchanged between the two governments." The question of actual sovereignty and nationality was placed aside for future consideration.

PHOSPHATES. See FERTILIZERS.

PHOTOGRAMMETRY, AMERICAN SOCIETY OF. See PHOTOGRAPHY.

PHOTOGRAPHY. Seldom, if ever before in the history of photography, have so many new films been introduced within one year. New emulsions were announced in almost all of the principal fields of photography, such as the amateur, the commercial, the cinematographic, the newsphoto, the aero, and numerous specialized branches. The year might well be characterized as a film makers' year.

Perhaps the most significant new film of the year was a multi-layer color film, which was made available in October, in sheet form, in sizes to 8 by 10-inches. Transparencies in full natural colors could be made with it in an ordinary commercial camera simply by exposing the film in the same way as an ordinary film. Development to a pattern-free positive image of extreme fineness of grain was done by the manufacturer. The resulting color transparency was used then as a basis for reproduction by photomechanical processes or for making color prints on paper.

This new color film was said to be adjusted to give correct color rendering with high efficiency incandescent tungsten filament lamps, operating at a color temperature of 3200° K., and at normal voltage. A series of lamps was announced, which were designed especially for use for color photography,

and a compact meter for the measurement of color temperatures was described.

Statistics showed that the amount of color printing in books, magazines, and other publications had more than doubled within two years. More than half of this increase was a result of color photography. The use of miniature color films in snapshot cameras grew rapidly during the year and many hundreds of these tiny pictures were enlarged and reproduced in color throughout the world.

Exhibitions were beginning to provide sections for color prints and transparencies, and a few restricted their entries exclusively to color photographs. The realism of a color picture was shown in a striking way when 24-sheet poster boards on the Pacific Coast were prepared from small color transparencies. An appreciable increase in speed was reported for a German multi-layer color film and for a screen color film made in England. Color prints in sizes to 18 by 20 inches from the latter film were advertised.

An important announcement to ciné film users was the statement that color duplicates could be made from Kodachrome originals. A three-color motion picture process called "Pantachrome" was announced in Germany, where it was said that copies in color could be made immediately for projection in motion picture theaters. The Technicolor Company, leading producer of 35 mm. color films, was reported to have delivered over 65 per cent of their annual capacity of 130,000,000 feet of color prints during the year (*Tech. Eng. News*, 19: 107, October, 1938).

The advantages and limitations of various methods of color photography were analyzed by von Holleben (*Phot. Ind.* 36: 203, Feb. 23, 1938), and a summary of recent color patents and articles was published by Grote (*Phot. Korr.* 74: 17, February, 1938).

One of the most active groups fostering the expansion of aerial photography was the American Society of Photogrammetry with headquarters in Washington, D. C. About three years ago, this organization began to publish a mimeographed journal known as *Photogrammetric Engineering*; during the year this quarterly publication was expanded to a copyrighted printed journal. The third issue for the year was especially interesting because its entire 90 pages were devoted to a detailed report on progress in materials and equipment for aerial photography in 13 countries. This report was prepared for presentation at the Fifth Congress of the International Society of Photogrammetry in Rome, Italy, Sept. 29 to Oct. 5, 1938.

The total area photographed and contracted for aerial survey by the U.S. Department of Agriculture from 1926 to June, 1938, was 1,582,052 sq. mi. as given by the report of the American Committee at the Congress. The requirements for adequate national aerial surveys were discussed by Reading, who stated that modern air surveying can supply maps and photographs at half their former cost (*Photogrammetric Eng.* 4: 11, Jan.-Mar., 1938).

Air photographic libraries were in use in many countries. The Canadian Air Library, established in 1923, was reported to contain 725,000 individual prints. Greater precision in topographic maps was assured with the use of the improved non-shrink films and papers. A special aero topographic camera was built which had a capacity of 635 exposures on a single film. It was tested out in an unconventional pusher-type airplane especially designed for high altitude mapping photography (*Aero Digest* 33: 85, September, 1938).

Exploration and geologic air-mapping were discussed by Loel, who included data on a study of submarine geology (*Mining Technology—Tech. Paper No. 890*, March, 1938). In the course of further aerial surveys in Alaska, Washburn photographed the greatest area of glacial ice known outside of the polar regions, and soon this long-standing blank spot on the map will be filled in from data obtained from the photographs. Extensive glacial areas were photographed for the first time in color from the air by Clark (*Life* 5: 53, Dec. 5, 1938).

At the U.S. Army Air Corps field near Dayton, Ohio, Major Goddard and his staff produced color prints within 40 minutes from tri-color separation negatives after exposure in a special aero camera during flight. Details of objects previously hidden by ordinary photography were said to be revealed in these color pictures. The prints were processed in mobile field laboratories, designed as auto trailers (*Camera* 57: 196, September, 1938).

The first photographs of the 19,613-foot volcano, Cotopaxi, in Ecuador were made in June by Bullock, the British Minister to Ecuador, and Roosevelt, an American explorer.

"Microfilming promises to solve some of the most troublesome and difficult situations that face our intellectual and scholarly institutions and libraries" according to Davis, President of the American Documentation Institute, Washington, D. C. (*J. Applied Physics* 9: 1, January, 1938). The Institute was founded in 1937 on behalf of over 60 scholarly and scientific agencies. Its purposes are three-fold: (1) Microfilming of materials in libraries upon demand; (2) publication of all material that should be made available to intellectual workers of the world; (3) recording of out-of-print and rare books as well as technical papers for which there is need for only a few copies for distribution. Davis defined this last application as "docufilm service." Problems attending the facsimile reproduction of rare books were described by Bendikson (*Library J.* 63: 140, Feb. 15, 1938). The year marked the debut of the *Journal of Documentary Reproduction*, a quarterly review of the application of photography and allied techniques to library, museum, and archival service.

New apparatus for making microcopies and machines for reading them were introduced, which increased the useful flexibility of such equipment (*Library J.* 63: 279, Apr. 1, 1938); also *J. Soc. Mot. Pict. Eng.* 30: 601, May, 1938). Records could be made at 500 to 1000 exposures per hour. Various types of equipment were demonstrated at the meeting of the International Federation on Documentation at Oxford in September.

The entire file of *The Times* (London) was being copied on film. The six big banking institutions of England were making photographic records of their files, and arrangements were made to store sets of these outside of London. In the United States 2000 of the 15,000 banks were photographing daily all the checks passing through their files. Insurance companies and department stores were also using this method of compact documentation.

The most notable advances in cinematography, according to the Progress Committee Report of the Society of Motion Picture Engineers (*J. Soc. Mot. Pict. Eng.* 31: 109, August, 1938), was the introduction of new panchromatic negative emulsions. These were of two general types, namely (1) films with additional speed and finer grain than any previously available and (2) films of great sensitivity, having four times the speed of any known

therefore. Improved quality of prints for theater reproduction was also noted.

A trend toward mobile sound-recording equipment effected easier interchangeability of studio and location photography. Better facilities were made available in the laboratories for development control and printing of motion picture film.

This industry was following closely the progress of television with especial reference to possible uses of motion pictures as an adjunct to television broadcasting programs. At the fall meeting of the Society of Motion Picture Engineers, papers by engineers from the General Electric and the RCA Manufacturing companies discussed some of these problems and the prediction was made that within a year commercial development of this field would be initiated. This opinion was concurred with by the Scientific Committee of the Academy of Motion Picture Arts and Science (*Tech. Bull.*, Nov. 22, 1938), although it was also pointed out that artistic and economic problems will act as an automatic brake and prevent too rapid development of the art.

Remarkable time-lapse motion pictures of solar prominences were made by the McMath-Hulbert Observatory of the University of Michigan. A cloud of incandescent gas was shown in one instance, which reached a total height of 620,000 miles above the surface of the sun (*Scientific Monthly*, 47: 411, November, 1938).

A detailed account of the development of non-theatrical films in America over the last quarter century was published by Krows (*Educational Screen* 17: 211, September, 1938, et seq.). Educational aspects of the motion picture were considered in one entire issue of the *Journal of Educational Sociology* (November, 1937) by British and American authors. It was noted by Darvall that the 240 million English-speaking people in the world give educational films a wider potential circulation than any other medium in any other language.

Installations of 16 mm. projection apparatus were being extended in various countries; Germany, for example, was reported to have over 20,000 in their schools so that one out of 2.6 schools possessed its own equipment. Over 200 schools in the United States were reported to be engaged in the production of films as a part of their project work (*Educational Screen* 17: 216, September, 1938).

Further studies on the practical problem of the cause of "knock" in a spark-ignition engine were made with a high-speed camera by Rothrock and Spencer. Their results showed that no type of sonic or supersonic compression waves exist in the combustion gases prior to the occurrence of knock. (Report No. 622, Nat. Advisory Com. for Aeronautics, Washington, D. C.). A new high-speed motion-picture camera of the optical compensator type, operating at 4000 pictures per second, was used to study problems applied to the design of the telephone apparatus (*J. Soc. Mot. Pict. Eng.* 30: 30, January, 1938). Natural-color motion pictures were made with exposures of $\frac{1}{10,000}$ th second of electric arcs being struck in various gases. New facts related to combustion were revealed when the pictures were projected at normal speed (*J. Applied Physics* 9: 188, March, 1938).

Esselen showed motion pictures at the fall meeting of the American Chemical Society at Milwaukee of air-bubble formation in water as revealed by ultra-slow motion photography. Edgerton had developed a camera that permitted as many as 600 exposures on a single plate. An intense light source was used which lasted $\frac{1}{100,000}$ th second and gave

100 exposures per second. Mili used the Edgerton high speed flash equipment for making action studies of athletes, such as skaters, tennis, and basketball players. The resulting photographs showed amazing clarity of detail in the action of the players.

Ordinary visual record seismographs as used for location of oil deposits record many types of vibrations in addition to those which are related to the deposit. A new instrument called a "Geosonograph" uses a receptor which transforms the vibrations to electric waves, amplifies and records them on sound film. Subsequent analysis can sort out the waves in which the oil surveyor is interested (*U.S. Geol. Survey Bull.* No. 895 B).

In the fields of medicine and surgery, color photography offered many advantages over ordinary photography as pathological cases, operations, and post-mortem examinations could be recorded quickly and accurately with the new, fast-color films. Miniature cameras were preferred for many types of general photography because of their convenience. Extensive use was also being made of the finer grain, fast panchromatic films in hospitals and laboratories throughout the world. Clinical cameras were designed for specialized uses such as dental intraoral photography, pictures of the stomach, the eye, ear, and throat (*Photography* 6: 45, June, 1938, also *J. Biol. Phot. Assn.* 7: 2, September, 1938).

A remarkable exhibit of 61 color photomicrographs (each $6\frac{1}{2}$ by $8\frac{1}{2}$ -inches in size) was shown at the Geological Museum, London, in October (*B. J. Phot.* 85: 644, Oct. 14, 1938). Increased resolution was obtained in photomicrographs of cross sections of animal skins by photographing them with ultra-violet (365 m μ) radiation (*J. Amer. Leather Chemists Assn.* 33: 67, February, 1938).

Unusual uses of photography were: Measurement of the swimming speed of fish (*Discovery N.S.* 1: 154, 1938); recording the songs of vanishing birds (*J. Soc. Mot. Pict. Eng.* 30: 201, February, 1938); photography with X-rays of the penetration of bullets into wood (*Naturwissenschaften* 26: 476, 1938); identification of precious stones by photographing the pattern formed when light passed through them (*Focus* 24: 466, 1937); measurement of the rate of emission of perfume from a flower (*Bull. Soc. Franc. Phot.* 25: 109, July, 1938).

A study of 30 metropolitan newspapers revealed a 40 per cent increase in the use of photographs since 1931 (*Editor and Publisher* 71: 8, Feb. 19, 1938). About 16,000,000 all-picture magazines were reported to have been purchased monthly in the United States. The number of users of stripping films was increasing constantly but many engravers still preferred the older wet-plate process of preparation of half-tone plates.

The rapid growth of demands for making color-print reproductions from small (35 mm.) film which caught the industry unprepared as regards cameras and lenses two years ago was being met by the introduction of suitable equipment (*Amer. Photo-engraver* 30: 602, July, 1938). The introduction of larger size color films during the latter part of the year was received with great interest. Elimination of réseau pattern in screen plates was claimed (*Phot. J.* 78: 269, April, 1938).

Physical Measurements. Several practical problems arising from the study of the characteristic curve of photographic materials were discussed by Willcock. Failure of the reciprocity law at low light intensities was observed and practical results

of the effect were noted (*Brit. J. Phot.* 84: 721, Nov. 12, 1937, et seq.). Discordant results were claimed by Bontenbal from contrast measurements of photographic papers according to methods suggested by various workers. A reasonable measurement was claimed to result, however, if the exposure difference between two points on the characteristic curve with densities of 0.25 and 0.9 was selected (*Phot. J.* 78: 76, February, 1938).

At the Washington meeting of the Society of Motion Picture Engineers, MacAdam read a paper and showed a motion-picture film, which demonstrated that colorimetry had acquired the status of an exact science (*J. Soc. Mot. Pict. Eng.* 31: 343, October, 1938).

The need for more precise instruments and methods for making color prints, both commercial and cinematographic, was admitted and suggestions for meeting it were given in papers by Kurtzner and Seymour (*Amer. Phot.* 32: 862, December, 1938), and Evans (*J. Soc. Mot. Pict. Eng.* 31: 194, August, 1938). The contention that the practical color photographer is concerned primarily with specific colors in certain parts of a scene rather than with the average color of the scene was upheld by several investigators, and suggestions were made that instruments should be built to evaluate such areas (*Brit. J. Phot.* 85: 385, June 24, 1938; also *Phot. J.* 78: 115, March, 1938).

A valuable use of the photographic plate was described by Harrison who gave details on the production of photographic scales for the rapid calibration and correction of comparator screws (*Rev. Sci. Instruments* 9: 15, January, 1938). Specific information of great use in undersea photography was supplied by Darby, Johnson, and Barnes on the absorption and scattering of solar radiation by the sea (Carnegie Institution of Washington, Publ. No. 475, p. 191, Oct. 15, 1937).

Manufacture and Storage of Sensitized Materials. As noted earlier in this report, the introduction of improved photographic materials in nearly every field of photography represented one of the most noteworthy events of the year. Emulsion manufacturers have, for many years, associated a gain in speed of an emulsion with a coarsening of the grain size. Many of the newer films of the year, however, were not only much faster than those available theretofore, but in many cases the grain size was reduced appreciably, a significant achievement (*J. Soc. Mot. Pict. Eng.* 30: 541, May, 1938; *ibid.* 31: 307, September, 1938; also *Internat. Phot.* 10: 23, December, 1938). A balanced color sensitiveness and freedom from halation distinguished many of the new films. Some of the very fine grain emulsions were reported to be single-coated (*Brit. J. Phot.* 85: 221, Apr. 8, 1938). Many interesting details related to the manufacture of motion-picture film were discussed by Amor (*Phot. J.* 78: 459, July, 1938).

Of interest to photographers and photoengravers was a new monopack film, which permitted three separation negatives to be made at one time in any commercial camera. After development, the images were iodized, washed, and dried. Printing was done by reflection (*Brit. J. Phot.* 85: 601, Sept. 23, 1938).

For air-mail transit, an extremely thin bromide paper was introduced, which had only 43 per cent of the weight of single-weight paper. Research in the manufacture of paper stock over the last decade by the Kodak Co. resulted in the production of a wood cellulose paper of superior quality to the

best rag content paper (*Business Week*, p. 42, Dec. 4, 1937).

A comprehensive survey was published by Kornfeld dealing with the mechanism of optical sensitizing of photographic emulsions, the connection between sensitizing and other properties and the mechanism of desensitizing (*J. Phys. Chem.* 42: 795, June, 1938). The limit of infrared sensitizing was set at 2μ by this same author who showed that the competition between the thermal reaction and the photochemical reaction sets a natural limit to such extension (*J. Chem. Physics* 6: 201, April, 1938).

A nondeformable film for air mapping photography was prepared from cellulose triacetate, using special solvents and plasticizers. Gradual transition to safety film from nitrate film appeared to be in progress. Many new professional films were being supplied on safety support. A film stock composed of a thin aluminum ribbon was reported to have several advantages, such as non-inflammability, freedom from deterioration, and non-shrinkage. Samples were claimed to have been projected by reflection 1500 times without perceptible wear (*Sci. Amer.*, July, 1938, p. 36).

A method of standardization of photographic gelatin on the basis of sensitivity as proposed in 1935 by two Russian investigators, Makaroff and Bekunoff, was examined by Trivelli and Smith, who concluded that the phenomena involved were too complex to be used for standardization because they depended not only on the kind of gelatin used, but also on the average grain size of the emulsion. Trivelli and Smith also studied the relation between contrast and grain size in photographic emulsions, and found contrast to be proportional to the logarithm of the number of grains over the full range of ripening (*Z. wiss. Phot.* 37: 123 and 140, 1938). Change in color when gelatin is treated with ammoniacal silver nitrate was stated by Polster to represent a method of determining the value of the gelatin for photographic purposes (*Osterreich Chemiker Ztg.* 41: 254, July 5, 1938).

An extensive study was reported by the French Air Ministry of the effect of low temperatures (20°C to -60°C .) on the sensitivity of emulsions. In general, sensitivity dropped with temperature. The plan of storage of valuable films in the National Archives, Washington, D. C., was described by Bradley (*Amer. Cinemat.* 19: 217, May, 1938).

New Apparatus. Interest in miniature cameras continued with no signs of the movement losing any of its popularity. On the contrary, many new cameras were placed on the market and the amateur appeared to greet each one with enthusiasm. It was estimated that 17,000,000 cameras of all types were being used actively in the United States.

The most compact new camera was probably the Minox, which was made in Latvia and measured about 3 by $1\frac{1}{2}$ by $\frac{3}{4}$ inches. The picture size was only $\frac{3}{4}$ by $\frac{3}{8}$ inch, but the camera had several features associated with larger cameras (*Brit. J. Phot.* 85: 352, June 3, 1938). Another camera used unperforated 16 mm. film (*Miniature Camera World* 2: 377, June, 1938); still another required 29 mm. film but gave standard size miniature pictures of 24 by 36 mm. (*Camera*, Phila. 56: 417, June, 1938).

A series of lenses with different covering powers and color correction were designed especially for use in making color pictures (*Phot. Ind.* 36: 35, May 11, 1938).

As a result of the extensive use of miniature cameras, amateurs were enlarging most of their

negatives. A demand for better enlarging equipment was being met by the introduction of enlargers having specialized features as follows: Better lenses; more accurate methods of focusing; provision for operation of high intensity lamps at reduced voltage during preliminary testing; adjustments for angle of lamp house to correct for tilt; and more rigid supports to insure freedom from vibration.

Printing machines using photocells for measurement of exposure were announced for use in commercial photo finishing plants (*Developments*, 12: 18, December, 1937). A sensitive instrument which measured the passage of an electric current when hypo was present in the wash water was recommended for the determination of thoroughness of washing of prints (*Miniature Camera Mag.* 2: 722, August, 1938).

Greater compactness, ease of repair, and higher efficiency was noted in projection equipment for motion picture theaters. A few 16 mm. projectors were equipped with arc illumination to make possible their use for larger picture projection (*Amer. Cinemat.* 19: 206, April, 1938).

Exposure meters appeared to be finding wider use, both by the amateur and the professional photographer. One new type meter was equipped with a sliding hood to prevent stray light striking the photocell (*Amer. Cinemat.* 19: 118, March, 1938). Another meter, especially designed for color photography work, permitted independent measurement of the highlights and shadow areas of the subject (*Kinemat. Weekly* 249: 53, Nov. 4, 1937).

Very promising results were reported from different parts of the world from investigators who were using the electron microscope, which permitted magnifications of 40,000 times. An instrument known as the Seriescope makes two pairs of radiographs, one vertically posterior-anterior and the other laterally. On viewing these in the instrument it is stated that the physician can locate a lesion and orient its position exactly in the body (*Bull. de Photogrammetrie* 7: 148, 1938).

The Photographic Process. The controversy on fine-grain developers continued unabated even though emulsions of much finer grain were introduced which made their use unnecessary except in cases where extreme enlargement is desired. In a series of noteworthy articles on practical fine-grain development, Arnold pointed out that much of the literature on the subject is obsolete because present-day negative materials differ greatly from older materials, and that the promotion of one photographic characteristic is usually obtained at the expense of another (*Photo. Art Monthly* 6: 429, September, 1937, et seq.). Jacobsohn divided fine-grain developers into two groups: (1) Compensating developers resulting in relatively fine grain by false gradation, and (2) genuine fine-grain developers comprising formulas using phenylenediamine compounds or similar developing substances (*Camera*, Luzern 16: 400, June, 1938).

The magnitude of speed losses and lowering in grain size with various types of developers was shown by Bloch and Mitchell to depend very largely upon the sensitive material (*Manuf. Chemist* 9: 16, April, 1938). Reinders and Beukers tested several fine-grain developers and made their comparisons from enlarged prints from step-wedge negatives. They pointed out that "a much stronger influence is exerted on the sharpness of the enlarged image by the focusing on the plate and the moving of the camera or object, . . . than by the use of one or the other developer" (*Phot. J.* 78: 192, April, 1938).

Among the various new fine-grain developers introduced were the following: (1) A "Meritol"-borax developer containing tribasic sodium phosphate and known as M.C.M.100 (*Miniature Camera Mag.* 2: 236, March, 1938); (2) a proprietary developer known as 777 Panthermic for which satisfactory development at temperatures to 90° F. was claimed without loss of speed (*Zeiss Mag.* 4: 128, June, 1938); (3) the Gamma "D" developer, a proprietary formula devised by Mortenson; (4) the Champlin No. 16, a much simpler formula than the famous No. 15 and said to be free from poisonous skin effects and stain; (5) X-33 Thermolecular developer, also stated to work well from 65° to 85° F.

At the annual meeting of the Photographic Society of America in Rochester, N. Y., in October, Crabtree and Henn read an interesting paper on their researches on this subject. A new formula, called DK-20, was announced, with which it was claimed that minimum graininess could be obtained with only a very slight loss in emulsion speed.

A successful modification of the Odell physical developer was described by Turner who considered it superior to paraphenylenediamine developers (*Miniature Camera World* 2: 79, January, 1938). Evans and Hanson, Jr. discussed methods of measuring the "reduction potential" and the "oxidation potential" of developers and stated that the true significance of these measured potentials is still not definitely known. In another paper they showed that it is possible to calculate readily the concentration of any ingredient present in a continually replenished developer solution during use (*J. Soc. Mot. Pict. Eng.* 30: 559, May, 1938; *ibid.* 31: 273, September, 1938).

Working details for making black-and-white enlargements from Kodachrome transparencies were published by Morse (*Amer. Phot.* 32: 1, January, 1938). The method of processing such films, as well as the use of dye images, is said to be the cause of the very fine grain of Kodachrome transparencies. The chemistry of color developer processes was reviewed by Tull (*Brit. J. Phot.* 85: 627, Oct. 7, 1938).

A new colorless desensitizer, "Pina-white," was marketed abroad, which could be added to a developer without causing precipitation (*Phot. Ind.* 36: 872, Aug. 3, 1938).

A photoelectric colorimeter for precise testing of the silver content of used fixing baths was described by Lobel (*Photographe* 29: 22, Jan. 20, 1938). Disadvantages are claimed by Sheppard and Houck to result if, after fixing films in a regular acid-hardening fixing bath, they are washed at the isoelectric point of gelatin (pH-4.9) rather than at a pH 7 or 8 (*J. Soc. Mot. Pict. Eng.* 31: 67, July, 1938).

An exhaustive paper on the toning of prints by selenium was published by Asloglow (*Brit. J. Phot.* 85: 599, Sept. 23, 1938).

Photographic Theory. A general discussion of the mechanism of the photographic process under the auspices of the British Association for the Advancement of Science at Nottingham, England, was opened by three speakers. Davies dealt with physical evidence on the action of light on photographic materials; Rawling gave an account of the action and theory of development; and Mott described a theory of light action and latent image formation which was developed on a wave-mechanical basis (*Nature* 140: 997, Dec. 11, 1937).

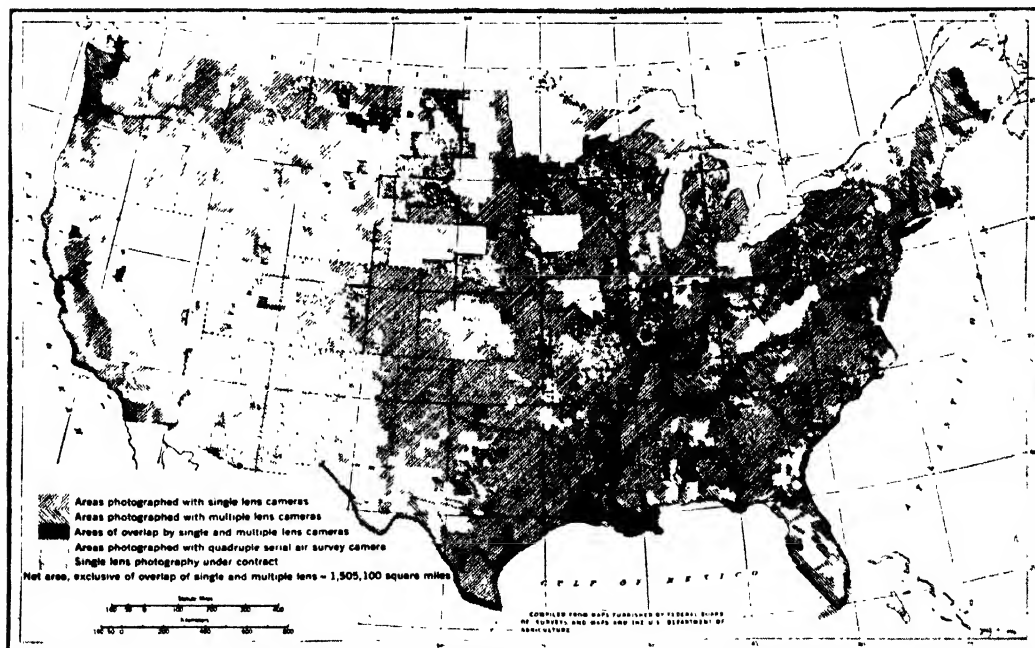

In a lecture before the Franklin Institute, Philadelphia, on May 20, 1938, Mees discussed photo-

INFRARED PHOTOGRAPH OF THE LONGEST GLACIER IN THE WORLD

Taken from an altitude of 15,000 feet, this picture shows the glacier, extending over 200 miles along almost the entire St. Elias Range in Canada and Alaska. Mt. Lucania (17,150) is at the extreme upper left; Mt. Logan (highest peak in Canada - 19,850) is near the upper center, Mt. Vancouver (15,720) is at the far end of the great glacier, to the right of Logan, and Mt. St. Elias (18,008) is the pointed peak to the right of Vancouver.

ULTRARAPID PHOTOGRAPH OF EXPERT SKATER—HAZEL FRANKLIN

Exposed at about 1,000,000-second at f 16 with Edgerton High Speed Camera and Flash Equipment as adapted for commercial work. Modeling achieved with five lights to give front, cross, and top lighting. Photographed by Gjon Mili

tography and the advance of pure science. He reviewed the progress of knowledge on color sensitizing of photographic emulsions, of processes of color photography, of the chemistry of development, and of the cause of sensitivity and the mechanism of latent image formation. In connection with the latter subject, he pointed out that a consistent theory of the effect of light upon silver bromide grains had come out of the work of the Kodak Laboratories and from Professors Gurney and Mott of Bristol, England (*Proc. Roy. Soc. 164A*: 151, Jan. 21, 1938). Summing up this theory Mees stated, "The action of light, then, on the silver halide crystals is, first, to produce instantaneously a charge of free electrons. Then these electrons are trapped at the sensitivity specks, and their charge is neutralized by silver ions, with the result that metallic silver is deposited around each sensitivity speck and forms the permanent nucleus which we call the *latent image*." (*J. Franklin Institute* 226: 281, September, 1938).

Two independent investigations confirmed various aspects of the theory of latent image formation proposed by Gurney and Mott. Experiments by Webb and Evans using interrupted and Herschel exposures (erasure by infrared radiation of the forward action of a previous exposure to white light) at low temperatures (-186°C .) as well as reciprocity measurements were shown to permit interpretation in terms of the Gurney-Mott theory (*J. Opt. Soc. Amer.* 28: 249, July, 1938).

Reproduced from an article by Webb and Evans, *J. Opt. Soc. Amer.* 28: 249, July, 1938.

SCHEMATIC DIAGRAM OF SILVER BROMIDE CRYSTAL SHOWING FORMATION OF THE LATENT IMAGE

(a) Three black spots near edges represent sensitivity specks. After exposure to light, the crystal contains free electrons (circles with lines inside them) in rapid motion; (b) Specks acquire a negative charge by trapping of some of the electrons; (c) Free silver ions (dislodged by heat motion from their regular lattice position) diffuse toward the negatively charged specks; (d) Each silver ion that reaches a speck neutralizes excess negative charge (electrons) and forms silver atoms, which remain bound to the speck. These metallic clumps are supposed to act as nuclei for inducing development of the silver bromide crystal.

Berg and Mendelssohn showed that photographic materials have an appreciable sensitivity down to -253°C . (liquid hydrogen) and that little change occurs when the temperature is dropped from -183°C . to -253°C . No reciprocity failure was found

at either of these temperatures (*Proc. Roy. Soc.—London, Series A* 168: 168, October, 1938).

Failure of the reciprocity law at low intensity of photographic exposure was shown by Webb and Evans to be due to a regression of the latent-image speck in its initial stages of formation. Their results also showed that a stable latent-image speck can exist which is not developable (*J. Opt. Soc. Amer.* 28: 431, November, 1938).

Renewed investigations on the numerical relationships between the sensitometric and the grain-size characteristics of emulsions based on the quantum theory of photographic exposure were reported by Silberstein and Trivelli. Particularly significant among the results with several sets of emulsions was the fairly close proportionality, which was found between the so-called H. and D. speed of an emulsion and its average silver halide grain size (*J. Opt. Soc. Amer.* 28: 441, November, 1938).

The mechanism of optical sensitizing of silver halides by dyes was studied by Sheppard, Lambert, and Walker who showed that in the presence of a halogen acceptor, the absorbed dye is not destroyed on exposure to light, but facilitates the transfer of electrons from bromide to silver ions by absorbing quanta of too low an energy to cause such a transfer directly. For each quantum of light absorbed per dye molecule, one atom of silver is produced in any event in the initial high efficiency region of the absorption (*Nature* 140: 1096, Dec. 25, 1937; *ibid.* 142: 478, Sept. 10, 1938).

An investigation by Cameron on the potentials of platinum electrodes in photographic developers showed these potentials to be functions of the oxygen concentration as well as that of the reducing agent. A second paper reported attempts that were made to determine a reversal point in developer solutions of elon containing sulfite. None was found to exist (*J. Phys. Chem.* 42: 521 and 629, 1938). Further studies on oxidation processes were reported by James, Weissberger, and Snell who discussed the auto-oxidation of durohydroquinone and several methylhydroquinones (*J. Amer. Chem. Soc.* 60: 98 and 2084, 1938).

Several very interesting papers were published on the theory of additive as well as subtractive color photography, and also on the theory of three-color reproduction as follows: "Additive Three-color Photography," Harrison, *Phot. J.* 77: 706, December, 1937; *ibid.* 78: 424, June, 1938; "Subtractive Three-color Photography," Yule, *J. Opt. Soc. Amer.* 28: 419, November, 1938; *ibid.* 28: 481, December, 1938; "Additive and Subtractive Color Photography," Hardy, *J. Soc. Mot. Pict. Eng.* 31: 331, October, 1938; "Three-color Reproduction," Hardy and Wurzburg, Jr., *J. Opt. Soc. Amer.* 27: 227, July, 1938; also MacAdam, *ibid.* 28: 399, November, 1938, and 466, December, 1938.

Using the photographic emulsion as the "proving ground," Wilkins and St. Helens made a statistical study of the grain spacing of alpha-rays, deuterons, and proton tracks (*Phys. Rev.* 54: 783, Nov. 15, 1938). Examples of this emulsion-track technique were exhibited at the 83d Exhibition of the Royal Photographic Society in London in September.

Bibliography. An attractively printed quarterly publication, *U.S. Camera*, made its debut in October. It is published by U.S. Camera Publishing Corp., New York, publisher of a leading American annual of photography. The *Photographic Digest*, which was started in 1936, was absorbed by *Minicam*, a popular monthly published in New York. In the specialized fields, two journals made their

appearance: The *Journal of Documentary Reproduction*, published quarterly by the American Library Association (Chicago); and the *Journal of the British Kinematographic Society*, issued quarterly by this society in London. A new Russian technical journal, *Kino-mechanik*, was in its second volume as a monthly issue.

The more notable books of the year were: D. Charles, *The Camera in Commerce*, Pitman & Sons, London; F. R. Bill, *A Manual of Home Portraiture*, Photographic Association of America, Cleveland, Ohio; L. P. Clerc, *Photography—Theory and Practice*, 2d English edit., Pitman & Sons, London; C. B. Neblette, *Photography—Principles and Practice*, 3d edit., Van Nostrand Co., New York; *The Modern Encyclopedia of Photography*, 2 vols., The Waverley Book Co., Ltd., London; J. Price, *News Pictures*, Round Table Press, New York; N. Naumberg, *We Make the Movies*, Norton Co., New York; *Motion Picture Sound Engineering*, edited by a committee of the Academy of Motion Picture Arts and Sciences (Hollywood), Van Nostrand Co., New York; H. Umbeh, *Der Schmalfilm Tont*, Knapp, Halle (Saale); R. M. Fanstone, *Color Photography for Beginners*, Fountain Press, London; C. E. Dunn, *Natural Color Processes*, 2d edit., Chapman & Hall, London; D. A. Spencer, *Color Photography in Practice*, Pitman & Sons, London; K. Henney, *Color Photography for the Amateur*, McGraw-Hill Co., New York; P. K. Turner, *Processing Miniature Films*, Link House Publications Ltd., London; F. R. Newens, *Trichrome Printing by the Autotype Process*, 2d edit., Autotype Co., Ltd., London; H. Champlin, *Brilliance—Gradation—Sharpness with the Miniature Camera*, Camera Craft Publishing Co., San Francisco, Calif.; *How to Make Good Movies*, Eastman Kodak Co., Rochester, N. Y.; J. I. Crabtree and G. E. Matthews, *Photographic Chemicals and Solutions*, American Photographic Publishing Co., Boston, and Chapman & Hall, London; C. W. Gamble, *Modern Illustration Processes*, 2d edit., Pitman & Sons, London; C. M. Willy, *Practical Photo-lithography*, Pitman & Sons, London; G. G. Reinert, *Praktische Mikro-fotografie*, Knapp, Halle (Saale); C. A. Mitchell, *Documents and Their Scientific Examination*, Griffin and Co., London; W. D. Morgan and H. M. Lester, *Miniature Camera Work*, Morgan & Lester, New York; E. Stenger, *Fortschritte der Photographie*, vol. v, Ergebnisse der Angewandten Physikalischen Chemie, Akademische Verlags, M. B. H. Leipzig; R. Taft, *Photography and the American Scene*, Macmillan Co., New York; M. Bardeche and R. Brasillach, *History of Motion Pictures*, trans. from the French by I. Barry, Norton and Co., New York.

A partial list of the handbooks and annuals appearing during the year is as follows: J. J. Rose, *The American Cinematographer Handbook and Reference Guide*, American Society of Cinematographers, Hollywood, Calif.; *Abridged Scientific Publications of the Kodak Research Laboratories*, vols. xviii and xix, Eastman Kodak Co., Rochester, N. Y.; *American Annual of Photography*, American Photographic Publishing Co., Boston, Mass.; *British Journal Almanac*, Greenwood, London; *Universal Photo Almanac* and *Market Guide*, Falk Publishing Co., New York, N. Y.; *Photofreund Jahrbuch*, Photokino-Verlag, Berlin; *Deutscher Kamera Almanach*, Union Deutsche Verlag, Berlin; *Jahrbuch des Kinoamaturs*, Photokino-Verlag, Berlin; *U. S. Camera*, Morrow and Co., New York, N. Y.; *Kinematograph Year Book*, Kinematograph Publications, Ltd., London; *Film Daily Year Book of Motion Pictures*, "Film Daily," New York, N. Y.; *International Motion Picture Almanac*, Quigley Publications, New York; *Penrose's Annual*, Lund, Humphries and Co., London; *Klimsch's Jahrbuch*, Klimsch and Co., Frankfurt a. Main.

PHOTOPERIODISM. See BOTANY.

PHYSICAL ANTHROPOLOGY. See ANTHROPOLOGY.

PHYSICS. Further search for new atomic particles, the near completion of the task of transmuting the known chemical elements, a better understanding of mysterious cosmic rays, and the creation of a better set of spectroscopic wavelength standards were among the outstanding achievements of the year 1938 in physics.

Atomic Particles. Although no new atomic particles actually were discovered during the year two significant experiments approached the much predicted goal of finding other sub-atomic building blocks.

Crane and Halpern at the University of Michigan made the first study of momentum relations in an individual disintegration event. Using the disintegration of a gaseous compound of a radioactive

salt they found that the law of momentum appears not to be conserved. Rather than lay aside this basic and well-tested law of physics, they postulated the existence of a third particle in the observed disintegration. "This third particle while undetected itself," they state, "is probably the long-sought neutrino."

Under the direction of Compton at the University of Chicago, Shonka reported experiments at 14,200 feet on the penetration of cosmic rays through great thicknesses of lead, which suggest that the causative agent is a new particle, the neutron, having the mass of the heavy electron—found in 1937—but without electrical charge.

To bring order out of the chaos over the nomenclature suggested for the heavy electron, Anderson and Neddermeyer of California Institute of Technology proposed a new name for this particle which has a mass intermediate between that of the proton and the electron. While the heavy electron was first known as the X particle and then variously and simultaneously as the dynatron, barytron, penetron, and yukon, it is now proposed that the particle be known as a mesotron to indicate the characteristic property of intermediate mass.

Work on the nature of the mesotron ranged from high in the atmosphere, in airplane laboratories, to the depths of deep mines. Flying at 25,000 feet Schein and Wilson of the University of Chicago obtained data indicating that a probable scene of origin of the mesotrons was in the upper atmosphere of the earth.

Most significant suggestion on the properties of the mesotron particles was that of Euler and Heisenberg of Germany who predicted that the particles suffered a radioactive type of decay which could explain their seemingly paradoxical absorption properties. Mesotrons had been found to pass more easily through dense materials like lead than through an equivalent amount of air. Experiments and calculations by Blackett in England and Rossi at Copenhagen give confirmation to the fact that the mean life of the disintegrating mesotron is .000002 seconds. That a single atomic particle like the mesotron can suffer a disintegration is explained by saying that it forms an electron and a neutrino with the original mass of the mesotron turning into kinetic energy of its two atomic "offspring" particles.

Is there really a heavy electron, or mesotron? Darrow of Bell Telephone Laboratories raised the pertinent point that because the electrical charge and exact mass of the mesotron has not yet been determined the particle is more a mental concept in the minds of physicists than it is a physical reality.

Forecasts of still yet undetected particles included that by Langer at California Institute of Technology, who suggested the need for a lightweight kind of mesotron having a mass from 2 to 10 times as great as the electron.

Cosmic Rays. Intriguing and intensive was research on the mystery of cosmic rays during the year. Millikan and his co-workers at California Institute of Technology massed findings best interpreted by saying that cosmic rays originate in the annihilation of such common atoms as carbon, nitrogen, and oxygen. Their high altitude balloon experiments indicate that cosmic rays reaching the earth have never encountered so dense a mass of matter before and thus rules out, they feel, the interior of stars as the scene of origin.

In contrast Johnson of Bartol Research Foundation, summarizing all cosmic-ray knowledge, pos-

tulates the interior of stars as the point of origin of cosmic rays.

Compton at University of Chicago sees in the absence of the discovery of a "galactic effect" in cosmic ray's intensity, evidence of a "local" origin for cosmic rays within the galaxy of stars containing the Milky Way, the earth, and the sun.

Largest and one of the most intricate cosmic-ray detecting devices ever built was reported by Swann of Bartol Research Foundation of the Franklin Institute. It consists of 180 Geiger-Muller counters, arranged in 10 tiers, separated by plates of lead. It is designed for studies of the most penetrating cosmic radiation and cosmic ray "shower" phenomena.

Spectroscopy. Vitrally important to the field of spectroscopy was the virtual completion of a comprehensive and precise catalogue of the spectral lines of the elements under the direction of Harrison of Massachusetts Institute of Technology. The new catalogue will supplant and greatly extend the present reference standards obtained more than 25 years ago.

To spectroscopy, too, in 1938 goes credit for the first experiments performed with the giant 225-ton cyclotron apparatus at the University of California, for Jenkins used the huge electro-magnet of the yet-unfinished unit to split the spectral lines in Zeeman effect research.

Cyclotrons. Significant was the trend of cyclotron construction toward the goal of creating sizable quantities of artificially radioactive materials for use in biological and medical experimentation including products for cancer-radiation therapy. Announcement of a new 100-ton cyclotron at Massachusetts Institute of Technology for such humanitarian purposes was typical.

Equally important was the first use of the 85-ton cyclotron at the University of California for the treatment of human cancer patients with neutrons obtained from the apparatus. Stone and John Lawrence, brother of Prof. E. O. Lawrence, who invented the cyclotron, were in charge of the tests.

Efforts continued to improve the performance of cyclotrons. Lawson and Tyler of the University of Michigan devised vacuum tube circuits which will control the 250 amperes of current flowing in the coils of the cyclotron electro-magnet to an accuracy of one part in 5000.

Kurie at Indiana University described new ways to bombard difficult targets like metallic sodium and lithium in cyclotrons. A small target chamber filled with hydrogen gas and special water cooling is employed.

Electrostatic Generators. Electrostatic generators, rival of cyclotrons as favored atom-smashing machines of the physicists, continued to be constructed. Van de Graaff at Massachusetts Institute of Technology, Wells at Westinghouse, and Tuve and his colleagues at Carnegie Institution of Washington, were all in the final stages of putting finishing touches on three great instruments operating under pressure.

Tate, Rumbaugh, and Williams at the University of Minnesota announced plans for the construction of still another generator capable of creating energies of 4,000,000 electron-volts.

Breit, Herb, and their colleagues described further studies with the Wisconsin high-voltage apparatus of the attractive force within atomic nuclei, which permit, finally, a quantitative fixation of the magnitude of this force and the distance over which it acts. The force, a "cement" holding matter together, constitutes a binding energy equivalent to

11,000,000 electron volts and acts only over a distance of one-tenth of a millionth of a millionth of an inch.

Super-Heavy Elements. Hahn, Meitner, and Strassmann of Kaiser Wilhelm Institute, Berlin, announced the creation of the trans-uranium element No. 95 made by bombardment of heavy uranium, for months, with neutrons. Element 95, called eka-iridium, was found to disintegrate spontaneously in a radioactive transformation having a half life period of 60 days.

Such elements, first created in experiments on neutron bombardment by Fermi and his colleagues at Royal University, Rome, were thus confirmed independently. Abelson at the University of California also confirmed Fermi's previous discovery of trans-uranium elements Nos. 93 and 94.

While not yet definitely substantiated, it is now probable that elements up to No. 97 have been produced by neutron bombardment of uranium.

Earth Electricity and Magnetism. McNish of Carnegie Institution of Washington reported vast electrical currents several hundred miles wide moving through the thin atmosphere from 60 to 90 miles above the surface of the earth. The currents appear during electrical storms and are attributed to the action of particles projected to the earth from the sun.

Forbush, also of Carnegie Institution of Washington, cited a ring of electricity as a possible cause for cosmic ray intensity decreases during intense magnetic storms. During periods between severe magnetic storms the size of the ring of electricity might also explain slight observed variations in cosmic radiation.

Millikan at California Institute of Technology announced similar findings and suggested that measurements of cosmic ray intensity would become a way of measuring the external magnetic field of the earth.

Transmutation. While Darrow of Bell Telephone Laboratories, summarizing transmutation research, reported that all the known chemical elements, except two, had yielded to the one-time dream of ancient alchemists; the field of changing elements one with another was still one of the most fruitful in physics.

Alvarez at the University of California described an electrical velocity selector which allows the production and use of highly collimated beams of pure thermal neutrons. The mean temperature and hence the speed of the neutrons may be varied from room temperatures (300 degrees Kelvin) down to only 10 degrees Kelvin above absolute zero, all without the use of refrigerants. The effect of fast neutrons is completely eliminated. Thus a new order of accuracy in transmutation experiments using such thermal, slow neutrons is now possible.

Allison, Skaggs, and Smith, of the University of Chicago, made a new precise determination of the energy changes in the transmutation of beryllium into lithium by proton bombardment. They were able to establish the difference of mass between the beryllium isotope of mass nine and the lithium isotope of mass six as 2.99804 ± 0.00009 . Assuming that of the two the mass of lithium six is more accurately known, and adopting the value of Livingston and Bethe of 6.01686 ± 0.00020 , the experiment shows the mass of beryllium nine isotope to be 9.01491 ± 0.00025 . The prevalence with which beryllium is used in transmutation experiments makes this new, more accurate figure of value.

Using the electrostatic generator at the University of Wisconsin, Bernet, Herb, and Parkinson were able to determine, with higher accuracy than ever before, the energy levels in the nucleus of the fluorine atoms at which gamma radiation is emitted. Protons were the bombarding particles. The findings throw new light on the nuclear reactions which bring about these gamma-ray emissions, a matter which is as yet poorly understood.

Konopinski and Bethe of Cornell University reported theoretical calculations which assign gyroscopic spin of the nucleus as the cause of the amazingly long life of the radioactive rubidium isotope 87 which has a half life of 100,000,000,000 years.

New Determination of e/m . Measurements by Bearden of Johns Hopkins on the index of refraction of X-rays by a diamond prism, with an accuracy of one part in 10,000, made possible a new determination of the value of the important physical constant e/m . The value is $(1.7601 \pm .0003) \times 10^7$. This value, for bound electrons, is higher than previous spectroscopic measurements but is in excellent agreement with the free electron results of Dunnington.

Wilson Cloud Chamber Improvement. Ruark, of the University of North Carolina, reported a new mechanism for photographing and viewing the tracks of atomic particles in a Wilson cloud chamber in three dimensions. The advance makes possible an increase in speed in studying photographs where scientists must take thousands of cosmic-ray pictures to obtain only a few of some special class of tracks which they may be investigating.

Cerenkov Radiation. Collins and Reiling at the University of Notre Dame made studies on Cerenkov radiation, the strange blue-white light emitted by liquids when bombarded with swift electrons. Originally discovered in 1934, the new work with this radiation discloses that the spectrum of the light is continuous from the long wavelength limit of the photographic plates down to the ultraviolet wave lengths where absorption by the liquid begins to occur.

Electron Bombardment Furnace. Temperatures of 4500 degrees Fahrenheit were obtained by Hultgren at Harvard University in a new furnace that utilizes the bombardment of electrons as the heating source. The furnace temperature is limited only by the lack of crucibles which will stand temperatures greater than 5000 degrees.

Ether Drift Experiment. Using hydrogen ions instead of light rays, Ives, of Bell Telephone Laboratories, repeated the famous experiment on ether drift whose negative result led to the formulation of Einstein's relativity theory. The results confirm the original findings of Michelson and Morley.

Dual X-ray Tubes. Increased length of service for X-ray tubes used in cancer therapy was achieved by Failla of Memorial Hospital, New York City, by using a dual circuit enabling two tubes to work, each in turn, off the half cycle of alternating current.

Acoustics. Reverberation was still a major subject of investigation in the science of acoustics.

Reverberation meters, instruments giving integrated records of the dying away of sound, came into wider use. In Holland, van Urk obtained interesting curves with such an instrument while in France, Fleurent and Beauvilain demonstrated how a fluxmeter could be used to measure reverberation times of considerable length.

Morris, Nixon, and Parkinson of Johns Manville laboratories reported studies on reverberation, noting that care must be taken to prevent vibrations in the room from reacting on the sound source.

In the field of sound-absorbing materials, Monna in Italy showed that in layers from one to two centimeters thick, openings of from 10 to 20 microns (a micron is equivalent to 39.37 millionths of an inch) possessed the most effective radius for best sound absorption.

Advances were made in studying reflections in rooms so that reverberation would not only be reduced but sufficient intensity of sound would be obtained in remote parts as under a gallery in an auditorium. Such tests, of which those of Vermeulen in Holland are typical, are made with aluminum sheet models and an electric light bulb replacing the source of sound. Justification for this unusual substitute is that the intelligibility of speech depends mainly on the higher frequencies of the speech sounds, those waves having a length of 30 centimeters or less, which are reflected with regularity as is light. The audience in such tests is represented by opal glass, through which the distribution of intensity in the different parts can be seen. Theaters made with the aid of models and the reverberation formula confirm the predictions with regard to loudness and intelligibility.

Söllner, at Cornell University, found that high-frequency sound waves not only make sediments, gels, and precipitates disperse—as previously has been known—but also that certain solids, having a laminated structure, like mica, could be broken into fine bits by the intense vibrations created.

Optics. Of outstanding interest and important practical applications in increasing the transmitting properties of elaborate trains of glass lenses and prisms as used in periscopes, cameras, and binoculars, was the announcement of the use of thin films to eliminate, almost completely, the reflective light losses at air-to-glass surfaces.

Blodgett of the General Electric Company and Cartwright and Turner of Massachusetts Institute of Technology announced independently the use of films, having a thickness of one-quarter the wavelength of light rays, as the means of eliminating reflective losses almost completely. When such films are applied properly to the two surfaces of a glass plate or lens, destructive interference of the reflected light ray is achieved and the light energy thus annulled appears in the transmitted beam.

Films of insoluble soap solution, obtained by dipping, were used by Blodgett and films of fluorides of magnesium and sodium, obtained by evaporation, were employed by the M.I.T. scientists.

Electron Diffraction. Germer of Bell Telephone Laboratories reported studies in monatomic films—so thin that they are often referred to as a two-dimensional world—which reveal the presence of *three-dimensional crystals*. This knowledge was obtained by analyzing the pattern obtained with an electron diffraction camera.

With electron microscopes Zworykin of the Radio Corporation of America described experiments which have rendered visible for the first time the virus of smallpox and pictures of molecules of gases. Magnifications approaching 100,000 times were achieved.

Centrifuge. Significant in the realm of high-speed centrifuges was the report of Beams, Skarstrom, and Carr, of the University of Virginia, that the isotopes of chlorine had been concentrated in their centrifuge spinning at 1000 revolutions a sec-

ond. Forces equivalent to 170,000 times that of gravity were attained. The equipment is able to concentrate a cubic centimeter daily of a fluid in which the isotopic ratio of chlorine of mass 35 to chlorine of mass 37 is increased by 12 per cent.

PICKERING, WILLIAM HENRY. An American astronomer, brother of Edward Charles Pickering (1846-1919), died in Mandeville, Jamaica, B.W.I., Jan. 16, 1938. Born in Boston, Mass., Feb. 15, 1858, he was educated at the Massachusetts Institute of Technology (B.S., 1879) and then taught physics there from 1879 to 1883. Invited by his brother, head of the Harvard College Observatory, to join him, he became assistant professor of astronomy there in 1887 in charge of the newly established Boyden Department. An amateur photographer, he realized that photography and astronomy could be combined and suggested its use on a large scale to his brother, with the result that the Harvard survey of the sky, which contained 400,000 plates, was begun. He himself took some of the earliest photographs of Mars during 1888-89.

In 1889, he went to California to establish an observatory on Mount Wilson, but subsequently this site was abandoned, and in 1891 he set up an observatory for Harvard at Arequipa, Peru, which was recently given up, where he discovered the great whorls of diffuse galactic nebulosity enveloping the whole constellation Orion. In the following year, with A. E. Douglass, he discovered visually the numerous so-called lakes or oases on Mars. Pickering returned to Boston in 1893 where he met Percival Lowell who arranged with him to build an observatory in the West, with the result that the foundation for the famous Harvard Observatory at Flagstaff, Ariz., was laid. In the following year (1894) he began his observations of Mars and Jupiter. Returning to Harvard, in 1899 he led the first Harvard Expedition to Jamaica, and during 1900-01 he established an astronomical station for Harvard at Mandeville, where he spent seven months photographing the moon.

He re-established the Jamaica branch of the Harvard Observatory in 1911 and began his constant visual observation of Mars, the moon, and Jupiter's third satellite. The foremost observer of Mars in the country, his Observatory was the center of activities of the International Society of the Associated Observers of Mars, and in 1914 he began the first of the classical "Mars Reports,"

published in *Popular Astronomy*. These analyses of observations and drawings of the planet by a number of co-operating observers ran through 44 numbers and were discontinued in 1930. Dr. Pickering retired from Harvard in 1924 and settled in Mandeville, where he converted the astronomical station into a private one and continued his studies and researches.

A pioneer in his field, being one of the first to lead expeditions to observe solar phenomena and to build observatories, he led expeditions to observe the total solar eclipses in Colorado, 1878; Grenada, W. I., 1886; California, 1889; Chile, 1893; Georgia, 1900, and New Hampshire, 1932. In 1904 he led an expedition to Southern California to make observations of the moon, and in 1905 he made a special visit to Hawaii, and in 1907 to the Azores, to study the volcanic craters because of their similarity to the moon's craters.

Dr. Pickering's work embraced astronomy, photography, novae, eclipses, meteors, and he is especially known for his discovery of the ninth satellite of Saturn—Phoebe—the existence of which was shown by a photograph taken at Arequipa in 1898. This was one of the first objects of the solar system found to have a retrograde motion, and its discoverer showed how and why it revolved in an opposite direction from the others. In 1905 he reported the discovery of the 10th satellite—Themis—but this discovery was not fully confirmed. For his work on the satellites of Saturn he received the Lalande Prize in 1905 and the Janssen medal in 1909. As early as 1907, Pickering worked out a position for a hypothetical planet, and when Pluto was discovered in 1930 by Clyde W. Tombaugh, working on the reckonings made by Dr. Lowell in 1914, it was found to be near where Pickering's calculations had placed it.

A frequent contributor to the *Annals of Harvard Observatory*, Dr. Pickering was the author of *Walking Guide to Mt. Washington* (1882); *The Moon* (1903); *Lunar and Hawaiian Physical Features Compared* (1906), and *Mars* (1921).

PITTSBURGH, UNIVERSITY OF. A nonsectarian institution of higher education for men and women in Pittsburgh, Pa., founded in 1787. The total autumn enrollment for 1938 was 10,200, distributed as follows: The College, 2526; engineering, 784; mines, 230; business administration, 1706; education, 866; off-campus centers, 822; graduate school, 2261; medicine, 240; law, 171; pharmacy, 205; dentistry, 159; retail training, 24; school of applied social sciences, 206. Students who are taking evening courses are included in the above enrollment. The extension division enrollment was 936. The 1938 summer session enrollment was 2989. There were 1051 members of the faculty (including fellows of Mellon Institute of Industrial Research) during the year which closed June 30, 1938. The amount of endowment for the year ending June 30, 1938, was \$2,787,339, and the income from endowment was \$99,292. The library contained 211,000 volumes. The Heinz Memorial Chapel, the gift of Howard Heinz, Mrs. John L. Given, and the late Clifford Heinz, in memory of their father, Howard J. Heinz, and his mother, Anna Margaretta Heinz, was dedicated and presented to the University Nov. 20, 1938. The School of Applied Social Sciences, a graduate school of social work, was organized in 1938. Chancellor, John G. Bowman, LL.D.

PLANTS. See BOTANY.

PLASTICS. See CHEMISTRY, INDUSTRIAL.

PLATINUM. Canada continued in 1938 to be the largest producer of platinum, exceeding Russia, Colombia, and South Africa. Besides the popular use of this metal for jewelry, there is a steady demand for it in chemical laboratories for blowpipe tips, crucibles, and other purposes. It is preferred to many materials because of its ability to withstand corrosion at high temperatures.

World production of the platinum metals in 1938, according to the American Metal Market, was estimated at 460,000 oz., compared with approximately 440,000 in 1937. The United States is the largest single market with actual imports of 161,226 oz., during 1938. Re-exports totaled 33,435 oz., or approximately half those of 1937. Price ranges of the platinum metals were steadier during 1938 than the previous year. Palladium held firm at \$24 per oz., rhodium was in the range \$120-125 per oz., while platinum in January, 1938, was \$36 per oz., fell to \$33 in May, reached a high of \$39 in August, and then receded to \$34 in December.

PNEUMONIA. See MEDICINE AND SURGERY.

POLAND. A central European republic, established Nov. 9, 1918. Capital, Warsaw.

Area and Population. On Jan. 1, 1938, Poland had an area of 149,957 square miles and a population estimated at 34,500,000. In October, 1938, the Teschen (Cieszyn) district, with an area of 419 square miles and 241,698 inhabitants, was ceded to Poland by Czecho-Slovakia (q.v.). Living births registered in 1937 numbered 856,064 (24.9 per 1000); deaths, 481,594 (14 per 1000); marriages, 275,560 (8 per 1000). Emigrants in 1937, 102,366; returned emigrants, 40,704. About 27.4 per cent of the population resides in urban centers. Estimated populations of the chief cities on Jan. 1, 1938, were: Warsaw, 1,261,000; Łódź, 665,000; Lwów (Lemberg), 318,000; Poznań (Posen), 269,000; Kraków, 255,000; Wilno (Vilna), 208,000; Czechochowa, 136,000; Bydgoszcz (Bromberg), 137,000; Katowice, 133,000; Sosnowiec, 125,000; Lublin, 120,000; Gdynia, 114,000; Chorzów, 109,000; Białystok, 105,000.

Education and Religion. About 23 per cent of the population 10 years of age and over were illiterate at the 1931 census. The school enrollment in 1937-38 was: Nursery schools, 83,100; primary, 4,851,500; general secondary, 221,200; continuation and trade schools (1936-37), 194,200; universities (1936-37), 48,200. At the census of 1931 there were 20,670,100 Roman Catholics (64.8 per cent), 3,762,500 Orthodox Church members (11.8), 3,336,200 Greek Catholics (10.4), 3,113,900 Jews (9.8), 835,200 Protestants (2.6), and 197,900 others.

Production. About 64 per cent of the working population is engaged in agriculture, forestry, and fishing, and about 15.4 per cent in trade and transport. Yields of the chief cereals in 1938 were (in metric tons): Wheat, 2,298,200 (1,926,200 in 1937); barley, 1,435,900 (1,363,400); rye, 6,920,000 (5,637,800); oats, 2,596,000 (2,342,900); corn, 103,100 in 1937. Other crops in 1937 were: Potatoes, 1,477,867,000 bu.; sugar beets, 3,246,000 metric tons; beet sugar (1937-38), 457,000 metric tons; linseed, 2,964,000 bu.; flax, 83,995,000 lb.; clover, 1,911,000 metric tons. Livestock in 1937 included 10,572,000 cattle, 7,696,000 swine, 3,188,000 sheep, 406,000 goats, 3,890,000 horses, and about 120,000,000 poultry. The 1937 output of flour was 16,329,000 bbl.; wool, 9,259,000 lb.; beef, 459,152,000 lb.; mutton, 22,355,000 lb.; pork, 1,140,043,000 lb.; milk, 238,000,000 gal.; butter, 265,000,000 lb.; eggs, 283,000,000 doz. Mineral and metallurgical production for 1937 was (in metric tons): Coal,

36,218,000; iron ore, 678,000; salt, 590,000; crude potash, 521,000; petroleum products, 456,000; pure ozokerite, 488; pig iron, 724,000; steel, 1,451,000; rolled iron and steel, 1,043,000; lead, 18,000; zinc, 107,000.

Foreign Trade. In 1938 imports for consumption totaled 1,300,504,000 zlotys (1,254,298,000 in 1937) and exports of Polish products were 1,184,604,000 zlotys (1,195,488,000). Metals and their manufactures, raw cotton, machinery, and wool were the leading 1937 imports. The value of the chief exports was (in U.S. currency dollars): Wood and its manufactures, \$37,684,000; coal, \$35,017,000; metals and their manufactures, \$26,159,000; canned hams, \$11,280,000. Germany supplied 14.5 per cent of the 1937 imports for consumption (14.2 in 1936); United Kingdom, 11.9 (14.1); United States, 11.9 (11.9); Austria, 4.6 (4.5). Of the 1938 exports, the United Kingdom took 18.6 per cent (21.8 in 1936); Germany, 14.7 (14.3); United States, 8.6 (6.6). United States figures showed exports to Poland and Danzig in 1938 of \$24,695,903 (\$26,297,155 in 1937); imports from Poland and Danzig, \$13,416,775 (\$19,568,280).

Finance. For the fiscal year ended Mar. 31, 1938, total budget receipts were 2,373,000,000 zlotys and expenditures 2,335,000,000 zlotys. For 1938-39 budget estimates placed receipts and expenditures at 2,475,000,000 zlotys. The national debt was 4,974,000,000 zlotys on Oct. 1, 1938, against 4,763,000,000 on Oct. 1, 1937. During the year the internal debt increased from 2,131,000,000 to 2,459,000,000 zlotys and the external debt decreased from 2,632,000,000 to 2,515,000,000 zlotys. The zloty exchanged at an average of \$0.1892 in 1937 and \$0.1886 in 1938.

Transportation. In 1937 Poland had 13,440 miles of railway lines (state-owned, 12,580; private and local lines, 860), which carried 266,300,000 passengers and 77,870,000 metric tons of freight. Gross receipts of the state lines were 963,838,000 zlotys. Highways and roads extended 208,579 miles in 1937; number of automobiles on Jan. 1, 1938, 34,324. Statistics of the Polish Airlines (LOT) for 1937 were: Number of flights, 8963; miles flown, 1,359,992; passengers, 37,497; baggage, 928,752 lb.; freight, 623,258 lb.; mail, 272,307 lb.; newspapers, 227,233 lb. The Polish merchant marine in 1938 consisted of 52 vessels of 100,903 gross tons. Gdynia (Poland) and Danzig (Free City) handle most of Poland's overseas commerce. In 1937, 5766 vessels of 5,638,300 net registered tons entered Gdynia and 5935 vessels of 4,025,700 tons entered Danzig.

Government. The Constitution of Apr. 23, 1935, vested extensive powers in a President, chosen by popular vote from two nominees—one selected by the retiring President and the other by 75 electors (50 appointed by the Diet and 25 by the Senate and the highest state officials). In case the President refrains from nominating a candidate, the other nominee is automatically elected for the term of seven years. The President was empowered to appoint and dismiss the Prime Minister, to issue decrees with the force of law when the Diet (Sejm) was dissolved, and to dissolve the Diet and the Senate. The Diet consists of 204 members, chosen by voters (male and female) over 24 years of age from lists of nominees selected by special bodies including representatives of various political, commercial, professional, educational, and other groups. The Senate is composed of 96 members, one-third chosen by the President and the remaining two-thirds elected by voters over 30 years of age who have been

decorated for service to the state, have obtained an advanced education, or serve on certain public or semi-public agencies. Members of both the Diet and the Senate serve for five years. President in 1938, Ignace Moscicki (non-partisan), re-elected May 8, 1933. Premier, Gen. Felicjan Slawoj-Skladkowski, heading a non-party cabinet formed May 16, 1936. Many of the dictatorial powers wielded by Marshal Pilsudski previous to his death were formally vested in Gen. Edward Smigly-Rydz, inspector-general of the army, in 1936.

HISTORY

Internal Affairs. The attempt launched by Marshal Smigly-Rydz in 1937 to stabilize the existing minority, anti-democratic government through the establishment of a one-party state based upon the semi-Fascist National Unity Movement (see 1937 YEAR BOOK, p. 610) largely collapsed in 1938. The dissensions that developed within the newly organized Camp of National Unity in 1937 increased in the following year. Col. Adam Koc, founder of the movement, was forced to resign on Jan. 11, 1938, due to mounting opposition to his pro-Fascist policies. He was succeeded by Gen. Stanislaw Skwarczynski, who set forth the movement's objectives on February 21 as follows: Political organization of the nation by the movement in order to unite the Poles for national defense; industrial development and economic expansion; settlement of the Jewish problem by mass emigration; and the winning of colonies for Poland.

His program was considered too democratic and not sufficiently nationalistic by the pro-Fascist Union of Young Poland, and when he expelled the Union from the ranks of the National Unity Movement, a considerable section of former government supporters seceded from the party and joined with other Fascist and nationalist groups to form a new party of Nationalist Pilsudskists. This split within the government ranks encouraged the more democratic Opposition parties to renew their demands for liberalization of the Constitution and the electoral laws, under which the majority groups were excluded from voting. In this demand they found a supporter in President Moscicki, who gradually emerged as the leader of the pro-democratic elements in Poland. Meanwhile the lack of political capacities displayed by General Smigly-Rydz caused a marked decline in his prestige and influence upon internal affairs.

The government's subsequent announcement that free municipal and communal elections would be held between September and the spring of 1939 was attributed to the President's desire to broaden popular support of the regime and provide a safety valve for popular unrest. On September 13 President Moscicki dissolved Parliament and called new elections for November 6 and 13. He sought to enlist the co-operation of the Opposition parties in the elections by calling for liberalization of the electoral laws by the new Parliament. Despite government pressure, the Opposition parties again boycotted the parliamentary elections on the ground that the electoral machinery deprived them of direct representation.

Of about 500 candidates nominated for the 204 seats in the Sejm, 70 per cent were nominees of the government-sponsored Camp of National Unity. Of the group of army colonels, known as the Pilsudski Guard, that had controlled the government for over a decade after 1926, only a few succeeded in winning nominations by the electoral committees. Consequently the final electoral contests were main-

ly between government candidates and the Camp of National Unity held nearly three-fourths of the seats in the Sejm chosen on November 6. The 64 Senators elected on November 13 were also largely National Unity candidates. On November 22 President Moscicki completed the Upper House by appointing 32 additional Senators, most of them prominent non-party men. The new Parliament convened on November 28.

The municipal elections held in 52 cities and towns on December 18 showed an entirely different result. Freedom of voting enabled the liberal Opposition parties to capture 639 seats in the municipal councils as against about 383 won by the Camp of National Unity, 53 by Jewish groups, and 16 by the German minority. With this election self-government was restored in many communities formerly administered by government nominees. The strength displayed by the Opposition in the municipal elections and the growing necessity for national unity in the face of a possible European conflict brought increased pressure upon Parliament for an early liberalization of the electoral laws. However the peasants, comprising over three-fourths of the population and without representation in the government or Parliament, demanded not only electoral reform but a revision of the Constitution on democratic lines. They also demanded that the government permit the return of their leader, former Premier Witos, who was forced into exile eight years before to escape imprisonment.

Ukrainian Agitation. The program of the Camp of National Unity, reducing the minority groups to a civil status lower than that of the Poles in order to encourage Polonization, created further difficulty in maintaining national unity. Under the "gentlemen's agreement" of Dec. 5, 1935, the government agreed to consider Ukrainian autonomist demands "in a friendly spirit," granting the group representation in Parliament. But the National Unity program led the Ukrainian leaders to assert that their effort to win minority rights by compromise and peaceful methods had failed. In February, 1938, the Ukrainian National Party formally demanded complete self-government, including an independent parliament and army, for that part of South Poland in which some 6,000,000 Ukrainians constituted a majority of the population. It was not until December 21 that the government announced indirectly, through the speaker of the Sejm, that it was not prepared to grant the Ukrainian demands.

Meanwhile friction between Polish Nationalists and Ukrainians provoked several days of street fighting in Lwów, the capital of Eastern Galicia, early in November. Poland's effort to achieve a common frontier with Hungary through facilitating the incorporation of the Ruthenian (Carpatho-Ukrainian) districts of Czecho-Slovakia in Hungary provoked anti-Hungarian demonstrations among the Polish Ukrainians. Polish students and nationalists then organized attacks on Ukrainian centers. The riots were ended only after heavy property damage and many arrests. On November 19 Ukrainian leaders denounced the reprisals they declared the Polish Government had inflicted on the Ukrainian population for the anti-Polish activities of some Ukrainian organizations. They said great moral and material damage had been caused to Ukrainian cultural and economic institutions, that many young men had been arrested and humiliations inflicted upon old men and women. The widespread unrest and hostility to the Polish Government among the Ukrainians provided a solid

basis for the German-sponsored agitation started in Carpatho-Ukraine late in the year for the establishment of an independent Ukrainian state allied to the Reich (see CZECHO-SLOVAKIA and GERMANY under *History*).

Anti-Semitism. Intensified nationalism, depressed economic conditions, the grinding poverty of the peasantry, and the lack of openings in the professions and other middle class pursuits for Polish youth all contributed to the increase of anti-Semitism in Poland during 1938 (see JEWS). The March crisis with Lithuania was attended by violent anti-Jewish outbreaks. While not giving open support to the anti-Semitic movement, the Polish Government used it as a lever for demanding colonies and the emigration of the Jewish population to relieve the economic situation in Poland. On December 21 the government adherents in the Sejm signed a resolution asking the government to speed up the mass emigration of the Jews. The United States, Britain, and France were criticized for closing their possessions to large-scale Jewish settlement.

Economic Conditions. Economic and financial conditions became worse in 1938 as a result of rising prices in Poland, contracting markets for Polish grain exports, the financial cost of the September-October crisis over Czecho-Slovakia, and the temporary economic difficulties resulting from the incorporation of Teschen Silesia in Poland. To relieve peasant distress, the government restored export bounties on grain, flour, pulse, and oleaginous seeds as from August 1, purchased large grain reserves for the army, and undertook to regulate prices of primary necessities. A merchandise-credit agreement reached with Germany at the end of September provided an additional outlet for Polish grain while promoting new industrial investments in Poland on a credit basis.

The financial and exchange stringency was reflected in decrees forcing Poles to offer for sale to government institutions all assets in foreign countries, including real property; encouraging domestic investments; providing for the conversion of outstanding dollar loans at lower interest rates, etc.

Other Developments. The government accompanied its ameliorative measures with others designed to curb Opposition activities. On November 24 a series of decrees were issued prohibiting strikes, lockouts, and interference of any kind with the movement of foodstuffs from country to town; restricting freedom of the press in some respects and making it obligatory for newspapers to print government communiqués; dissolving the Masonic lodges and confiscating their properties; and making it a crime to spread false news about the financial situation, receive money from foreign governments for political activities in Poland, or to export goods of an inferior quality. The properties of B'nai B'rith, Jewish organization, were confiscated on November 27. The remains of the last King of independent Poland, Stanislas II Augustus Poniatowski, who died in exile in Leningrad (then St. Petersburg) in 1798, were returned to Poland on July 14, 1938.

Foreign Relations. By mobilizing its army and threatening to use military force, Poland succeeded in March in forcing the Lithuanian Government to abandon its persistent anti-Polish policies and to open the Lithuanian frontier to Polish commerce and other forms of intercourse (see LITHUANIA under *History* for details). The same methods enabled the Poles to take the rich industrial district

of Teschen from Czecho-Slovakia in October (see CZECHO-SLOVAKIA under *History*). Thus two of the major objectives of Polish foreign policy were attained.

By aiding in the partition of Czecho-Slovakia, however, Poland made her own position as against Germany much more precarious. The Reich won a strategically important base for possible future military operations against Poland's southern flank. At the same time friction between Poland and Germany over Danzig became more acute (see DANZIG and GERMANY under *History*).

Foreign Minister Beck sought to continue his policy of maintaining the balance of power between Germany and the Soviet Union in eastern Europe, playing Poland's diplomatic cards with ruthless realism. After aiding in the dismemberment of Czecho-Slovakia, he strove to block Germany's eastward expansion by the establishment of a common Polish-Hungarian frontier (see HUNGARY under *History*). This move failed due to the opposition of both Germany and Rumania to the inclusion of Ruthenia in Hungary. Beck then redoubled his efforts to build a neutral bloc between Russia and Germany under Polish leadership (see ESTONIA and RUMANIA). At the same time he countered the German propaganda among the Ukrainians and Nazi pressure in Danzig by effecting a partial rapprochement with the Soviet Union, with which Polish relations had long been cool.

On November 26 the Polish-Soviet non-aggression pact of 1932 was renewed and on December 20 Beck announced that negotiations for a Soviet-Polish trade agreement would begin in January.

The Franco-Polish alliance of 1921, which had been weakened by the German-Polish non-aggression pact of 1934, appeared to have been completely nullified by France's repudiation of her alliance with Czecho-Slovakia during the September crisis with Germany. Throughout the year Beck followed an anti-French policy, especially at Geneva, in his flirtations with the Rome-Berlin axis, and in joining in the dismemberment of Czecho-Slovakia. Poland's recognition of Manchoukuo's independence on October 18 was interpreted as a slap at both the League powers and the Soviet Union.

Consult Raymond Leslie Buell, "The Foreign Policy of Poland," *Foreign Policy Reports*, Dec. 1, 1938.

POLAR RESEARCH. Antarctic. The *Wyatt Earp*, a vessel intended to carry the fourth expedition of Lieut. Comdr. Lincoln Ellsworth into the Antarctic area, started from New York for Capetown on Aug. 16, 1938. Ellsworth later boarded the vessel at Capetown to proceed to Enderby Land, hoping to map the Enderby quadrant of Antarctica from the air, determine the full extent of the polar plateau and of the mountains of Victoria Land, and fly across the Antarctic continent a distance of 2000 miles to Little America.

Alfred Stephenson, summarizing the work done in 1934-37 by the Rymill expedition (*Crown Colonist*, May, 1938; "Extending the Colonial Empire Southwards"), stated that Alexander I Land had been followed southward along its eastern shore to lat. 72° 30', where, to the west it "seemed to terminate in a low glaciated point, being separated from the continent by a broad strait filled with ice." There seemed a probability that Alexander I Land was not joined to the continent; on the other hand, Graham Land to at least as far south as that latitude was judged to have been proved continuous. This judgment superseded the view, based on Sir Hubert Wilkins' flights of 1929-30, that Gra-

ham Land was probably a chain of islands, separated by supposed straits, of which he observed the inlets. The newly discovered strait running southward between Graham Land and Alexander I Land was named King George VI Sound; it offered to later expeditions a level route toward the Antarctic mainland, approximately along the meridian 68° W., suitable for travel by dog-sleds at rates from 18 to 25 miles a day, to within $17\frac{1}{2}^{\circ}$ of the Pole.

Arctic. The Russian North Pole expedition under Ivan Papanin (see 1937 YEAR BOOK) ended successfully, but after a time of peril, its drift through the Polar Sea upon the ice. Two Russian ice-breaking vessels, the *Murman* and the *Taimyr*, took the party aboard on Feb. 19, 1938, after repeated breaks in the supporting ice had forced it to shift quarters and to entrust itself to a comparatively small fragment of the mass on which it had originally landed. The party repeated the process employed by Nansen in his memorable drift (1894-96) aboard the *Fram*. The Russian expedition, however, employed an advantage that Nansen had not possessed: the party of four and its supplies were carried by airplane and deposited, approximately at the North Pole, on May 21, 1937. Thence they drifted, at first along the meridian of Greenwich and later parallel to the eastern coast of Greenland, where they were rescued somewhat north of the 70th parallel. They took more than seven months to drift to the 80th parallel and but 50 days to go the rest of the way. The slowness of the earlier drift afforded time for making many soundings in the area close to the Pole. A sounding on June 7 gave a depth of 4293 meters; deep soundings led the party to the opinion that "a deep circular valley" lay in the central part of the Polar basin. Warm currents heading up from the Atlantic Ocean were found at depths between 250 and 750 meters, throughout the trip. Meteorological observations, the main function of the expedition, were made by Fedorov four times a day. Polar bears, a sea lion, seagulls, and guillemots were seen as far north as the 88th parallel.

The undesigned drift of the *Sedov*, a Russian ice-breaker, in the Arctic Ocean, progressed by the end of 1938 to within a few degrees of the Pole. The vessel had become caught in the ice in Russian Arctic waters in the autumn of 1937; there was prospect of her emerging eventually, by a westward drift, to the coast of Greenland.

Reports from Moscow told in June of the discovery of written records, supposedly by Commander De Long and relating to his expedition of 1879-81 into the Arctic region by way of the Bering Sea. The records, with other material, were found on Henrietta Island, north of eastern Siberia. The manuscript was found in a copper cylinder, of which the cap had come loose, so that the paper had suffered much by water; later word from Moscow gave hope that, though the paper had been damaged by the water's action, the writing might at least in part be deciphered. Lieutenant Melville of the De Long expedition had left an account of placing such a cylinder under a cairn on the Island.

In Arctic areas of the New World there was in 1938 considerable localized research not directly related to the North Pole. A British party of three, led by David Haig-Thomas, after wintering among the Canadian Arctic islands, made journeys by sled in the spring. One trip ran from Thule, Greenland, across Amund Ringnes Island and back, a distance of 1500 miles. Zoological work was done in the

summer; the nest of the greater snow goose was for the first time discovered and photographed.

An expedition headed by Dr. Lauge Koch sailed from Copenhagen late in the summer, on the way to explore the northern extremity of Greenland; it was to spend the winter at a land station on its route up Greenland's eastern coast. Subsequently it was to travel by land to Peary Land, the area of its main work. In advance of the start of this expedition, Dr. Koch flew (May 15-16) from King's Bay, North Spitsbergen, over Peary Land and satisfied himself that Koch Fjord extended southeastward, almost connecting with Independence Fjord. Near Igloodik, Reynold J. O. Bray, a young English ornithologist belonging to a Canadian and British party of explorers, was drowned in September, in Foxe Channel, according to word received at the Hudson's Bay Co. post at Churchill in December. Louise A. Boyd, in the steamship *Veslekari*, sponsored by the American Geographical Society, took soundings in the waters lying between Jan Mayen and Spitsbergen for data as to a possible submarine height of ground between the two. In August the *Veslekari*, favored by the relative scarcity of obstructing ice, sailed along the eastern coast of Greenland to the Isle de France ($77^{\circ} 50' N.$), the next-to-highest latitude that had been reached on that coast by a vessel; the Duc d'Orleans, on the *Belgica* in 1905, had proceeded about 50 miles farther northward.

Dr. Hubert Garrigue, French scientist, set out in September on an expedition to resume the work, off the coast of Iceland, that had been interrupted by the loss of the Charcot party in 1936.

Clifford J. MacGregor, American meteorologist, returned with his party, in the schooner *A. W. Greely* (October 4), to Port Newark, N. J., from Reindeer Point, Greenland. He asserted that hourly observations of the weather, taken during the stay in western Greenland waters, had provided information about the drift of masses of cold polar air likely to affect weather in the United States; he favored establishing a set of six or more stations for observing the weather at divers points north of the 70th parallel and the re-establishment of the station at Point Barrow, as a means to bring precision to forecasts.

POLISH CORRIDOR. See DANZIG, GERMANY, and POLAND.

POLITICAL AND SOCIAL SCIENCE. THE AMERICAN ACADEMY OF. A national forum for the discussion of political and social questions, founded in Philadelphia in 1889, and incorporated in 1891. The organization takes no sides upon controversial questions. Its aim is to secure and present reliable information to assist the public in forming an intelligent opinion.

The 42d Annual Meeting, held April 1 and 2, considered the general subject "Present International Tensions." On October 27 the Academy was addressed on the subject of "The Future in Central Europe," by Mr. Brackett Lewis, Dr. Frederick Konrad Krüger, and Sir Willmott Lewis.

The *Annals*, issued bimonthly, is the official organ of the Academy. Each issue is devoted to a particular topic of economic, political, or social importance. Topics considered in 1938 were: "Our State Legislators"; "Consumer Credit"; "Social Problems and Policies in Sweden"; "Present International Tensions"; "Better City Government"; and "Freedom of Inquiry and Expression."

The Academy has established a monograph series, the first of which was a study on "Private Police" with special reference to Pennsylvania, pre-

pared by Dr. J. P. Shalloo; the second, a study on "The Negro as Capitalist" by Dr. Abram Harris, and the third, a study on "The Turkey of Ataturk" by Donald Everett Webster.

In the pamphlet series inaugurated by the Academy, the following publications have appeared: No. 1, *Economics of Planning*; No. 2, *Financing New York City*, by William Whyte; No. 3, *Some Statistical Aspects of Marriage and Divorce*, by Dr. I. M. Rubinow; No. 4, *Modernizing Our State Legislatures*, by A. E. Buck; No. 5, *The Economics of Isolation*; No. 6, *Constitutional Rights*; and No. 7, *Democracy versus the Totalitarian State in Latin America*, by Dr. Samuel Guy Inman.

The officers in 1938 were: President, Ernest Minor Patterson; Secretary, J. P. Lichtenberger; Treasurer, Charles J. Rhoads; Vice-Presidents, Herbert Hoover, Carl Kelsey, and Clarence A. Dykstra. Headquarters are at 3457 Walnut Street, Philadelphia, Pa.

POLITICAL ECONOMY. Subjects in the field of applied economics are treated in this volume under the following heads: BANKS and BANKING; BUSINESS REVIEW; CHILD LABOR; CO-OPERATION; FINANCIAL REVIEW; LABOR ARBITRATION and CONCILIATION; LABOR LEGISLATION; MINIMUM WAGE; OLD AGE PENSIONS; STRIKES and LOCKOUTS; UNEMPLOYMENT; WOMEN in INDUSTRY; WORKMEN'S COMPENSATION. See also such articles as: CHILD WELFARE; LABOR, AMERICAN FEDERATION OF; SOCIALISM; STATISTICS; TRADE UNIONS; WELFARE WORK. See also the article on AGRICULTURE and the various crops. Further discussions are to be found in articles on the several industries, minerals, public utilities, etc. Books on political science and economics for the general reader are to be found listed in the article LITERATURE, ENGLISH AND AMERICAN, under *Economics and Politics*.

POLITICAL SCIENCE, ACADEMY OF. An international learned society for advancing the political sciences and their application to political, economic, and social problems, founded in 1880 in New York City and incorporated in 1910. Its membership on Dec. 31, 1938, numbered 7363, of whom 6 were honorary members, 224 life members, 5803 individual members, and 1330 subscribing members, chiefly libraries and organizations. At the semi-annual meeting on Mar. 25, 1938, in New York City, "Essentials for Sustained Recovery" was discussed. At the fifty-eighth annual meeting on November 9 the topic under discussion was "Monopoly and Competition in Industry and Labor." The officers for 1938 were: Wesley C. Mitchell, president; Albert Shaw and R. C. McCrea, vice-presidents; Noel T. Dowling, secretary; John A. Krout, editor of publications; Leon Fraser, treasurer; and Miss Ethel Warner, director and assistant treasurer. Headquarters were in Fayerweather Hall, Columbia University, New York City.

POPULATION. See each country and each state under *Area and Population*; AGRICULTURE.

PORTO SANTO ISLAND. See MADEIRA.

PORTS AND HARBORS. Probably the most notable event in this field during the year was the dedication on February 14 of the great dry, or graving, dock, as the English call it, at Singapore. This dock, 1000 ft. long, 130 ft. wide, and with its sill 35 ft. below low water, is not only a large dock but is a very important addition to the great British Naval Base of the Far East.

PORTUGAL. A republic of southwestern Europe. Capital, Lisbon (Lisboa).

Area and Population. The area is 35,582 square miles (continental, 34,386; Azores and Madeira, 1196), and the population was estimated at 7,301,000 on Dec. 31, 1936 (6,825,883 at the 1930 census). Living births in 1937 number 198,127 (27 per 1000); deaths, 117,291 (16 per 1000); marriages, 46,741 (6.4 per 1000). The 1930 census populations of the chief cities were: Lisbon (Lisboa), 594,390 (1936 estimate, 650,000); Oporto (Pôrto), 232,280; Setúbal, 46,398; Funchal (in Madeira), 31,352; Coimbra, 27,333; Braga, 26,692; Évora, 22,061; Ponta Delgada (in Azores), 18,022; Faro, 18,019; Covilhã, 15,460.

Education and Religion. About 60 per cent of persons 10 years of age and over were unable to read or write at the 1930 census. School attendance in 1935-36 was: Primary, 444,675; secondary, 18,365; technical, industrial, and commercial, 18,173; university, 6047. The great majority of Portuguese are Roman Catholics, but freedom of worship is granted other faiths.

Production. Agriculture, the principal occupation, is supplemented by fishing, mining, and manufacturing. Of the area of continental Portugal, 60.7 per cent was cultivated in 1933, 19.6 per cent was meadow, 15.4 per cent was uncultivated but cultivable, and 4.3 per cent was waste. Production of the chief crops in 1937 was: Wheat, 14,405,000 bu.; rye, 4,642,000 bu.; barley, 1,994,000 bu.; oats, 107,100 metric tons; corn, 324,500 metric tons; wine, 210,985,000 gal.; olive oil (1937-38), 27,739,000 gal. The production of cork in 1937 was estimated at 180,000 metric tons; wool, 3761 metric tons; canned sardines, 40,462 metric tons. The value of mineral production in 1938 was approximately 200,000,000 escudos (150,000,000 in 1937); about 13,000 persons were employed in the mines in 1938. Production in 1937 was (in metric tons): Coal, 282,770; pyrites, 350,108; tungsten ore (wolframite), 1845; tin ore (cassiterite), 1763; titanium ore (ilmenite), 1131; cement, 254,365. Industrial production in 1937 included 18,407 metric tons of paper, 65,089,000 lb. of cotton (net imports), 391,389 pairs of shoes, 2078 metric tons of enameled iron ware, and 41,395,000 lb. of macaroni and other alimentary paste.

Foreign Trade. According to preliminary figures, imports for consumption totaled 2,326,583,000 escudos in 1937 (1,994,285,000 in 1936) and exports of Portuguese products were 1,212,672,000 escudos (1,025,770,000 in 1936). Heavy iron and steel; coal, coke, and briquets; raw or carded cotton, oilseeds, and codfish were the leading 1937 imports, in order of value. The chief exports were (in current U.S. dollars): Canned sardines, \$8,532,000; port wine, \$8,352,000; textiles, \$6,452,000. The principal sources of 1937 imports were: United Kingdom, 18.3 per cent; Germany, 15.1; Portuguese colonies, 11.2; United States, 10.4 per cent. Of the exports, 22 per cent went to the United Kingdom, 11.3 to the Portuguese colonies, 11 to Germany, 10.4 to France, and 7.9 to the United States.

Finance. Actual budget receipts in 1937 were 2,424,000,000 escudos (ordinary, 1,935,000,000) and expenditures 2,420,000,000 escudos (ordinary, 1,930,000,000). The 1938 estimates placed receipts at 2,472,000,000 (ordinary, 1,994,000,000) and expenditures at 2,469,000,000 escudos (ordinary, 1,988,000,000). For 1939 ordinary revenues were estimated at 2,029,193,334 and extraordinary revenues at 786,000,000 escudos, while ordinary ex-

penditures were estimated at 2,019,792,792 and extraordinary expenditures at 793,462,500 escudos. The gross public debt on Dec. 31, 1937, totaled 7,232,050,000 escudos and the net debt 6,375,160,000 escudos (7,212,000,000 and 6,580,700,000, respectively, on Dec. 31, 1936). The average exchange value of the escudo was \$0.0448 in 1937 and \$0.0443 in 1938.

Transportation. In 1937 Portugal had about 2169 miles of railway line (including 450 miles of narrow gauge) and 19,402 miles of roads and highways (with 46,705 automobiles on Jan. 1, 1938). In 1938 the merchant marine consisted of 254 vessels of 100 tons or over, with a capacity of 261,142 gross tons. During 1937 a total of 9662 vessels of 31,691,150 gross tons entered Portuguese ports in the international and coastwise trade.

Government. The dictatorship established by a military-civilian directorate in 1926 was placed on a corporative basis by the Constitution promulgated Feb. 22, 1933. This provided for a President elected for seven years by "educated heads of families"; a National Assembly of 90 members elected for four years by the citizen-electors; and an appointive Corporative Chamber of 79 members representing local authorities and the various social interests. The Corporative Chamber reports and advises on all legislative proposals submitted to the National Assembly before discussion is initiated in the latter body. Cabinet members are responsible only to the Premier and he in turn to the President of the Republic. The Constitution forbids political parties as such, but the government-organized Party of National Union controls the electoral machinery and submits government lists for election to the National Assembly. The National Assembly met for the first time on Jan. 11, 1935. President in 1938, Gen. Antonio Oscar de Fragozo Carmona, who was re-elected Feb. 17, 1935, unopposed, for the term expiring Apr. 15, 1942. Premier, Minister of Finance, of War, of Foreign Affairs, and dominant spirit in the dictatorship, Dr. Antonio de Oliveira Salazar, heading a military-civilian cabinet reorganized Jan. 18, 1936.

History. Elections for the National Assembly were held Oct. 30, 1938, and the new Assembly convened on November 27. Of the registered voters, 671,157, or 83.8 per cent, cast their votes for the government list of candidates, which was the only one submitted to them. Premier Salazar hailed the result as an unqualified endorsement of the corporative state and the regime. Government-controlled newspapers, reporting that many former leaders of the disbanded liberal and democratic parties had also taken part in the election, pointed to this as a further indication of the political pacification of the country.

On January 12, however, the police reported the frustration of another of the frequent conspiracies against the Salazar Government, arresting a number of alleged ringleaders. Later the same month extraordinary precautions were taken against a threatened radical uprising. In an effort to check unrest among the lower classes, the government pushed work on several low-cost housing projects in Lisbon; some 602 dwellings completed during the year brought the total number of such houses constructed by the government to 1368. A decree published September 18 authorized the government to fix minimum wages for office workers and laborers if the salaries were lowered below reasonable levels.

With the apparent acquiescence of the government, adherents of Dom Duarte Nuno, pretender

to the throne of Portugal then residing in Hamburg, Germany, increased their open propaganda for his restoration. On November 11, Adm. Acevedo Coutinho, official representative of Dom Duarte in Portugal, introduced some 400 members of the nobility, financiers, writers, professors, politicians, and others to Princess Filipa de Braganza, sister of Dom Duarte, at a formal reception in Lisbon.

In addition to the internal political situation, two major problems continued to perplex the Portuguese Government and people during 1938—the safeguarding of their colonial empire and the policy to be adopted in the event of a European war. Suggestions emanating from British and other sources that Germany's colonial demands might be satisfied at the expense of Portugal aroused anger and alarm at Lisbon. Premier Salazar repeatedly declared that Portugal would not discuss the cession, sale, or lease of any of her colonies. His government took various steps to bind the colonies closer to the mother country. Late in May a minimum price for colonial cotton was guaranteed and a government Board of Colonial Cotton Exporters was established. Plans for stimulating production throughout the colonies were studied. Arrangements were made to open an air service between Portugal and Portuguese Guinea upon completion of the landing field at Bolama. A Lisbon-Angola air-mail service was opened November 13. A military mission was sent to Angola and Mozambique to develop a general plan for their defense. And in July President Carmona started a seven weeks' tour of Portugal's Atlantic and West African colonies.

Portugal placed main reliance for the protection of her colonies upon the British alliance, which was reaffirmed by Prime Minister Chamberlain on March 24. The danger that colony-hungry Germany and Italy might gobble up the Portuguese possessions nullified their efforts to woo Portugal away from Britain, despite the Salazar Government's support of German and Italian intervention on behalf of the Insurgent cause in Spain. The German-Italian failure was evidenced in Portugal's reliance upon Britain for aid in strengthening her military, naval, and air forces.

A British mission, composed of representatives of the War Office, Admiralty, and Air Ministry, spent from February to December in Portugal aiding in the reorganization of her defense forces. In February the Portuguese air force purchased 15 military planes in Britain. Purchases of other war equipment followed. In October, Premier Salazar declared that relations with Britain were "better than ever." Late the same month, Oswald Pirow, South African Minister of Defense, conferred at length with Portuguese officials in Lisbon on the common defense of Angola and South-West Africa. On November 5 the British Rear Admiral, René Charles Hugill, was appointed naval industrial director to organize the new naval arsenal and dockyards at Lisbon. On May 3 the Lisbon Government had announced a £2,500,000 naval building program.

Although the Loyalist Government in Spain announced that it would guarantee the integrity of Portugal and aid her in defense of her colonies, Premier Salazar agreed early in June to exchange diplomatic representatives with the Spanish Insurgent Government. On October 28 Dr. Salazar expressed hope for an early Insurgent victory "as the indestructible base for a policy of reciprocal security."

See GERMANY, GREAT BRITAIN, and SPAIN under

History; also the articles on the various Portuguese colonies.

PORTUGUESE EAST AFRICA. See MOZAMBIQUE.

PORTUGUESE GUINEA. A Portuguese colony in West Africa. Area, 13,944 square miles; population (1936 estimate), 416,000. Capital, Boma. The principal commercial products are rice (1934-35, 22,400 metric tons), wax, oil, seeds, and hides. Exports in 1937, in metric tons, were: Groundnuts, 21,300; palm kernels, 5200; palm oil, 900. In 1936 imports were valued at 33,313,884 escudos; exports, 38,920,163 escudos (escudo averaged \$0.0451 for 1936). In 1937 there were about 1863 miles of roads. In 1935, 108 vessels (171,672 tons) entered, and 107 vessels (171,088 tons) cleared the ports. In the coasting trade, in 1935, 2348 vessels (51,416 tons) entered, and 2362 vessels (51,651 tons) cleared. For 18 months ended Dec. 31, 1936, revenue totaled 33,556,774 escudos; expenditure, 24,148,306 escudos; public debt (Dec. 31, 1937), 6,632,223 escudos (escudo averaged \$0.0448 for 1937).

PORTUGUESE INDIA. The Portuguese possessions in India, comprising Goa, Daman, and Diu. Total area, 1537 square miles; total population (1936 estimate), 600,000. Capital, Panjim (or New Goa). In 1936 it was estimated that 1300 metric tons of manganese ore were produced. Copra (200 metric tons estimated in 1937), coconuts, spices, cashu-nuts, salt, fish, and manganese are the main exports. Trade is largely transit. In 1937 the estimated value of merchandise imports (in old U.S. gold dollars) was \$4,300,000 (1936, \$3,500,000); exports, \$700,000 (1936, \$600,000). In 1935 there were 730 miles of roads and 51 miles of railway line. The revenue for 1938 was estimated to total 6,130,000 rupees. Governor-General, Gen. C. Craveiro Lopes.

POSTMASTERS' CIVIL SERVICE ACT. See UNITED STATES under Congress.

POTASH. See FERTILIZERS.

POTATOES. The 1938 crop of 27 countries reporting to the International Institute of Agriculture was estimated at 5,535,240,000 bu. produced on 29,029,000 acres. The yield was 8.6 per cent under the yield of 1937 but 8.8 per cent above the average for the five years 1932-36 and the acreage was practically the same as last year and only 1.6 per cent above the five-year average. The leading countries and their yields excluding the United States and the Soviet Republics were reported as follows: Germany, including Austria 1,969,430,000 bu., Poland 1,238,827,000 bu., France 628,096,000 bu., and Czechoslovakia 344,994,000 bu. The average production of the Soviet Republics for the four years 1932-35 was reported at 1,957,698,000 bu. Canada reported a yield of 59,623,000 bu. in 1938.

The 1938 potato crop of 369,297,000 bu. of the United States as reported by the U.S. Department of Agriculture compared with 394,139,000 bu. produced in 1937 and 394,139,000 bu., the average for the 10 years 1927-36. The 1938 harvested acreage of 3,007,600 acres was 5 per cent below the acreage harvested in 1937 and 10 per cent below the 10-year average. About 2 per cent of the planted acreage was abandoned as the result of floods, insect damage, and freezing. In some sections of Idaho potatoes were frozen in the ground and most of the potatoes dug after the freezing weather were lost in storage. In Montana, Wyoming, and Colorado a heavy psyllid infestation caused acreage abandonment and reduced yields. In the New England States, New York, Pennsylvania, and Wisconsin

the crop suffered extensively from late blight rot which continued in storage. The average yield per acre in 1938 was 122.8 bu., compared with 124.2 bu. in 1937 and 110.6 bu., the average for the 10 years.

The 1938 production of the 18 surplus late potato States was reported as 255,294,000 bu. harvested on 1,925,700 acres, the average yield being 132.6 bu. The leading States and their yields were as follows: Maine 39,600,000 bu., Michigan 30,000,000 bu., Idaho 28,750,000 bu., and New York 26,840,000 bu. The 12 other late potato States reported a yield of 38,782,000 bu. and of these Ohio led with a production of 12,626,000 bu. followed by Iowa with 5,684,000 bu., Indiana with 4,940,000 bu., and Illinois with 3,822,000 bu. The crop intermediate in maturity, estimated at 37,923,000 bu., was produced in seven States with New Jersey leading in yield with 10,530,000 bu. and Virginia, following with 10,349,000 bu. The 11 southern early potato States estimated their yield at 37,298,000 bu. North Carolina, the leading State, reported a yield of 8,690,000 bu. and Florida, ranking next, a yield of 4,488,000 bu. The 1938 certified seed-potato production of the country was reported at 11,206,068 bu. with Maine, the leading State, reporting a yield of 4,301,628 bu.

In the fiscal year ended June 30, 1938, the United States exported 124,745,000 lb. of potatoes and imported 1,889,000 lb. of potatoes, 39,072,000 lb. of seed-potatoes, and 6,774,000 lb. of potato starch.

POULTRY. See VETERINARY MEDICINE.

POWER PLANTS. Business conditions in 1938 were reflected by less activity in construction which reached a low point in June. An improvement was noted toward the close of the year when contracts were let for several important installations. These included two or three new central stations and several high-pressure extensions to existing stations in the utility field, also extensions to industrial power plants. The utilities have announced plans for adding about 600,000 kw in steam-plant capacity in 1939 and over 1,000,000 kw in 1940. This program is in line with the plans of the National Defense Power Committee which has set up certain standards for steam conditions and capacity of units in order to expedite production (see STEAM TURBINES).

The third high-pressure unit, consisting of a 900,000-lb. per hr., 1200-lb. pressure boiler, and a 110,000-kw turbine-generator, has just gone into service at the Rouge Plant of the Ford Motor Co., Detroit, which makes its present capacity 345,000 kw and gives it the distinction of being not only the largest industrial power plant in the world, but also the largest plant of any class operating at 1200 lb. pressure. There are a number of larger plants among central stations operating at lower pressures and many others of lesser capacity operating at this or higher pressures.

Steam pressures of 1200 to 1400 lb. per sq. in. predominate among the superimposed stations and 800 to 900 lb. among the newer stations, despite some exceptions in which the reverse holds. A large 2400-lb. central station installation in the Middle West, for which contracts were let more than a year ago, is still in the construction stage, and a smaller unit is nearing completion in an industrial plant to operate at around 2200-lb. per sq. in. The trend toward the more extensive use of high steam temperatures continues with 950 deg. F representing the present limit, although an experimental unit of 10,000 kw capacity was operated in commercial service for several years at 1000 to 1100 deg. F steam temperature.

The Port Washington Station of the Wisconsin Electric Power Co. completed its third year of operation and maintained its position as the most efficient steam-electric power plant in the world. In fact, it slightly bettered its previous record by averaging, for the year, a kw-hr with an expenditure of 10,788 Btu in fuel. This corresponds to a thermal efficiency of 31.6 per cent.

The high availability of modern large high-pressure boilers has been responsible for the employment of a single boiler per turbine in a number of plants, a recent example being the new generating station at Oswego, N. Y., in which an 80,000-kw turbine-generator will be supplied with steam at 1250 lb., 900 deg. F, by one boiler. The Port Washington Station, previously mentioned, has such an arrangement with a 690,000-lb. per hr. boiler supplying steam at 1350 lb. to an 80,000-kw turbine-generator. In this case the boiler and turbine availability is about 95 per cent.

In the railway field there has recently been completed for the Union Pacific R.R. a steam-electric locomotive in which the turbine is supplied with steam at 1500 lb. per sq. in. and 920 deg. F by a forced-circulation boiler. The turbine operates condensing and the new locomotive is expected to do about twice the amount of work of the conventional locomotive with the same expenditure of fuel. See **ELECTRIC LIGHT AND POWER.**

PRAIRIE PROVINCES. The popular name of the three Canadian provinces of ALBERTA, MANITOBA, and SASKATCHEWAN (qq.v.). See CANADA.

PRATT INSTITUTE. A nonsectarian educational institution in Brooklyn, N. Y., founded in 1887 and composed of four schools: Fine and applied arts, household science and arts, science and technology, and library science. The 1938 autumn enrollment was 4704. There were 242 members on the faculty. The library contained 145,670 volumes. President, Frederic B. Pratt, A.M., LL.D.

PRESBYTERIAN CHURCH IN THE UNITED STATES OF AMERICA. This is the largest body of the Presbyterian communion, being represented by churches in every State of the Union and having official mission stations in Alaska, Cuba, Puerto Rico, and 16 foreign lands. In 1938 its churches in the United States and abroad were organized into 42 synods and 276 presbyteries. Statistics for the year ending Mar. 31, 1938, showed a total communicant membership in full standing of 1,953,734, with adherents numbering approximately 5,000,000. The Sunday School enrollment totaled 1,483,191. The number of churches was 8883 and of ministers, 9632. Contributions during the year amounted to \$40,551,108, of which \$33,721,050 was for current expenses and \$6,830,058 for benevolences. The board of national missions received \$2,213,879; the board of foreign missions, \$2,011,665 (in addition to a special 1937 Centennial fund of a half million dollars); the board of Christian education, \$489,426; and the board of pensions (relief department), \$150,665, all from living givers. The church maintains 53 colleges, 12 theological seminaries, and 2 training schools for lay workers. It publishes three national official periodicals, *Monday Morning*, *Everyone*, and *Women and Missions*.

The 150th annual general assembly was held in Philadelphia, Pa., May 26 to June 1, 1938. The Rev. Charles Whitefield Welch, D.D., LL.D., pastor of Fourth Avenue Church, Louisville, Kentucky, was elected Moderator; and the Rev. Robert Brewster Beattie, D.D., pastor of the First Church, East Orange, New Jersey, was appointed

vice-moderator. The assembly commemorated the organization of the first General Assembly in 1788, renewed its approval of the raising before 1941 of a large sesquicentennial fund for the colleges of the church, elected a Stated Clerk in succession to the Rev. Lewis Seymour Mudge, D.D., LL.D., who retired as Stated Clerk Emeritus after 17 years of service; approved adherence by the church to the proposed World Council of Churches, united with the 1937 triennial convention of the Protestant Episcopal Church in declaring a common purpose "to achieve organic union between their respective churches"; sent down to the presbyteries for their consideration a proposed amendment to the constitution of the church which sets forth the church's renunciation of war but at the same time establishes the principle that God alone is Lord of the conscience of the individual; and adopted a pronouncement on the attitude of the church toward social problems of today.

The church has its headquarters, including the offices of the general assembly and the general council, in the Witherspoon Building, Philadelphia, Pa., in charge of the Rev. William Barrow Pugh, D.D., Stated Clerk. The board of Christian education and the board of pensions also are housed there, while the board of foreign missions and the board of national missions are located in the Presbyterian Building, 156 Fifth Avenue, New York City.

PRESBYTERIAN CHURCH IN THE UNITED STATES (South). This division of the Presbyterian denomination covers the territory commonly known as the Southern States. It was composed in 1938 of 17 Synods and 88 Presbyteries, with 3493 organized churches, 2463 ministers, and 497,824 members, a gain of 4513 over the previous year. 16,282 were received on confession of faith and 22,187 by certificate. There were 9260 adult baptisms and 5032 infant baptisms. The ruling elders numbered 16,734 and deacons, 19,085. Contributions for current expenses during the past year amounted to \$7,962,784, and for benevolences \$3,398,025. The total per capita gift was \$22.83, of which \$6.83 was for benevolences and \$16 for current expenses.

Foreign mission work is carried on in six countries: Africa, Brazil, China, Japan, Korea, and Mexico, among 36,000,000 people. 383 American missionaries constitute the foreign working force. On account of the state of war in China no statistics were available and further detailed information is not given for our foreign mission work. Most of our China missionaries remained at their posts in the midst of great dangers and rendered a noble service among the Chinese refugees. A splendid work is done in the fields of education and medicine through numerous schools and hospitals.

In the homeland the church maintains 4 theological seminaries, 1 Training School for Lay Workers (White), 2 training schools for colored people, 14 colleges, 9 junior colleges, 2 preparatory schools, 3 mission schools, 4 mountain schools, 2 Mexican mission schools, and 15 orphans' homes and schools. The official organ of the Church is the *Presbyterian Survey*, published by the Presbyterian Committee of Publication, Richmond, Virginia. Privately owned papers of the denomination are: *The Christian Observer* (Louisville, Ky.) and *Presbyterian of the South* (Richmond, Va.).

The Seventy-Eighth General Assembly of the Church convened in Meridian, Miss., May 19, 1938, with 338 Commissioners present. Mr. Willis M. Everett, Layman from Atlanta, Ga., was elected Moderator. The matter which is receiving the

major thought and effort is completion of the \$3,000,000 Accrued Liability Fund in order to make possible the operation of the Pension Fund for Ministers. More than two-thirds of this capital sum has been raised and a thorough church-wide campaign is in progress looking to consummation of this objective within the year. The meeting of the 1939 General Assembly will be held in Montreat, N. C., on May 25th. Rev. E. C. Scott, D.D. is Stated Clerk and Treasurer, with office at 1240 Liberty Bank Bldg., Dallas, Texas.

PRESBYTERIAN CHURCH OF AMERICA. THE. This division of Presbyterianism was organized on June 11, 1936, in Philadelphia, Pa. It is composed of 10 presbyteries, 65 organized congregations, 102 ministers residing in 22 states. It has 22 home missionaries who are laboring in 10 states and 9 ministers who are serving as foreign missionaries in 5 countries.

The last General Assembly was held from May 31 to June 2, 1938, in Quarryville, Pa. The Church has committees on Christian Education, the Constitution, Foreign Missions, Home Missions, and Church Extension. The Committee on Foreign Missions has its office at 506 Schaff Building, Philadelphia, Pa. The Rev. Robert S. Marsden, 506 Schaff Building, Philadelphia, is General Secretary. The Committee on Home Missions and Church Extension also has its office at 506 Schaff Building, Philadelphia, and the Rev. Robert S. Marsden is its Secretary.

PRESBYTERIAN CHURCH OF NORTH AMERICA, UNITED. A member of the family of Presbyterian Churches, of Secession and Covenant origin, formed by the Union in Pittsburgh, Pa., in 1858 of the Associate and Associate Reformed Churches.

The General Assembly of the church convened in Cleveland, Ohio, on May 25, 1938. On that date there were reported in the United States 11 synods, 53 presbyteries, 861 congregations, 894 ministers, 5299 ruling elders, and a church membership of 180,065. The total membership, including missionary fields, was 247,103. The Sabbath School enrollment was 164,827, while the young people's societies numbered 1066 with a membership of 22,231. Contributions for the year 1937-38 totaled \$4,302,652 and missionary contributions \$1,276,683.

The Assembly adopted the report of its Commission appointed to conduct a survey of the values and customs of public worship for the purpose of enriching the worship program of the Church and referred the matter to the Board of Administration for further education of all congregations, for the creation of a more worshipful atmosphere. Active steps were taken looking toward the enlargement of the denomination's missionary work in America.

The denomination supports 325 men and women in four foreign mission fields and 225 men and women in homeland mission fields. It carries on medical work in 25 foreign hospitals and dispensaries, conducts educational work in 303 schools at home and abroad, and in 1937-38 reached and influenced the lives of more than 44,000 young men and women in schools and colleges. The colleges in the United States are: Westminster College at New Wilmington, Pa.; Muskingum College at New Concord, Ohio; Monmouth College at Monmouth, Ill.; Tarkio College at Tarkio, Mo.; Sterling College at Sterling, Kans., and Knoxville College at Knoxville, Tenn. The colleges in foreign mission fields are: Gordon College, Rawal Pindi, India; Assiut College, Assiut, Egypt; and Cairo Girls College, Cairo, Egypt. Denominational

journals are the *United Presbyterian*, for adults, and the *Christian Union Herald* for the young people.

The moderator of the General Assembly of 1938 was the Rev. Ralph Atkinson, D.D., of Pasadena, Calif. The Rev. O. H. Milligan, D.D., of Avalon, Pittsburgh, Pa., is Stated Clerk. Headquarters of the Board of Administration are at 705 Publication Building, Pittsburgh, Pa.

PRICES. See AGRICULTURE.

PRINCE EDWARD ISLAND. A maritime province of Canada. Area, 2184 square miles; population (1938 estimate), 94,000 compared with 88,038 (1931 census). During 1936 there were 1977 births (21.5 per 1000), 1024 deaths (11.1 per 1000), and 595 marriages (6.5 per 1000). Chief towns: Charlottetown, the capital, 12,361 inhabitants in 1931; Summerside, 3759; Souris, 1063. In 1936 there were 19,537 students enrolled in the primary and secondary schools, and colleges. There are two colleges—the Prince of Wales College (the head of the provincial school system) and St. Dunstan's.

Production. The estimated gross value of agricultural production for 1937 amounted to \$12,870,000 (\$15,765,000 in 1936) of which field crops represented \$7,284,161 (\$10,311,000 in 1936). Fur farming is an important industry and for the year ending June 30, 1936, there were produced a total of 64,581 pelts (almost all silver fox) valued at \$2,119,706. Livestock in the province (June 1, 1937): 28,800 horses, 99,500 cattle (including 46,100 milch cows), 49,600 sheep, 43,900 swine, and 878,300 poultry. In 1937 the fishing industry had 3310 men employed, the value of the fish caught totaled \$870,299. Forest production (1936) equaled 12,550 M cu. ft. valued at \$520,483. In 1936, from the 233 manufacturing plants, employing a total of 996 employees, the net value of products was \$1,055,201 (central electric stations, and dyeing, cleaning, and laundry work ceased to be regarded as "manufacturing" industries for 1936).

Government. For the year 1936, ordinary revenue totaled \$1,718,466; ordinary expenditure, \$1,743,120; net funded debt, \$4,713,168. The executive head of the government is the lieutenant-governor who is advised by an executive council of 9 members who are also members of the legislative assembly of 30 members elected for 5 years (15 are elected by real property holders and 15 by universal male and female suffrage). In the Dominion parliament at Ottawa, the province is represented by 4 Senators (appointed for life) and 4 members in the House of Commons. Lieutenant-Governor, George D. DeBlois (appointed Dec. 28, 1933); Premier, Thane A. Campbell (Liberal). See CANADA.

PRINCETON UNIVERSITY. A nonsectarian institution of higher learning for men at Princeton, N. J., founded in 1746. The total enrollment in the autumn of 1938 was 2716, of whom 2441 were undergraduates and 275 were advanced students. Of the undergraduates, 2113 were candidates for the degree of Bachelor of Arts and 328 for the degree of Bachelor of Science in Engineering. Of the advanced students, 244 were in liberal arts and sciences and 31 in the Schools of Architecture and Engineering. The faculty numbered 389. The total of endowment and other non-expendable funds in June, 1938, was \$30,138,877; the total operating income \$3,022,980; and the total operating expenditures \$2,905,543. Gifts and bequests for the year ended June, 1938, totaled \$2,015,390, with \$1,526,853 for endowment, \$262,392 for other funds, \$189,041 for current expenses,

\$20,139 for student aid, \$15,297 for buildings, and \$1667 unallocated. The library contained 920,000 volumes. President, Harold Willis Dodds, Ph.D.

PRINCIPE. See SÃO THOMÉ AND PRINCIPE.

PRINTS. The important place the Graphic Arts now hold was evidenced by the fact that more than half of the exhibits sent from this country to the Venice biennial International in the summer of 1938 were prints. Furthermore, they, rather than the paintings displayed in the American pavilion, met with special commendation. The artists represented were with one exception (that of Childe Hassam) living, and the representation was by groups rather than single examples. An etching by John Taylor Arms, "La Bella Venezia," was bought by the King of Italy and presented to the Museum of Modern Art in Venice.

Two International exhibitions of prints were held in this country, one at Los Angeles, at the Museum of History, Science, and Art, under the auspices of the Print Makers Society of California, in the spring; the other at the Art Institute of Chicago the last of the year. Both comprised about 200 prints and the latter included works by artists of 20 countries.

An exhibition of lithographs in black and white and color by members of the Senefelder Club of London (of which Joseph Pennell was one of the founders), was held in the Arts Club of Washington and later in other cities.

Under the Joseph Pennell bequest the Library of Congress was enabled to make numerous additions to its collection of works by contemporary artists, the selection being made, in accordance with conditions set forth in the will, by the Head of the Division of Fine Arts (Leicester B. Holland) in consultation with a distinguished etcher (John Taylor Arms) and a distinguished lithographer (Stow Wengenroth) named by Mr. Holland, Mr. Minnigerode, Director of the Corcoran Gallery of Art, and Mr. Ruel P. Tolman, Acting Director of the National Collection of Fine Arts, in agreement. The Pennell funds for the upbuilding of the collection of Whistleriana and also the completion of the Pennell collection likewise became available in 1938, by the settlement of the Pennell estate, and made possible further acquisitions.

Wesleyan College, Ohio, received in 1938, through an anonymous donor, a collection of prints valued at \$250,000, as well as a fund to pay the salary of a curator. This collection covers examples of the entire history of print-making and may be drawn upon by other colleges for loan exhibitions. Its value was enhanced to the Wesleyan students during the current scholastic year by a series of lectures on it given by outstanding authorities.

More prints were made and more exhibitions of prints held in 1938 than in previous years, partly through impetus given by Government patronage. Under the WPA Art Project, headed by Holger Cahill, graphic arts work-shops were set up in several of the eastern art centers. In one of these a new graphic process combining features of the mezzotint with that of the aquatint was developed. To it the name "Carborundum tint" was given. Interesting examples of prints produced by this new method were shown in an exhibition of 200 prints in various media by WPA workers set forth in the National Museum in Washington in September. As a whole this exhibition showed great technical facility on the part of the exhibitors.

Mid-year in 1938 it was officially announced by the WPA Art Project that since the setting-up of

its Graphic Arts Section in August, 1935, 21,174 prints had been produced and allocated to tax-supported institutions, schools, libraries, etc. throughout the country—an astoundingly large output.

In accordance with established custom various print organizations published prints during the year for distribution to their members. The American College Society of Print Collectors thus issued etchings by Roi Partridge—"Water Willows"—and by John C. Vondrous—"View from Charlea IV Bridge, Prague"; The Society of American Etchers, a drypoint by Armin Landeck entitled "Manhattan Nocturne"; The Print Makers Society of California, a drypoint, "Fall Ducks," by Richard E. Bishop; The Prairie Print Makers, an etching, "Job," by William Auerbach-Levy, and the Connecticut Academy of Fine Arts, an etching, "Wilemstad, Curaçao," by Philip Kappel.

A notable exhibition of Naval Historical prints was shown in the United States National Museum, in June, 1938, under the auspices of the Naval Historical Foundation. The works shown were by famous print makers, in many instances after paintings by well-known artists. They were drawn from a collection of over 1200, assembled, before the Great War, by Admiral von Fischel of the German Navy, which was purchased from his son by Mrs. Ferdinand Eberstadt of New York and given to the Naval Historical Foundation with headquarters at Washington.

Other outstanding print exhibitions of the year were a second "Print Lovers' Hundred," comprising works by old masters and contemporary print makers shown at Knoedler's in New York; a much-discussed collection of prints by "Artists of Aloofness" in the New York Public Library; 50 prints, described as an anthology covering the years 1933-38, circulated by the American Institute of Graphic Arts, and annual displays held by the Society of American Etchers in New York and the Art Alliance in Philadelphia, not to mention museum shows or those of a local character.

Bolton Brown, lithographer and lithographic printer, lately deceased, was memorialized by an exhibition, organized by his colleagues, held at the Kleeman Galleries, New York City.

Serious loss was occasioned in the field of the graphic arts by the deaths of Troy Kinney, Donald Shaw McLaughlan, and S. Arlent Edwards. Mr. Kinney was best known for his etchings of dancers and the dance; Mr. McLaughlan, Canadian by birth, for his etchings of typical American landscape; Mr. Edwards, born in London but long resident in the United States, for his mezzotint engravings, for the most part printed in color.

Among the noteworthy publications of the year was *Flower and Fruit Prints of the 18th and 19th Centuries* by Gordon Dunthorne which, in addition to 70 full-page reproductions, many in color, gave a *catalogue raisonné* of sources and included identifications and informative material not heretofore available.

In the British publication *Fine Prints of the Year*, works by 40 American print makers were listed and reproduced.

Print prices were high in 1938 and buying brisker than for some years (For exceptional instances see ART SALES).

PRISON ASSOCIATION, AMERICAN. A confidential body organized in 1870 and incorporated in 1871 under the laws of the State of New York. The objects of the association are as follows: 1. Improvement of the laws in relation to public offenses and offenders, and the modes of procedure

by which such laws are enforced. 2. Study of the causes of crime, the nature of offenders and their social surroundings, the best methods of dealing with offenders and of preventing crime. 3. Improvement of the penal, correctional, and reformatory institutions throughout the country, and of the government, management, and discipline thereof, including the appointment of boards of trustees and other officers. 4. The care of, and providing suitable and remunerative employment for, paroled and discharged prisoners and probationers, and especially such as may or shall have given evidence of reformation.

The association, the duly qualified medium for the registration of the opinions of prison administrators in the United States, holds an Annual Congress in some city on this continent, attended usually by representatives of more than 40 States of the Union.

The American Prison Association maintains a free clearing house, which is prepared to furnish advice and information on prison, reformatory, workhouse, and jail administration, construction of penal and correctional buildings, and in general on the treatment of the offender both inside and outside of institutions. General Secretary, E. R. Cass, 135 East 15th St., New York City.

PROPORTIONAL REPRESENTATION. A voting system, first proposed in 1859 by Thomas Hare in England, and later advocated by John Stuart Mill, by which an elector, instead of being restricted to a single choice among candidates for office, may express several successive ones; and if his first choice fails of election or does not need the vote, it is added to others which may have been cast for the voter's second choice and so on through the other choices, first, second, third, fourth, etc. After gaining a considerable foothold in Continental Europe, it was first applied in the United States at Ashtabula, O., in 1915 and was gradually extended to other cities, including Boulder, Colo., 1917; Kalamazoo, Mich., 1918; Sacramento, Cal., 1920 (in the two latter it was declared unconstitutional by the respective state supreme courts); Cincinnati, O., 1924 (where it is recognized as the bulwark of the commission-manager system); Hamilton, O., 1926, Toledo, O., 1934, and New York City, 1936 (1936 *NEW INTERNATIONAL YEAR BOOK*, p. 399) where it was adopted by popular vote. The attempt of the Constitutional Convention to nullify that action aroused intense opposition among the voters of both state and metropolis and was emphatically repudiated at the polls (see **REFERENDUM**).

The proposed new charter for Philadelphia, framed by a Commission appointed by Governor Earle under an act of the legislature, and released on September 1, after 15 months of labor, provides for election of the 11 council members by Proportional Representation; the Commission declared:

The experiences of New York, Cincinnati, Toledo, Wheeling, and other cities using this principle in their elections demonstrates that a better type of candidate runs for office. A new vital interest in the election of council is invariably experienced when P. R. is adopted; especially is this true of the independent voter. The possibility of election fraud is greatly reduced, because of the central count, because of the checks in counting that go with it, and because of the great costs and risk that would be incurred in attempting to steal an election.

See *HOAG, Proportional Representation* (1926).

PROTESTANT EPISCOPAL CHURCH.

The major events in the life of the Episcopal Church in the year 1938 stemmed largely from actions of the Church's General Convention late in 1937. The election of a new Presiding Bishop, the Rt. Rev. Henry St. George Tucker, Bishop of Virginia, to whom was restored the presidency of the Church's National Council, gave to the Church a leadership which had been lacking in recent years. Bishop Tucker immediately began the reorganization of National Council along lines outlined by General Convention and by the close of the year this work had advanced sufficiently far to indicate a more effective leadership in the national administrative body of the Church.

The Forward Movement inaugurated at the General Convention of 1934 was continued by the Convention of 1937 for another three years. This Movement in 1938 came under the active leadership of the Presiding Bishop and went forward in its task of "reinvigorating the life of the Church and rehabilitating its work."

The Commission on Approaches to Unity appointed by the General Convention of 1937 with the Bishop of California, the Rt. Rev. Edward L. Parsons as chairman, met with a similar group appointed by the General Assembly of the Presbyterian Church in America. The two groups at a meeting in New York, October 27-28, agreed on a proposed statement on reunion and a Concordat designed as a step in carrying out the declared purpose of the two Churches for reunion. The Concordat now awaits action by the next General Assembly of the Presbyterians and the next General Convention of the Episcopalians. In the meantime it is expected that Church people everywhere will give their consideration to the proposals made by the Commissions.

The Episcopal Church also participated in various ecumenical movements, notably the preliminary conference held in Utrecht, Holland, in the spring of 1938 to establish a World Council of Churches, and in the thirtieth anniversary celebration in November of the Federal Council of Churches in America. At this latter meeting the Presiding Bishop made an address, the first time that the head of the Episcopal Church has participated in these gatherings.

In 1938 there were an unusually large number of changes in the House of Bishops. Five Bishops died: the Rt. Rev. Philip Cook, Bishop of Delaware, and sometime President of the National Council; the Rt. Rev. K. G. Finlay, Bishop of Upper South Carolina; the Rt. Rev. Hiram Richard Hulse, Missionary Bishop of Cuba; the Rt. Rev. William G. McDowell, Bishop of Alabama; and the Rt. Rev. Warren Lincoln Rogers, Bishop of Ohio. At its meeting early in November, 1938, the House of Bishops accepted the resignations on account of age or health of these Bishops: The Rt. Rev. Robert H. Mize (Salina), the Rt. Rev. John W. Nichols (Suffragan, Shanghai), the Rt. Rev. William L. Gravatt (West Virginia), the Rt. Rev. E. D. Shaylor (Nebraska), the Rt. Rev. David Lincoln Ferris (Rochester), the Rt. Rev. Irving Peake Johnson (Colorado), the Rt. Rev. Theodore Dubois Bratton (Mississippi), the Rt. Rev. Warren Lincoln Rogers (Ohio), the Rt. Rev. James Craik Morris (Louisiana), and the Rt. Rev. Edward T. Demby (Suffragan, Arkansas). In four cases the retiring Bishops were succeeded at once by their Coadjutors. Those who assumed diocesan responsibility in this way were the Rt. Rev. Robert E. L. Strider (West Virginia), the Rt. Rev. B. H.

Reinheimer (Rochester), the Rt. Rev. Fred Ingle (Colorado), and the Rt. Rev. William M. Green (Mississippi).

During the year 11 Bishops were consecrated and four Bishops-elect were awaiting consecration. The newly consecrated Bishops were the Rt. Rev. Karl Morgan Block (Coadjutor, California), the Rt. Rev. William A. Brown (Southern Virginia), the Rt. Rev. Charles C. J. Carpenter (Alabama), the Rt. Rev. Edmund P. Dandridge (Coadjutor, Tennessee), the Rt. Rev. Raymond A. Heron (Suffragan, Massachusetts), the Rt. Rev. R. Bland Mitchell (Arkansas), the Rt. Rev. Malcolm E. Peabody (Coadjutor, Central New York), the Rt. Rev. Henry D. Phillips (Southwestern Virginia), the Rt. Rev. William Payne Roberts (Shanghai), the Rt. Rev. Beverley D. Tucker, brother of the Presiding Bishop (Ohio), and the Rt. Rev. Robert F. Wilner (Suffragan, Philippine Islands). The Bishops-elect awaiting consecration at the close of 1938 were the Rev. A. H. Blankingship (Cuba), the Rev. Spence Burton, S.S.J.E. (Suffragan, Haiti), the Rev. Richard A. Kirchhoffer (Coadjutor, Indianapolis), and the Rev. Arthur R. McKinstry (Delaware). These changes left five sees vacant—Easton (Maryland), Louisiana, Nebraska, Upper South Carolina, and Salina.

At the close of its annual meeting in November, 1938, the House of Bishops, "conscious of the weighty obligation resting upon spiritual leaders in a time of world crisis, a crisis that involves the deep interest of Christian civilization and of humanity for which the Church contends, with deep humility and a solemn sense of its responsibility," issued a statement to the Church on its considered judgment in regard to certain vital matters. Among the issues discussed were the instability and insecurity of world peace, the persistent persecution of helpless peoples, the Church's Mission especially in the Orient, and the place of youth in the Church.

The Church's work in the Orient, especially in China, was greatly upset by the continuance throughout 1938 of the undeclared war in the Yangtze Valley. Hardly any piece of work in the great line of missions extending from Shanghai inland up the Yangtze Valley to the Wuhan cities and beyond escaped disruption: congregations were scattered, regular ministrations became impossible; schools and hospitals were bombed, and forced to find temporary shelter in quieter places. Hua Chung College, for example, was forced to move 567 miles from Wuchang to Kweilin. Nevertheless, there was abundant evidence of the very real vitality of the Chinese Church. Chinese pastors and other leaders remained with their congregations, ministering to them in new and unusual ways as circumstances required; American missionaries stuck to their posts and rendered particularly notable service to thousands and thousands of refugees; all, Chinese and American workers alike, were alert to opportunities presented by the situation to preach the Gospel of Christ to countless Chinese newly receptive to that Gospel.

In America Church people responded to the special needs in the Orient by generous gifts to the \$300,000 China Emergency Fund authorized by the General Convention of 1937. Early in December, 1938, gifts to this fund amounted to \$220,000 and there was every indication that the goal would be reached early in 1939.

In 1938 the total number of communicants of the Episcopal Church in 8048 parishes and missions was 1,439,968, an increase of 15,831 over the preceding year. The clergy numbered 6347; 150 priests

were ordained during the year while the 15 theological seminaries reported 263 candidates for Holy Orders. In the 5000 Church schools 487,035 pupils were enrolled. Baptisms during the year numbered 61,963, and confirmations 67,642. The government of the Church centers in a General Convention which meets triennially, the next session (the fifty-third) to be held in Kansas City, Mo., in October, 1940. Between sessions of the Convention the affairs of the Church are conducted by the National Council.

The headquarters of the National Council which is the Board of Directors of the Domestic and Foreign Missionary Society are in the Church Missions House, 281 Fourth Avenue, New York. The President of the National Council is the Presiding Bishop, the Rt. Rev. Henry St. George Tucker, Bishop of Virginia.

PROTOZOA. See ZOOLOGY.

PRUSSIA, prush'a. A former constituent republic of Germany. On Jan. 30, 1933, the National Socialists (Nazis) seized the government and later set aside the constitution, and abolished popular government and the Diet. The government of the Reich passed a law on Jan. 30, 1935, which placed Prussia under the absolute rule of a governor (Statthalter) who appoints the cabinet. Area, as of Jan. 1, 1935, 114,120 square miles; population (June 16, 1933), 39,934,011. Capital, Berlin (4,242,501 inhabitants in 1933). Livestock (1937): 2,400,800 horses (exclusive of army horses), 11,747,700 cattle, 2,924,400 sheep, 16,027,600 swine, 1,467,900 goats. The budget for 1938-39 was balanced at 1,897,000,000 reichsmarks. On Dec. 31, 1937, the public debt amounted to 1,147,000,000 reichsmarks.

PSYCHICAL RESEARCH. See PARAPSYCHOLOGY.

PSYCHOLOGY. Psychological research is concerned increasingly with the real problems of real human beings. According to M. Bentley, who this year became Consultant for Psychology at the Library of Congress, "the most obvious and central fact in the activities of man and other animals" is "the fact that the organism sees and hears . . . , cautiously inspects, understands and interprets significant situations, desires, searches out, chooses and pursues, predicts means and ends of movement, and is caught up in insoluble predicaments." The commonly neglected functions of searching, inspecting, and anticipating have been studied in six recent researches at Cornell under Professor Bentley's direction. Even "where a repeated stimulus seems to the superficial observer merely to lead on to one and the same responsive type of movement," the trained observers of S. G. Longwell discovered a rich variety of psychological performance.

The trend toward practical research is exemplified in investigations looking toward highway safety. T. W. Forbes and T. M. Matson have studied driver judgments in passing on the highway. A. A. Sharp has investigated traffic violations. H. R. DeSilva, creator of the Mechanical Tests for Drivers, has worked out a clinical treatment for traffic violators. S. M. Newhall has discovered that an uncompensated blind spot may cause traffic accidents, when a cigar or other object prevents compensation by the other eye. E. Allgaier finds the abilities involved in driving are highest between 20 and 40. M. A. Wilson has prepared a bibliography of highway safety (U.S. Dep. Agric. Misc. Publ., 1938, 296). *Psychology and the Motorist* by H. A. Toops and S. E. Haven (Columbus, O.: Adams) points to the need of radical improvements in design of auto and road, in habits of driv-

ers and pedestrians, and in traffic regulations. A national bureau for co-operative research is suggested.

The white rat remains the favorite subject of animal experimenters, but guinea pigs, dogs, chicks, cats, monkeys, chimpanzees, and even ants are used. N. R. F. Maier has been studying reasoning in rats. J. Uhlrich has discovered a social hierarchy in albino mice. I. L. Child of Yale has investigated taboo formation in monkeys. Z. Y. Kuo found that kittens would not eat rats reared in the same cage with them till they had seen other cats kill and eat rats. *Bird Flocks and the Breeding Cycle* by F. F. Darling (New York: Macmillan) is a contribution to avian sociology. *The Behavior of Organisms* by B. F. Skinner (New York: Appleton-Century) formulates a system based in part on the author's experiments.

Researches combining psychology with biochemistry are increasingly fruitful. Several investigators this year have studied effects of male hormone. Several others have investigated the relationship between vitamin-A deficiency and dark adaptation and night blindness. *Les Yeux et la Vision* by M. L. Verrier (Paris: Alcan) reports recent experimental data which seem to render the traditional dualistic theory of vision untenable.

Hearing: Its Psychology and Physiology by S. S. Stevens and H. Davis (New York: Wiley) is the first comprehensive treatment of hearing since the subject became an exact science through modern electrical methods.

There have been many new books on experimental psychology, including *Recent Experiments in Psychology* by L. W. Crafts, T. C. Schneirla, E. E. Robinson, and R. W. Gilbert (New York: McGraw-Hill); *Introduction to Methods in Experimental Psychology* by M. A. Tinker and K. H. Baler (New York: Appleton-Century); *A Laboratory Manual in General Experimental Psychology* by N. L. Munn; and *An Introduction to Experimental Psychology* by P. Finner (New York: Prentice-Hall). In *Contemporary Experimental Psychology* by W. L. Valentine (New York: Farrar & Rinehart) each chapter centers about one important psychological problem and the practical results in everyday life that would follow from its solution. *Experimental Foundations of General Psychology* by W. L. Valentine (New York: Farrar & Rinehart) is written for use in a first course. *Working with Psychology* by F. L. Ruch and Neil Warren (New York: Scott, Foresman) is a guidebook for use with an introductory text. *Elements of Psychology* by A. C. Reid (New York: Prentice-Hall) adheres largely to the traditions of structural psychology. *An Introduction to General Psychology* by J. B. Stroud (New York: Prentice-Hall) utilizes the new anthropological approach. *Mind in Transition* by J. K. Hart (New York: Covici, Friede) is subtitled *Patterns, Conflicts, and Changes in the Evolution of the Mind*. Among other new books are *An Introduction to the Fields of Psychology* by E. S. Dexter and K. T. Omwake (New York: Prentice-Hall); *Psychology in Everyday Life* by W. C. Varnum (New York: McGraw-Hill); *General Psychology* by W. J. H. Sprott (New York: Longmans, Green); *The Science of Human Behavior* by W. T. Wait (New York: Ronald Press); *Psychological Development* by N. L. Munn (New York: Houghton, Mifflin); and *Psychology and Life* by F. L. Ruch (Chicago: Scott, Foresman). *Psychology of Music* (New York: McGraw-Hill)

is written by C. E. Seashore, pioneer experimenter in this field.

Child Psychology and Educational Psychology. The humanizing of administration, reorientation of the educational task, and better provision for emotional development are among the many suggestions made by W. C. Ryan in *Mental Health Through Education* (New York: Commonwealth Fund). C. C. Crawford and J. A. Carmichael find evidence that homework in elementary schools is unnecessary. W. S. Learned and B. D. Wood recommend that high schools and colleges abandon the pseudostandards of time and credits. In *Emotion and the Educative Process* (Washington: Amer. Council on Educ.), D. A. Prescott reports a study revealing basic personality needs, conditions which frustrate them, and the influence of affective factors upon learning. Experiments of O. H. Mowrer at Yale and R. K. White at Iowa show that children adjust better under guided democratic government than under autocratic adult management. In *Teachers and Behavior Problems* (New York: Commonwealth Fund), E. K. Wickman points out that the teacher's reaction often intensifies maladjustment, and suggests a program of re-education for improving teachers' attitudes. *Developing Teacher Personality That Wins* by C. M. Sanford (Evanston, Ill.: Row, Peterson) offers helpful suggestions.

Among new texts are *Fundamentals of Educational Psychology* by O. B. Douglas and B. F. Holland (New York: Macmillan); *Educational Psychology*, written by 25 experts and edited by C. E. Skinner (New York: Prentice-Hall); *The Psychology of Learning Through Experience* by H. V. Race (New York: Ginn); *Experience and Education* by that veteran psychologist, social philosopher, and educational pioneer, J. Dewey (New York: Macmillan).

In *Directing Learning* (New York: Appleton-Century), R. W. Frederick, C. E. Ragsdale, and R. Salisbury contend that the ability to go on learning throughout life is more important than anything else the school can teach. They therefore stress training for self-directed study and problem solving. *Psychology of Elementary School Subjects* by W. H. Gray (New York: Prentice-Hall) integrates important experimental work, both early and recent.

C. H. Town's research studies from the Psychological Clinic of the Children's Aid Society of Buffalo and Erie County reveal unpredictable types of mental growth incompatible with the traditional theory of the constancy of the I.Q. S. S. Hawk has shown that within six months the I.Q. can be improved as much as 40 points by suitable speech training. *The Psychology of Speech* by J. Eisonson (New York: Crofts) is an elementary introduction to the psychology underlying the problems of speech. *The Cure of Stammering, Stuttering, and Other Functional Speech Disorders* by J. L. Orton (New York: Fortune's) will interest specialists. *Voice for Speech* by F. W. Orr (New York: McGraw-Hill) is a practical guide for voice training explaining the anatomical, physiological, and psychological factors involved. G. D. Stoddard has shown that mental growth is stimulated more by enrichment of experience than by verbal training. H. M. Skeels found that the intelligence of children placed in foster homes when less than six months of age has a zero correlation with the true mother's I.Q. M. Lightenstein and A. W. Brown found a downward trend in I.Q. for successive age groups in an area of low economic status in Chicago.

J. C. Hill contends that until a satisfactory environment is obtained for all children eugenic measures need not be considered. In an orphanage with minimum play facilities, B. L. Wellman found a trend toward feeble-mindedness, whereas in another group of children initially equal to the first group and living under the same regime except that they attended preschool, the trend was toward normality.

The older conception of intelligence as a unitary trait is giving place to the recognition of many variable factors. L. L. Thurstone reports 12 such factors in *Primary Mental Abilities* (Psychometr. Monogr., 1938, No. 1). K. Maxfield has studied retardation of blind children, H. S. Lane of deaf children. Social workers will be interested in *What of the Blind?* edited by H. Lende (New York: American Foundation for the Blind); *Child Guidance Procedures* by the staff of the Institute for Juvenile Research, Chicago (New York: Appleton-Century), and *Manual for the Diagnostic Child Study Record* by P. A. Witty and D. Kopel (Evanston, Ill., Northwestern Univ. Psycho-Educ. Clinic). *Student Guidance Techniques* is a handbook for counselors in high schools and colleges by D. G. Paterson, G. G. Schneider, and E. G. Williamson (New York: McGraw-Hill).

Helpful to parents are *Baby's Point of View* by E. J. Partridge (New York: Oxford Univ. Press); *The Psychology of Early Growth* by A. Gesell, H. Thompson, and C. S. Amatruda (New York: Macmillan), a comprehensive, scientific, yet fascinating work; *Parents in Perplexity* by J. Carter (New York: Amer. Ass. for Adult Educ.); and *The Adolescent* by A. H. Arlitt (New York: McGraw-Hill). F. K. Shuttleworth has prepared a large indexed graphic and pictorial atlas of *The Adolescent Period* (Monogr. Soc. Res. Child Devel., 1938, 3, No. 3), and A. A. Greulich, H. G. Day, S. E. Lachman, J. B. Wolfe, and F. K. Shuttleworth, *A Handbook of Methods for the Study of Adolescent Children* (Monogr. Soc. Res. Child Devel., 1938, 3, No. 2). R. Benedict of Columbia contends that "the adolescent period of Sturm und Drang is due to our discontinuous cultural institutions and dogmas" and does not occur in societies where the child is taught nothing he will later have to unlearn (Psychiatry, 1938, vol. i, pp. 161-167).

Psychopathology and Mental Hygiene. The rising optimism of contemporary psychiatry is reflected in the numerous attempts to cure schizophrenia, once accepted as incurable. Psychologists, physicians, and biochemists in many lands have collaborated in diagnostic and therapeutic studies of schizophrenia this year. H. Strecker and R. Freudenberg have written reviews of the insulin therapy with bibliographies (J. Ment. Sci., 1938, 84, 146-155 and 165-176).

Among new books on psychoanalysis are *Clinical Aspects of Psychoanalysis* by R. LaFargue (London: Hogarth Press), *Dream Analysis* by E. F. Sharpe (New York: Norton), and *The Meaning of Psychoanalysis* by R. LaFargue (London: Hogarth Press). *The Basic Writings of Sigmund Freud* (New York: Modern Library) is edited by A. A. Brill.

A Biological Approach to the Problem of Abnormal Behavior by M. Harrington (Lancaster, Pa.: Science Press) rejects Freudianism and attempts a mechanistic interpretation of the functioning and modification of adaptive systems. *The Psychology of Human Conflict* by E. R. Guthrie (New York: Harper) presents an interesting theory of opposing action tendencies within the mus-

cles, the personality disorders that may result, and the methods of reconditioning. J. McV. Hunt has traced psychosis to conflict of social origin in the case of a neighborhood group of boys, some of whom were taught sexual perversions and some of whom attended religious revivals. Only those exposed to both influences developed psychoses.

In the mental hygiene field are *The Autobiography of a Purpose* (Garden City: Doubleday Doran) by the late W. A. White, *Mental Hygiene for Nurses* by E. L. Vincent (Philadelphia: Saunders), *Psychology as Applied to Nursing* by L. A. Averill and F. C. Kempf (Philadelphia: Saunders), *Knowing Yourself and Others* by D. McLean (New York: Holt), *In the Name of Common Sense: Worry and Its Control* by M. N. Chappell (New York: Macmillan), *The Treatment of Moral and Emotional Difficulties: A Practical Guide for Parsons and Others* by C. Valentine (New York: Macmillan), and *Managing Yourself* by M. Wright (New York: Whittlesey House). *Designs for Personality* by M. E. Bennett and H. C. Hand (New York: McGraw-Hill) is a high-school text. *Psychology and Religion* by C. G. Jung (New Haven: Yale Univ. Press) borders on philosophy. *The Quest of the Overself* by P. Brunton (New York: Dutton) is a western application of Oriental psycho-spiritual self-analysis. *The Troubled Mind* by C. S. Bluemel (Baltimore: Williams and Wilkins) is a simplified description of psychoneuroses and psychoses for the layman.

Social Psychology. The social and economic factors which largely determine personality are brought out in many new books, including *Social Psychology* by J. M. Reinhardt (Philadelphia: Lippincott), *Personal and Social Adjustment* by W. L. Uhl and F. F. Powers (New York: Macmillan), *Social Psychology* by D. Katz and R. L. Schanck (New York: Wiley), *The Psychology of the Growing Personality* by F. M. Gregg (Lincoln, Neb.: Personality Press), *Social Behavior and Child Personality* by L. B. Murphy (New York: Columbia Univ. Press), and *Social Life and Personality* by E. S. Bogardus and R. H. Lewis (New York: Silver, Burdett). In *Personality in Formation and Action* (New York: Norton), W. Healy defines personality as "an integrated system of habitual adjustments to the environment" and traces the influencing factors from the prenatal period through all the formative years. *Life and Growth* by A. V. Keliher (New York: Appleton-Century) is a text on social relations, life functions, and sex for high schools and junior colleges. New books on marriage include *The Art and Science of Marriage* by E. B. Tietz and C. K. Weighert (New York: McGraw-Hill), *Plan for Marriage: An Intelligent Approach to Marriage and Parenthood*, proposed by members of the staff of Vassar College and edited by J. K. Folsom (New York: Harpers), *Love and Marriage* (New York: Liveright), essays edited by A. Forbath, and *Psychological Factors in Marital Happiness*, by L. M. Terman of Stanford University (New York: McGraw-Hill).

The Family and the Depression is a study of 100 Chicago families by R. S. Cavan and K. H. Ranck (Univ. Chicago Soc. Sci. Stud., 1938, No. 35). P. Eisenberg and P. F. Lazarsfeld have studied the psychological effects of unemployment, and E. N. Bartlett those of WPA employment. *Scholastic, Economic, and Social Backgrounds of Unemployed Youth* by W. F. Dearborn and J. W. M. Rothney (Harvard Bull. Educ., 1938, No. 20) and *Character and Personality of Children from Broken Homes* by N. Wallenstein (New York: Teachers

Coll., Columbia) are significant studies. G. E. Outland has studied 3352 transient boys and found that a majority were native-born white boys from crowded homes. *The Runaway Boy in the Correctional School* by Z. C. O'Connor (New York: Columbia Univ.) raises a challenging question. *Children in Court* by M. Hatfield, a juvenile court judge, condemns the old court system. In *Mental Conflicts and Personality* (New York: Longmans, Green), M. Sherman emphasizes the origin of conflicts from environmental stresses in youth and explains their relation to adult maladjustments which produce antisocial behavior. In *Crime and the Community* (Boston: Ginn), F. Tannenbaum interprets the criminal as a normal person in an abnormal society. L. Wood in *Responsibility and Punishment* (J. Crim. Law Criminol., 1938, 28, 630-640) contends that drastic social reforms are necessary, including the alleviation of poverty and unemployment, the control of disease, the supervision of marriage, and the dissemination of birth-control information.

The fact that stereotyped public opinion often constitutes a barrier to needed reforms has led many psychologists to measure opinions and attitudes and the methods by which they may be modified. G. H. S. Razran of Columbia has invented a method for "conditioning away social bias by the luncheon technique." R. Stagner has attempted an analysis of public opinion on the prevention of war. There have been many studies of organized propaganda. *Propaganda from China and Japan* is a case study in propaganda analysis by B. Lasker and A. Roman (New York: Institute of Pacific Relations). J. Jastrow, veteran psychologist and debunker, has written *The Betrayal of Intelligence* (New York: Greenberg), a protest against exploiters of the American public and a plea for the use of intelligence in distinguishing between truth and sales talk. D. McGregor attempted to study public opinion among members of a C.I.O. union concerning policies directly affecting them (lay-off policies, "share the work," etc.) and found wide disagreement among "rank and file" members and no clearly crystallized public opinion.

Vocational Psychology and Testing. Helpful for the business man are *Psychological Aspects of Business* by E. K. Strong (New York: McGraw-Hill) and *Psychology in Modern Business* by H. W. Hepner (New York: Prentice-Hall). In *Men Must Work* (New York: Appleton-Century), L. Brophy gives advice on employment problems. In *Human Nature at Work* (New York: Harper), J. L. Shepherd shows how personnel relations can be improved by understanding the problems of the individual worker, especially in terms of security, recognition, etc. E. C. Robbins has suggested that personnel workers should be prepared by applying the fundamental principles of democracy to the working situation. In *The Industrial Worker* (Cambridge: Harvard Univ. Press), T. N. Whitehead reports an experiment showing that social factors affect the efficiency in light physical work much more than most physical factors. W. A. Lurie has found that extra-individual factors exert a preponderant influence in vocational adjustment. *The Problem of Vocational Guidance* by H. Schneider (New York: Stokes) is a useful text. *My Vocation* by "Eminent Americans," edited by E. G. Lockhart (New York: Psychological Corporation) is a symposium covering 23 distinct occupations, each described by 25 of the most eminent Americans in the field. The National Occupational Conference has published

several new pamphlets covering various occupations, including housework, journalism, accounting, advertising, architecture, and other professions. F. E. Clark proposes a study of occupations from an historical approach, emphasizing co-operation or collective attainments instead of individual acquisitions or success, picturing change instead of a static condition, and attempting to anticipate future demand.

New tests for the personnel worker and the educator appear frequently. The Tyler-Kimber Study Skills Test, which measures proficiency in the location and extraction of information, will perhaps have greater diagnostic value than the vast flock of tests which measure chiefly the knowledge already acquired. The revised edition of G. Hildreth's *Bibliography of Mental Tests and Rating Scales* (New York: Psychological Corporation) lists more than 4000 published and unpublished tests and scales. E. B. South has prepared a *Dictionary of Terms in Measurement and Guidance* (New York: Psychological Corporation). J. W. Dunlap and A. K. Kurtz have newly revised their statistical slide rule which permits immediate determination of probable and standard errors of the coefficient of correlation, probability that an obtained difference is due to chance, and other statistical data usually requiring long, tedious, arithmetical computation. A test scoring machine is now used in scoring several tests.

Periodicals. Outstanding among new periodicals is *Psychiatry: Journal of the Biology and Pathology of Interpersonal Relations* (Baltimore: The William Alanson White Psychiatric Foundation). The publishers interpret the field of psychiatry broadly to include much of social psychology, anthropology, and political theory. Among other new periodicals are *Revista de Neuro-Psiquiatria* (Review of Neuropsychiatry), a quarterly edited by H. Delgado and J. O. Trelles (Lima, Peru: S. A. Prensa, Banquiano); *Die Irrenpflege: Zeitschrift zur Berufsbildung des Pflegepersonals* (The Care of the Insane: Journal for the Vocational Development of the Custodial Personnel), edited by Ladame (Zurich: Genossenschaftsdruckerei); *Zeitschrift für Arbeitspsychologie und praktische Psychologie im allgemeinen* (Journal for Industrial Psychology and Practical Psychology in General), edited by H. Rupp (Neustadt in Sachsen: Julius Missbach); and *Zeitschrift für Altersforschung: Organ für Erforschung der Physiologie und Pathologie der Erscheinungen der Alters* (Journal for Old Age Study: Organ for the Investigation of the Physiology and Pathology of the Phenomena of Aging), edited by E. Abderhalden and M. Bürger (Dresden, Leipzig: Theodor Steinkopff). A new psychological review was started this year in Rumanian at Cluj.

Organizations. The American Psychological Association held its forty-sixth annual meeting at Ohio State University, September 7-10. The National Institute of Psychology, the Psychometric Society, the Psychological Corporation, the Society for the Psychological Study of Social Issues, and the American Association of Applied Psychologists all met at the same university the same week.

The Tenth International Medical Congress for Psychotherapy was held in London this year. The American Psychiatric Association held its ninety-fourth annual meeting at San Francisco, June 6-10. Section I (Psychology) of the American Association for the Advancement of Science met in Richmond, Va., December 27-29. Beside the usual programs, there was a symposium on "Recent Ad-

vances in the Psychology and Physiology of Audition," led by E. A. Culler of Rochester. The Society of Experimental Psychologists met at the University of North Carolina at Chapel Hill, April 7 and 8. The Eastern Branch of the American Psychological Association met at New York University, April 1-2. The Rocky Mountain Branch met at the University of Colorado, July 23. The Washington-Baltimore Branch has been meeting the last Thursday of each month. The Michigan Psychological Association held its annual meeting March 17-19. The Midwestern Psychological Association met at the University of Wisconsin, April 22-23. The Minnesota Society for Applied Psychology has been meeting monthly. The New York State Association of Applied Psychologists held its annual meeting in May. The Psychologists' League of New York City has met monthly. The Southern Society for Philosophy and Psychology met at the University of Tennessee, April 15-16. The Western Psychological Association met at the University of Oregon, June 17-18.

PSYCHOPATHOLOGY. See **PSYCHOLOGY.**

PUBLIC AFFAIRS, INSTITUTE OF. An organization inaugurated in 1927 at the University of Virginia for the purpose of advancing an enlightened public opinion on current political, social, and economic questions of a national character, but enlarged in 1932, after the closing of the Institute of Politics at Williamstown, to include international problems as well.

The attendance at the 1938 session, which was held from July 3 through July 16, consisted of 1573 registered members and visitors, representing 30 States and 12 foreign countries. Membership in the Institute is open to men and women who have taken part in public life and to all those interested in the discussion of public affairs.

The general topic of the 1938 session was "Economic Stability and Social Security." The international part of the program included addresses and round tables on the following subjects: "International Good Will Through Economic Stability," "Inter-American Aspects of Economic Stability and Social Security," "The Church Faces an Insecure World," and "The Challenge of the Far East to World Security." The national program was composed of round tables on "The Administration of the Social Security Program: Unemployment Compensation," and "The Future of American Democracy."

The officers of administration in 1938 were: John Lloyd Newcomb, president of the University of Virginia; Robert Kent Gooch, acting director of the Institute; and Marjorie McLachlan, secretary of the Institute. Headquarters are at the University of Virginia, Charlottesville, Virginia.

PUBLIC FINANCE. A radical change in the budget philosophy of the Roosevelt Administration occurred during 1938. Until that year, the Administration regarded large-scale Federal spending and a heavy Federal deficit to be financed through loans as a pump-priming measure. The oft-expressed theory was that an increase in government expenditures during a depression would help to inaugurate a revival of private business activity, and when the latter was achieved government spending could be curtailed and a budget surplus would develop, due to increased tax revenues, that would permit repayment of the added national debt incurred during the depression period. The new budget philosophy, as clearly expressed in the President's annual message to Congress on Jan. 4, 1939, contemplates the stabilization of Federal expenditures around \$9,000,-

000,000 a year, while the elimination of the resulting huge budget deficits is to be accomplished only when there is an increase in national income. The President estimated that national income had to rise above \$80,000,000,000, thus exceeding the 1929 record level, if tax revenues were to be large enough to meet this \$9,000,000,000 annual expenditure. The annual budget message contained, for the first time, a table showing how large Federal receipts are likely to be at different levels of national income.

As a result of the ambitious spending-lending program launched by the President in April, the indicated deficit for the fiscal year ending June 30, 1939, was increased from the initial estimate of \$1,088,000,000 to \$3,972,000,000. This was the largest peacetime deficit in the history of the country, except for the deficit of \$4,550,000,000 incurred in 1936. However, the latter is not really comparable, as it included the cash payment of the veterans' adjusted compensation certificates effected in that year. If we leave out the cash payment of the bonus, therefore, the deficit for the 1939 fiscal year was the largest on record except for the World War period.

While the Administration thus adopted a program of chronic huge Federal expenditures, with revenues permitted to take care of themselves as business conditions varied, some revulsion of feeling against the fiscal innovations of recent years was apparent in Congress and in public sentiment. In the face of strong resistance from the Administration, the Revenue Act of 1938 greatly liberalized taxation of capital gains and largely ended the undistributed profits tax. The more conservative trend of the elections in November, 1938, was at least partly attributed by many observers to uneasiness over the steady increase in the national debt to new high levels and the absence of even an expressed intention of bringing revenues and expenditures into balance within the near future. As the new Congress met after the turn of the year, strong resistance to the maintenance of large relief expenditures in the face of improving business conditions was apparent, although many members of Congress in both parties continued ready to appropriate large sums of money for favored projects of their own, including some not covered in the budget as submitted by the President.

The President's annual budget message of Jan. 5, 1939, contained a tabular summary of Treasury finances for the decade 1931-40 inclusive, covering the era of continuous deficits brought on by the severe depression of the early thirties and the deliberate heavy spending program adopted during the latter years of this period; see p. 626.

Federal Revenues. The total income of the Federal government in the fiscal year ending June 30, 1938, amounted to \$6,242,000,000, which compared with \$5,294,000,000 in the preceding fiscal year. While the relatively prosperous business conditions during most of 1937 contributed largely to this improvement, the increase in Federal revenues was chiefly due to the higher yields of the social security taxes. Receipts from taxes levied under the Social Security Act and Railroad Retirement Act aggregated \$754,000,000, as against only \$252,000,000 the year before. Income tax collections during the year totaled \$2,635,000,000, as compared with \$2,158,000,000 the year before. Miscellaneous revenue taxes increased by \$99,000,000. On the other hand, a sharp decline in customs receipts occurred as a result of the contraction in foreign trade during the year.

The chief sources of Treasury revenue for the

1938 fiscal year, and estimates for the 1939 and 1940 fiscal years, were as tabulated below.

Federal Expenditures. The aggregate of Federal expenditures during the fiscal year ended June 30, 1938, exclusive of debt retirement, was \$7,626,000,000, which compared with \$8,442,000,000 during the preceding year. Of these expenditures, a substantial amount went into the purchase of Government securities for reserve funds. During the year ended June 30, 1938, holdings of Government obligations by the Old-Age Reserve Account, the Unemployment Trust Fund, and other reserve funds rose by fully \$1,117,000,000, so that on a cash basis the net deficit for the year was not the \$1,384,000,000 reported, but only \$267,000,000.

The largest decline in expenditures for the 1938

fiscal year, as compared with the year ended June 30, 1937, was the fall of \$799,000,000 in recovery and relief outlays. This reflected the program of reducing expenditures due to business recovery which prevailed during 1937, a policy that was abruptly changed toward the end of the fiscal year. National defense outlays of the 1938 fiscal year aggregated \$980,000,000, an increase of \$85,000,000 over the year before. While plans for a sharp increase in such outlays were laid during the year, they were not brought to fruition until the following fiscal year.

Estimated expenditures for the fiscal year that began July 1, 1938, were sharply higher because of the enlargement of recovery and relief expenditures.

**RECEIPTS FOR THE FISCAL YEAR 1938 AND ESTIMATED RECEIPTS FOR THE FISCAL YEARS
1939 AND 1940**

^a Excess of credits (deduct).^b Includes \$22,507,108.04, representing one year's interest at 4½ per cent on \$500,157,956.40 face amount of bonds issued to the United States Government life insurance fund pursuant to sec. 5 of the Adjusted Compensation Payment Act of Jan. 27, 1936.¹ Additional expenditures on these accounts are included under "Recovery and relief" and "Revolving funds (net)."² The figures for the fiscal year 1938 represent payments and repayments of \$8,780,085.63 and \$7,928,662.85, respectively, on account of adjustments of grants for prior years. The net adjustment is \$851,422.78.³ Includes expenditures made by Federal Surplus Commodities Corporation from funds provided for the Federal Emergency Relief Administration.

Treasury Financing Policy. The Treasury's financing problems during 1938 were very simple, despite the decision of the Administration to embark once again upon extraordinary expenditures for recovery and relief on a large scale. One reason for this was the fact that the deficit assumed substantial proportions, on a cash basis, only late in the year. Secondly, the elimination of the inactive gold fund in April not only relieved the Treasury of the necessity for financing the purchase of imports of the yellow metal, but also increased its cash balance by the \$1,183,000,000 held in the inactive fund on April 14. On that date, the Treasury transferred to the gold certificate fund of the Federal Reserve System this entire sum, as well as \$209,000,000 of gold held in its working balance.

Contrary to past experience, the announcement of the spending-lending program did not affect adversely prices of Government bonds. Rather, the reduction in reserve requirements and the end of the gold sterilization policy that were announced simultaneously with the new spending-for-recovery program in a special message to Congress on April 14 assured that excess reserves of the banks, which had been scaled down sharply in 1937, would soon rise to new high levels. Hence, prices of Government securities developed persistent strength during the balance of the year.

During the fiscal year ended June 30, 1938, Government securities held outside of the social security and other reserve funds actually declined by

^a As of Dec. 1, 1938, and it is assumed for the purpose of this statement only that they will remain at these amounts throughout the fiscal years 1939 and 1940.

\$376,000,000, owing to sharp increases in the amount of special Treasury issues held by the Old-Age Reserve Account and the Unemployment Trust Fund. For the fiscal year ended June 30, 1939, an increase in the gross Federal debt of \$3,967,000,000 is anticipated. Of this amount, the Treasury expects to raise \$959,000,000 by sale of special obligations to reserve and trust accounts, and \$600,000,000 are to be obtained from cash sales of baby bonds.

A table on page 629 shows the gross public debt outstanding on June 30, 1937, and on June 30, 1938, and estimates for the closing dates of the two succeeding fiscal years.

The Treasury embarked upon a policy of financing certain of its agencies independently of the budget during the year. The Commodity Credit Corporation and the United States Housing Authority are to be financed in this way. The President has proposed that this principle be applied also to the Reconstruction Finance Corporation, the Export-Import Bank, the Home Owners' Loan Corporation, the United States Maritime Commission, and other agencies, so that only the losses incurred from their operation would enter into the budget. This would constitute a move toward the division

of the Federal budget into ordinary and extraordinary divisions, such as has been adopted by many countries abroad, not always with reassuring results.

The Public Debt. The gross public debt of the United States outstanding at the end of the calendar year 1938 amounted to \$39,427,183,901. This represented an increase of \$2,147,892,383 over the gross debt of \$37,279,291,518 outstanding at the end of 1937. Despite this increase in the debt, the persistence of unprecedentedly low money rates resulted in only a very small increase in the sum required to meet the interest on the Treasury's obligations.

The floating debt at the end of the year amounted to \$2,389,366,000. This constituted a decrease as compared to the year before, as the volume of outstanding Treasury bills was reduced because of the abandonment of the policy of paying for imported gold with funds borrowed in this manner. Certificates of indebtedness sold to the Unemployment Trust Fund increased, however.

The public debt at the end of the year was as follows:

PUBLIC WORKS ADMINISTRATION (PWA). See MUNICIPAL OWNERSHIP; RELIEF; SEWERAGE AND SEWAGE PURIFICATION; WATERWORKS AND WATER PURIFICATION; UNITED STATES under *Administration*.

PUERTO RICO, pwě'r'tō rě'kō. A West Indian island forming a territory of the United States; acquired from Spain on Dec. 10, 1898. Capital, San Juan. Two small adjacent islands, Vieques and Culebra are included with Puerto Rico in jurisdiction and statistics.

Area and Population. Having an area of 3435 square miles, Puerto Rico is inhabited by 1,773,207 persons (estimate for July 1, 1937); it had 1,723,534 inhabitants according to the census of Dec. 1, 1935. The density of its population is among the highest in the group of agricultural countries. The number of inhabitants to the square mile was 521, as estimated for 1937; this number had increased from 280.3 for 1899 and 506.8 for 1935. The birth rate, calculated for 1937, was 38.3 to the thousand; the death rate, 20.9. Nearly 4 out of 9 of the popu-

lation were below the age of 15 years. The rise in the population by reason of a great excess of births over deaths during a long succession of years would have been greater but for a considerable aggregate emigration of natives to the Continental United States and to some of its possessions. An official tabulation for 1937 gave the number of the colored inhabitants as 414,936 and grouped the remainder as white.

The populations of the chief cities (census of 1935) were: San Juan, 137,215; Ponce, 60,867; Mayagüez, 44,907; Caguas, 22,599; Rio Piedras, 16,849; Guayama, 16,075; Arecibo, 14,332; Bayamón, 13,873; Aguadilla, 11,133. Of all the population of Puerto Rico, 563,616 (1935) were classed as urban; 1,159,918 as rural. The two groups had numbered, respectively, 489,584 and 1,054,329 in 1930. Thus, while the rural majority had made a greater absolute gain in number, the urban had increased at a higher rate. Spanish continues to be the prevailing language of the population, but English is widely used; the predominant religious allegiance is to the Roman Catholic Church.

Education. The number of pupils enrolled in

the public schools, as totaled at the end of the academic year 1937-38, was 278,265. This comprised 12,329 in high schools, 114,068 in urban elementary schools, 124,699 in rural elementary schools, 11,164 in "second unit" rural schools, 8502 in adult schools, and 7503 in adolescent schools. The total enrollment exceeded by 33,854 that of a year earlier, which in turn had fallen about 10,000 below that of the year preceding it. These fluctuations attended the cessation in 1936 of the Federal Emergency Relief Administration's grants for the pay of additional teachers and, in the year 1937-38, an extra appropriation of \$1,150,000 for elementary education, made by the Insular Legislature, and grants of funds through the Puerto Rico Reconstruction Administration. Accredited private schools, 51 in number, reported for the year 1936-37, 2075 high-school pupils, 8070 elementary pupils, and 717 in kindergartens. University practice schools had 422 secondary and 359 elementary pupils; evening high schools and extension classes, 881 adult students. For the year 1937-38 the expenditures of the public-school system, per capita of enrolled pupils, totaled \$25.27.

The Governor's report for 1938 noted, with regard to education, that the total of enrollments in the public schools came to but 45 per cent of the number of inhabitants aged from 5 to 18 years. The lack of higher enrollment was attributed to insufficient school facilities in rural areas, where two out of three of the young in the designated age-group were said not to be attending school. While attendance at school during a period of elementary education was a legal requirement, it remained needful to effect the extension of the school system into the less accessible localities until schools should come within the reach of all required by law to attend. The Governor recommended as essential a program of school extension to be financed by Insular and by Federal funds through a succession of years. Two particular difficulties attended the task of bringing schools into the reach of all the population: the very high proportion of actual or potential schoolboys and schoolgirls to the whole population rendered the cost of public education much higher, in proportion to the people's income, than in the case of a typical State in the Union; the rivalry of English and Spanish languages, in the schools' curriculum, at the same time tended to increase the amount of study needful to a given degree of progress to learning in either tongue.

Spanish was still, in 1938, the predominant language of the public schools, being the pupils' original speech. Some English was taught, however, even in elementary grades. A plan that went into effect in the year 1937-38 started the teaching of English, among the other subjects, in the lower elementary grades and sought to build up the English part of the instruction as the pupil advanced, to a maximum of half or more of the school-time, assigned to instruction in English (as a subject or as a medium) in the seventh and eighth grades.

Production. Puerto Rico's production of sugar in 1938 attained 1,077,149 tons; this exceeded previous yearly totals, except that for 1934, which was 1,103,822 tons. The growing of sugar cane and the extraction of sugar from the cane formed, together, the principal industry of the island; this industry produced, for the whole product of 1938, at its estimated average price, about \$75,000,000. However, the production of the year exceeded the exports of sugar by about 50 per cent, a margin far in excess of that needful to supply the local demand, so that the amount realized from exports of

sugar, for 1938, attained only \$50,144,811, materially less than the sums thus realized in 1936 and in 1937. The production of tobacco in 1938 totaled 44,069,272 lb., a considerably higher figure than any other year's total subsequent to the 50,000,000 lb. of 1927. The average price paid to growers, however, was but 11 cents a lb., which fell short of the average price for any of the previous 17 years. The tobacco of 1938 thus had a farm value of about \$4,870,000. Among other crops, coffee yielded, in 1938, 16,639,200 lb., and much fruit was grown, some for the export market in canned form or otherwise.

Intense as was the cultivation that must provide livelihood to a dense population gaining its support primarily from agriculture, less than half of the rural land was cultivated in 1938. About 1,000,000 acres were in pasture and woodland; about 300,000, cultivated to sugar cane; nearly 250,000 to coffee, and about the same area to minor crops; somewhat over 60,000 to tobacco; and about 10,000 was occupied by coconut trees.

Efforts were under way in 1938 to promote more advantageous cultivation of the land in some respects. The growing of cucumbers for the United States market had the lead among undertakings to supply vegetables for export, but it met with difficulties in January and February on account of a waterfront strike which shut off the handling of vegetables for six weeks. In advocacy of farmers' giving more attention to growing food crops for their own subsistence it was pointed out that the island still imported a certain amount of foodstuffs for which it was capable of raising substitutes.

Overseas Trade. For the fiscal year ended with June 30, 1938, the imports into Puerto Rico totaled \$93,314,783 from all sources, and \$84,987,994 from the United States alone. The year's exports totaled \$82,077,178 altogether and \$79,808,113 to the United States. Yearly exports fell below imports for the first time after 1927. For the year 1937 imports had totaled \$98,859,969 in all and \$90,288,508 from the United States; exports, \$114,953,827 in all and \$112,857,749 from the United States. The yearly exportation of sugar decreased to 735,541 tons (1938) from 959,510 tons (1937); in value, to \$50,144,811, from \$71,390,088. The drop in this item, regularly making the bulk of the island's exports, accounted for most of the deficiency of the total value of 1938 exports as compared with those of 1937. The exports of tobacco (all but a small part unmanufactured) attained, for 1938 (calendar year), \$9,211,423; those of fresh fruits, \$1,882,350; rum, \$2,772,155; cotton manufactures (chiefly garments), \$9,377,939; silk manufactures (mainly garments), \$2,029,963.

Finance. For the fiscal year ended with June 30, 1938, the insular government's revenues amounted to \$16,380,975; they consisted chiefly of internal revenue totaling \$12,917,925. Disbursements for the fiscal year, to the total of \$16,946,823, included the following: Education, \$5,432,410; health, \$1,722,601; insular police, \$1,922,084; Attorney-General's office, \$1,253,523. The cash balance on hand on June 30, 1938, was \$2,158,127, as against \$2,683,623 a year earlier. Taxable property in Puerto Rico was assessed, as of Apr. 1, 1938, at the aggregate valuation of \$301,016,501. Outstanding debt of the insular government totaled, June 30, 1938, \$28,533,846, being in the main insular bonds to a total of \$27,400,000; net of sinking-fund assets, the debt was \$25,055,205.

Transportation. Railway line in Puerto Rico, approximating 922 miles, included 574 miles of

sugar railways built to serve the sugar industry. The insular government maintained (1938) 1379 miles of highways. These did not include municipally maintained highways. The city of San Juan was regularly served by airplanes of Pan American Airways, which made four trips a week from Miami. Connection by airplane was maintained with other points in the West Indies and with South America. The Grace line included San Juan as a port of call and three of its vessels sailing between New York and South America touched there regularly in the course of the year, while the New York and Porto Rico Steamship Company added a vessel to its fleet calling at San Juan.

Government. Governed in accordance with the organic act of Mar. 2, 1917 (the Jones Act), as later amended from time to time, Puerto Rico has as its chief executive a governor appointed by the President of the United States; the inhabitants received by the organic act the status of United States citizens. They elect, by adult suffrage, a legislature composed of a Senate of 19 members and a House of 39 Representatives, all chosen for four years. A commissioner, also elected by popular vote, represents the island in the U.S. Congress. The Governor of Puerto Rico in 1938 was Maj. Gen. Blanton Winship.

HISTORY

Nationalist Terrorism. The most conspicuous occurrence of the year was an attempt to shoot Governor Winship to death while he attended a public ceremony in Ponce on July 25, marking the anniversary of the arrival of the United States' forces under Gen. Nelson A. Miles in Puerto Rico in 1898. A band of possibly a dozen men, officially identified as Nationalists, fired pistols at Winship as he stood in the reviewing stand while a force of the Puerto Rican National Guard marched past. Winship was not hurt, though a bullet went through a leg of his trousers; Col. Luis Irizarri of the National Guard, who sat behind Winship, was killed by a bullet, and one of the alleged assassins, Angel Esteban Antongiorgi, was shot to death by police returning the fire. A detective who leaped forward to protect the Governor was wounded. Two men known in connection with previous outbreaks of violence attributed to the Nationalists, Tomas Lopez de Victoria and Elifaz Escobar, and two more described as Nationalists were immediately arrested, and a number of others were arrested subsequently. A gathering of 40,000 spectators remained on the scene, and the ceremonies, including a speech from Governor Winship, were carried out as planned.

Five of the men arrested after the attempt to kill Winship were tried, by the end of the year, for the murder of Colonel Irizarri; all were convicted of murder and sentenced to imprisonment for life. Four more remained to be tried; some of those who had been arrested testified for the prosecution, giving evidence that implicated a number of men who had not been arrested on the scene of the crime. Lopez de Victoria, prominent among the convicted men, was said to have given the command, as a captain of Nationalist cadets, which led to the affray of Palm Sunday, 1936, in Ponce, in which 21 persons were killed; Escobar had previously been acquitted of participation in the outbreak of 1936. As the law of Puerto Rico did not provide capital punishment, the convicted defendants received the heaviest punishment allowed.

The attempt to assassinate the Governor plainly was the work of extremists in the Nationalist party.

It started a tendency of the moderates in that party to break with the extremists. The party's acting president, R. Medina Ramos, issued a denial (Aug. 1) that the party had authorized the attack on the Governor's life. Later, attorneys professing Nationalist principles declined to act as counsel for some of the men charged with the killing of Irizarri, and in some instances the defendants had to be represented by assigned counsel.

Relations with Federal Government. A lower rate of exportation from Puerto Rico to the United States tended to cut down business, employment, and public revenues to some extent, and to augment the demand for public expenditure. The Federal Secretary of Agriculture put the island's allotment of sugar for exportation to the States at 819,344 tons for 1938; while only some 22,000 tons less than the quota for 1937, the figure for 1938 left Puerto Rico unable to dispose of an unusually great surplus, the result of a big harvest of cane. In this situation Puerto Rican commercial opinion had reason to oppose the existing concessions as to quotas and tariffs that had been made to Cuban sugar. The suggestion in September that the Federal administration might make further concessions to Cuban sugar naturally bore on this situation. The Federal act of 1938 for the regulation of the wages and hours of labor, moreover, was so framed as apparently to apply to Puerto Rico: according to an observation credited to Governor Winship, the same Federal administration that wanted and got a law setting minimum wages far above the level attainable from Puerto Rico's existing sources of production was supplying food in the same island, for the support of indigent families, at the average rate of \$1.70 a month for the family of five; the comparison implied the possible difficulty of forbidding persons supported on this scale from working for less than 25 cents an hour. Governor Winship was credited in the press with making persistent endeavor to render evident to authorities in Washington the interests and sentiment of the people that he governed on salient points in the relations between Puerto Rico and the Federal Government.

The death (October 15) of Antonio R. Barceló, Senator and for many years insular political leader, deprived the island of one of its best-known spokesmen, whose health and activity had, however, for some years been impaired. The Federal First Circuit Court held (December 18) that a great number (1012) of laws passed by the Puerto Rican Legislature after 1902 were invalid; these laws had been passed as joint resolutions, a practice that had been commonly used when the legislators found themselves short of time to prepare regular legislative bills; the court held that the power to proceed thus did not reside in the Legislature. Stevedores at the port of San Juan went on strike (January 3), interrupted the loading and unloading of ships for five weeks, and obtained (February 10) a rise in wages to 40 cents an hour, from 32 cents. A naval commission visited the island in September, in the course of a general survey of the naval bases of the United States and their defensive needs.

Legislation. The Legislative Assembly convened on February 14 in its second regular annual session. It established the permanence of appointments of teachers in public schools, allowing a preliminary period of probation in the cases of new teachers. As an addition to the insufficient revenue of the University of Puerto Rico, a tax of $\frac{1}{8}$ cent a gallon was imposed on production of molasses and

the proceeds were assigned to the University. Another similar tax, at $\frac{1}{4}$ cent a gallon, was assigned to the cost of work to combat malaria and hookworm and of assistance to insolvent mothers and abandoned children. A measure was passed to create a Labor Relations Board. The issue of \$1,000,000 of bonds was authorized for the purpose of purchasing the Rio Blanco Hydroelectric works from the Porto Rico Railway, Light, and Power Company. Three measures were enacted to promote the undertaking of projects for building improved housing.

A special session of the Assembly met on August 10 at the call of the Governor. It failed to restore the penalty of death, as he had recommended after the Nationalist attack in Ponce. Efforts were made to provide the insular Government with more revenue through the period of depressed business as the Governor had proposed.

PULITZER PRIZES. A series of awards established in 1915 by the will of Joseph Pulitzer, publisher of the New York *World*, presented annually by Columbia University on recommendation of the advisory board of the Pulitzer School of Journalism, for outstanding achievements in letters and literature. In 1938, as announced on May 2, the awards in literature were: Novel, *The Late George Apley*, by John P. Marquand; play, *Our Town*, by Thornton Wilder; history, *The Road to Reunion*, by Paul H. Buck; verse, *Cold Morning Sky*, by Marya Zaturenska; biography, *Pedlar's Progress*, by Odell Shepard, and *The Border Captain*, and *Portrait of a President*, two volumes on Andrew Jackson by Marquis James. In journalism, awards were made to Arthur Krock, chief Washington correspondent of the New York *Times*, "for distinguished service as a foreign or Washington correspondent during the year"; to W. W. Waymack, associate editor of the *Des Moines Register and Tribune*, "for distinguished editorial writing during the year"; to the Bismarck (N. D.) *Tribune*, for its news reports and editorials entitled "Self Help in the Dust Bowl"; to Ray Sprigle, of the *Pittsburgh Post Gazette*, for a distinguished example of a reporter's work. Mr. Sprigle exposed the one-time membership of Justice Hugo L. Black, of the Supreme Court of the United States, in the Ku-Klux Klan; to the *Edmonton Journal*, for the fight it waged in having declared unconstitutional the Alberta press act. For distinguished examples of a cartoonist's work, Vaughn Shoemaker of the *Chicago Daily News*, for his cartoon "The Road Back." Three traveling scholarships were awarded to graduates of the school "who shall have passed their examinations with the highest honor and are otherwise deserving." Also a scholarship to an art student "who shall be certified as the most promising and deserving by the National Academy of Design, with which the Society of American Artists has been merged."

PURDUE UNIVERSITY. A State technological institution in Lafayette, Ind., founded in 1869. The enrollment for the autumn of 1938 was 6778; registration in the 1938 summer session was 1564. There were 500 members on the faculty. The endowment amounted to \$340,000, and the income for the year was \$2,889,835. The library contained 140,156 volumes. New buildings under construction during 1938-39 were: A music hall and auditorium, a chemical engineering building, and additions to the Women's Residence Hall group, the Cary Halls for Men, and the Purdue Memorial Union Building. President, Edward C. Elliott, Ph.D.

PYROMETALLURGY. See METALLURGY.

QATAR. See ARABIA.

QUEBEC, kwé-bék'. An eastern province of Canada. Area, 594,534 square miles; population (1938), 3,172,000 compared with 2,874,255 (1931 census). Quebec had 13,281 Indians in 1934. During 1936 there were 75,285 births (24.3 per 1000), 31,853 deaths (10.3 per 1000), and 21,654 marriages (7.0 per 1000). Chief cities (with 1931 population figures in parentheses): Quebec, the capital (130,594), Montreal (818,577), Verdun (60,745), Three Rivers (35,450), Hull (29,433), Sherbrooke (28,933), Outremont (28,641), Westmount (24,235). In 1936 there were 695,680 students enrolled in schools of all kinds, including 30,570 students in the colleges and universities. The province has four universities (McGill, Bishop's, Laval, and Montreal).

Production. The estimated gross agricultural revenue for 1937 was \$191,510,000 (\$189,970,000 for 1936) of which field crops represented \$81,629,000 (\$91,276,000 in 1936). Other important items included in the 1936 agricultural production total were dairy products, \$52,284,000; farm animals, \$23,626,000; poultry and eggs, \$8,215,000; maple products, \$2,482,000. Livestock in Quebec (1937): 279,900 horses, 1,764,100 cattle (inc. 962,400 milch cows), 658,000 sheep, 773,900 swine, and 7,603,100 poultry. Fur production for the year ended June 30, 1936, totaled 295,606 pelts valued at \$2,470,998. The output of the forests during 1936 equaled 931,505 M cu. ft. valued at \$47,417,044. In 1937 the value of the fisheries catch was \$1,892,036.

Mineral production (1938 preliminary figures): Gold 883,060 fine oz. (valued at \$31,061,635); silver, 1,204,604 fine oz.; asbestos, 289,820 tons; copper, 113,819,618 lb. Building materials: Clay products, valued at \$1,036,270; lime, 126,648 tons; cement, 2,730,317 bbl.

Mineral production (1937) was valued at \$65,160,215 of which gold (711,480 fine oz.) accounted for \$24,894,685; asbestos (410,025 tons), \$14,505,541; copper (94,653,132 lb.), \$12,378,737; zinc (8,566,927 lb.), \$419,951; silver (908,590 fine oz.), \$407,784; selenium (208,531 lb.), \$360,759. In 1936, from the 7969 manufacturing plants, with a total of 194,876 employees, the net value of products was \$377,514,998 (central electric stations, and dyeing, cleaning, and laundry work ceased to be regarded as "manufacturing" industries in 1936).

Government. For the year ended June 30, 1938, revenue amounted to \$53,344,037; expenditure, \$50,335,750; net funded public debt, \$219,697,689. The government is vested in a lieutenant-governor who is advised by a responsible ministry, a legislative council of 24 members (appointed for life by the lieutenant-governor), and a legislative assembly of 90 members elected for a term of five years by popular vote of the people (women do not vote nor are they eligible for election to the legislature). Quebec is represented in the Canadian parliament at Ottawa by 24 members in the Senate and 65 members in the House of Commons. Lieutenant-Governor, Esioff L. Patenaude (appointed May 3, 1934); Premier, Maurice Duplessis (Union Nationale).

History. The Fascist tendencies displayed by Premier Duplessis' Government continued to arouse alarm in anti-Fascist circles in Canada and the United States during 1938 (see 1936 and 1937 YEAR BOOKS for background material). Duplessis had been swept into power on a strong wave of French-Canadian nationalism aroused by depressed economic conditions and the domination of the province's economic life by Anglo-American finan-

cial and business interests. He also benefited from resentment at corruption within the preceding Taschereau Government.

In fulfillment of his campaign pledges, the Premier on April 11, 1938, announced the arrest of a number of former officials of the Taschereau regime on charges of graft and corruption. He made no effective move, however, to carry out his promise to curb "foreign" financial and business interests through the reform of monopolies and public utilities. On the contrary, he enjoyed the support of these interests in pursuing his labor and anti-radical policies. From Nov. 9, 1937, when the Padlock Law was first enforced, to the end of July, 1938, the Quebec police were reported to have conducted some 300 raids on the homes, offices, and shops of Communists, Socialists, trade union leaders, and other alleged radicals. Much printed material was seized, homes and offices were in many cases padlocked, and radical and liberal activities were suppressed.

Democratic and anti-Fascist elements throughout Canada denounced these measures as a violation of civil rights and a step toward destruction of Canadian democracy. The Duplessis Government justified them as necessary to combat alien and subversive movements repugnant to the sentiments of the great majority of French Canadians. The Dominion Government was strongly urged by liberal groups to disallow the Quebec Padlock Law but it declined to do so for fear of alienating French-Canadian support in the next Dominion election. The issue was left to be decided by the courts on a concrete case. In December the Montreal police ordered landlords to evict all tenants with communistic tendencies.

Meanwhile the Duplessis Government was under fire from various French-Canadian groups. Some of the Premier's former political associates attacked him for not carrying out his pledge to curb monopolies and public utilities. The extreme nationalists, led by Abbé Lionel Adolphe Groulx of the University of Montreal, who advocated the secession of Quebec to form an independent French-Canadian state, rejected the Premier's policy of full provincial autonomy within the confederation. But the Separatist movement, which gained rapid headway in 1937, waned considerably in 1938 as a result of the disapproval voiced by the French-Canadian clergy. Extreme nationalism prompted the Quebec Legislature in 1937 to make French rather than English the accepted text for all statutes. But the law caused so much inconvenience and was so widely denounced that Premier Duplessis had it repealed in March, 1938. The government's anti-union measures, aimed chiefly at C.I.O. and other international unions, were in some instances opposed by the French Catholic workers' syndicates who co-operated with the international unions in fighting the measures.

In an effort to undermine the international unions, and apparently as a first step toward the corporative state favored by the Catholic clergy of the province, the government undertook to extend existing labor legislation. Under the Fair Wages Act of 1937 a government board on Dec. 28, 1937, issued minimum wage and hour regulations affecting nearly 80 per cent of the province's 670,000 workers and increasing their annual wage payments by \$26,000,000, according to the official estimate. The provisions of this measure evoked protests from both employers and workers. Accordingly they were revised in new regulations effective May 15, 1938. Under these, four industrial

zones were established in the province with separate minimum wage scales for each.

The Fascist party established in Quebec in 1937 by Adrien Arcand, editor of a semi-official newspaper of the Duplessis Government and business associate of the Premier, split into two factions in May. But in July Arcand's majority faction united with the Fascist movement organized in Ontario and Manitoba, the new movement taking the name of National Unity Party.

The practice followed by some French-Canadian judges in annulling marriages in Quebec Province not performed in accordance with Roman Catholic canon law was repudiated in a decision issued by Chief Justice R. A. E. Greenshields of the Quebec Superior Court on June 8. The chief justice declared that "the blessing of the church has nothing whatever to do with the validity of marriage."

See CANADA under *History*.

QUEENS-CHICORA COLLEGE. A college for women in Charlotte, N. C., founded in 1857; nonsectarian in purpose but under the direction of the Presbyterian Church. The enrollment for the autumn term of 1938 was 432. There were 35 members of the faculty. The income for the year was: From endowment \$15,000; from benevolences \$10,000; from student fees \$60,000. The library contained approximately 14,000 volumes. President, William H. Frazer, D.D., Litt.D., LL.D.

QUEENSLAND. An Australian State. Area, 670,500 square miles; population, exclusive of full-blood aboriginals, 996,219 (Mar. 31, 1938, estimate), compared with 947,534 (1933 census). During 1937 there were 19,162 births, 9006 deaths, and 8353 marriages. The principal cities are Brisbane (capital), with 318,430 inhabitants (including suburbs) on Dec. 31, 1937; Rockhampton, 30,000 (1936); Townsville, 28,535 (1936); Toowoomba, 27,968 (1936); Ipswich, 22,885 (1936). During 1936 the 1720 State schools had 118,483 pupils in average daily attendance. In 1935 in the 239 grammar, high, and private schools, there were 29,913 students in average attendance; 14 technical schools had 13,492 students on the roll, and Queensland University had 1165 students in the same year.

Production. Sugar cane, wheat, maize, hay, potatoes, cotton, grapes, tobacco, pineapples, and oranges are the main agricultural products. In 1937-38 the estimated production from 373,000 acres under wheat totaled 3,749,000 bu. Sugar produced (1936) totaled 744,676 tons. The chief dairy products for 1936-37 were butter, 87,474,757 lb.; cheese, 7,789,890 lb.; bacon and ham, 20,229,728 lb. Wool (greasy) produced during 1936-37 totaled 153,766,368 lb. Livestock in the State (Dec. 31, 1937, estimate): 22,200,000 sheep, 6,000,000 cattle, 441,000 horses, and 290,000 pigs.

The estimated value of mineral production for 1937 was 4,392,492 Australian pounds, of which copper accounted for £A308,968; tin, £A202,614; coal, £A934,107; gold, £A1,104,760; silver and lead, £A1,172,531. In 1936-37, from the 2883 factories, with 48,216 employees (including working proprietors), the estimated net value of production was £A17,184,522 (Australian £ averaged \$3.9594 for 1936; \$3.9394 for 1937).

Government. For the year ended June 30, 1938, revenue totaled £A17,340,000; expenditure, £A17,568,000; public debt, £A125,782,000. Executive power is vested in a governor, assisted by an executive council of ministers who are also members of the legislative assembly. Parliament consists of a legislative assembly of 62 members elected by universal adult suffrage for three years. The legis-

lative assembly elected on Apr. 2, 1938, was estimated to be composed of 43 Laborites and 19 members of Independent Labor, United Australia, and Country parties. Governor, Col. Sir Leslie Orme Wilson (appointed June, 1932; reappointed June, 1937); Premier, William Forgan Smith. See AUSTRALIA.

QUEENS MIDTOWN TUNNEL. See TUNNELS.

QUICKSILVER. The war in Spain seriously affected the production of quicksilver in that country. During the first nine months of 1938, 1750 metric tons were produced in Italy against 1715 in the corresponding period of 1937. Exports in 1938 amounted to 54,161 lb. valued at \$50,184. According to the U.S. Bureau of Foreign and Domestic Commerce, the United States in 1938 imported 179,522 lb. of quicksilver valued at \$132,610.

RACE. See ANTHROPOLOGY.

RACING. See SPORTS under Turf.

RADCLIFFE COLLEGE. A nonsectarian college for women in Cambridge, Mass., founded in 1879. The enrollment for the autumn of 1938 was 1040. Instruction was given by approximately 400 teachers from Harvard University. The productive funds amounted to \$5,663,842 and the income, including tuition, for college purposes, was \$541,288. The library contained 80,000 volumes, exclusive of pamphlets. President, Ada Louise Comstock, A.M., Litt.D., LL.D., L.H.D.

RADIO. At no time since the *Titanic* disaster in 1912 made the world initially radio-conscious has radio had the opportunity it had in 1938 to demonstrate its enormous potentialities. Through the facilities of radio broadcasting systems peoples in all parts of the world in effect occupied reserved seats in the amphitheater of world affairs in which the European crisis of the fall of 1938 was such a vital and far-reaching drama. Also, there was the quietly efficient but nonetheless dramatic recurrence of amateur radio as the first means of communication available in disaster areas, such as those of midcontinent and California floods, and the Long Island-New England hurricane. In February, 1938, and again in the winter months at the end of the year "Radio Delhi" of the Indian State Broadcasting Corporation was received strongly in the United States on 9.53 megacycles, establishing records for strong signals. March 5 brought in the first radio signals from Pitcairn Island, establishing communication contacts with that remote point, and capturing the imagination of the world with reminiscences of the mutiny on the *Bounty* several generations ago. In July, short-wave radio kept the listening world in touch with Howard Hughes in his record globe-circling flight. So far as United States listeners report, efforts to maintain short-wave contact with an explorer's expedition into the Belgian Congo have been unsuccessful, whereas contact with another expedition in Netherlands New Guinea has been eminently successful at 14,000 kilocycles. Propaganda broadcasts over short-wave foreign stations have been persistent. Two of the outstanding characteristics of broadcast programs in the United States have been, on the one hand, many delightful symphony and other musical programs, and on the other hand, a widespread rash of "quiz" programs.

For broadcast receivers, 1938 improvements include devices eliminating the common external radio antenna, and devices by means of which a day's programs may be pre-set and tuned in automatically by a clock-operated mechanism. Another development was the appearance on the market of

several high-fidelity radio receivers susceptible of satisfactory usage within the service areas of the high-fidelity broadcasting stations. A radio and associated self-contained control device were put on the market by means of which the radio, once turned on, can be operated or turned off from any point in the house.

A new type of radio transmission and reception designated as wide-band frequency modulation is under experimental development. In this system audio modulation is provided by varying the frequency of the radio-frequency carrier, the rate depending on the audio frequency and the magnitude depending on the audio amplitude. This system reduces noise background by eliminating noise-amplitude variations in the receiver and renders insignificant the frequency-modulated noise components. Utilizing a carrier frequency of from 41 to 44 megacycles, the entire audio spectrum from 16 to 15,000 cycles per second or more is transmitted with high fidelity, fidelity in fact so high as to require the development of a new and highly superior loudspeaker in order that the full possibilities might be realized. Improvements in short-wave radio equipment, both transmitters and receiver, have reduced their size and bulk and consequently increased their portability and range of possible use, as well as increasing the range and quality of their service. Two-way police communication has become more common. According to press reports, a U.S. Forest Service investigator has developed a radio-operated device which enables forestry headquarters to call a forester or fire warden at a remote point even though the latter's radio receiver may be turned off.

A fundamental radio development growing out of communication research is a sonic altimeter which reads directly and continuously in feet from 50 to 5000 the actual clearance existing between an airplane in flight and the earth underneath. This device operates on the principle of sending out a radio impulse and picking it up again when it is reflected back from the terrain. The time interval required for this reflection is translated into feet of clearance between plane and ground and so indicated on an instrument. Other aviation radio developments include improvements in facilities for two-way communication between plane and ground and still further extensions in development and operation of radio beams for flight control. Radio devices for the successful consummation of blind landings have been developed to a point where the results are distinctly encouraging. Facsimile transmission by radio was enormously improved during the year. The common application of this process is to the transmission of pictures, but increasingly has to do with the facsimile transmission of almost anything else from bank checks to printed pages.

For the purpose of considering various phases of telephone, telegraph, and radio operations on an international basis, an international conference was held in Cairo, Egypt, early in February, 1938. Among important matters considered was that of short-wave broadcasting, a subject that has become of major importance in the political strategy of many nations. The delegates were asked to find a way of allotting wider frequency bands for short-wave broadcasting without seriously curtailing allocations for other purposes. Allocation of frequency bands for aviation radio also presented numerous problems particularly with respect to Europe. In so far as wire communication is concerned, outstanding questions before the conference related to telegraph tariffs and the conventions

underlying word counts. Like those that have preceded it at intervals during the past 60 years, the fundamental objective of the 1938 conference was to establish binding agreements among the sovereign powers that would facilitate international communication development. See TELEVISION.

RAILROAD RETIREMENT ACT. See OLD-AGE PENSIONS.

RAILROAD UNEMPLOYMENT INSURANCE ACT. See UNEMPLOYMENT.

RAILROAD WAGE DISPUTE. See LABOR ARBITRATION.

RAILWAY ACCIDENTS. Casualties on steam railroads in connection with the operation of trains in the United States during the calendar year 1937, as reported by the Interstate Commerce Commission, resulted in the death of 5118 persons, as compared with 5174 in 1936, and in the injury of 20,149 persons, as against 19,592 in 1936. Of the persons killed, 516 were employees, 18 were passengers, 2515 were trespassers, and 2069 non-trespassers. At crossings of public highways and railways in 1937, 1875 persons were killed and 5136 injured, or a total of 7011 casualties occurred in 4489 accidents. This is the largest number both with respect to number of accidents and resulting casualties since 1930. Automobiles were involved in nearly 90 per cent of these accidents in 1937. Major railway accidents throughout the world in the calendar year 1938 follow:

March 8. At Tarragona, Spain, passenger and freight trains crashed, killing 19, hurting 168.

March 14. A passenger and a freight train colliding at Bicocca, Sicily, was the cause of 12 deaths, besides injuring several persons.

April 4. Near Plumtree, Southern Rhodesia, the Rhodesian Mail Express collided with a freight train; 23 were killed.

April 6. Eighty were killed, and many hurt at a railroad accident near Yencheng, China.

June 20. The crack passenger train *Olympian* of the Chicago, Milwaukee, St. Paul, and Pacific R.R. plunged through a bridge over Custer Creek, Mont., that had previously been weakened by heavy rains; 48 persons were killed and a large number hurt. See FLOODS.

July 25. A train wreck at St. Trond, Belgium, was the cause of 5 deaths, and injuries to 15 persons.

August 1. The streamlined trains *Commodore Vanderbilt* and *Mercury* of the New York Central R.R., crashed at Toledo, O., injuring about 20.

August 1. Near Balaclava Station, Jamaica, B.W.I., one of the worst train wrecks of the year took place; 52 persons were killed, and 70 hurt.

August 14. At Querétaro, Mexico, 5 were killed and 8 injured in a railroad accident.

August 22. A train derailed between Trichinopoly and Madura, India, was the cause of 20 deaths and the injuring of 100 persons.

September 21. Twelve persons were killed and 100 injured, when two passenger trains of the Southern Pacific R.R. crashed at Niland, Cal.

October 6. At Viborg (Viipuri), Finland, 14 were killed when a tank of sulphur dioxide exploded in a freight-passenger train collision.

December 19. At Barbacena, midway between Rio de Janeiro and Belle Horizonte, Brazil, a head-on collision between a freight train and an express caused the death of 35 persons and the injuring of over 100.

December 25. One of the worst railway accidents of the year occurred at Eutulia, Rumania, on Christmas Day. It was officially admitted that 93 persons had been killed and 340 injured.

RAILWAYS. The background for the railway activities of 1938 was: Freight traffic (ton miles) was 20 per cent less in 1938 than in 1937. Passenger business (passenger miles) was less by nearly 12 per cent in 1938 than in 1937. The net railway operating income was \$362,000,000, which was 39 per cent less than 1937. After fixed charges the deficit for the railways in 1938 was \$125,000,000 as compared with an income of \$98,000,000 in 1937. One hundred and eleven companies, operating 78,000 miles of line, 31 per cent of the total mileage of

the United States, were in receivership or trustship at the end of the year. Net indebtedness of the railways to the government was \$469,000,000 at the end of November, 1938, an increase for the 11 months of \$63,000,000. The number of employees averaged during 1938 about 940,000 which was 174,000 less than in 1937, but during 1938 there was a strongly expressed public opinion that railways should no longer make savings in expenses by laying off men. The average pay for railway employees in 1938 was \$1847, which was the highest on record for the country.

Public opinion, in forbidding railway managements to radically reduce their labor forces, took away from the managements a power that was considered essential. It was as if railway reserves had been wiped out. Railway reserves were almost never in cash. They were in the form of property so well maintained that maintenance expenses, in large part shop and track men's wages, could be greatly reduced for a limited period.

By laying off labor, shop expenses could be reduced to less than a quarter of what they had been. A track gang could be cut from seven men to one without serious detriment to the property and in this way a saving could be made that would enable the company to pay the interest on its debt (bonds) during a period of light traffic. Laying off men with the resulting suffering of the men and their families was painful to many railway officers but the school in which they had been brought up required that property rights—bondholders' interest—must come ahead of human considerations.

It was this change in emphasis as to what really *fixed* charges consisted of, that gave 1938 significance in railway history. During the year the railways had been refused permission to raise their rates. That was not a new experience and inability to lower the *rate* of wages was not a new experience. It is true that the Transportation Act had provided that in consolidations employees should not be laid off but few consolidations had taken place. It was not a law that so drastically affected railways in 1938; it was the application of the spirit of the New Deal that threatened to revolutionize the conduct of the business.

On Jan. 1, 1938, there were 71,562 miles of railway in receivership and during the year the Erie, with a double-track main line from New York to Chicago, was allowed to go into receivership through the failure of the Chesapeake and Ohio, which controlled the company, to lend the money necessary to meet maturing obligations.

This demonstrated the fact that neither private capital nor the Government ventured to support the railways in the desperate situation. The physical properties had been undermaintained for eight years. Bus and truck competition were eating into the revenue that due to the depression was inadequate for solvent operation of the railways alone.

The government administration at Washington had verbally acknowledged the seriousness of the situation but had taken no action. Government officials, including the Interstate Commerce Commission, were fully aware that an emergency existed but no plan to meet it was brought forward. At a meeting of the New England Council Senator Burton K. Wheeler suggested that bondholders temporarily forego interest so that the physical properties could be rehabilitated. For the first time in the history of railways in the United States it is proposed that property rights be used instead of men's jobs as a cushion against economic shocks.

In the spirit prevalent in 1938 of "let someone

else do it" the National Industrial Traffic League, largely made up of shippers, passed a resolution calling on the railways to give "more intelligent" effort to adjust their rates and services to the changed conditions brought about by bus and truck competition. The resolution is recorded not because there is anything either constructive or destructive in it but to indicate the general attitude toward railways in 1938.

A committee was appointed by President Roosevelt to study and report on the railway situation. The committee consisted of Carl R. Gray, president of the Union Pacific R.R.; M. W. Clement, president of the Pennsylvania R.R.; Ernest E. Morris, president of the Southern Railway; George M. Harrison, chairman of the Railway Labor Executives' Association; B. M. Jewell, president of the railway employees' department of the American Federation of Labor, and D. B. Robertson, head of the Brotherhood of Locomotive Firemen and Enginemen. In November, 1938, it was announced that the committee had made "a satisfactory start" on its work.

In connection with the failure of the National Government to bring forward any plan it should be borne in mind that the European crisis had to be met, relief had to be carried on, and the conflict between state and national authority was still in process of being fought out.

There were a few definite proposals made regarding railways. The Railway Business Association, manufacturers of railway equipment and supplies, at its annual meeting in November, 1938, passed a resolution asking "a definite subsidy to the railroads, limited to a period of from three to five years, and based upon a defined proportion, say 25 per cent of their expenditures for maintenance of way and structures during the preceding year." Railway officers thought that to base the subsidy on the preceding year's expenditures was quite unfair since at that time maintenance was being cut to the bone and the roads that in normal times had the highest standard of maintenance were making the deepest cuts so that the roads that had pursued the soundest policy over a series of years would be penalized by receiving the smallest subsidy.

There was evidence that owners of railway securities were in a mood to accept the dictates of public opinion and make property sacrifices in order to tide over an emergency. The Lehigh Valley R.R. management asked the bondholders of the company to assent to a reduction for five years of 75 per cent of the maturing semi-annual coupon payments. This would reduce, for the period, a 5 per cent annual interest rate to $1\frac{1}{4}$ per cent. But the 75 per cent, described as "extended interest," was to retain its lien unimpaired; that is to say, it must be repaid sometime after the five-year omission of its payment. The company expressed the belief "that the present situation may be temporary."

To this request 80 per cent of the bondholders have assented and, with the previous approval of the court and the Interstate Commerce Commission, the plan is operative under the law of 1935, which requires the consent of 75 per cent or more of security holders affected to make such a plan binding.

A similar proposal was placed before the security holders of the Baltimore and Ohio. In the B. & O. plan only 20 per cent of the face value of maturing coupons was to be paid.

A possible definitive solution of the steam railway problem of the United States is suggested in

the report of the Committee appointed by the President of the United States Sept. 20, 1938. The committee consisted of M. W. Clement, president of the Pennsylvania R.R., Carl R. Gray of the Union Pacific R.R., Ernest E. Norris of the Southern Ry., George M. Harrison, B. M. Jewell, and D. R. Robertson. The first three are railway executives and the other three represent railway labor. The report was dated Dec. 28, 1938. There were 64 pages of report. A vital part was: "We recommend appropriate legislation which will provide uniform regulation, similar in character and scope, for all modes of transportation—rail, highway, pipe-line, air, and water (coastal, intercoastal, inland, and Great Lakes)."

The report as a whole implies that bus rates should be fixed high enough to cover the interest on the cost of the highways used by the busses as part of their machine for transportation and that barge rates should be fixed high enough to cover the interest on the cost of improvements to waterways. The total cost of transportation to the whole public would be no higher, necessarily, than it is now but by transferring interest on highway costs and interest on waterway improvement costs from general taxes to a direct charge against transportation it would enable the steam railways to compete successfully against busses, trucks, and barges.

Loans to Railways and National Defense. On Dec. 12, 1938, the Interstate Commerce Commission sent to the railway managements a questionnaire as to the nature and extent of maintenance and capital expenditures necessary to handle the volume of traffic that they actually handled in 1937.

The committee of six mentioned above seems to infer that this questionnaire of the ICC indicates that the government is interested in the advisability of loans by the government to the railways. In its recommendations the committee suggested that the Reconstruction Finance Corporation be authorized to loan the railways such money as the given railway has a reasonable chance of paying back, the rate of interest being 2 per cent and to be a charge ahead only of dividends and contingent interest charges. This latter is important and quite unusual. It would be a distress loan made without any attempt to slip a charge in ahead of that of first mortgage bonds.

In connection with the discussion of government loans to railways it was pointed out that such loans might well be considered an integral part of national defense. Although in 1938 this was in the discussion stage only, it marks an awareness on the part of the general public of a function of steam railways heretofore overlooked. Local needs have so often obscured the importance of a well-balanced transportation system to a country the size of the United States, that even the raising of such a question is worthy of note.

Railway Age, from a study of the situation, says that the money is needed for freight and passenger cars, locomotives, structures, track, and signals.

It was the discussion of financial problems that was of interest to the general public but there were some among the railway officers who thought that the permanent stability of steam railroad industry could be attained along lines suggested by past railroad history. It was pointed out that:

The Union Pacific had been converted from a bankrupt to a highly prosperous railroad by supplying a main line with feeders at both ends.

The Southern Railway had been made to function as a profit earner by concentrating traffic on a well-built main line, Atlanta, Ga., to Washington, D. C.

The New York, New Haven, and Hartford in the face of severe competition had been enabled to earn a profit by building a yard at the east end and another at the west end, and thus concentrating traffic on the main line connecting these two yards.

A freight train of 30 cars each loaded with 40 tons of revenue freight moving 500 miles, even if the ton mile rate is as low as half a cent per ton mile, will bring in gross of \$3000.

It was the thought of railway officers that systems based on such main lines as here suggested would be profitable steam railway systems. The feeder lines could be either light steam lines or truck lines or combinations of the two. It was contended that while there would be some shift in the manner in which labor was employed there need not be wholesale unemployment. It would be, in effect, adapting steam operation so that it would perform the work for which it had unequaled facilities.

Even railway officers, who were not dependent on the favor of bankers for their jobs, pointed out that reducing interest charges would not solve the present problem. In the first eight months of 1938 net operating income (the amount left after paying expenses of operation and taxes) was 155 million dollars, that is, at the rate of 233 million dollars a year. This is 6 per cent on 4 billion—the Interstate Commerce valuation of the railways is 20 billion dollars.

Some idea of the theories of the majority of the Interstate Commerce Commission as to reducing interest charges may be had from the reorganization of the Spokane International which they approved during 1938. In this case 4½ per cent first lien income bonds were to be issued. The interest on these bonds was to be cumulative against available net income if earned and not paid up to 13½ per cent. The new bonds were to be exchanged, 600 dollars new bonds and 6 shares of new stock for 1000 face value of old bonds. Eastman objected because no provision was made for new financing but Eastman was in the minority.

Earnings. The following table shows the earnings and expenses of all railways in 1938 and 1937.

	1938 millions	1937 millions
Freight revenue	\$2,845	\$3,378
Passenger revenue	405	443
Mail revenue	96	98
Express revenue	48	57
All other	156	190
Total	\$3,550	\$4,166
Maintenance of way	\$ 425	\$ 496
Maintenance of equipment	668	827
Traffic	103	105
Transportation	1,352	1,510
General and other	162	181
Total	\$2,710	\$3,119

Although new capital has been restricted since 1929 some progress has been made in improving the railway plant. A report on the Delaware and Hudson welded rail, described in the 1937 YEAR BOOK, says the rails "have shown stability in line and surface without apparent ill effects from the rail continuity."

The substitution of Diesel-electric locomotives for some steam locomotives is the most radical change that has taken place in 1938 in the motive-power situation of the railways.

On October 31 the Seaboard Air Line (the company is in receivership), exhibited the first of its new 6000-h.p. Diesel-electric locomotives for the southbound run of its finest train, the Orange Blossom Special.

The run is from Washington, D. C., to Miami, Fla. The train consists of 3 sections of the locomotive, 3 Pullmans, 1 coach, 1 diner, and 1 combination passenger and baggage coach. The locomotive was built by the Electro-Motive Corporation. It is comprised of three 2000-h.p. units coupled together and operates from a single control station in the leading unit. The complete locomotive is 210 ft. long, 13 ft. 11 in. high, 9 ft. 10 in. wide, and, equipped for service, weighs 900,000 lb. Each of the three units carries 1200 gal. of fuel oil and 1000 gal. of water to cool the engines and to heat the train. On the run from Washington to the south of Florida, nearly 700 miles, there are only two fueling stops. In each unit there are two Diesel engines, each of which drives a 600-volt direct-current electric generator which furnishes current for the motors. Two motors are mounted on each of the six-wheel trucks, making 12 motors for a three-unit locomotive. Regular service was begun on Dec. 15, 1938.

Thus for the first time passengers were able to travel from New York City to Florida resorts on trains powered by electricity, the Pennsylvania Railroad's electric locomotives pulling the train from New York to Washington and there turning it over to the Seaboard Air Line's Diesel-electrics.

The changes in the design of steam locomotives were slight. For instance, the Southern Pacific passenger locomotives delivered in 1937 had 73½-inch driving wheels and with the booster had a total tractive force of 74,710 lb. and those delivered in 1938 had 80-inch drivers and a tractive force of 75,000 lb.

Changes in the design of passenger cars continued in the direction of streamlining of trains and detailed comfort for travelers.

On June 16, 1938, the Twentieth Century Limited of the New York Central, streamlined completely, arrived on time in Chicago on the new schedule of 16 hours from New York, and on the same morning the Broadway Limited of the Pennsylvania, also streamlined, also on a 16-hour schedule, and also on time, arrived in Chicago from New York. The schedule of each train was half an hour faster than the one that had been in effect. The Century ran in two sections, the first of 10 cars and the second of 15 cars. The Broadway ran in one section with 11 cars. The Century carried 225 passengers and the Broadway carried 99. The Century reached a top speed of 85 miles an hour and the Broadway a top speed of 90 miles an hour. Both trains are all-room trains, the first in the country.

The Union Pacific's City of Los Angeles, running from Chicago to Los Angeles, was re-equipped and now consists of a two-unit Diesel-electric locomotive and 11 remodeled cars, one of which, the observation-lounge car "Copper King," has several new features. The rear end of the car is designed to prevent the formation of a low-air pressure space back of the train which would tend to pull up dust from the roadbed and obscure vision. Besides being air-conditioned the car is "light conditioned" by means of 29 Polaroid variable density windows, the first installation of this kind to be developed. These circular windows, 27 in. in diameter, may be adjusted to admit any desired amount of light by turning a knob at each window. The train consists of one auxiliary-baggage-dormitory car; one chair car seating 40; one chair car seating 48; one diner-kitchen car seating 32; one diner seating 60; three 11-section sleepers with accommodations for 22 passengers each; two 7-bedroom

2-compartment cars holding 18 passengers each and the observation-lounge car, seating 41. The total capacity is 190 revenue passengers, 88 in the coaches, and 102 in the sleepers. Details are given here because they show a new trend of thought in American railway practice. It is comparable to the attention that automobile manufacturers give to dashboard design.

Walter E. Dunham, General Superintendent Car Department of the Chicago and North Western, sums up the situation as follows:

True aerodynamics (design) by reduction of cross section, full shrouding, and full trailing construction has not been acceptable to the public. It also has serious operating objections. Instead of reducing the cross section, particularly the internal clearances, there has been with each new streamlined train a gradual return to the former generally accepted interior horizontal and even vertical clearances. By maintaining the former extreme outer widths and taking advantage of possible thinner side construction, the interior width has been increased.

As to the arranging and equipping of the interior, that is another story. . . . The ordinary fixed type of coach seat is being discontinued and the individual adjustable reclining seat of the duplex type is returning to its own, with the swiveling feature added in some instances, so that the passenger may obtain a direct side view from the car if desired. The electric water cooler gives an opportunity to provide also cooling compartments for such uses as infants' special feeding formulas, etc., thus making traveling especially with small children less of a "nightmare" for mothers than it used to be.

With the furnishing of such comfortable coach service for long-distance traveling, including overnight trips, there has developed the use of amusement or lounge cars for coach passengers.

The 1938 lightweight 50-ton capacity box car of the Union Pacific exemplifies new freight-car construction. It has a completely welded underframe of corrosion-resistant low-alloy steel. It weighs 36,900 lb., 8300 lb. less than the 1937 standard of the American Association of Railroads. Mayari R, Bethlehem, low-alloy steel was used throughout the entire car except open-hearth carbon-steel center sill. The cubic capacity is 3735 ft. Thus the lightweight is 9.88 lb. per cubic foot of capacity and the maximum load is nearly three times the tare weight. The car is 40 ft. 6 in. long, 9 ft. 2 in. wide, and 10 ft. floor to roof at sides. The Mayari R sheets, 0.05 in. thick, were used for the roof and sides. A roof for a box car $\frac{1}{20}$ in. thick was a radical departure from the practice heretofore followed in the United States.

Developments in the refrigerator car include the ice bunker, ice hatch, removable bulkhead, application of insulation, and a new method of using dry ice in combination with water ice. The ice bunkers have floor pans which are continuations of the Johns-Manville membrane floor. A well trap of galvanized steel is used. The ice grate support is built up of pressed low-alloy high-tensile steel sections fusion welded together to form a single unit. The ice grate support is carried on shelves at the side of the car, which are a part of the car framing. There are three ice-grate sections in each bunker, which sections are built up of $\frac{3}{8}$ inch inverted V pressed grate bars welded to $\frac{3}{16}$ inch grate-bar ties. These sections are bolted to the supports and are readily removable.

There is one dry-ice container in each bunker at diagonally opposite corners of the car. Each container has a capacity of 300 lb., and is so designed that CO₂ gas can be exhausted either into the car or the atmosphere.

The container can be applied to old as well as to new cars as it is inserted through the hatch and rests on the ice grate. In the combination of dry-ice and water ice in ice bunkers, tests show a lower uniform temperature to be obtained with less con-

sumption of water ice so that the cost of both dry ice and water ice is lower than the cost of water ice alone as used in a conventional ice bunker.

The length of the 40-ton alloy-steel refrigerator car is 41 ft. $2\frac{3}{4}$ in. and the length inside lining is 39 ft. $10\frac{1}{8}$ in. The length between bulkheads 33 ft. $2\frac{3}{4}$ in. Thus the total cubic capacity between ice bunkers is 2130 cu. ft. The width over side sills is 9 ft. $\frac{1}{2}$ in. The height from top of rail to top of running board is 13 ft. The tare weight, weight of empty car, and trucks is 44,200 lb.

The bottom course of insulation applied on the $\frac{5}{8}$ in. blind floor is a 2 in. blanket of Fiberglas faced with muslin and covers the full width and length of the car in one piece. The top course of the insulation is in a panel form of 2 in. Fiberglas covered on both sides with Silalkraft paper.

In this car one side and end is insulated with Johns-Manville Stonefelt and the other side and end with Fiberglas. The sides and ends are insulated with two courses of 2 in. Stonefelt or Fiberglas. They are applied in panels. This construction enables repairs to be made to the steel sides without removing the side lining. By applying the lining vertically, the boards at the damaged panel only need be removed.

The inside lining consists of $2\frac{5}{32}$ in. by $3\frac{1}{4}$ in. tongue and groove fir applied vertically on sides and ends. The ceiling is formed of $2\frac{5}{32}$ in. by $3\frac{1}{4}$ in. tongue and grooved fir applied transversely and nailed to yellow pine roof purlines bolted to clips, fusion welded to the roof carlines. The floor consists of $1\frac{1}{4}$ in. by $5\frac{1}{8}$ in. tongue and grooved fir laid transversely and spiked to the floor nailers. Over this floor is applied Johnsville membrane flooring.

The details of the improvements in steam railway equipment that have been selected for description were chosen because they were steps toward the solution of problems that have been uppermost in the minds of railway officers for 50 years. There were many other improvements. Such trends of thought follow tradition.

Some railway men recognize, however, that to simply improve the tools of steam railway transportation is like improving the design of sailing ships after sailing ships have been made obsolete by other forms of transportation.

The experiment undertaken in 1938 by the New York, New Haven, and Hartford is along lines of co-operation with the newer forms of transportation in an attempt to preserve only that part of steam railway operation that is inherently more economical than any other form known.

The New Haven undertook to carry loaded and empty truck trailers between Boston and New York at a rate of \$32.50 loaded and \$16.25 for the returning empty. The traffic was encouraged by the railway company by building ramps at which flat cars could be loaded with trailers at both Boston and New York. How revolutionary this is can only be appreciated by one familiar with the traditions of railway men. Cut-throat competition was standard practice for railways before 1938. Compelled to make joint rates with competitors by the Interstate Commerce Commission, they gave such poor service to competitors' freight cars that in large part they nullified the Commission's orders. This is to be contrasted with the co-operative action of the New Haven in 1938.

Electrification. The new work of electrification undertaken by the Pennsylvania Railroad includes the main line from Paoli, 20 miles west of Philadelphia, through Lancaster to Harrisburg for pas-

senger service to and from the west; the low-grade freight line from Morrisville, Pa., near Trenton, N. J., via Columbia to Enola Yard near Harrisburg, the freight line from Columbia, Pa., following the Susquehanna River to Perryville, Md., and the freight line from Monmouth Junction to South Amboy, N. J., with connecting branches and yards. This new work involves the electrification of 315 miles of line and 773 miles of track.

In general the same type of system of delivering power to the moving trains will be employed in the extension as is now in use. An 11,000-volt, single-phase, 25-cycle trolley wire supported by a catenary type messenger construction is used over the center of each track. Transmission from power-supply points to substations is over 132,000-volt, single-phase, 25-cycle, two-wire transmission circuits supported on the same structures which carry the catenary system. Substations are 8 to 10 miles apart and in some cases as much as 13 miles apart. Power is supplied at seven separate points and, except at the railroads' own power plant at Long Island City, is purchased from power-supplying companies. Upon completion of the new work the Pennsylvania will have a total of 2677 miles of electrified track. See ELECTRICAL TRANSPORTATION.

New Construction and Lines Abandoned. There were only 38 mi. of railway completed in 1938, comparing with 148 mi. completed in 1937, with 24 in 1933, and with 6026 in 1902. There were 1897 mi. of railway abandoned in 1938, comparing with 1140 abandoned in 1937. The miles of railway abandoned 1917 to 1938 inclusive was 22,140.

Of the total 38 mi. completed during 1938 the largest single project was that of the Virginian (a coal carrier) between Simon, W. Va., and Kopperstown—19.33 mi. The next largest, involving a series of connections at Oakland, Cal., totaling 11.54 mi., was built to enable the Southern Pacific to operate its electric trains over the new Bay Bridge between Oakland and San Francisco. The remainder of the mileage consisted of short lines to reach industries or of construction made necessary by revisions of other facilities.

At least two widely different conclusions are drawn from the extent to which railways are being abandoned in contrast to the restriction of new railway building. One is that the railways have been so unfairly treated that they are now failing to do their part in the development of the country. The other is that railways by adjusting themselves to new transportation needs are successfully helping to develop the transportation needs of the country. If the figures for railway building and abandonment are considered in conjunction with improvements of equipment and service the evidence seems to indicate that the railways are merely changing the character of their development. They are meeting the needs of the times.

Locomotives Ordered. According to the records of *Railway Age* there were 287 locomotives ordered in 1938 comparing with 481 ordered in 1937. Of the 287 ordered in 1938, 35 were for Canada (some of those were exported from there to other countries) and 24 were exported to other countries from the United States. There were 300 locomotives built in the United States in 1938 and 570 in 1937. These figures are very carefully compiled by *Railway Age*, but may be subject to slight correction.

Freight Cars Ordered. In 1938 there were 21,883 freight cars ordered (61,504 in 1937). Of those in 1938, 16,539 were for service in the United States and 4897 for service in Canada; the remaining 447

were for export. Freight cars built in the United States totaled 18,022, as against 76,124 in 1937.

The largest order placed with outside builders was that of the Southern Railway which included 3064 40-ton box cars and 3377 drop-bottom, 50-ton, gondola cars.

Passenger Cars Ordered. There were 293 passenger cars ordered in 1938 as against 928 ordered in 1937. The passenger cars built during 1938 in the United States totaled 264.

Signaling. *Railway Age* says: "Automatic signaling is justified on 6000 miles of line not now so equipped, but the great opportunity in this field is to utilize new systems of signaling, such as modern interlocking, remote control, centralized traffic control, cab signaling and car retarders."

Material Costs. Although prices for materials bought by railways were a little higher in the early part of 1938 than during 1937, there was a considerable drop in the latter part of 1938. Thus the price of bituminous coal for locomotives to all roads, as reported to the Interstate Commerce Commission, averaged 3 per cent more at the mine in 1938 than in 1937 and 5 per cent more with freight and handling charges included, but coal at the end of 1938 was \$1.91 a net ton at the mines, or 5 per cent less than in January, 1938, and the December, 1938, price, with transportation added, was \$2.52, or 4 per cent less than at the beginning of the year.

Cross ties and lumber prices in 1938 were about 10 per cent less than the average in 1937 and at the end of the 1938 year they were 18 per cent less than at the end of 1937. Rails and other materials of iron and steel in the aggregate cost as much in 1938 as in 1937, but in October rails cost \$40 per ton, which was 5.9 per cent less than the cost at the end of 1937. Some equipment is built in the railway's own shops and its cost is a controlling factor in the prices that the roads will pay for cars and locomotives. Boiler steel per cwt. cost \$2.53 in 1937; this dropped to \$2.48 in the first quarter of 1938 and to \$2.28 in the last quarter. Fir lumber for sheathing cars cost in 1937, on an average, \$41.50 per thousand feet; in the first quarter of 1938, \$35 and in the last quarter of 1938, \$28.50.

New Financing. The railways did almost no new financing in 1938. The Chesapeake and Ohio Railway sold \$30,000,000 of 25-year 3½ per cent refunding and improvement mortgage bonds. The price to the bankers was 100 and the bonds were sold to the public at 101½.

Morgan Stanley and Co., doing the investment banking and underwriting business formerly done by J. P. Morgan and Co., offered to the public \$28,000,000 of Duluth, Missabe, and Iron Range Railway company First Mortgage 3½ per cent bonds due 1962. The price to the public was 98. The public offering was made by a prospectus meeting the requirements of the SEC and therefore throws light on the manner of present railway financing. The most notable change from the former manner is the emphasis laid on the railway rather than on the banker. Whether or not the general public acquires a more intimate knowledge of railway operations and problems is to be seen, but at least the facts are now available to the public. Heretofore the public's concern with railway financing has been largely confined to the soundness of the banking house making the offering.

Dividend Changes. There were some important reductions in dividends paid in 1938 as compared with 1937. There were no increases. The Alabama Great Southern reduced its extra divi-

dend from \$4 paid in 1937 to \$3 in 1938. The Atchison, Topeka and Santa Fe reduced the amount to be paid on its preferred from \$2.50 to \$1—before the depression this was a 5 per cent preferred stock. The Chesapeake and Ohio paid a total of \$1.75 in 1938 as compared with \$3.80 in 1937. The Cincinnati, New Orleans, and Texas Pacific paid extra dividends of \$11 as compared with extras in 1937 of \$22.50. The Kansas City Southern paid \$1 on its preferred as compared with \$1.50 in 1937. The Louisville and Nashville paid \$4 in 1938 and \$6 in 1937. The Pennsylvania Railroad paid 50 cents in 1938 and \$1.25 in 1937. The Reading Co. reduced its quarterly payment from 50 cents to 25 cents.

Receiverships. In 1938 nine companies with a mileage of 6194, a funded debt of \$367,840,469, and stock outstanding of \$293,157,200 were placed in receivership or trusteeship. Since a return to solvent operation may mean now either a foreclosure sale or merely a release from trusteeship it is more accurate to use the phrase "taken from receivership or trusteeship," rather than the phrase "foreclosure sale." There were eight companies with a total mileage of 290 taken from receivership or trusteeship in 1938.

The receivership of the Erie with its 2403 mi. has already been mentioned. The company had \$234,933,709 funded debt and \$214,868,100 stock outstanding. It is a company that is grossly over capitalized, but despite this fact it has greatly improved its physical property in recent years. It is strategically located, but has suffered from an insufficient west-bound traffic.

The one other large road which went into receivership was the Minneapolis, St. Paul, and Sault Ste. Marie with 3232 mi. and \$91,315,800 funded debt and \$37,810,200 stock. Controlled by the Canadian Pacific, it serves a wheat-growing country which now furnishes only one-way traffic.

RANDOLPH-MACON WOMAN'S COLLEGE. An institution for the higher education of women in Lynchburg, Va., under the auspices of the Methodist Episcopal Church, South, founded in 1893. The enrollment for the autumn of 1938 was 679. The faculty numbered 73. The endowment amounted to \$1,211,130, while the income for the year was \$502,197. The library contains 48,742 volumes. A new science building was completed in 1937 and in 1938 new laboratories for Psychology were constructed. President, Theodore H. Jack, Ph.D., LL.D., Litt.D.

RAPA ISLANDS. See OCEANIA, FRENCH ESTABLISHMENTS IN.

RAPID TRANSIT. Early in the year PWA Administrator Ickes appointed a commission of four experts to study the plans proposed for two subways in Chicago. In October, President Roosevelt approved a PWA grant of \$18,000,000, or about 45 per cent of the cost of the revised project, which had been at first estimated at \$26,000,000.

The two lines of the final plan are closely parallel in the Loop District, then diverge as they extend eastward, one line following Dearborn St. and Milwaukee Ave., while the other passes down State St. and Clybourne Ave.

Bids were opened December 1 for the first 3600 ft. section and the ground-breaking ceremony was held on the 17th. This section will be in blue clay at about 40 ft. below street level and is to be constructed using the steel, ribbed liner plate and needle-beam type of construction under low air pressure. Thus, after many years of discussion, and the study of a confusing number of alternate plans,

the Chicago subway is at last under construction. See previous YEAR BOOKS.

Progress in the construction of the 6th Ave. link in the Independent Subway System of New York has been satisfactory during the past year. No distinctly new methods have been developed in this work although it is notable that there has been an extensive use of steel beams for carrying the street floor and for shoring, thus eliminating the complicated timber supports of earlier work with their great fire hazard, and also greatly reducing the amount of patching required as the concrete subway sections are built.

As the year closed, work had finally begun on the demolition of the old 6th Ave. Elevated line. There was naturally much criticism of the lack of foresight shown by the Board of Transportation in building the subway before the "El" was removed and thus incurring the extra cost of supporting and underpinning the elevated structure. While the "El" is carried in part on the Manhattan Tubes, and thus did not affect the construction of the new subway, it was estimated that the additional cost was from one and a half to five million dollars.

RAYON. According to the annual survey of the rayon industry by *Rayon Organon*, New York, the world production of rayon for 1938 was estimated at 1,900,000,000 lb. as compared with an actual total of 1,823,000,000 in the previous year. Of the 1938 total, filament yarn amounted to 975,000,000 lb. and staple fiber 925,000,000; these products for 1937 were 1,205,000,000 lb. and 618,000,000 respectively.

The United States production in 1938 of rayon filament yarn was about 26 per cent of the world total, but only 3 per cent of the staple fiber total. Japan continued to be the largest rayon-producing country in the world, with a total production of about 550,000,000 lb. in 1938; this figure represents about 20 per cent of the world filament yarn and about 35 per cent of the world staple production. German and Italian staple fiber production increased substantially in 1938.

Rayon consumption in the United States during 1938 reached a new all-time high total of 327,387,000 lb., which compares with 322,623,000 consumed in the record year of 1936. In 1938 rayon filament yarn consumption was 274,000,000 lb. and staple fiber 53,000,000; in 1937 the figures were 267,000,000 and 41,000,000 respectively. Exports of rayon yarn for 1938 were valued at \$11,031,491; imports for the same period at \$6,965,836.

Rayon yarn consumption by principal trades in 1938 showed no significant changes. In the viscose-cuprammonium division, the main change was an increase in shipments to the knit underwear and outerwear industry. For the acetate yarn, the larger takings by the hosiery and the broad weaving industries were especially noteworthy. In the broad weaving field, the increasing use of acetate yarn in combination with viscose yarn or other fibers has undoubtedly been a real factor in the increase shown.

RECESSION. See BANKS AND BANKING; BUSINESS REVIEW.

RECOVERY LOAN ACT. See UNITED STATES under Congress.

RED CROSS, AMERICAN NATIONAL. A semi-governmental organization chartered by the Congress, January, 1905. Its chartered obligations are: "To furnish volunteer aid to the sick and wounded of armies in time of war . . . to perform all duties devolved upon a national society by each nation which had acceded to the Treaty of Geneva . . .

to act in matters of voluntary relief and in accord with the military and naval authorities as a medium of communication between the people of the United States and their Army and Navy . . . to continue and carry on a system of national and international relief in time of peace and to apply the same in mitigating the sufferings caused by pestilence, famine, fire, floods, and other great national calamities, and to devise and carry on measures for preventing same."

Under these obligations the Red Cross conducts services as follows: Relief work in disaster; for World War veterans; for men in the regular Army, Navy, Coast Guard, and Marine Corps; enrollment of nurses' reserve for the U.S. Army; first aid and life-saving instruction courses; public health nursing; instruction in home hygiene and care of the sick; volunteer service, including furnishing clothing, surgical dressings for emergencies, Braille books for the blind, ambulance, motor-corps, and canteen services, etc.

The American Red Cross had 3715 chapters, with 7843 chapter branches in the United States and the insular possessions on June 30, 1938.

Disasters during the fiscal year called the Red Cross into action in administering relief 171 times in the United States and its insular possessions. Aid was given 420,000 persons and only eight states escaped some type of catastrophe.

During the year 88,149 life-saving certificates were issued, and 186,000 persons were qualified as beginners or swimmers under Red Cross supervision. Through the same period 295,000 first-aid certificates—38,000 more than were issued last year—were granted to students who successfully completed the course prescribed by the Red Cross.

The problems of 165,049 ex-service men or their families were dealt with by chapter workers. In hospitals and regional offices of the Veterans' Administration and in other Government hospitals, representatives of the national organization dealt with 50,326 ex-service men or their families. Chapters aided 11,121 men now in regular service, or their families. Red Cross field directors in Army, Navy, Coast Guard, and Marine Corps stations and workers in Government hospitals handled the cases of 40,104 men in active service or their families.

On the active list of the Red Cross Nurses' Reserve are 42,059 nurses ready to respond to calls from Army, Navy, and Red Cross disaster service.

Public health nurses made 1,043,954 nursing visits to or on behalf of patients; inspected 559,187 school children within the 12 months. At the close of the fiscal year 663 public health nurses were employed in 494 communities.

Hygiene and home care of the sick was taught by 1775 graduate nurses. Under them, 58,754 students who received instruction satisfactorily completed the course and were awarded certificates. Since the Red Cross first undertook teaching such courses, it has issued 951,639 certificates.

Accomplishments of volunteers, numbering 197,397 aside from those engaged in disaster relief, include: Production of 331,646 garments; 386,824 pages of Braille printed by hand for blind readers; 17,806 Christmas bags for distantly stationed men of the Army and Navy; the making of 51,809 calls by members of motor corps; the making of 17,243 home service visits; the preparation of 4,591,765 surgical dressings; the feeding of 50,397 persons by canteen workers.

Membership for the year ended June 30, 1938,

was 5,523,585 men and women—an increase of 619,269 over the previous year.

The Red Cross continued to concentrate on First Aid on the Highways and the prevention of accidents in the home and on the farm. At the close of the fiscal year 2454 First Aid stations were in operation on principal highways throughout the nation, with trained personnel in attendance at each station, and many more are planned for the coming year. A total of 2051 mobile first-aid units are also in operation. During this same period the campaign against home and farm accidents was carried out with a great amount of assistance given by school children. The Red Cross reached an estimated 7,000,000 dwellings with check-lists of accident hazards and instruction for the removal of these hazards.

During the fiscal year the American Red Cross was active in the field of international relief. It contributed \$26,523.79 to the work of the International Red Cross Committee at Geneva to assist non-combatants and prisoners of war in Spain, and to facilitate the exchange of news between anxious relatives and persons stranded in Spain. For Chinese civilian relief the American Red Cross asked its chapters to raise a relief fund of \$1,000,000, and much of this has already been expended. The American Red Cross contributed \$200,000 from its treasury to the fund, which is administered by the American Advisory Committee composed of representative Americans resident in Shanghai, and which has procured food and clothing for destitute Chinese civilians as well as helped establish medical and refugee units in China. In addition the American Red Cross helped finance the repatriation of American citizens in China. In both Spain and China the Red Cross offered assistance impartially to both factions.

The President of the United States is president of the American Red Cross. Norman H. Davis is chairman of the Central Committee, having been named by President Roosevelt on Apr. 12, 1938, to succeed the late Rear Admiral Cary T. Grayson. The Central Committee is composed of 18 members, 6 of whom are appointed by the President of the United States to represent the Government.

REED COLLEGE. A non-sectarian, coeducational college of liberal arts and sciences in Portland, Ore., established in 1911. Enrollment for the first semester, 1938-39: Men, 304; women, 238; total, 542. Enrollment for attendance at the three 1938 summer institutes of International Relations, Northwest Affairs, and Education, 276. Faculty numbered 44. Endowment assets for 1937-38, \$1,811,526; net endowment income (exclusive of gifts), \$53,234; college operating budget for 1937-38, \$171,390 (does not include Commons or Dormitory). Volumes in the Library, approximately 63,000. A Student Union Building is now under construction. Through a grant by the Carnegie Corporation, a resident sculptress of distinction, with whom an extra-curricular group of students is working in the studio, is spending the year at the College. President, Dexter Merriam Keezer.

REFERENDUM. United States. Federal. The proposal for popular ratification of constitutional amendments (1937 YEAR BOOK, p. 648) moved a step forward in March with tentative approval by the Senate Judiciary subcommittee. Another Indian plebiscite (*ib.*) resulted in the adoption of 14 tribal constitutions and 13 tribal charters. Indians of the Cass Lake Agency voted overwhelmingly against its removal to Duluth as ordered by the Indian Bureau. Navajos elected their

tribal council with a first use of colored ballots, without other designation, their language having no alphabet. Crop-control plebiscites resulted in approval by New York potato growers in August (by 2 votes) and rejection by those of Nebraska. In the December voting, cotton control was approved and that for rice and tobacco rejected.

Alabama. Constitutional amendments were adopted as follows: (1) Requiring Limestone County to levy a malaria control tax if approved by a vote of the electors (11,889 to 47,764); (2) providing impeachment for sheriffs who allow prisoners to be seized and mobbed (95,848 to 81,066).

Arizona. A constitutional amendment was adopted (37,438 to 28,478) disqualifying legislators, during their terms, from appointment to other state offices. Proposed measures rejected: (1) To exempt from taxation homesteads up to \$5000 (43,771 to 39,589); (2) to limit terms of appointed state officers to that of governor (34,752 to 33,016).

Arkansas. Constitutional amendments were adopted as follows: (1) Authorizing a workmen's compensation law (77,028 to 45,966); (2) exemption of new manufacturing establishments from taxation (70,989 to 49,226); requiring the Supreme Court to regulate the practice of law and the conduct of attorneys (74,290 to 46,932); abolishing "committee nominations," special elections, and appointment of relatives to vacancies (63,414 to 56,947). Rejected proposals: State assumption of local obligations for improvements (65,544 to 51,771); creating a state board of education (64,906 to 56,994); county option liquor law (initiated) (71,702 to 56,439); refunding state bonds (83,982 to 40,753).

California. Out of 25 proposed measures, but seven were adopted, viz.: (3) reserving revenues from motor vehicles for highway purposes (1,505,043 to 766,063); (5) regulation of fisheries (1,309,007 to 795,023); (6) eliminates deduction from taxation of reinsurance premiums paid other admitted insurers (1,424,076 to 609,135); (7) gives legislature "plenary power" to administer relief (1,166,589 to 834,332); (12) exempts Golden Gate Exposition Co. from taxation (1,067,573 to 943,533); (14) provides removal of judges convicted of "crime involving moral turpitude" (1,782,350 to 346,701); (17) allows 40 days additional for preparing measures for submission to popular vote (985,255 to 832,359). The following were rejected: (1) To prevent coercive acts by strikers and provide for penalties, damages, and injunctions (1,476,379 to 1,067,229); (2) to regulate pounds (1,581,258 to 721,126); (5) highway traffic regulation (1,358,351 to 904,491); (8) to authorize gifts to political subdivisions (1,395,523 to 479,500); (9) to exempt veterans from certain taxes (1,288,517 to 839,379); (10) to permit leasing of public beaches for oil drilling (1,666,251 to 491,973); (11) to create a new district (with an elective member) of the State Board of Equalization (1,371,153 to 540,578); (13) to authorize issue of bonds for acquisition of public utilities (1,465,841 to 516,591); (15) to admit laymen to State's Judicial Council (see CAL. ST. BAR JNL., XIII, 11) (972,526 to 806,742); (16) pensions for retired judges (1,105,183 to 822,982); (18) for custody of state funds (998,421 to 826,901); (19) for distribution of surplus funds to veterans (1,493,574 to 405,552); (20) for gradual introduction of "single tax" (1,836,585 to 372,386); (21) to extend tax exemptions of property used for charitable or educational purposes (1,323,176 to 760,482); (22) to regulate adoption of municipal charter amendments (1,086,405 to 702,387); (23) to increase allowances for legislative employees (1,378,262 to 451,880); (24) similar to (10) *supra* (1,744,801 to 309,795); (25) for retirement life payments ("\$30 every Thursday"; 1,398,999 to 1,143,670).

Colorado. Initiated measures were rejected as follows: (1) To repeal the act requiring licenses for stores (230,169 to 146,757); (2) to permit every recognized profession to regulate its own members and every person to choose his own "healer" (277,460 to 83,356); (3) to authorize old-age pensions (proposed constitutional amendment; 239,005 to 140,189).

Florida adopted the following constitutional amendments: (1) Exempting from taxation, homesteads up to \$5000 (119,728 to 11,442); (2) requiring published notice of legislative intent to enact local or special laws affecting municipalities (99,996 to 10,204); (3) requiring taxation for state expenses, debts, and public instruction (110,104 to 15,108); (4) regulating the state ("national") guard (98,616 to 16,365).

Georgia adopted 23 constitutional amendments; but 21 of them authorize political subdivisions to levy taxes, issue bonds, or take some other action which, in most states, would be covered by a general constitutional clause; the others authorize (1) county levies for conservation, forest protection, etc. (28,418 to 7536); (2) legislative sanction of county levies for medical care of resident, indigent invalids (28,552 to 6669).

Idaho. A comprehensive (initiated) measure, creating a commission for the protection, preservation, and control of "wild life" was adopted (118,448 to 37,442).

Illinois. A proposed constitutional amendment to remove the double liability of bank stockholders and repeal the requirement of submitting bank legislation to the voters, was lost for lack of the required two-thirds (922,237 for to 352,428 against). A "Question of Public Policy" (instructing members of Congress to vote against drafting American boys to fight on foreign soil) was answered in the affirmative (1,678,352 to 957,696).

Louisiana. 28 constitutional amendments were adopted. Five provide exemptions from taxation; one for "prescribing" ("Outlawing") taxes, after a certain time; two for naming Mississippi River bridges after Huey Long; two relate to educational institutions, one to juvenile courts; one for retirement of judges and another for district attorneys, and others of chiefly local application.

Maine adopted (125,966 to 79,342) a constitutional amendment authorizing longer residence for voters and submitted three "Referendum Questions" re liquor traffic: (1) Option to install state liquor stores (carried in all but 3 of 16 counties); (2) for private sale on premises (lost in 7 counties); (3) for malt liquor sale licenses (carried in all but 2 counties).

Maryland adopted (167,122 to 57,369) a constitutional amendment requiring lapse of 48 hours between issue of license and solemnization of marriage (abolishing "Gretna Green" at Elkton); (2) an additional judge in 2d circuit (92,899 to 59,512). The following were rejected: (3) To authorize income tax (99,314 to 79,562); (4) to authorize lotteries (123,365 to 90,805).

Massachusetts adopted (748,030 to 417,134) a constitutional amendment for biennial legislative sessions; (2) an initiated measure (defeated in the legislature) requiring free, but exclusive, taxicab stands in localities accepting it (664,762 to 614,487). Pari-mutuel betting on licensed horse races was approved in 9 of the 14 counties; on licensed dog races in 4. Representatives in 3 legislative districts were instructed by popular vote to favor restriction to highway purposes of revenues from vehicular traffic; representatives in 3 others, to legislate against free housing, etc.; in 8 districts, to favor Federal pensions for those over 60; from 48 districts to vote against employment in public service, of employees' wives.

Michigan adopted (813,289 to 529,859) a constitutional amendment reserving for highway purposes, revenues from vehicular traffic; rejected one for four-year term for county officers (872,057 to 414,832); (2) for appointment of supreme court judges by governor on nomination of Judicial Council (745,312 to 504,904); (3) a comprehensive, referred measure for a Department of Public Assistance, to supersede various relief agencies (572,756 to 497,569).

Minnesota. Proposed constitutional amendments declared lost under requirement of majority of all votes cast at election: (1) For exchange of state lands (for 609,046 to 259,007); (2) to change publication requirements in amending municipal charters (488,370 for to 260,152 vs.).

Missouri rejected proposed constitutional amendments (1) to increase legislators, compensation and fix session expenses (560,500 to 336,796); (2) rendering state treasurer eligible to re-election (590,591 to 288,457); (3) authorizing special tax levy for county hospitals (567,337 to 303,602).

Montana adopted (71,908 to 46,543) constitutional amendment (1) providing four-year term for county officers and consolidation of offices by county board; (2) investment and disbursement of state educational funds (103,071 to 50,135); (3) referred measure, for local option, retail sales of state liquor store beverages by licensees and allotment of liquor revenues (113,332 to 68,685); (4) initiated measure to authorize issue of \$3,000,000 of highway debentures and for non-divertible gasoline tax (126,247 to 32,134).

Nebraska adopted (190,328 to 178,998) a constitutional amendment removing the double liability of bank stockholders; rejected (333,120 to 115,189) proposal initiated to regulate slot machines and proposed constitutional amendments to reduce number of elective state officers and to extend terms to four years.

Nevada adopted (16,346 to 15,741) a constitutional amendment authorizing withdrawal of public funds from a school district permitting sectarian instruction; rejected (19,392 to 13,483) an initiated proposal of bounties for slaughtered predatory animals.

New Hampshire adopted (96,631 to 23,851) a constitutional amendment reserving for highway purposes revenues from motor vehicle traffic; rejected (for lack of two-thirds) proposals for (1) absentee voting (75,474 for to 38,399); (3) disfranchisement of "paupers" (57,289 for to 53,671); new subjects of taxation, including income and inheritance, and sales (44,950 for to 52,157). The Hampton town meeting on March 8 voted unanimously to restore citizenship to Eunice Cole, convicted of witchcraft in 1656, by a Massachusetts judge.

New Mexico adopted (43,864 to 18,468) a constitutional amendment authorizing the State's Chief Justice to assign two or more supreme or district court judges to sit in any county, and in case of disqualification, a special judge, to be selected by the parties.

New York adopted six of the nine constitutional amendments proposed by the Convention (see LAW) as follows:

(1) The "Catch all," virtually a new constitution (1,521,036 to 1,301,777); (3) grade crossings (1,561,846 to 895,382); (4) to provide low rent housing (1,686,056 to 936,279); (6) labor provisions (1,869,883 to 940,770); (8) social welfare outlay (1,902,075 to 943,296); (9) N. Y. City transit unification (1,407,056 to 935,744). (The blank and void votes outnumbered all others.) The state rejected (2) reapportionment (1,425,344 to 848,367); (5) judiciary (1,550,653 to 641,332); (7) to abolish proportional representation (1,554,404 to 627,123). The city manager plan was adopted in Yonkers (24,072 to 21,169) after previous defeats (1936 YEAR BOOK, p. 656). More than 100,000 voters in 46 towns exercised the local option privilege on the liquor question. On April 12, Peekskill, incorporated as a village in 1816, adopted (3100 to 1256) a city charter, effective in 1940, and voted on 13 financial measures, rejecting appropriations for firehouses and World War Memorial.

North Carolina adopted constitutional amendments (1) providing a four-year term for sheriffs and coroners (206,069 to 197,593); (2) creating a Department of Justice (172,583 to 145,103).

North Dakota adopted on June 28 constitutional amendments as follows: (3) Reducing interest on, and regulating sales of, public lands (95,700 to 76,051); (4) disqualifying legislators from other state positions (106,699 to 64,087); (5) requiring election of state tax commissioner on a no-party ballot (86,822 to 78,206); (6) requiring payment of all state money into treasury and disbursement by appropriation only (83,140 to 75,818); creating a state board of education (93,156 to 71,448); (referred measures) prohibiting dances where liquors are sold (109,619 to 77,046); (initiated measures): abolition of state regulatory department (76,683 to 76,672). The state rejected constitutional amendments for (1) manager plan for county government (94,702 to 80,786); (2) to end ban on re-election of certain county officers (91,219 to 80,246); (initiated measures): (10) for a civil service department (116,632 to 39,710); (11) for a commission to regulate certain county securities transactions (115,785 to 41,301); (12) to reduce legal rate of interest to 3 per cent (121,206 to 45,808); (13) for a state commission to appoint local officials (138,940 to 24,222). On November 8 the voters rejected measures: (1) to regulate dairy products factories (referred; 106,718 to 97,019); (2) to repeal the liquor control act (initiated; 160,365 to 98,478); but adopted (154,367 to 78,427) an initiated "old-age assistance" amendment with a minimum monthly payment of \$40.

Ohio rejected (1,237,443 to 621,011) a proposed (initiated) amendment for appointment of supreme judges by the governor from a list selected by a judicial council consisting of the chief justice and other officials. Voters in nearly 150 localities exercised the local option privilege as to the liquor question. Dayton, which had closed its public schools for lack of funds, defeated a proposed two-mill levy for their maintenance.

Oklahoma rejected proposals (1) authorizing political subdivisions to operate utilities, etc. (266,893 to 98,216); (2) legalizing slot machines (280,284 to 98,360); (3) relative to sale and taxation of oleomargarine (215,799 to 184,619); (4) providing deputy oil inspectors (259,240 to 99,613); (5) for retirement allowances to teachers (218,945 to 183,997); (6) to change salaries and number of legislators (256,745 to 92,264).

Oregon adopted (1) constitutional amendment allowing governor 20 days to consider legislative bills (233,384 to 133,525); (2) measure requiring medical examination of applicants for marriage license (277,099 to 66,484); (3) requiring destruction of slot machines (204,561 to 126,580); (4) prohibiting certain games of chance (197,912 to 129,043); (5) old-age assistance (183,781 to 149,711); (6) regulating picketing and boycotting (197,771 to 148,460); (7) for water purification (247,685 to 75,295); (8) regulating liquor sales (222,221 to 118,282). The state rejected proposals for constitutional amendment (1) to repeal double liability of bank stockholders (165,797 to 133,525); (2) re legislators' compensation (169,131 to 149,356); (3) (initiated) to legalize lotteries, etc. (180,329 to 141,792); (4) citizens' retirement annuity measure (219,557 to 112,172).

Rhode Island approved (101,023 to 79,501) a proposal to make "Columbus Day" a legal holiday; rejected projects for (1) rehabilitation (93,004 to 73,231); (2) refunding bonds (86,163 to 63,913); (3) metropolitan sewers (95,552 to 63,974); (4) bridge construction (90,573 to 69,317); (5) road construction (86,441 to 73,393); (6) public buildings (86,762 to 75,786).

South Carolina adopted five constitutional amendments, only one being of statewide application, viz., to eliminate the property tax for school purposes (21,669 to 19,358). Each of the other four affected but a single county. The voters rejected proposed amendment for the retirement, with pay, of judges (30,020 to 9,385).

South Dakota rejected (1) a proposed constitutional amendment to enlarge membership of the legislature (116,326 to 60,428); (2) a referred measure to substitute a single Unemployment Commissioner for the present three and to provide for administrative and judicial review (118,007 to 106,493).

Texas adopted (91,453 to 71,596) a constitutional amendment requiring oath of all public officers that they have not purchased votes.

Utah adopted (62,098 to 59,850) a constitutional amendment creating a permanent and uniform school fund; rejected proposals (1) relating to taxation (rate, purposes, and distribution) (60,706 to 55,908); (2) to regulate public work hours (61,807 to 41,421).

Washington adopted measures (1) for election of state and county superintendents of schools by non-partisan ballot (293,202 to 153,142); (2) limiting the annual tax levy to 40 mills (340,296 to 149,534); rejected (1) income tax amendment (285,946 to 141,375); (2) initiated measure to regulate strikes and lockouts (295,431 to 268,848).

West Virginia adopted a constitutional amendment removing the double liability of bank stockholders (139,985 to 62,241).

Wyoming adopted (54,180 to 22,702) a constitutional amendment regulating deposit of public funds.

FOREIGN. Austria. On Wednesday, March 9, Chancellor Schuschnigg, in a radio broadcast from Innsbruck, announced a plebiscite on the question of retaining Austrian nationality, for the following Sunday. That move proved his undoing, for a free expression of the popular will was not what Hitler wanted. To prevent it his forces invaded the country on the day before the proposed voting and, instead, on that day another was decreed by the Nazi leaders for April 10, but at the same time the Anschluss was declared a *fait accompli*. The ballots, when printed, asked "the German men and women of Austria" if they approved the union effected on March 13. Underneath the query was a large JA and a much smaller Nein; and no effort was spared to evoke the former. According to the N. Y. Times correspondent the Ja vote was 4,453,752 to 11,929 Nein; invalid, 5776.

Germany, on the same day and by the same authority, voted for the Anschluss, 44,451,401 to 442,981, with 69,486 invalid ballots.

Paraguay. The arbitration treaty with Bolivia (see INTERNATIONAL LAW) was submitted to a popular referendum on October 10 and ratified by 132,000 to 12,000.

Rumania. On February 24, with but three days' notice, all voters were required to appear before their local authorities and answer aloud whether they wished their names recorded as accepting or opposing the King's dictated constitution of 117 articles which abolished political parties and, virtually, the parliament, and vests absolute powers in the monarch. The vote as recorded was (4,297,581 to 5483)—more than at any "political" election.

Switzerland. On July 3, the new Penal Code (abolishing capital punishment, providing reformatory measure for convicts and special treatment for juvenile offenders) was adopted (357,815 to 310,297), and on December 27 a financial measure forming part of a national defense program (508,292 to 194,285).

REFORMED CHURCH IN AMERICA.

Composed originally of settlers from the Netherlands, and known until 1867 as the Reformed Protestant Dutch Church in North America, the denomination has since become largely intermixed with elements from many other nationalities. Its doctrinal standards are the Belgic Confession, the Heidelberg Catechism, and the Canons of the Synod of Dort. The form of government is of the Presbyterian type.

In 1938 the denomination reported 724 churches, 857 ministers, 88,382 families, and 159,343 communicants. In the foreign mission field, which included China, India, Japan, Arabia, and Iraq, there were employed 135 missionaries. Three ordained ministers and three other workers were employed in the mission in the State of Chiapas, Mexico. There were also 100 domestic missionaries who served as pastors of mission churches and as teachers and other workers among the Indians of Nebraska, Oklahoma, and New Mexico, the mountaineers of Kentucky, and the Negroes of Alabama. Contributions reported in 1938 amounted to \$3,132,064 for congregational expenses, 585,106 for denominational benevolence, and \$108,671 for other benevolences.

The church colleges are Hope, at Holland, Mich.; Central, at Pella, Ia.; and Northwestern Junior, at Orange City, Ia., while theological seminaries are maintained at New Brunswick, N. J., and Holland, Mich. The official paper is *The Intelligencer-Leader*, published at Grand Rapids,

Mich. There is also the *Mitarbeiter*, published in the interest of the German-speaking churches.

The General Synod of 1938 met in Asbury Park, N. J. Rev. J. Harvey Murphy, D.D., of Hudson, New York, was elected President and Rev. John A. Dykstra, D.D., of Grand Rapids, Michigan, Vice-President.

Substantial progress was reported for the newly organized Contributory Annuity Fund for Ministers and the Retirement Fund for Lay Workers. There was an advance of some \$20,000 in offerings for the current work of the benevolent boards and of \$150,000 in offerings for congregational expenses.

The motto "With One Accord" was adopted for the year and plans were made for observing the "Golden Milestone" of the Arabian Mission, in which the founders of the Mission, Rev. Drs. James Cantine and Samuel M. Zwemer, were to have a prominent part; and for an extensive campaign among the churches under the leadership of Dr. Murphy, President of General Synod and Rev. Dr. Raymond B. Drukker of the Board of Education, R.C.A.

The meeting in 1939 is to be held with the West End Collegiate Church of New York City, June 8-13. Rev. John A. Ingham, D.D. is Stated Clerk and Treasurer of the General Synod. The denominational headquarters are at 25 East 22nd Street, New York City.

REFORMED EPISCOPAL CHURCH. A denomination formed in 1873 by Bishop George David Cummins, D.D. and associated clergymen and laymen who had withdrawn from the Protestant Episcopal Church. It is liturgical and evangelical and possesses the historic episcopate. The two synods are New York and Philadelphia (Bishop William Culbertson), comprising churches from New York to Virginia, and Chicago (Bishop Frank V. C. Cloak, D.D. in jurisdiction), comprising those in Illinois and Ohio. At the twenty-eighth triennial session of the general council, held in Philadelphia, Pa., May 27, 1937, there were reported 68 parishes, served by four bishops and 60 other ministers, with 8900 communicants.

The Church's paper, the *Episcopal Recorder*, has been published continuously in Philadelphia for 116 years. Its theological seminary, 25 South 43d St., Philadelphia, was founded in 1886. The foreign mission field is the Lalitpur district in India, with more than 200,000 inhabitants. To the evangelistic department and the orphanage, a medical department, with hospital, was added in 1933. The home mission field, under the care of Bishop Joseph E. Kearney, D.D. consists of 36 parishes and missions among the Negroes of South Carolina. The office of the mission boards is 1016 Girard Trust Building, Philadelphia. The presiding bishop and president of the general council was Bishop Frank V. C. Cloak, D.D.; the general secretary is Bishop Howard D. Higgins, Th.M., and headquarters are at the seminary.

REFUGEES. See IMMIGRATION; JEWS.

RELIEF. Development of Public Policy. With the inauguration of the Public Works program and the Works Progress Administration program, in the second half of 1935, the Federal Government began the gradual liquidation of the Federal Emergency Relief Administration. The upshot was, the task of carrying the general relief burden—that is to say, the care of those unemployed who could not for one reason or another fit into the works program or that of the Social Security Board—was transferred back to the States

and municipalities. Final grants to the States for general relief purposes were made by the FERA in December, 1935.

It is interesting to note the great drop in the cases receiving general relief as a result of the expansion of Federal programs into other fields. Thus in January, 1935, 5,276,000 cases were in this category as contrasted with 2,216,000 cases in January, 1936, 1,903,000 cases in January, 1938, and 1,629,000 cases in December, 1938. Also, in January, 1935, the Federal Government, under the FERA program, expended \$148,437,000. As a result of the change in plans, in January, 1936, the States and local governments expended for general relief in January, 1936, \$47,915,000, in January, 1937, \$37,906,000, and in September, 1938, \$35,453,000. In December, 1938, the cost of general relief had risen to \$40,771,000.

In the 40 States for which actual figures were reported for September, 1938, there were 1,300,000 cases on general relief for which obligations amounting to \$31,600,000 were incurred. The average monthly payment per case in these States amounted to \$24.09. The averages for individual States ranged from \$4.36 in Mississippi to \$32.94 in New York. There were only six jurisdictions—California, Connecticut, the District of Columbia, Massachusetts, New York, and Pennsylvania—in which the average payment per case was greater than the average for the whole group. Four of these six States—California, Massachusetts, New York, and Pennsylvania—accounted for two-thirds of the total amount of relief expended and for more than one-half of the total number of cases.

Total Relief Bill and Load. The accompanying Table I presents the expenditures for all public relief purposes in the continental United States, by months, for the period January, 1937, to December, 1938.

Attention is called to the figures in Table II which concerns itself with the numbers of persons receiving public relief of one kind or another during the period January, 1937, to December, 1938. It will be noted that the estimated number of persons in households receiving public relief rose steadily from September, 1937—when the full rigors of the business decline began to make themselves felt—up to September, 1938. In September, 1937, there were 13,200,000 persons in relief households as contrasted with 21,200,000 in September, 1938, and 20,900,000 in December, 1938.

Works Progress Administration. The paradox of business improvement plus inability to separate substantial numbers of persons from the relief rolls continued to be one of the outstanding characteristics of the history of relief during the year. From the end of the summer into the late fall it was estimated by Washington that business had reabsorbed from 1,000,000 to 1,500,000 persons. Nevertheless, at the same time the WPA relief rolls, as reference to Table II will indicate, also rose by nearly 500,000 persons. In September, 1938, the number of persons on WPA totaled 3,111,000, which represented a steady increase since September, 1937, when the number was 1,407,000, the lowest point since the agency was created. The highest previous figure was in 1936, when 3,035,000 persons were being provided for.

As a result of the passage of new legislation in April, 1938, the WPA was granted \$1,440,000,000, which was supposed to cover its needs from July 1, 1938, to Mar. 1, 1939. By the middle of October, 1938, however, the WPA had only \$764,000,000 left.

TABLE I—AMOUNT OF PUBLIC ASSISTANCE AND EARNINGS OF PERSONS EMPLOYED ON FEDERAL WORK PROGRAMS IN THE CONTINENTAL UNITED STATES, JANUARY, 1937–DECEMBER, 1938 *

* This series, in addition to earnings of persons certified as in need of relief, includes the earnings of all other persons employed on work and construction projects financed in whole or in part from Federal funds, except for the CCC. Figures do not include the cost of administration; the cost of materials, equipment, and other items incident to the operation of work programs; or transient care. Figures are partly estimated and subject to revision.

^b Payments from Federal, State, and local funds in States administering the three special types of public assistance under the Social Security Act and payments from State and local funds only in States not participating under the act.

^c Figures for January–March, 1937, from the WPA, Division of Statistics.

^d Figures from the FSA, Rural Rehabilitation Division, represent the net amount of emergency grant vouchers certified to cases during the month.

^e Figures estimated by the CCC by multiplying the average monthly number of persons enrolled by an average of \$70 per month. This average amount is based upon the amount of obligations incurred for cash allowances and for

clothing, shelter, subsistence, and medical care of persons enrolled, and for certain other items.

^f Figures from the WPA, Division of Statistics, represent earnings of persons employed on projects financed from WPA funds and cover all pay-roll periods ended during the month.

^g Figures from the WPA, Division of Statistics, represent earnings during all pay-roll periods ended within the month.

^h Figures from Bureau of Labor Statistics, Division of Construction and Public Employment, represent earnings on other work and construction projects financed in whole or in part from Federal funds, and cover all pay-roll periods ended within the monthly period ended on the 15th of the specified month.

ⁱ For administrative reasons, some payments which would have been certified in December, 1936, and February, 1937, were not certified until January and March, 1937, respectively.

^j Less than \$1000.

^k Includes projects operated by other Federal agencies.

It was generally being conceded that Washington was encountering increasing difficulties in getting out of "this business of relief." This had become increasingly the conviction of Harry L. Hopkins, Administrator of the Federal Works Program, when he admitted to the House Appropriations Committee that in his belief the situation would never correct itself automatically. He called attention to the fact that there was a constant increase in the working population at the same time that technological improvements were continuing to make lesser demands upon this group. He went on to say:

In addition, other factors are in a condition of flux which affects the volume of employment. Seasonal shifts in labor demand, shifts in foreign tariffs and changes in foreign markets, changes in domestic demand for various products and the migration of industries from one section of the country to another all affect the demand for labor.

In the middle of November, Mr. Hopkins was even less sanguine. Speaking before a conference of 1000 WPA executives in New York City, he was prepared to admit that the WPA was likely to continue over a period of 20 or 30 years providing

jobs at useful work for at least two million persons. He predicted eventual abandonment of the needs test as a qualification for employment in the Federal Works Program and acceptance in its place of the concept that a man's right to a job should be determined by his "ability to do a day's work."

He went on to point out that while employment stabilization plans and unemployment insurance were helpful in coping with unemployment problems, neither provided a complete answer. He expressed doubts that the economic system could be made to work without some unemployment. He also called for the introduction of relief administrators and workers into the Civil Service.

With the elevation of Mr. Hopkins to the Cabinet post of Secretary to the Department of Commerce, Col. F. C. Harrington was named Acting Administrator of the WPA beginning December 24. In an initial interview to the press, Colonel Harrington indicated that he had two responsibilities. One was to see that money appropriated went to those actually in need, and the other was to try to get the best work and the most useful results from those on relief. He anticipated that the WPA funds

TABLE II—RECIPIENTS OF PUBLIC RELIEF IN THE CONTINENTAL UNITED STATES, BY MONTHS, JANUARY, 1937–DECEMBER, 1938 ^a

^a For information for January, 1933–December, 1934, see *Social Security Bulletin*, vol. i, No. 6 (June, 1938), p. 45; and for January, 1935–December, 1936, see *Social Security Bulletin*, vol. i, No. 9 (September, 1938), p. 34. Figures do not include transient cases and are partly estimated and subject to revision.

^b Includes not only recipients of public assistance under the Social Security Act but also recipients of similar types of assistance in States not administering aid under the act.

^c Figures for January–March, 1937, from the WPA, Division of Statistics and Economic Research.

^d Figures from the WPA, Division of Statistics and Economic Research.

^e Includes persons employed on projects financed by the Emergency Relief Appropriation Acts of 1935, 1936, and 1937, and the Public Works Administration Extension Act of 1937; and, beginning July, 1938, persons employed on Farm Security Administration projects and on projects of other Federal agencies operating with WPA allocations under the Emergency Relief Appropriation Act of 1938.

^f Figures are averages computed by the CCC.

^g Figures from the Farm Security Administration, Rural Rehabilitation Division, represent the number of emergency grant vouchers certified to farmers. Ordinarily only one grant voucher per farmer is certified per month.

^h For administrative reasons, some payments which would have been certified in December, 1936, and February, 1937, were not certified until January and March, 1937, respectively.

ⁱ Less than 1,000 persons employed this month.

would be entirely consumed by February 7 and expected to consult with Congressional leaders over the amount to be asked as a deficiency appropriation. He also declared, and this was in line with the policy adopted by his predecessor, that because he favored the principle of collective bargaining he had no objection to the organizing of work relief clients into associations under their own direction.

Despite the refusal in official quarters to anticipate serious changes in the policy and program of the WPA, there was fear expressed in many quarters that the President's growing preoccupation with the rearmament program would result in the shifting of relief workers from socially useful projects to those that had only as their purpose the servicing of wartime industry. Indeed, persons in touch with this situation were openly declaring that the national defense program of the President might result in a contraction of WPA and other relief programs because of the refusal of Washington to tap new tax resources in order to finance its defense plans.

RENSSELAER POLYTECHNIC INSTITUTE. A nonsectarian institution for the technical training of men in Troy, N. Y., founded in 1824. In 1938 there were 1483 students enrolled. The teaching staff numbered 151. The productive funds amounted to \$5,591,237 as general endowment; the total income was \$981,568. As gifts for endowment \$142,106 was received. The library contained 30,000 volumes and 31,000 pamphlets. President, William O. Hotchkiss, C.E., Ph.D., D.Sc.

REORGANIZATION BILL. See UNITED STATES under Congress

REPARATIONS AND WAR DEBTS. The chief change in 1938 in the United States Treasury's account with the 15 foreign governments listed as debtors to the United States under the head of funded intergovernmental debts was Austria's disappearance from the number, upon the German annexation of that country. The German Government was notified that the United States Government would look to it for the discharge of Austria's debt, and the Reich Government thereafter was listed by the Treasury as the debtor in Austria's place. The German Government did not during 1938 explicitly commit itself by public statement as to its responsibility for the original debtor in the case. The United States, before stating its position to Berlin on this subject, was informed (March 17) by the Minister of the Republic of Austria, that that country had ceased to exist as an independent nation and had been incorporated in the German Reich.

The American Ambassador at Berlin delivered a note (April 6), citing the Austrian minister's statement, notifying the German Government of its asserted liability for the discharge of Austrian debts concerning the United States, and designating these debts, as follows: The loans made by the United States Government to the Austrian Government under the act of Congress of Mar. 30, 1930, the money borrowed by the Austrian Government in the American market as part of the international loan of 1930, and the dollar loans contracted by Austrian political subdivisions and corporations. No reply to the American note was received, but indications were given informally (May 16) that the German Government was taking the position that it was not under legal obligation to take over the external debts of the Austrian Federal Government. A further American note (June 17) dealing with the German Government's omission of payments due June 1 on the American

part of the international loan of 1930, stated its dissent from the German position as indicated on May 16.

The other 14 foreign governments acknowledging themselves indebted to the United States Government for intergovernmental loans all communicated with the Secretary of State or announced payments to the Treasury. The governments that made payment on their debts in 1938 were three. Greece paid (May 23) \$174,336, which represented 40 per cent of two semi-annual installments of interest that had fallen due in 1937. Greece had made payments in the period from 1932 to 1936. Hungary continued to make in 1938 the semi-annual payments of \$9828 begun in 1937; these payments covered a minor part of the sums falling due in the year. Finland continued to pay the entire amount due on account of its intergovernmental debt to the United States, under the terms of the existing agreements. The 12 governments that made no payments communicated, in each case, their inability to undertake payments in the existing circumstances.

Among the major debtors, Great Britain in particular gave evidence of some renewal of interest in the problem of terminating default. Lord Samuel, in the House of Lords, urged the need of preventing the impression that the suspension of the British payments was to close the chapter as to the British indebtedness to the United States. Lord Snell expressed the view that an attempt at a settlement of the matter was overdue. Lord Lothian asked whether token payments could not be resumed. Replying for the Government, Lord Stanhope expressed official willingness to enter into discussions looking to a settlement, whenever circumstances suggested that a satisfactory arrangement could be reached, but he expressed the fear that it would be disastrous to reopen the subject before that prospect should appear. He deemed it questionable whether the resumption of token payments would suit the United States Government, in view of possible resulting complications on account of the Johnson act.

In unofficial consideration of the subject, George P. Auld contributed to *Foreign Affairs* (July, 1938), a study of the history and prospects of the British war debt, in which was evident the increasing consciousness among American students of the difficulties of the particular problem of "transfer": i.e. of transforming value existent in the debtor's country into value acceptable in that of the creditor; the question was seriously discussed, whether private British capital holdings in divers parts of

TABLE I—WAR-DEBT PAYMENTS THAT CAME DUE IN CALENDAR YEAR 1938

	(Due June 15)	(Due Dec. 15)

* Includes principal postponed under moratorium agreements and principal amounts not paid according to contract terms.

^b The German Government has been notified that the Government of the United States will look to the German Government for the discharge of the indebtedness of the Government of Austria to the Government of the United States.

^c This government has not accepted the provisions of the moratorium.

^d The United States holds obligations in the principal amount of \$289,899, which, together with accrued interest thereon, are to be canceled pursuant to agreement of Apr. 14, 1938, between the United States and the Republic of Nicaragua, ratified by the United States Senate on June 13, 1938.

^e Includes \$12,286,752 received from Cuba and \$36,472 from Liberia in full payment of debt.

NOTE: Indebtedness of Germany to the United States on account of costs of army of occupation and awards under Settlement of War Claims Act of 1928, as amended, not shown in above statement.

the world could be acquired by the British Government and converted into a means of payment.

Hungary communicated to the U.S. Department of State (Feb. 7, 1938), the outline of a possible basis for a new arrangement with regard to the Hungarian debt to the United States Government. The President sent the Hungarian communication to Congress, which completed no action on the subject during the year.

Apart from all sums included in the group commonly called war debts, Germany owed the United States Government the sum (June 30, 1938) of \$1,247,579,707, which in addition to funded principal, included \$22,555,597 of accrued and unpaid interest. Nearly two-thirds of the total represented the costs incurred by the American army of occupation on account of service in Germany; the remainder was the charge against Germany on account of war claims. The payments that fell due in 1938 on these sums, as to interest and as to principal, were not made.

RÉUNION, ră'ūnyōn'. A French island colony 420 miles east of Madagascar. Area, 970 square

miles; population (1936 estimate), 210,000, as against (1931) 197,933 including 194,272 French, 2242 Chinese, 302 Africans, 921 natives of Madagascar, and 196 British Indians. Chief towns: St. Denis, the capital (26,807 inhabitants), St. Pierre (22,048), St. Paul (22,679), St. Louis (17,237). The chief port is Pointe-des-Galets.

Sugar, rum, manioc, coffee, tapioca, vanilla, and spices are the main products. In 1937-38 (estimate), 85,000 metric tons of sugar were produced; spirits, totaling 9,524,658 gallons, were produced in 1934. In 1937 the estimated value of merchandise imports (in old U.S. gold dollars) was \$6,000,000 (1936, \$4,900,000); exports, \$5,800,000 (1936, \$4,700,000). There were about 80 miles of railway line. The budget for 1933 was balanced at 63,634,000 francs (franc averaged \$0.0503 for 1933). Administration is under a governor assisted by a privy council, and an elective council-general. Réunion is represented in the French Parliament by a senator and two deputies. Governor, M. Truitart.

REVENUE. See UNITED STATES under *Administration and Congress*.

REXISTS. See BELGIUM.

RHODE ISLAND. Area and Population. Area, 1248 square miles; included (1930) water, 181 square miles. Population: Apr. 1, 1930 (census), 687,497; July 1, 1937 (Federal estimate), 681,000; 1920 (census), 604,397. Providence, the capital, had (1930) 252,981 inhabitants.

Agriculture. Acreage, production, and value of the chief crops of Rhode Island, for 1938 and 1937, appear in the accompanying table.

Crop	Year	Acreage	Prod. Bu.	Value
Hay (tame) ...	1938	45,000	58,000 *	\$905,000
	1937	43,000	57,000 *	884,000
Potatoes	1938	3,900	624,000	468,000
	1937	4,300	838,000	603,000
Corn	1938	10,000	400,000	284,000
	1937	10,000	400,000	336,000

* Tons.

Finance. Rhode Island's State expenditures in the year ended June 30, 1937, as reported by the U.S. Bureau of the Census, were: For maintaining and operating governmental departments, \$13,352,879 (of which \$1,512,638 was for highways and \$646,957 was for local education); for interest on debt, \$1,007,939; for capital outlay, \$8,441,510. Revenues were \$21,956,518. Of these, special taxes furnished \$2,350,709; inheritance taxes, \$803,268; sales taxes (on gasoline), \$2,388,324; departmental earnings, \$690,704; sale of licenses, \$6,262,589; unemployment compensation, \$4,632,719; Federal or other grants-in-aid, \$4,229,399. Funded debt outstanding on June 30, 1937, totaled \$33,018,000. Net of sinking-fund assets, the debt was \$26,966,219. No assessed valuation of taxable property was stated, and the State levied in the year no general ad-valorem tax.

There were operated, as separate enterprises outside of any of the totals above, a State harbor and a State airport. Both were maintained mainly by the State's general fund. From this source the harbor received, in the year, \$42,322; the airport, \$51,252. The two enterprises owed, on their respective bonds, \$1,222,000, not reckoned in the State's total debt.

Charities and Corrections. Under the administrative system in effect in 1938 the authority over aid granted to needy individuals and over the institutions for the care and custody of persons rested in the Department of Public Welfare (Edward P. Reidy, Director). The Department's functions in-

cluded aid to dependent children, a psychometric service, old-age security, probation, and the government of 12 State institutions. Of the State's tax on gasoline, 3 cents a gallon was set apart for the cost of poor-relief. An act of the Legislature, passed in 1938, specified that no person receiving old-age assistance or other aid under its terms should therefore be classed as a pauper; it also made provisions designed to put the State's assistance to the blind in conformity with the requirements of the Federal Government and thus qualify the State for Federal grants to this end. The 12 institutions under the Department had 5962 inmates by the latest count in 1938. The individual institutions and their respective totals of inmates follow: State Prison, 320; Reformatory for Men, 166; Reformatory for Women, 24; Providence County Jail, 156; Sockanosset School (boys), 161; Oaklawn School (girls), 41; State Hospital (mental), 2699; State Infirmary, 804; State Sanatorium, 496; Exeter School, 703; State Home and School, 312; Soldiers' Home, 80. A State School for the Deaf was separately run by the Department of Education. The Department of Labor administered unemployment compensation.

Legislation. The Legislature met in regular annual session on January 4. In addition to appropriating for the next year's ordinary expenses of the State government it provided \$700,000 to meet the unexpectedly high cost of poor-relief for the rest of the current fiscal year. The session was disturbed by fewer partisan conflicts than some of its predecessors. A bill supported by the Republican minority and designed to insure rollcalls when the minority wanted them was rejected by the presiding officer of the Senate as out of order. Its purpose was to prevent the smothering of opposing voices by the chair. A throng summoned by labor leaders made a demonstration in the Senate chamber (January 6) on behalf of the \$700,000 appropriation and other measures desired by the laboring interest.

Political and Other Events. The New England hurricane, which struck the coast on September 21, did its worst damage in Rhode Island. More than 300 persons lost their lives, according to prevalent estimates. The damage to property was placed considerably above \$100,000,000. The chief harm was done in the communities along the shore, where the sea, driven in by winds of great violence, caused many drownings and washed away structures and stretches of beach. About 10,000 dwellings were reported to have been either totally destroyed or badly damaged. In Providence, water forced up the tidal Providence River filled the low-lying business section to a depth sufficient to wash away and drown people on the tops of automobiles where they had been marooned. Part of the roof of the Union Station crashed. Trees and other objects obstructed many streets and fell among automobiles in which great numbers were trying to return to their homes.

Bailey's Beach, at Newport, was overwhelmed by wind and huge breakers; few remnants of its structures were left; the water carried great blocks of stone from the sea wall up on the golf course of the Newport Country Club. People were drowned in the streets at Newport, Westerly, and Portsmouth. Properties at Watch Hill and Narragansett Pier were ravaged. The extent of the ruin in some of the lesser communities along the shore was exemplified by the town of South Kingston, where the estimated damage was \$2,500,000. Electric current and communications by rail, road, and

wire were cut off for varying periods in many parts of the afflicted area.

Strife between Governor Quinn and Walter E. O'Hara, head of the Narragansett race track (see 1937 YEAR BOOK, p. 653), ended in the submission of O'Hara, who resigned (February 9), under pressure from stockholders and withdrew statements that he had previously published to the detriment of the Governor.

Elections. William H. Vanderbilt (Rep.) was elected Governor at the general election (November 8), defeating Gov. Robert E. Quinn (Dem.), candidate for re-election, by a plurality of about 40,000; Walter E. O'Hara, a third candidate running as an independent, polled only some 11,000 votes. In a referendum a proposal favored by Governor Quinn, for the expenditure of \$27,000,000 on public works, was apparently rejected. Republicans were elected to minor State offices and to many seats in the Legislature. The overturn of Democratic administration followed four years of strongly partisan rule in which the Democrats had prevailed over a virtually helpless Republican minority. Governor-elect Vanderbilt, son of the late Alfred Gwynne Vanderbilt, was a descendant of Cornelius Vanderbilt.

Officers. Rhode Island's chief officers, serving in 1938, were: Governor, Robert E. Quinn (Dem.); Lieutenant-Governor, Raymond E. Jordan; Secretary of State, Louis W. Cappelli; Attorney-General, John P. Hartigan; General Treasurer, Henri A. Roberge; Budget Director and Comptroller, Henry J. Lee; Director of the Department of Education, James F. Rockett.

Judiciary. Supreme Court: Chief Justice, Edmund W. Flynn; Associate Justices, William W. Moss, Francis B. Condon, Hugh B. Baker, Antonio A. Capotosto. Superior Court: Presiding Judge, J. E. O'Connell.

RHODESIA, NORTHERN. A British protectorate in Africa. Area, 290,320 square miles; population (1937), 1,377,346 including 1,366,425 Africans, 10,500 Europeans, and 421 Asiatics. Chief towns: Lusaka (capital), Livingstone, Broken Hill, Fort Jameson, and Mazabuka. On June 1, 1937, a total of 127,000 pupils were enrolled in 1460 recognized schools.

Production and Trade. Maize, wheat, tobacco, coffee, oil seeds, and citrus fruits are the important agricultural products. Teak is the most important timber. Livestock raising is an important industry; in 1937 there were 604,600 cattle in the territory. Mineral production (1937) was valued at £12,751,014 (£6,375,929 in 1936), of which copper (208,172 tons) represented £11,563,653. Other important minerals were zinc, cobalt, and vanadium. In 1937, excluding specie, imports were valued at £4,004,402; exports, including re-exports, £12,021,542. Great Britain took 51 per cent of the exports and supplied 37 per cent of the imports.

Government. For 1937 revenue totaled £981,894; expenditure, £909,252; public debt, £2,347,000. Revenue for 1938 was estimated at £1,484,770; for 1939, £1,480,590. The protectorate is administered by a governor, aided by an executive council of 5 members and a legislative council of 16 members. Governor, John A. Malbin (appointed June 27, 1938).

History. A royal commission, headed by Lord Bledisloe as chairman, left England, during April of 1938, for Northern and Southern Rhodesia and Nyasaland, to "inquire and report whether any, and if so what, form of closer co-operation is desirable between the three countries."

RHODESIA, SOUTHERN. A British dominion in southern Africa. Area, 150,344 square miles; population (June 30, 1938, estimate), 1,375,540 including 1,311,000 natives, 58,870 Europeans, and 5670 Asiatic and colored persons. Chief towns: Salisbury, the capital, including suburbs, had 32,846 inhabitants; Bulawayo, with suburbs, 29,126; Umtali; Gwelo; Gatooma; Que Que; Shabani; Selukwe; Sindura; Wankie; and Fort Victoria. During 1937 (Europeans only) there were 1308 births (22.92 per 1000), 536 deaths (9.39 per 1000), and 686 marriages (24.04 per 1000). On Dec. 31, 1937, the 1418 schools of all kinds had 116,475 pupils enrolled.

Production and Trade. The principal agricultural products were maize, cotton, tobacco, groundnuts, legumes, oranges, and lemons. Dairying was an important industry. Citrus fruit exported in 1937 totaled 162,352 cases. Livestock in the country included 2,316,832 cattle (1938), 306,068 sheep (1936), and 105,610 swine (1936). Mineral production (1937) was valued at £7,484,863 of which gold (804,219 fine oz.) accounted for £5,656,693; asbestos (57,014 tons), £840,026; coal (1,134,656 tons), £497,724; chrome ore (271,265 tons), £367,386; silver, mica, iron, tin, and tungsten also were produced. In 1937 total imports were valued at £8,568,685; total exports, £11,978,984 (including gold valued at the price current on the day of export. Prior to 1937 the price of gold was calculated at the standard price of £4.24773 per fine oz.).

Communications. The total length of railway line in operation during 1937 was 1356 miles. Road motor services with an aggregate length of 1629 miles supplement the railways. There is a network of airways covering the country and connections are made with Imperial Airways' service between London and South Africa. There were 39,924 miles of telegraph and telephone lines in 1937.

Government. For the fiscal year ended Mar. 31, 1938, revenue totaled £3,434,410; expenditure, £3,168,453 (excluding expenditure out of loan funds of £1,186,724); public debt, £12,367,224. The government is headed by a governor who is assisted by an executive council. There is a legislative assembly of 30 members elected for five years by popular franchise. Amendments (with certain exceptions) to the Letters Patent setting up the constitution may be made by a two-thirds vote of the legislature. During October, 1937, an act was passed providing for the establishment of native councils, representative of the local chiefs and native residents in any native reserve, to advise the governor and supervise such local matters as may be entrusted to it. Governor and Commander-in-Chief, Sir H. J. Stanley (appointed in 1934); Prime Minister and Minister of Native Affairs, G. M. Huggins.

History. By amending Letters Patent of 1937 the British High Commissioner in South Africa relinquished certain supervisory powers in connection with native affairs and the trusteeship of the native reserves which were vested in him. See RHODESIA, NORTHERN, under *History*.

RHODES (RODI) ISLANDS. See *ÆGEAN ISLANDS, ITALIAN*.

RICE. The seven countries other than the United States reporting to the International Institute of Agriculture estimated their yields of rough rice for the crop year 1938-39 as follows: Japan 582,721,000 bu., Burma 406,934,000 bu., Siam 241,917,000 bu., Chosen 18,975,000 bu., Italy 35,516,000 bu., Manchoukuo 35,471,000 bu., and Bulgaria 1,290,-

000 bu. The Soviet Republics reported a production of 16,402,000 bu. in 1937-38 and an average of 11,596,000 bu. for the five years 1932-33 to 1936-37.

The Department of Agriculture estimated the 1938 rice crop of the United States at 52,303,000 bu., only 1,069,000 bu. below the all-time record crop produced in 1937 and compared with the average of 42,452,000 bu. for the 10 years 1927-36. The harvested area of 1,068,000 acres compared with 1,088,000 acres harvested in 1937 and the acreage of 906,000 acres for the 10-year period. The 1938 average yield for the four rice-growing States was estimated at 49 bu. per acre, which was 2.1 bu. above the 10-year average. Production in the southern rice area totaled 43,203,000 bu., which was 1,061,000 bu. below the harvest in that area in 1937. The yields of the States in this area were reported as follows: Louisiana 20,748,000 bu., Texas 13,005,000 bu., and Arkansas 9,450,000 bu. The crop was damaged in southwestern Louisiana by an August hurricane and in Texas by heavy rains in the harvesting season. The 1938 crop of California, estimated at 9,100,000 bu., was produced on 130,000 acres, the average yield per acre being 70 bushels. The weather preceding and during the harvest was favorable so that by November 1, about 70 per cent of the crop was in storage.

During the fiscal year ended June 30, 1938, the United States exported 22,390,000 lb. of paddy or rough rice, 295,773,000 lb. of milled and brown rice, and 538,000 lb. of rice flour, screenings, and like products and imported 87,638,000 lb. of broken rice, 7,987,000 lb. of cleaned or milled rice, 5,915,000 lb. of paddy, uncleaned, or brown rice, 3,167,000 lb. of patna, 1,633,000 lb. of rice flour, meal, polish, and bran, and 287,000 lb. of rice straw and fiber. See "Rice Culture in the Southern States," U.S. Department of Agriculture Farmers' Bulletin No. 1808, October, 1938.

RICE INSTITUTE. A coeducational institution for higher education in Houston, Texas, opened in 1912. The enrollment in the autumn of 1938 was 1368, and the faculty numbered 92. The plant equipment and productive funds of the institution were estimated at \$17,000,000, and the income from endowment for the fiscal year 1937-38 was in excess of \$600,000. The library contained 140,000 volumes. President, Edgar Odell Lovett, Ph.D., Sc.D., LL.D.

RIDGWAY, ROBERT. An American engineer, died in Fort Wayne, Ind., Dec. 19, 1938. Born in Brooklyn, N. Y., Oct. 19, 1862, he was educated in the public schools there and at home, and in 1882 he went to work for the Northern Pacific R.R. in Montana and Wisconsin as a chainman, rodman, and leveler. Two years later he returned to New York where he entered the employ of the Aqueduct Commission of New York City, becoming assistant engineer in the construction of the aqueduct, reservoirs, and dams of the Croton system (1886-1900). He then joined the Rapid Transit Railroad Commission, serving as an assistant engineer, and later as division engineer in charge of the construction of the South Ferry Loop, tunnels under the East River, and various Brooklyn subways.

With the establishment of the Board of Water Supply of New York City in 1905, Ridgway became associated with that department as an engineer in charge of the location and construction of the Catskill Aqueduct. In 1912 he joined the Public Service Commission, 1st District, N. Y., and its successors, the Transit Construction Commission

and the Transit Commission, becoming one of the foremost authorities on subway construction. Until 1921 he was in charge of all engineering work of the commission in connection with the rapid transit system of New York City, when he was appointed chief engineer of the Commission. In 1924 he became chief engineer of the Board of Transportation of the City of New York in charge of all rapid transit design and construction in the city, and as such was credited with much of the design and construction of the City's Eighth Avenue Subway Line. He became consulting engineer to the Board in 1932 and retired on Dec. 16, 1933. He then joined the Port of New York Authority as a consulting engineer.

Although Mr. Ridgway's work was done chiefly in New York, he served also as a member of the Chicago Traction and Subway Commission (1916-17); chairman of the board of engineers of the Trans-Bay Bridge, San Francisco (1927); member of the Colorado River Board for Boulder Canyon Dam (1928-32); consulting engineer to the Japanese Government (1929); consulting engineer, Rapid Transit Subways, Chicago (1930-31), and consulting engineer in the rapid transit studies of San Francisco (1935). In August, 1938, he was appointed by Secretary of the Interior Ickes to the Chicago Subway Commission to report on a proposed subway system for Chicago to be financed by the PWA.

A holder of honorary degrees from leading schools and a member of the chief engineering societies, he was president of the American Society of Civil Engineers in 1925 and was elected to honorary membership in 1934.

ROADS AND STREETS. Highway construction administered by the U.S. Bureau of Public Roads for the year ended June 30, 1938, included 15,345 miles of all types of improvement, elimination of 711 grade crossings, reconstruction of 144 obsolete grade-crossing structures, and protection by signs and signals of 744 highway-railway crossings. Most of the work was done in co-operation with and under the direct supervision of the several state highway departments. In this way there were completed 9333 miles of the so-called rural portion of the Federal-aid highway system, 2037 miles of secondary or feeder roads, and 760 miles of roads and streets in municipalities, the intra-urban work being a relatively new feature of Federal-aid. Roads in Federal forests and other Federally controlled areas, reconstruction of flood-damaged roads and roads improved with funds allotted by other Federal agencies totaled 3215 miles. At the close of the fiscal year there were 9142 miles of Federal-aid roads under contract and mostly under construction. Of high-character road surfacing done in 1937-38, Portland cement concrete led with 2870 miles. Next came 1989 miles of low-cost bituminous mix. Plain macadam totaled only 316 miles. Gravel and sand-clay, mostly untreated, made up the highest total mileage. Looking to the future, the Bureau says that the greatest needs on main highways are widening, longer sight distances, and reduced curvature. Starting with 12 ft., widths of improved roadways were increased to 14 and 16 ft. The Federal Highway Act of 1921 demanded no more than 18 ft. for two lanes. Soon a surfaced width of 24 ft. will be the generally recognized standard for important two-lane highways. Experience with four-lane roads near and

between large cities shows that traffic in opposite directions should be separated by a dividing neutral strip.

A 140-mile unit in the 480-mile Blue Ridge Parkway was so far completed during the year as to make its opening in the spring of 1939 probable. This unit is located in Virginia and North Carolina. The Overseas Road and Toll Bridge District put into service on March 29 its highway and bridge system joining the island of Key West, Fla., with the mainland. Built with a \$3,600,000 PWA loan, the highway utilizes what remained of the roadbed and bridges of the railroad after the hurricane of 1935.

State gas tax diversion to other than highway purpose was prohibited by constitutional amendments in New Hampshire, Michigan, and California at elections on November 8, in each case by a large majority. In Alabama a similar amendment was defeated by a close vote. In Arkansas an amendment obligating the major part of the State motor vehicle and gas taxes for the payment of principal and interest of highway bonds was defeated. An experimental reinforced-brick road is being tested by the Ohio Highway Department. The reinforcement consists of different types of steel: bars, welded bars, and welded bar mats.

Central and South America. Toward the Inter-American Highway from Laredo, Texas, to Panama City, Panama, the Bureau of Public Roads contributed materially in 1937-38. Besides reconnaissance surveys, the Bureau has aided in the design and supervision of the construction of bridges. The United States has supplied steel, cement, and construction equipment, while the assisted countries provided local materials and labor. The total length of the Inter-American Highway as planned up to the middle of 1938, states the U.S. Bureau of Public Roads, is 3305 miles, thus divided: Paved, 1083; gravel, 447; graded earth, 47; ungraded road or trail, 1732 miles. By the end of 1941 it is hoped that an "all-weather road" will have been completed as far south as Choluteca, Honduras. In Peru, there was officially inaugurated on November 20 a 100-mile addition to the Pan-American Highway.

ROCHESTER, UNIVERSITY OF. A nonsectarian, privately endowed institution of higher education for men and women at Rochester, N. Y., founded in 1850. It includes three schools: The College of Arts and Science, composed of a College for Men and a College for Women, on separate campuses; the Eastman School of Music, and a School of Medicine and Dentistry. A School of Nursing is also maintained in conjunction with the Strong Memorial Hospital, property of the University. The enrollment for the first term of 1938-39 was 2326, exclusive of extension division (1374) and special music students (664), and was distributed as follows: Arts and Science, 1226; music, 355; medicine and dentistry, 188; nursing, 113; graduate students, 416. For the summer session, 406 were enrolled in the arts college and 501 in the music school. There were 538 members on the faculty, including 331 full-time. The amount of endowment was \$51,897,173, and the total income for the year 1937-38 was \$2,280,000, exclusive of gifts totaling \$227,103. The library contained 329,706 books. President, Alan Valentine, LL.D.

ROCKEFELLER FOUNDATION, THE. An organization chartered in 1913 for the permanent purpose of "promoting the well-being of mankind throughout the world." Its program is concerned with certain definite problems in the fields

of the medical, natural, and social sciences, the humanities, and public health, and with rural reconstruction in China. For work in these fields the Foundation during 1938 appropriated approximately \$15,100,000. A statement of the major grants follows.

Medical Sciences. In the field of medicine the Foundation's interest is centered on mental and nervous diseases, and its contributions are chiefly for the furtherance of research and teaching in psychiatry and allied subjects. The larger appropriations for these purposes in 1938 included: \$1,580,000 to the China Medical Board, Inc., for the maintenance of the Peiping Union Medical College; \$1,000,000 to the American University of Beirut, for endowment of the medical sciences, nursing, and premedical subjects; \$700,000 to Yale University, toward support of the Institute of Human Relations; \$634,000 to Washington University School of Medicine, for support of the department of neuropsychiatry, for research in neurophysiology, and for maintenance of its departments of medicine, surgery, pediatrics, and obstetrics; \$150,000 to the University of Chicago, for support of psychiatric teaching and research; \$150,000 to The Johns Hopkins University School of Medicine, toward support of the Institute of the History of Medicine; \$127,500 to the London County Council, for psychiatric research at Maudsley Hospital; \$120,000 for fellowships to be provided during the year 1939; \$120,000 to the Institute for Psychoanalysis, Chicago, for its general program and training analyses; \$100,000 to Columbia University, toward the support of teaching and research in neurology; \$100,000 to the University of Oregon Medical School, for construction of a library; \$90,000 for grants in aid of research, for 1939; \$75,000 to Leland Stanford, Junior, University, for its general research fund in medicine; \$66,000 to the Research Council of the New York City Department of Hospitals; \$60,000 to Dartmouth College, for research in physiological optics; and \$51,000 to McGill University, for research in epilepsy and dementia.

Natural Sciences. The Foundation aims to stimulate and assist studies in the field of the natural sciences which will furnish the factual background essential to the understanding of bodily processes. Appropriations for such studies during 1938 included: \$1,680,000 to the University of Chicago, for the endowment of biological research and for specific studies; \$189,000 to Yale University, toward the expenses of its Laboratories of Primate Biology; \$160,000 for grants in aid of research and \$140,000 for fellowships to be awarded during 1939; \$100,000 to Harvard University, for research in its department of physical chemistry; \$83,700 to Columbia University, for biochemical research; \$75,000 to the University of Illinois, for research on the biochemistry of amino acids; \$70,000 to the California Institute of Technology, for research in biological problems as related to chemistry; \$67,000 to Washington University, for research in general physiology and experimental embryology; \$61,200 to the University of London, for research on vitamins, sterols, and related compounds; \$58,800 to the Eidgenössische Technische Hochschule, Zurich, for research in organic chemistry; and \$51,000 to the University of Leeds, for research on X-ray analyses of biological tissues.

Social Sciences. In the field of the social sciences the Foundation has three spheres of special interest at the present time: International relations, social security, and public administration. Approp-

riations of \$50,000 and over made during 1938 for projects in these fields were as follows: \$2,000,000 to the Spelman Fund of New York, for its program in public administration; \$315,000 to the graduate Institute of International Studies, Geneva, toward its general expenses; \$275,000 to the Social Science Research Council, for conferences and planning, grants in aid of research, and special studies in public administration, social security, and state unemployment compensation; \$200,000 to the Institute of Pacific Relations, for its American and Pacific Councils, and for studies carried on under the International Secretariat; \$125,000 for grants in aid of research; \$105,000 to the National Institute of Public Affairs, for recruiting and training personnel for Federal service; \$102,000 to the Centre d'Études de Politique Étrangère, for general expenses; \$100,000 to be applied for fellowships granted in 1939; \$99,000 to the Council on Foreign Relations, for its research program and the work of the American Co-ordinating Committee of the International Studies Conference; \$75,000 to the University of Chicago, for research and training in public administration; \$75,000 to the Foreign Policy Association, New York City, for support of its research department; \$74,500 to the Pacific Northwest Council of Education, Planning, and Public Administration, for general administration, research, and publications; and \$50,000 to the Geneva Research Center, for a study of commercial policy.

The Humanities. The program in the humanities is concerned with the techniques, such as museums, the radio, drama, and libraries, by which cultural levels of contemporary society are being influenced, and with the promotion of better international understanding through cultural interchanges. Major appropriations in 1938 included: \$112,500 to the American Council of Learned Societies, for its general activities and certain specific researches; \$100,000 to the World Wide Broadcasting Foundation, for developing its program of educational and cultural value; \$90,000 for grants in aid of research to be designated in 1939, and \$75,000 for fellowships to be awarded in 1939; \$70,000 to the Museum of Modern Art, for general support of its Film Library; and \$65,000 to Princeton University, for the development of its Far Eastern studies and for its Index of Christian Art.

Public Health. The Foundation appropriated \$2,200,000 in 1938 for the work of its International Health Division during 1939. This work includes research on a number of selected diseases, among them yellow fever, malaria, rabies, tropical anemia, intestinal parasites, respiratory diseases, and yaws; demonstrations in the control of certain of these diseases in their environment; co-operation with governments in the organization or improvement of important services of central or local health departments; and the development of public health education. Fellowships in public health are provided and public health personnel are given opportunities for training in connection with health demonstrations and through travel. Grants of \$270,000 toward the construction and equipment of a state institute of public health in Stockholm, Sweden, and \$255,000 toward the endowment of the School of Nursing of the University of Toronto, were made directly by the Foundation.

China Program. Conditions in China during the past two years have naturally prevented the development of the Foundation's program in rural reconstruction, but certain grants were made during 1938 to maintain features of the work which

were still being carried on, or which would tend to conserve the personnel trained to prosecute the endeavors. \$170,100 was appropriated for projects in connection with certain institutions under this general classification; \$85,000 to the Associated Boards for Christian Colleges in China, to be expended as emergency grants for maintenance of nine private foreign universities and colleges; and \$70,000 was set aside for fellowships and grants in aid of research.

In addition to major appropriations listed above, the Foundation appropriated \$50,000 as a Special Research Aid Fund for allocation to institutions in behalf of European scholars whose productive careers have been interrupted because of political conditions.

Officers. The executive officers of the Foundation in 1938 were: John D. Rockefeller, Jr., Chairman of the Board of Trustees; Raymond B. Fosdick, President; Thomas B. Appleget and Selskar M. Gunn, Vice-presidents; Alan Gregg, M.D., Director for the Medical Sciences; Warren Weaver, Director for the Natural Sciences; Sydnor H. Walker, Acting Director for the Social Sciences; David H. Stevens, Director for the Humanities; Wilbur A. Sawyer, M.D., Director of the International Health Division; Norma S. Thompson, Secretary; Lefferts M. Dashiell (died, February 28) and Edward Robinson, Treasurer; George J. Beal, Comptroller; Thomas M. Debevoise, Counsel; and Chauncey Belknap, Associate Counsel. Offices were maintained at 49 West 49th Street, New York City.

ROLLINS COLLEGE. A nonsectarian, coeducational institution of higher learning in Winter Park, Fla., founded in 1885. The enrollment for the fall term of 1938-39 was approximately 400. The full-time faculty members numbered 56. The productive endowment, and other invested funds serving as endowment, amounted to approximately \$1,250,000, yielding an annual income of about \$45,000. The net income from all other sources was in excess of \$250,000. The library contained approximately 46,000 volumes, in addition to 5000 public documents. President, Hamilton Holt, Litt.D.

ROMAN CATHOLIC CHURCH. All the life of the Catholic Church is affected by events in Rome where in Vatican City the Pope resides as its visible head. The year 1938 was one of great activity in the Vatican where Pius XI, a man in his eighties, used his indomitable will to fight off the effects of age and ill health. None of the problems with which he had wrestled were new but the greater proportion of them were in an aggravated form. Through his endeavors to promote peace and his numerous pronouncements against the ideologies based on totalitarian forms of government and racial hatreds, he won new recognition as a notable statesman and leader. Yet there was some slackening in his activities for he, who had issued 30 encyclicals during his reign, wrote none in 1938; and he created no new Cardinals.

In the presence of 18 Cardinals and a distinguished company, Pope Pius inaugurated the Pontifical Academy of Science on January 30. In his inaugural address, he emphasized the admirable harmony that must exist between science and faith. He paid a special tribute to the late Senator Marconi, who had put at the service of mankind the electric rays discovered by Hertz. These two, he said, understood that nature was an admirable field for men of good will to ascend toward God, their Creator. On February 11 brilliant ceremonies were held in Vatican City and throughout Italy to ob-

serve the ninth anniversary of the Lateran agreement which re-established harmonious relations between Italy and the Holy See. This celebration antedated by one day the 16th anniversary of the coronation of Achille Ratti as Pope Pius XI.

The Holy Father was greatly saddened by conditions in Austria which led to the *Anschluss*, although he had, long before the actual happening, realized that this Catholic country would be absorbed by a government, which, normally observing its Concordat, nevertheless was continuously, if not always openly, persecuting the Church. He refrained from making any public announcement on the crisis precipitated over the annexation of Austria although he had a two-hour conference with Cardinal Innitzer, Archbishop of Vienna, who made a hurried trip to the Vatican for that purpose. On April 13 on the occasion of the visit of a group of students from Innsbruck, the Holy Father told them that they brought him more abundant consolation than usual but this was mixed with affliction "For there blows from Austria not the breath of spring, but rather a sorrowful tempest." On March 16, receiving the faculty and students of the Russian College in Rome, he declared that he remained optimistic concerning the future of religion in Russia "notwithstanding persecution, suffering and sorrow"; and he blessed especially their preparation to labor for souls in their own country "when the hour of God comes." The canonization of Andrew Bobola, the Polish Jesuit martyr, Giovanna Leonardo, founder of the Clerics Regular of the Mother of God, and Salvatore of Horta, Spanish Franciscan, were marked by great solemnity on Easter Sunday. The Pope, despite ill health, presided at the ceremonies in the Basilica of St. Peter.

The Pope left Rome and took up his residence at Castel Gandolfo on the first of May. His departure from Rome earlier than was usual gave rise to rumors that he had left the Vatican to avoid the visit of Adolf Hitler to Rome. This rumor was officially denied, but in an address on May 4 to a group of newly married couples he regretfully referred to the fact that on a day dedicated to the Holy Cross there was displayed in Rome, to welcome the German dictator, another cross "which is not the cross of Christ." On May 31 Pius XI celebrated quietly his 81st birthday, a Mass of thanksgiving being the only observance of the day, although countless messages of congratulations were received.

On May 27, the closing day of the International Eucharistic Congress at Budapest, to which Cardinal Pacelli was appointed Papal Delegate, the Pope broadcast a message and his blessing. En route to the Congress and from it many pilgrims, including a goodly number of Americans, journeyed to Castel Gandolfo for audiences with the Holy Father. He praised their piety and zeal and hailed the Budapest Congress as a great success, for there were reunited the Faithful from every country with "a few very disgraceful exceptions." He was referring to the fact that the German government refused passports to its citizens to make the trip into Hungary. Among those the Pope received at this time were three prominent Americans. The first was Monsignor Ready, General Secretary of the National Catholic Welfare Council in Washington in whose work the Pope expressed deep interest. He spoke with joy of Christian education and lay organization in the United States in contrast to the suffering of the Church in many countries. In an audience granted the Rev. John LaFarge, S.J., Chaplain of the Catholic In-

terracial Council, the Holy Father expressed keen interest in the work of this organization in America and his approval of the work of all those participating in it. On the occasion of giving a special blessing to the Knights of Columbus, on receiving Martin H. Carmody, Supreme Knight, Pius XI particularly commended the Knights' campaign against communism which, he said, he was informed from authentic sources, was directing its greatest efforts in America as a country in which communists considered easiest progress might be made.

Formal recognition of the Spanish Nationalist Government by the Vatican took place in May. This was marked by the appointment of the Most Rev. Gaetano Cicognani as Papal Nuncio to Burgos and Don Jose Maria de Janguas y Messia as ambassador from Spain to the Vatican. The Holy Father had made available for restoration and relief purposes in Spain over five hundred thousand pesetas distributed during the year by the former Charge d'Affaires, Most Rev. Hildebrand Antoniutti who was later appointed Apostolic Delegate to Canada.

The Pope appointed Cardinal Villeneuve as Papal Delegate to the National Eucharistic Congress, held in Quebec June 22-26. At the closing ceremony the Pope blessed the Congress in a radio broadcast and said: "We congratulate you cordially, because you have given Us to see the ancestral faith of your forebears so vigorously relived today and to behold the pious emulation with which you seek the revival of their excellent example." To a group of Mexican pilgrims received on June 11, the Holy Father spoke words of paternal consolation to them and their countrymen suffering sorrows in the face of persecution of truth. He welcomed Premier Imredy and Mme. Imredy of Hungary on July 20, awarded them the Cross Pro Ecclesia et Pontifice, and sent through them his blessing to all Hungarians, especially those having greatest need of Divine help. Declaring that he "expects much from Japan," the Pope on August 11 extended greetings to a mission of Japanese youth who had previously been guests of the Italian government. When on September 2, he received representatives of Chinese missionary organizations, he expressed deep paternal solicitude for those laboring in the vineyard of war-torn China. An official mission from Manchoukuo was welcomed by the Pontiff on September 10, at which time he said he was delighted to have their good wishes and prayed God would bless their country, their people, and their emperor. In a discourse to the General Chapter of the Capuchins, he recommended severity of discipline above all for those just entering religious life. His words, he said, were directed to the Bishops and clergy in general, as there is in the world today a lack of discipline which compromises everything. In a discourse to Italian Catholic Action assistants on July 21, the Holy Father emphasized the importance of their work and, expressing his gratitude to the Bishops of the whole world, stated: "This period of Our life is so sadly preoccupying and serious in so many parts of the world, but We must say that God has reserved for this last part of Our life not venom but an infinite sweetness, especially in this development"—the continual and ever greater fruitfulness of Catholic Action.

During the summer months the first manifestations of a new Italian racial credo appeared. The Pope immediately and vigorously condemned as erroneous and dangerous "a nationalism in many ways exaggerated, an ill-conceived nationalism"

which is contrary to the law of God and the Faith. This new Italian policy led to disputes as to activities of Catholic Action groups. Commenting on this, the Pope said: "Catholic means universal, not racist, nationalist, or separatist. Catholic Action must be inspired by these principles. . . . Some, as if seizing a propitious occasion, affirm that between Catholic Action and the Fascist party there exists insurmountable doctrinal divergences. This is a silly affirmation." These difficulties were adjusted in August by agreements confirming the stipulations of September, 1931, which regulated the relations between Catholic Action and the Fascist party. However, the Pope repeated his warnings against exaggerated nationalism when he visited the College of Propaganda in August. He termed it "a real malediction" that produces apostolic sterility and recalled the universality of the Redemption. Later he protested the Italian Law toward the Defense of the Race prohibiting marriages between Italians of "the Aryan race" and persons of other races; and King Victor Emmanuel assured him efforts would be made to meet these objections. See ITALY under *History*.

By the express wish of the Pope, enormous congregations participated in the Hour of Adoration, Reparation, and Supplication for peace held in all the churches of Rome on September 25 during the Sudeten crisis. On September 29 he broadcast an appeal to all the world to join him in "most undaunted and insistent prayer" for the preservation of peace. Receiving the Czecho-Slovak envoy a few days later, Pope Pius spoke of the great sacrifice for peace and humanity made by the envoy's country and gave his blessing to "the new Czecho-Slovakia which will certainly have a happier future."

The Holy Father broadcast a message and his blessing to the National Eucharistic Congress held in New Orleans on October 18 at which Cardinal Mundelein was Papal Legate. He returned quietly to the Vatican on October 29 and on November 3 was present in St. Peter's when a requiem Mass was celebrated by Cardinal Pacelli in the presence of other high dignitaries for the members of the Sacred College who died during the year. On three succeeding Sundays, the Pontiff presided at special ceremonies of beatification in the Vatican Basilica—on November 6 for Maria Rossello, foundress of the Sisters of Mercy; on November 13 for Mother Francis Xavier Cabrini, foundress of the Missionary Sisters of the Sacred Heart of Jesus; and on November 20 for Maria Dominia Mazzarello, foundress of the Salesian Sisters. On November 25 the Pope suffered a sudden heart attack which caused much anxiety but the following day he had rallied and shortly thereafter resumed his normal activity. Just before this illness, voicing his distress over conditions in the whole world, he had said: "We continually repeat to God that We would be very happy if He would give Us a happy death, namely, rest to an old man who is now a tired worker. But We add, like St. Martin, that if We can still do something for the common good, God's will be done."

Diplomatically the Church was occupied during the year in many parts of the world. The German absorption of Austria, a country 95 per cent Catholic, foreshadowed persecutions of the Church similar to those in Germany itself. There were immediately grave breaches of the Concordat which had existed between the Vatican and Austria. Various Catholic organizations were dissolved and their funds confiscated; the direction, personnel, and character of Catholic journals were changed; semi-

naries and all private and parochial schools were closed and Catholic leaders were arrested. After a conference with the Pope, Cardinal Innitzer of Vienna issued a statement in the name of the Austrian hierarchy which declared that no "approval of what was, or is irreconcilable with the law of God and the freedom and rights of the Catholic Church" could be issued. The hierarchy only asked freedom of religious practice, and instructions to the clergy in May and June were issued ordering them to abstain completely from any kind of political activity. Nazi demonstrations against the Cardinal took place on October 7, when a mob broke all windows of his residence, sacked his apartment, and attacked and injured priests seeking to protect His Eminence. For a time toward the close of the year, the Cardinal was reported to be held in "protective custody." In Germany there were sporadic demonstrations against various members of the hierarchy and various violences. The Bishops, meeting at Fulda on August 26, issued a joint pastoral in which was stated that "it is obvious that Nazis are aiming at the complete destruction of Christianity." After the partition of Czecho-Slovakia, Cardinal Kaspar, Archbishop of Prague, in a pastoral letter, declared that country's crisis was in great part due to irreligion among the people and he called for a solid Christian reconstruction of the country. A new and stronger agreement between Czecho-Slovakia and the Holy See was being sought at the end of the year. The Vatican protested the Yugoslavian government's decision not to consider ratification of the Concordat signed in 1933. Whereas in Mexico the sporadic persecutions of priests and nuns, desecration of Church property, and suppression of Catholic publications continued, there was indicated a new determination by communicants to continue openly their religious worship. Restoration of churches was won in some parishes but many restrictions imposed by Mexican civil and military authorities still exist.

Assemblies. The outstanding Catholic world event of the year was the 34th International Eucharistic Congress which opened May 25 in Budapest. Over one million attended the various ceremonies in Heroes' Square. The Congress was marked by a Holy Hour and midnight Mass for men and a unique night pageant on the Feast of the Ascension during which illuminated boats steamed for 6 miles down the Danube between the twin cities, Buda and Pest, escorting the Blessed Sacrament. Cardinal Pacelli, Papal Secretary of State, who was serving as Papal Legate, presided at the ceremonies which were closed on May 29 by an address of Pius XI transmitted by radio. Mindful that the Congress coincided with St. Stephen's Jubilee Year which commemorated the 900th anniversary of the death of Hungary's first Christian king, His Holiness acclaimed the spiritual heritage which was Hungary's national glory: "We see in spirit . . . so many men and women from your nation . . . so full of evangelic virtue, who through the brilliance of their lives and example, have illuminated Hungary and have made it a sort of invisible rampart against the enemies of the Christian name and of European civilization." Two other notable assemblies of the year were National Eucharistic Congresses, one held in Quebec June 22-26; and another in New Orleans Oct. 17-20. The Pontiff addressed both Congresses by radio.

The Cardinals. There were no new Cardinals created in 1938 and five members of the Sacred College died leaving its membership at 62, 8 short of its full complement. Patrick Cardinal Hayes

(q.v.), Archbishop of New York, died September 3. Camillo Cardinal Laurenti, Prefect of the Sacred Congregation of Rites, died September 6. Carlo Dalmazio Cardinal Minorette, Archbishop of Genoa, and social scientist, died March 13 at the age of 76. Named Bishop of Crema in 1915, he was transferred to Genoa in 1925 and created Cardinal in 1929. He was head of the Italian "Social Week" and author of a manual on Social Science. Giulio Cardinal Serafini, Prefect of Sacred Congregation of the Council died July 16. Luigi Cardinal Capotosti, Apostolic Datary, died February 16.

The Hierarchy. New Bishops created in 1938 included Most Rev. John H. Peschges, Bishop of Crookston, Minn., consecrated on November 16; Most Rev. Frank A. Thill, Bishop of Concordia, Kan., consecrated October 28; Most Rev. Stephen Woznicki, Auxiliary Bishop of Detroit and titular Bishop of Pelte; Most Rev. Peter Amigo created Archbishop of Southwark, February 10; Most Rev. Francis R. Cotton, first Bishop of Owensboro, Ky., consecrated February 24; Most Rev. Bartholomew J. Eustace, first Bishop of Camden, N. J., consecrated March 25; Most Rev. William A. Griffin, Auxiliary Bishop of Newark and titular Bishop of Sanavo, consecrated May 1; Most Rev. Pedro A. Santos, Bishop of Nueva Caceres, P. I.; Most Rev. Mariano Madriago, Bishop of Lingayen, P. I.; Most Rev. Matthew Francis Brady, Bishop of Burlington, Vt., consecrated October 26. Most Rev. Timothy Corbett resigned as Bishop of Crookston because of ill-health and was made Titular Bishop of Vita; and for the same reason the Most Rev. Francis J. Tief, Bishop of Concordia resigned and was named Titular Bishop of Nisa. Saginaw, Mich., was made a diocese with its see in that city and Most Rev. William F. Murphy was consecrated its first Bishop.

Statistics. Catholic populations are as follows: Alaska, 12,272; Albania, 100,320; Algeria, 814,740; Andorra, 5231; Angola, 354,021; Arabia, 688; Argentina, 12,108,790; Australia, 1,225,514; Austria, 6,154,431; Azores, 262,073; Bahamas, 3801; Balearic Islands, 343,650; Basutoland, 146,000; Bechuanaland, 25,265; Belgium, 7,968,431; Bolivia, 2,779,000; Borneo, 7584; Brazil, 46,794,874; Bulgaria, 44,240; Camerouns (Br.), 24,807; Cameroon (Fr.), 263,755; Canada, 4,285,388; Canary Islands, 473,320; Cape Verde Islands, 145,300; Celebes, 21,435; Ceylon, 443,665; Chile, 3,682,591; China, 3,000,000; Colombia, 6,880,000; Congo, 1,767,492; Costa Rica, 440,695; Crete, 800; Cuba, 2,003,307; Czecho-Slovakia, 10,831,636; Dahomey, 38,307; Denmark, 25,702; Dominican Republic, 600,000; Dutch East Indies, 572,390; Ecuador, 1,140,639; Egypt, 156,000; England, 2,230,960; Estonia, 4000; Fiji Islands, 15,709; Finland, 3000; Formosa, 7193; France, 29,000,000; French Equatorial Africa, 587,724; French India, 250,000; French Indo-China, 1,441,124; French West Africa, 200,000; Gambia, 3000; Germany, 21,172,078; Gibraltar, 15,410; Goa (Portuguese India), 345,341; Gold Coast, 103,651; Greece, 54,269; Guadeloupe, 266,357; Guam, 19,045; Guatemala, 1,997,560; Guiana (Br.), 33,998; Guiana (Dt.), 30,124; Guiana (Fr.), 43,667; Guinea, 10,872; Haiti, 2,000,000; Hawaii, 116,000; Holland, 2,293,563; Honduras, 91,350; Hungary, 7,131,398; Iceland, 231; India (Br.), 3,707,704; Iraq, 73,144; Eire, 2,751,269; N. Ireland, 420,428; Italy, 43,409,145; Ivory Coast, 44,265; Jamaica, 54,000; Japan, 111,870; Kenya, 76,019; Korea, 115,949; Latvia, 506,509; Liberia, 5805; Libya, 51,148; Lithuania, 1,691,587; Luxembourg, 87,977; Macao (Portuguese China), 33,047; Madagascar, 590,000; Ma-

deira, 150,528; Malaya, 79,730; Malta, 160,000; Mauritius, 140,073; Mexico, 16,000,000; Monaco, 20,000; Morocco (Fr.), 105,225; Morocco (Sp.), 59,669; Mozambique, 516,296; Nepal, 500; New Caledonia, 28,000; Newfoundland, 87,000; New Guinea, 15,594; New Hebrides, 32,96; New Zealand, 187,000; Nicaragua, 576,608; Nigeria, 208,170; Norway, 2842; Nyasaland, 100,390; Palestine, 45,367; Panama, 412,467; Papua, 17,882; Paraguay, 800,000; Persia, 5813; Peru, 3,678,110; Philippines, 11,653,722; Poland, 23,668,123; Portugal, 5,612,000; Puerto Rico, 1,500,000; Réunion, 189,361; Rumania, 2,391,677; Russia, 1,550,000; Salvador, 1,430,000; San Marino, 13,000; Scotland, 634,444; Senegal, 34,807; Siam, 62,143; Sierra Leone, 794; S.W. Africa, 12,000; Spain, 23,000,000; Swaziland, 4125; Sweden, 4031; Switzerland, 1,677,317; Syria, 524,984; Tahiti, 8560; Tanganyika, 255,182; Trinidad, 195,000; Tunisia, 194,856; Turkey, 41,391; Uganda, 477,391; Union of S. Africa, 314,816; Uruguay, 1,568,000; Vatican City, 1025; Venezuela, 2,456,000; Wales, 102,921; Zanzibar, 19,137. The total Catholic world population is approximately 350,000,000 or about 19 per cent of all.

Figures compiled by the Official Catholic Directory for 1938 put the Catholic population of the United States at 21,451,460, an increase of 492,326. The number of converts was 62,696 or 634 more than in the previous year. The hierarchy numbers 20 Archbishops, 4 of whom are Cardinals (including Cardinal Hayes), and 112 Bishops. The secular priests number 22,045, an increase of 305 over 1937; and the priests of religious orders number 10,623, an increase of 714. The churches total 18,428, a decrease of 98, and include 12,797 churches with resident pastors and 5631 missions with churches. The number of seminaries increased by 1, the total being 206; and the seminarians decreased by 5893, the total being 15,984. There are 196 colleges for boys, a decrease of 6. Colleges and academies for girls total 675, an increase of 7. There are 1306 high schools, 127 more than in 1937, with a total attendance of 410,021, a gain of 12,234. The number of parochial schools is 8028, an increase of 583, and an attendance of 2,101,376, a decrease of 68,689. The number of orphanages is 326, an increase of 1, and the number of orphans cared for was 39,545, or 583 less than in 1937. There are 168 homes for the aged poor, a decrease of 2, and there are 684 hospitals, an increase of 12, with 412 nursing schools. Catholic chaplains attached to the U.S. Army number 31; to the U.S. Navy, 16, with 21 assigned to veteran hospitals. There are 24 auxiliary and 40 military reserve chaplains on active duty.

ROOSEVELT, FRANKLIN D. See UNITED STATES.

ROSE ISLAND. An island of the central Pacific (approximately 14½° S. and 168° W.), included in American Samoa (q.v.).

ROSICRUCIAN ORDER. An international fraternity, known as the Ancient, Mystic Order Rosae Crucis, whose name is derived from the emblem, a cross with a single rose in the center, adopted by Johann Valentin Andreae, erroneously regarded as the restorer of the Order in Germany in the 17th century. (For details as to the traditional origin and re-establishment of the Order in North America, see the NEW INTERNATIONAL YEAR BOOK, 1932.) In 1938 the Rosicrucian Order in North America had throughout its jurisdiction of the United States and its dependencies, Canada, the West Indies, and the Central American States 13 grand lodges, 145 local chapters, and 3 colleges.

The Rose-Croix University student body for the year 1938 was again larger than in previous years, and the students were greatly assisted in their study by the visitation of a number of scientists and surgeons from European countries who came to the University for the purpose of assisting in its summer courses.

A few days after the graduation of the student body, the usual International Convention of the Order for North and South America was held at Rosicrucian Park, with a very large attendance, and one of the principal matters discussed which led to a resolution of approval dealt with the establishment in San Jose of the "Rose-Croix Research Institute and Clinic," for the study and analysis of the cause and origin of malignant growths, including tuberculosis, cancer, ulcers, tumors, and similar conditions, and for the offering of an efficient and rapid form of treatment for these conditions. For over a year the experimental clinic of the Order had been testing a new system of short and efficient treatment for cancer, with unusually good results, and the members of the higher degrees of the Order, therefore, eagerly and wholeheartedly sponsored the continuation of the research work and the authorization of the building of a large institute including a clinic. It is expected that the clinic and research institute will be opened for the reception of selected patients by the first of January, 1939. It is also the plan of this institute to accept as students certain licensed physicians from various parts of the country to whom the better methods of treatment will be taught so that they

may return to their communities and assist the Order in its battle against cancer and other forms of malignant growths. The institute has been incorporated as a separate body on a non-profit basis, and its fees to patients and to student physicians will be extremely nominal for there is no intent to make any profit or any form of reserve remuneration from the activities of the institute, and the institute will not sell any devices, remedies, or preparations.

ROTARY INTERNATIONAL. Rotary undertakes to inspire men to realize fully their individual capacity for patriotic citizenship in their states and nations; to deal justly with their customers or clients, their employees, and others with whom they have business or professional relations; to have concern for the welfare of their neighbors; and, individually and through their association in Rotary clubs, to bring about international understanding, good will, and peace.

The 29th annual convention of Rotary International was held June 19 to 24, 1938, in San Francisco, Calif. There were approximately 10,000 Rotarians and members of their families present representing Rotary clubs in 55 geographical regions. Officers elected for 1938-39 are: President, George C. Hager, Chicago, Ill.; Vice-presidents, Fernando Carbajal, Lima, Peru; Nils Parmann, Oslo, Norway; C. Reeve Vanneman, Albany, N. Y.; Secretary, Chesley R. Perry; Treasurer, Rufus F. Chapin. The 1939 convention will be held in Cleveland, Ohio, U.S.A., June 19 to 23.

On Dec. 1, 1938, Rotary International consisted of 4816 clubs with an approximate membership of 203,000. There were 3066 clubs in the United States, 148 in Canada, 466 in Great Britain and Ireland, and 1136 in other parts of the world.

The International secretariat at 35 East Wacker Drive, Chicago, serves as a clearing house for the reception, analysis, and dissemination of Rotary information and ideology. Branches of the secretariat are at Zurich, Switzerland; Singapore, Straits Settlements; and London, England.

RUBBER. World rubber shipments in 1938, by net exports, totaled 888,431 long tons, as reported by the Leather and Rubber Division of the U.S. Department of Commerce. Net exports in 1937 were 1,135,332 long tons. Shipments of rubber from British Malaya continued to be larger than from any other country. Shipments by producing countries as compared with 1937 were:

WORLD RUBBER SHIPMENTS [Long tons]

	1937	1938
British Malaya	468,192	370,810
Brunei and Labuan	1,768	1,238
Ceylon	70,359	49,549
British India	9,777	8,223
Burma	7,232	6,738
Sarawak	25,922	17,792
British North Borneo	13,213	9,512
Siam	35,551	41,080
Java and Madura	84,085	57,526
Sumatra East Coast	139,632	94,501
Other Netherlands Indies	207,863	145,744
French Indo-China	43,399	58,518
Amazon Valley	15,576	14,196
Mexico (guayule)	2,691	2,485
Other America	532	643
Africa	7,882	8,097
Papua	1,247	1,173
Philippine Islands	411	606
Total	1,135,332	888,431

Consumption of rubber in the United States exceeded that in any country, and was estimated by the Leather and Rubber Division of the U.S. Department of Commerce for 1938 as 411,363 long tons, or 24.3 per cent less than in 1937. Absorption by nations for the two years 1937-38 is shown in the accompanying table.

WORLD RUBBER ABSORPTION [Long tons]

	1937	1938
Consumption		
United States	543,600	411,363
United Kingdom	114,628	106,915
Net Imports		
Australia	19,050	11,944
Austria	3,775	8,210
Belgium	14,970	11,309
Canada	36,087	25,696
Czecho-Slovakia	13,063	9,936
Denmark	2,587	2,879
Finland	3,337	2,764
France	59,872	59,660

Norway	2,063	2,011
U.S.S.R. (Russia)	30,462	25,650
Spain	2,400	2,400
Sweden	6,693	8,298
Switzerland	2,434	3,093
Others (estimated)	60,000	48,000
Total	1,104,536	909,426
Minus United States Consumption	543,600	411,363
Foreign	560,936	498,063

For 1938 according to the same authority, exports of rubber and manufactures totaled \$27,181,516, and imports of rubber for the same period \$134,499,027. Domestic stocks of crude rubber on hand Dec. 31, 1938, amounted to 245,413 long tons compared with 262,204 at the close of 1937.

According to information in *The Rubber Age*, the production of reclaimed rubber for 1938 was estimated at 113,482 long tons, against 185,033 of previous year. Consumption of reclaimed rubber in 1938 was 113,341 long tons, that in 1937, 162,000.

Rubber tires and tire sundries continued in 1938 as the largest field for the consumption of rubber. Shipments of pneumatic casings in this year were estimated by the Rubber Manufacturers Association as 42,395,176 and production 40,026,280, against 53,485,388 and 53,309,972 in 1937. Shipments for 1938 were 20.7 per cent less, and production 24.7 per cent less than the previous year. Shipments of inner tubes for 1938 amounted to

CRUDE RUBBER CONSUMED IN LONG TONS, IN PRODUCTS MANUFACTURED IN THE UNITED STATES

	First three quarters 1938	1937
Tires and tire sundries	247,991	329,390
Mechanical rubber goods	27,351	46,772
Boots and shoes	13,029	20,150
Insulated wire and cable compounds ..	5,041	7,193
Druggist sundries, medical and surgical rubber goods	2,716	3,781
Stationers' rubber goods	1,743	1,996
Bathing apparel	596	952
Miscellaneous rubber sundries	2,156	3,077
Rubber clothing	467	575
Automobile fabrics	369	425
Other rubberized fabrics	3,499	4,015
Hard rubber goods	1,711	2,484
Heels and soles	9,904	9,635
Rubber flooring	833	1,150
Sponge rubber	2,706	4,131
Sporting goods, toys, and novelties	1,734	1,980
Total	321,846	437,706

40,387,390 and production 37,717,793 against 52,762,450 and 52,373,330 in 1937. Pneumatic casings in the hands of manufacturers Dec. 31, 1938, were estimated at 8,497,932 units, or 18.2 per cent less than on Dec. 31, 1937.

See CHEMISTRY, INDUSTRIAL.

RUMANIA. A monarchy of southeastern Europe. Capital, Bucharest. Sovereign in 1938, Carol II, who was proclaimed King June 8, 1930.

Area and Population. Rumania has an area of 113,887 square miles, as compared with 60,643 square miles before the World War. The estimated population on Dec. 31, 1937, was 19,646,000 (17,888,992 at the 1930 census). About 81.6 per cent of the population is rural and 18.4 per cent urban. Living births in 1937 numbered 601,303 (27 per 1000); deaths, 117,291 (19.3 per 1000); marriages, 185,102 (9.5 per 1000). Estimated populations of the chief cities on Jan. 1, 1937, were: București (Bucharest), 643,293; Chisinau (Kishenev), 114,101; Cernauiți (Czernowitz), 110,357; Iași (Jassy), 104,541; Galati (Galatz), 102,349; Cluj (Klausenburg), 99,546; Timișoara (Temeswar), 90,177; Oradea-Mare (Grosswardein), 81,181; Ploesti, 77,000; Arad, 75,143; Brăila, 68,817.

Education and Religion. Primary education is nominally free and compulsory, but a large proportion of the population is illiterate. Educational statistics for 1936-37 showed 2024 public infant schools, with 147,195 pupils; 15,510 public elementary schools, with 2,339,892 pupils; 195 private and confessional schools for infants, with 10,637 pupils; 1414 private and confessional elementary schools, with 137,621 pupils; 741 public secondary schools, with 159,878 pupils; and 1211 private and confessional secondary schools, with 34,337 pupils. The four universities had 3081 students in 1934-35; the various vocational and technical schools, 9289 students. There were in Rumania in 1934 about 13,300,000 members of the Orthodox Church, 1,800,000 Greek Catholics, 1,200,000 Roman Catholics, 900,000 Jews, 720,000 Reformists, 400,000 Lutherans, 260,000 Moslems, 75,000 Unitarians, and 140,000 others.

Production. About three-fourths of the population is engaged in agriculture. In 1936 there were 34,447,000 acres of arable land (47 per cent of the total area), 9,531,000 acres of pasture and 15,934,000 acres of forest. Yields of the principal cereals in 1938 were (in metric tons): Wheat, 4,940,000 (3,760,100); barley, 1,090,000 (917,200); rye, 670,000 (451,300); oats, 560,000 (512,800); corn, 5,300,000 (4,751,800). The output of other crops in 1937 was: Potatoes, 77,444,000 bu.; sugar beets, 499,000 metric tons; beet sugar (1937-38), 84,000 metric tons; plums, 556,000 metric tons; wine, 281,517,000 gal.; tobacco, 22,588,000 lb.; alfalfa and clover, 1,092,000 metric tons. Livestock slaughtered in public slaughter-houses in 1937 included 1,082,000 cattle and calves, 1,454,000 sheep, 32,000 goats, and 952,000 swine.

Mine and factory production in 1937 (preliminary) was: Petroleum, 51,399,000 bbl.; lignite, 1,872,000 metric tons; coal, 302,000 metric tons; natural gas, 96,903,000 cu. ft.; salt, 714,030,000 lb.; iron ore, 128,592 metric tons; gold, 172,183 troy oz.; silver, 670,199 troy oz.; pig iron, 127,235 metric tons; copper, 3,014,000 lb. Manufacturing statistics for 1936 showed 215,000 wage earners, 590,000 h.p., and a value of production totaling 51,334,000,000 lei (51,147,000,000, preliminary, in 1937). The total national income declined from about 313,600,000,000 lei in 1929 to 129,400,000,000 in 1934 and then rose to 295,000,000,000 in 1937.

Foreign Trade. Imports for consumption were valued at 17,896,500,000 lei in 1937 (12,637,700,000 in 1936) and exports of Rumanian products at 30,965,100,000 lei (21,703,400,000 in 1936). For the chief import and export commodities and the distribution of trade by countries in 1936, see 1937 YEAR BOOK. Exports of agricultural products in 1937 were (in metric tons): Wheat, 1,000,200; wheat flour, 700; rye, 259,600; barley, 317,100; oats, 17,600; corn, 523,200. United States trade figures for 1938 showed exports to Rumania of \$5,283,220 (\$6,938,401 in 1937) and imports from Rumania of \$2,473,633 (\$4,978,025).

Finance. Budget returns for the fiscal years ended March 31 were: Ordinary receipts, 23,664,000,000 lei in 1936-37 (26,754,000,000 in 1937-38); ordinary expenditures, 23,135,000,000 lei in 1936-37 (26,743,000,000 in 1937-38). For 1938-39 the ordinary budget estimates balanced at 28,650,000,000 lei. No figures were available covering extraordinary expenditures, which included large sums for armaments. Excluding war debts to the United States, the total funded debt on Apr. 1, 1937, was 108,449,000,000 lei (internal, 29,971,000,000; external, 78,478,000,000). Official figures for the floating debt were not available. The nominal average exchange value of the lei (singular of lei) was \$0.0073 for both 1937 and 1938.

Transportation. Rumania in 1937 had 7004 miles of railway line which in that year carried 43,367,000 passengers (including troops) and 26,602,000 metric tons of freight; gross receipts were 11,655,000,000 lei. Highways and roads in 1937 extended 64,792 miles. Automobiles numbered 25,070 on Jan. 1, 1938. Two Rumanian air companies operated routes linking the chief cities of the country and Bucharest had air connections with the European network. On June 30, 1937, Rumania had 88,000 gross tons of shipping (vessels of 100 tons or more) as against 91,000 on June 30, 1936.

Government. The Constitution of Mar. 28, 1923, vested executive power in the King and a council of ministers and legislative power in a parliament of two chambers—the Chamber of Deputies with 387 elected members and the Senate with 248 members (148 elected, 47 *ex-officio*, and 17 Senators by right). The King had a suspensive veto over laws passed by Parliament. The composition of the parties in the Chamber of Deputies elected Dec. 20, 1937, for four years was: National Liberal, 152; National Peasant, 86; All for Country (Fascist Iron Guard), 66; National Christian party, 39; Hungarian party, 19; National Liberal (George Bratianu's faction), 16; Radical Peasants, 9. A minority coalition government headed by Octavian Goga (q.v.), co-leader of the National Christian party, was formed Dec. 29, 1937. For developments in 1938, see *History*.

HISTORY

Goga's Overthrow. The anti-Semitic, pro-Fascist, and radical economic policies carried into effect by the Goga Government at the end of 1937 (see 1937 YEAR BOOK, p. 667) were extended during the first weeks of 1938. A series of decrees were promulgated designed to bar Jews from trade, industry, and the professions, and to expel all Jews, except those who resided in Rumania previous to 1919. As the 828,000 Jews largely controlled the commercial and industrial life of the country, the government's measures caused an immediate drastic dislocation of the economic structure. Frantic efforts of Jews to convert their holdings into ready money produced rapid depreciation of the currency,

a decline in real estate, industrial and banking shares, and a threatening economic depression.

King Carol acquiesced in the anti-Semitic program in order to undermine the power of the violently Fascist Iron Guard, led by Corneliu Zelea Codreanu, whose expanding movement constituted a growing threat to the King (see 1937 YEAR BOOK for background). At the same time he undertook to break the power of the other political movement that menaced his power—the pro-democratic National Peasant party led by former Premier Julius Maniu. To prevent the Parliament elected in December, 1937, from overturning the Goga Government, Carol ordered its dissolution on January 18 before it had even convened. New elections were called for March 2 under a revised electoral procedure calculated to confuse the largely illiterate electorate and insure the election of a majority favorable to the government. About the same time dissolution of the Socialist trade unions was announced and some 80 Socialist leaders arrested. Various other steps were taken to intimidate opposition groups and weaken their political strength.

All of the opposition parties protested at these unconstitutional maneuvers and efforts were made to form a united front of the powerful National Liberal and National Peasant parties in defense of parliamentary rule, but Carol in an interview with the Liberal leaders managed to block this program. Meanwhile the lesson the King was giving the country as to what might be expected from the extremist Iron Guard once it gained power, was proving too costly. The economic debacle was gaining momentum and Premier Goga's moves toward an alignment with the Berlin-Rome axis had aroused vigorous protests from Britain, France, and Rumania's allies of the Little Entente. Consequently the King on February 10 unceremoniously dismissed the Goga Cabinet and set up a government of "national union" which served as a screen for his personal dictatorship.

Headed by Premier Miron Cristea, Patriarch of the Orthodox Church, the new ministry included leading members of all parties except the Iron Guard and the National Peasant party. At the same time Carol suppressed all of the political parties, canceled the forthcoming elections, suspended the Constitution, appointed a commission to draft a new organic law, proclaimed martial law and a strict censorship, and announced a program of sweeping economic and social reforms and of adherence to Rumania's existing alliances with France and the Little Entente. All criticism of the government and its personnel was prohibited; civil servants were forbidden to participate in any political movement—another blow at the Iron Guard; and the Iron Guard's pledge of loyalty to Codreanu was declared illegal.

The New Constitution. The new draft Constitution was published on February 20 and without discussion was submitted to a government-manipulated oral plebiscite on February 24. According to the official report, the vote showed 4,165,193 votes in favor of and 5313 votes against its adoption. The King then proclaimed the Constitution on February 27. It gave him virtually unlimited dictatorial powers, including the right to rule by decree, the sole power to initiate legislation, authority to veto all parliamentary measures, to appoint half of the Senators, suspend Parliament, appoint and dismiss all ministers, and to declare war, conclude treaties, and establish and terminate alliances, subject to parliamentary approval. The number of Deputies and Senators was reduced and their terms length-

ened to six and nine years, respectively. The franchise was restricted to persons 30 years of age and over and could be exercised only on an occupational basis. While political rights were curbed, the Constitution extended civil and religious rights. Cultural and social rights of minorities were guaranteed, civil rights of the Jews were safeguarded, and religious freedom was guaranteed other sects besides the state religion.

Carol's Rule. The King lost no time in using his new powers to consolidate his position and to reorganize and reform political, economic, and social conditions. On March 30 the cabinet was reorganized, with Patriarch Cristea retaining the Premiership. The first act of the new ministry was to dissolve all political parties and societies. A Supreme Economic Council and a Crown Council were created, the latter including the Premier and 10 other leading political and military figures. The army took over the administration of martial law, the censorship, and the former civil powers of the prefects.

During the remainder of the year, the budgetary equilibrium was restored, cheaper credit provided, usury reduced, and the military services strengthened and re-equipped. An extensive public health campaign was launched; the schools, courts, and public administration were reorganized and staffed with younger personnel through the pensioning off of older employees; secret Treasury funds were abolished; workmen were given holidays with pay. A new minorities statute of August 4 gave the 7,000,000 members of minority groups in Rumania the same rights as Rumanians in all political, economic, social, and religious activities. This measure, designed especially to conciliate the large Hungarian minority, was followed by a decree of August 13 abolishing the existing administrative system, carried on through 72 districts, and dividing the kingdom into 10 provinces under governors with ministerial rank. The former regional and national political lines were eliminated to aid in the assimilation of non-Rumanian elements and check minority separatist agitation. Negotiations with the minorities for settlement of their complaints were under way at the year end. The King also undertook to eradicate the corruption that pervaded all departments of the government. Seven Controllers were appointed to uncover and eliminate graft and grafters.

On December 15 the King took another step toward the consolidation of his rule by establishing a new Party of National Regeneration, open to all Rumanians over 21 except soldiers and judges, with a completely authoritarian program. It was made the sole legal political organization, and all candidates in the forthcoming parliamentary elections were to be chosen from its membership. Criticism of the party or membership in opposition groups was made punishable by five years' loss of civil rights. The new party obtained the at least passive support of elements in all of the former political parties except the Iron Guard, being composed at the outset of five members each of the former National Peasant, Liberal, National Christian, and Rumanian Front parties. However the Peasant leader, Julius Maniu, and the Bratianus, leaders of the two wings of the Liberal party, withheld their co-operation. On December 19 the organ of the Liberal party and two National Peasant newspapers were suppressed.

A 10-year program for reducing the influence of the Jews and foreigners was approved by the cabinet December 14. A new public worship law,

requiring at least 100 families for a congregation, led to the closing of about 1500 Baptist churches on the same day and a number of Baptist clergymen were arrested, allegedly for refusing to comply with laws for the regulation of the non-official churches.

Iron Guard Crushed. In the meantime the King succeeded in destroying his most formidable enemy, Codreanu, and in breaking the power of the Iron Guard movement. Obeying the ban on political parties, Codreanu "dissolved" his Iron Guard on February 21. Yet it continued to function underground and received a marked stimulus from the Nazi coup in Austria in March. After sending Crown Prince Michael abroad to insure his safety, the King struck suddenly at the Iron Guard on April 17, arresting Codreanu and hundreds of his adherents in all parts of the country. On April 19 Codreanu was sentenced to six months' imprisonment on a libel charge.

The government then announced that in searching Iron Guard headquarters it had uncovered a plot for an anti-government coup, financed by large subsidies from an unnamed foreign power and reaching into high official circles, including the General Staff and Defense Ministry. On May 6 Codreanu was charged with treasonably seeking military and moral aid from the German Nazis. Following his conviction he was sentenced on May 27 by a military tribunal to 10 years of forced labor and subsequent loss of civil rights for seven years. A score of Codreanu's most prominent associates were convicted about the same time.

The sensational Nazi gains achieved throughout Central and Southern Europe as a result of Hitler's victory over the democracies at Munich produced a renewal of the terroristic activities that had long characterized Codreanu's fanatical followers. Prof. Stefanescu Goanga, dean of the University of Cluj and a fearless Iron Guard opponent, was shot and wounded on November 28. The following day the Iron Guard notified the governors of two provinces that they would be assassinated between Jan. 1 and 15, 1939. There were bombings and shootings in various parts of Northern Rumania.

The King struck back with equal ferocity. On the morning of November 30 Codreanu, and 13 other Iron Guard leaders serving terms for murder, were shot dead by their guards while being taken by automobile from the prison at Rimenescul Sarat to the military prison at Jihlava near Bucharest. A military communiqué stated that Iron Guard adherents had attempted to rescue their leaders during the transfer and that all prisoners were killed while attempting to escape. Investigations of newspaper correspondents cast doubt upon this story. It was widely believed that Carol had ordered the prisoners shot, since they could not be legally executed under Rumanian law, which bars capital punishment. December was marked by continuation of the government drive against the Iron Guard and its sympathizers in both high and low positions. On December 3 the three youths who attempted to assassinate Professor Goanga were "killed while trying to escape." There were hundreds of arrests, bringing to more than 2000 the number of Iron Guard adherents held in prisons and concentration camps. Yet the terroristic campaign of the Guard was not entirely stamped out.

Death of Queen Marie. The year was also marked by the death on July 18 of Dowager Queen Marie, who had played a notable role in the history of Rumania and the Balkans (see MARIE OF RUMANIA).

Foreign Relations. Rumania's territorial integrity was imperiled during 1938 by the expansion of Germany and the progressive collapse of the European status quo established after the World War. The Munich accord deprived Rumania's alliances of much of their effectiveness and increased the danger that Rumania would be forced to cede territory to Hungary and Bulgaria and to accept German economic and political control. The emasculation of Czecho-Slovakia shattered the Little Entente, placed the Czech arms and munitions factories upon which the Rumanian army relied under German control, and further weakened the possibility of effective support from France. Moreover it led to an increase in Rumania's economic dependence upon the Reich, which in 1937 took 27 per cent of Rumania's exports and supplied 28 per cent of its imports. On December 10 a German-Rumanian trade agreement was negotiated in Bucharest by the German Minister of Economic Affairs, Walther Funk.

At the same time Rumania was alarmed by German plans to construct the Rhine-Danube canal, build a great port at Vienna, and place a German commercial and military fleet upon the Danube. The minority of 800,000 Germans in Rumania, which showed increasing attachment to Nazi racial doctrines and closer supervision from the Reich after Munich, also aroused fears that it would be utilized to disrupt Rumania and make her subservient to Germany in the same fashion that the partition of Czecho-Slovakia was brought about. The strength of the Iron Guard, which was inspired and partially financed from Berlin, created still another formidable obstacle to the maintenance of Rumania's independence.

In the face of the threat from Germany and Hungary, King Carol abandoned the pro-German orientation of foreign policy manifested by the Goga Government and despite the lukewarm support obtained in Paris and London returned to the former close collaboration with France and Britain. He ruthlessly crushed the Iron Guard and put a damper on anti-Semitism which had served to alienate Anglo-French sentiment. During the crisis over Czecho-Slovakia he joined with the Yugoslav Government in warning Hungary that they would fulfill their military obligations under the Little Entente treaties in case Hungary attacked the Czecho-Slovaks. He was also reported to have assured France and Britain confidentially that Rumania would join them if they went to Czecho-Slovakia's aid against the Reich and that he would permit the passage of Russian troops through Rumania to Czecho-Slovakia after, but not before, war was declared.

On October 19 Foreign Minister Beck of Poland visited Carol at Bucharest in an effort to secure his collaboration in building a neutral bloc of states in Eastern Europe to bar Germany's advance. Carol agreed to accept Polish mediation in seeking an understanding with Hungary, but refused to consent to the establishment of a joint Polish-Hungarian frontier through Hungarian annexation of Ruthenia. On November 4 Prince Paul, Regent of Yugoslavia, arrived in Bucharest to discuss ways of meeting Hungarian and Bulgarian revisionist claims and their country's future policies as members of the Balkan and Little Ententes.

In the middle of November Carol went to London and Paris to sound out their attitude toward closer collaboration with Rumania. He then had a long talk with Chancellor Hitler at Berchtesgaden (November 24). Immediately after his return to Bu-

charest the slaying of Codreanu and the other Iron Guard leaders led to violent anti-Rumanian outbursts in the German press and intimations that Carol's regime was doomed. Meanwhile on November 28 Rumania, Yugoslavia, Greece, and Turkey commenced a 10-day conference at Athens on means of safeguarding their interests as members of the Balkan Entente.

See BULGARIA, CZECHO-SLOVAKIA, FRANCE, GERMANY, HUNGARY, ITALY, POLAND, and YUGOSLAVIA under *History*; BALKAN ENTENTE; LITTLE ENTENTE; REPARATIONS AND WAR DEBTS.

RUSSELL SAGE FOUNDATION. This Foundation was created by Mrs. Sage as a memorial to her husband. The original endowment was \$10,000,000 to which \$5,000,000 was added by her will. The Foundation was established for the purpose of promoting the improvement of social and living conditions in the United States of America. Its charter provides that it may "use any means which from time to time shall seem expedient to its trustees, including research, publication, education, the establishment and maintenance of charitable and benevolent activities, agencies, and institutions, and the aid of any such activities, agencies, or institutions already established." Its general aim is the investigation and study of the causes of adverse social conditions with a view to spreading information which will be basic and of assistance to citizens and organizations seeking to ameliorate, remedy, or prevent such conditions.

It is the policy of the Foundation not to make grants to colleges, universities, local charitable agencies, or to religious institutions. It does not directly relieve either individual or family need.

While the Foundation is not primarily a contributing organization, it does make grants of approximately 40 per cent of its income largely to agencies with similar purposes, and in fields where it is believed that a specified piece of work might be done better by an outside agency. Among the types of activities financially assisted are adult education; city and regional research and planning; the improvement of housing; family welfare; education and training for social work; the survey, study, co-ordination, and planning of community social work programs; child welfare; placement and vocational service; leisure time activities; legal aid; penology and the prevention of delinquency; service to travelers and transients; social welfare publications; professional organization of social workers; race relations; research in the social sciences; and social phases of the arts.

The Foundation not only endeavors to avoid duplicating the work already being done by other agencies, but frequently transfers to subsequently set up organizations activities which it has been instrumental in organizing, when it believes that such transfer will work to the greater advancement of that particular type of work. Under this policy it has from time to time encouraged several of its departments to become independent national units; and it has filled their places with other activities in fields which at the time seemed to be more neglected.

Its departments are engaged in various types of study of problems relating to social and living conditions, and in making the results of such studies and their interpretation available to others. The information thus obtained is given to the public, and particularly to those who can use it for social betterment, through publications, lectures, addresses, courses of instruction, conferences, correspondence, and such various other methods as may contribute

to the advancement of knowledge in the welfare field and to the stimulation of public and private action therein.

During the last several years of business depression many of the members of the Foundation staff have felt that their greatest contribution to human welfare called for diverting much of their time and energy from the regular activities of their department and doing what was possible to alleviate or treat the various problems which followed unemployment. An important part of such special service was given in the collection evaluation, and distribution to individuals and to communities the results of the most intelligent and beneficial methods for organizing and administering relief developed elsewhere. Monthly bulletins of new and helpful methods and procedures being used in various States were prepared and sent to State emergency relief administrations. Assistance was given by personal counsel and otherwise in planning publicity techniques and developing educational campaigns to interest and inform the public regarding the needs of the unemployed and of methods of co-operation in helping them. Surveys were made of certain Federal agencies affecting unemployment and relief, and of government measures to extend Social Security. Studies were made and plans developed for the improvement of public statistics relating to employment, the systematic collection of statistics of relief work, and experimental research in cities on the amount and distribution of unemployment, in an effort to develop more effective survey methods for use in other similar localities. A study was made of consumer debt in its relation to unemployed borrowers and others.

The Foundation makes available to social welfare organizations free use of its conference rooms and halls for public meetings. Each year these rooms and halls are used by approximately 100 different organizations and special groups, in a total of more than 500 separate meetings.

The trustees and officers of the Foundation are: Lawson Purdy, president; Morris Hadley, vice-president and treasurer; John M. Glenn, secretary; Lindsay Bradford, Joseph P. Chamberlain, Harry Woodburn Chase, Johnston de Forest, Frederic A. Delano, John H. Finley, and Harold T. White. Shelby M. Harrison is general director.

The titles of its present departments and the names of their directors are as follows: Charity Organization, Joanna C. Colcord; Consumer Credit Studies, Rolf Nugent; Industrial Studies, Mary van Kleeck; Library, Bertha F. Hulsemann; Social Work Interpretation, Mary Swain Routzahn; Statistics, Ralph G. Hurlin; Surveys, Shelby M. Harrison. Russell H. Kurtz is editor of its *Social Work Year Book*. Allen Eaton has charge of its studies on the handicrafts, and F. Emerson Andrews is manager of its publications.

The offices of the Foundation are at 130 East 22d Street, New York City.

RUSSIAN SOVIET FEDERATED SOCIALIST REPUBLIC. One of the 11 constituent republics of the U.S.S.R., according to the constitution adopted Dec. 5, 1936. It includes the Azov-Black Sea, Far Eastern, Krasnoyarsk, North Caucasus, and West Siberian territories; Chelyabinsk, East Siberian, Gorky, Ivanovo, Kalinin, Kirov, Kuibyshev, Kursk, Leningrad, Moscow, Northern, Omsk, Orenburg, Saratov, Stalingrad, Sverdlovsk, Voronezh, Western, and Yaroslavl provinces; the Tatar, Bashkir, Daghestan, Buryat-Mongolian, Chechen-Ingush, Chuvash, Crimean, Kabardino-Balkarian, Kalmyk, Karelian, Komi,

Mariisk, Mordva, North Osetian, Udmurt, Volga-German, and Yakut soviet socialist republics; and the Adygei, Cherkess, Jewish, Karachayev, Khakass, and Oirot autonomous provinces. Area, 6,368,768 square miles; population (Jan. 1, 1933), 105,650,900. Chief towns (with Jan. 1, 1936, populations) are: Moscow (capital), 3,641,500; Leningrad, 2,739,800; Gorky, 522,000; Sverdlovsk, 446,000; Novosibirsk, 352,000; Chelyabinsk, 293,000; Magnitogorsk, 224,000; Irkutsk, 218,300; Stalinsk, 217,000; Karaganda, 150,000; Stalinogorsk, 72,000; Komsomolsk, 50,000; Kirovsk, 35,000.

Production, etc. In 1938 there were 103,818,546 acres of spring sowing, by collectives, of chief grain crops. The chief agricultural products are wheat, rye, maize, oats, buckwheat, barley, millet, sugar beet, cotton, flax, hemp, peas, and beans. The chief industries are coal, oil, iron and steel, metalworking, textiles, and food. See UNION OF SOVIET SOCIALIST REPUBLICS.

RUTGERS UNIVERSITY. A nonsectarian institution for higher learning in New Brunswick, N. J., founded under the name of Queen's College in 1766. The University consists of the following schools and colleges: Arts and sciences, engineering, agriculture, pharmacy, chemistry, education, ceramics, New Jersey College for Women, and University College. The registration for the autumn of 1938 was 2667, of whom 985 were enrolled in the college for women. Of the 274 members of the faculty, 255 were professors and 93 instructors. The endowment funds amounted to \$5,126,307 and the income for the year, exclusive of the State agricultural experiment station, was \$3,533,932. The library contained 273,873 catalogued books, 20,000 uncatalogued books, and many thousand unbound items. President, Robert C. Clothier, LL.D.

RUTHENIA. See CZECHO-SLOVAKIA.

RYE. The 1938 rye production of 27 countries reporting to the International Institute of Agriculture was estimated at 1,034,845,000 bu. and their acreage at 47,045,000 acres. The production was 18.9 per cent above the production in 1937 and 9.7 per cent above the average for the five years 1932-36 and the acreage 2.2 per cent more than the area of the preceding year and 3.6 per cent greater than the average for the five-year period. The yields of the leading countries not including the United States and the Soviet Republics were reported as follows: Germany, including Austria, 356,431,000 bu., Poland 272,431,000 bu., Czecho-Slovakia 66,139,000 bu., France 31,665,000 bu., and Hungary 30,747,000 bu. For the Soviet Republics an average yield of 863,155,000 bu. is recorded for the five years 1932-36. Argentina, the leading rye-growing country of the southern hemisphere, reported a yield of 11,614,000 bu. for the crop year 1938-39 and an average production of 9,594,000 bu. for the five years 1932-33 to 1936-37. The 1938 rye production of Canada was estimated at 11,115,000 bu.

The Department of Agriculture placed the 1938 rye crop of the United States at 55,039,000 bu. compared with 49,830,000 bu. in 1937 and 36,454,000 bu., the average for the 10 years 1927-36. Excepting the 1935 crop the 1938 production was the largest since 1924 but far below the record crop of 100,986,000 bu. in 1922. Increases in production in 1938 in North Dakota, South Dakota, and Nebraska more than offset decreases in other corn-belt States. The acreage harvested, 3,219,000 acres, compared with 3,846,000 acres harvested in 1937 and the average of 3,140,000 acres for the 10 years 1927-36. The average yield per acre of 13.8 bu. was higher than the average yield of 13 bu.

in 1937 and the average of 11.3 bu. for the 10-year period. The yields of the States leading in production were reported as follows: North Dakota 12,974,000 bu., South Dakota 10,176,000 bu., Minnesota 9,846,000 bu., Nebraska 4,796,000 bu., and Wisconsin 4,290,000 bu.

In the fiscal year ended June 30, 1938, the United States exported 6,578,000 bu. of rye and imported less than 500 bu.

RYKOV, rá'kóf, ALEXEY IVANOVITCH. A Russian Soviet public official, executed for treason, Mar. 14, 1938. Born at Saratoff in 1881, he was educated at the University of Kazan and in 1898 joined the Social Democratic Party. Like other members of the Party, his life until 1917 was a series of arrests, imprisonments, and exiles. He joined Lenin in the Bolshevik wing of the Party in 1917 and subsequently became head of the Supreme Economic Council. Upon the death of Lenin in 1924 he was elected president of the Council of People's Commissars, which office he held until Dec. 19, 1930, when, with other "right wing" members of the Government, he opposed Stalin's plan for speeding up industrial production and collectivization, and was dismissed from office. Three days later he was dropped from the Politburo to which he had belonged since 1919. Recanting his opposition in 1931 he was reinstated and appointed Commissar of Posts and Telegraphs and Radio, later changed to Communications. He held this post until 1936 when he was implicated in plots to kill Stalin and in the assassination of Sergei Kirov in 1934. Arrested, he was executed after a mass trial, for an account of which see UNION OF SOVIET SOCIALIST REPUBLICS under History.

SAAR, THE (SAARLAND). See GERMANY under Area and Population.

SAGHALIEN. See SAKHALIN; KARAFUTO.

ST. CHRISTOPHER-NEVIS. See LEEWARD ISLANDS, BRITISH.

ST. HELENA. A colony of Great Britain, in the South Atlantic, consisting of the islands of St. Helena (47 sq. m.) and its dependency, Ascension (34 sq. m.). Population (Jan. 1, 1938, estimate), 5569 (including 154 on Ascension) as compared with (1931 census) 4183 (including 188 on Ascension). Capital, Jamestown (1381 inhabitants in 1931). Early in 1938 the King by Letters Patent under the Great Seal declared that the islands of Tristan da Cunha, Gough, Nightingale, and Inaccessible, in the South Atlantic, are, from Jan. 12, 1938, dependencies of St. Helena. The production of New Zealand hemp (*Phormium tenax*) was the main industry, the output for 1937 being 1046 tons of hemp and 486 tons of tow. In 1937 imports were valued at £37,828; exports (including re-exports of £461), £26,404 of which fiber, tow, rope, and twine accounted for £25,609; revenue, £41,436; expenditure, £23,191; public debt—nil. The colony is administered by a governor, aided by an executive council of six members; the governor makes all ordinances. Governor, Henry G. Pilling (appointed, June, 1937).

ST. JOHN'S COLLEGE. A college of liberal arts and sciences for men in Annapolis, Md., founded as King William's School in 1696. The enrollment for the first half year of 1938-39 was 127. There were 31 faculty members. The income for the year 1938 was \$227,122. The library contained 32,595 volumes. President, Stringfellow Barr.

ST. KITTS. Same as St. Christopher. See LEEWARD ISLANDS, BRITISH.

ST. LAWRENCE UNIVERSITY. An institution for the higher education of men and wom-

en at Canton, N. Y., founded in 1856. The registration for the autumn term of 1938 was 681. For the summer session of 1938, 242. The faculty numbered 61 members. The endowment funds amounted to \$5,189,862 and the income for the year was \$238,194. The law school of the University is located in Brooklyn, N. Y. Its enrollment for the autumn term of 1938 was 1262. The library contained approximately 64,000 volumes. President, Laurens Hickok Seelye, M.A., LL.D.

ST. LUCIA. A British island colony in the Windward Islands group of the West Indies. Area, 233 square miles; population (Jan. 1, 1938, estimate), 67,405. During 1937 (excluding stillbirths) there were 2216 births and 969 deaths. Chief towns: Castries, 20,798 inhabitants (the port of Castries has one of the best harbors in the West Indies); Soufrière, 7309 inhabitants. The principal products are sugar, copra, limes, cacao, and bananas. In 1937 imports were valued at £244,851; exports (including re-exports of £76,794), £214,080; revenue, £99,045; expenditure, £100,009; public debt, £116,531, against which the sinking fund for its redemption amounted to £18,998. An administrator (under the governor of the Windward Islands) governs the colony, assisted by an executive council. The legislative council (reconstituted on Dec. 18, 1936, by order in council of Oct. 27, 1936) consisted of the governor of the Windward Islands, 3 ex officio members, 3 nominated members, and 5 elected members. Administrator, Arthur Alban Wright. See **WINDWARD ISLANDS**.

History. A series of landslides occurred in the Bar de L'Isle district on Nov. 21, 1938. A total of 60 persons lost their lives, 50 more were missing, and many others were injured. Heavy rains, which had fallen previous to the disaster, may have been responsible, and volcanic disturbances also were considered as a cause. An area of 64 square miles was evacuated and 500 refugees were cared for by the government. The British Colonial Office announced that a free grant of £16,000 would be made to St. Lucia for reconstruction work.

ST. PIERRE AND MIQUELON (mīk'ē-lōn'). The main islands in two small groups, near the south shore of Newfoundland, owned by France. Area of St. Pierre group, 10 square miles; Miquelon group, 83 square miles. Total population (1936 estimate), 4175. Capital, St. Pierre. Cod fishing is the principal industry. In 1936 imports were valued at 13,683,000 francs; exports, 12,673,000 francs. The budget for 1937 was balanced at 8,317,600 francs (franc averaged \$0.0405 for 1937). In a decree published on July 18, 1936, the French government reorganized the government set-up of St. Pierre and Miquelon and abolished townships. The islands are under an administrator who is assisted by a council of administration made up of government officials and 7 members elected by popular vote.

ST. THOMAS. See **SÃO THOMÉ AND PRINCE-IPÉ; VIRGIN ISLANDS**.

ST. VINCENT. A British island colony in the Windward Islands of the West Indies. Area, 150.3 square miles; population (1937 estimate), 57,526, compared with 47,961 (1931 census). Kingstown (capital) had 4269 inhabitants (1931). On Dec. 31, 1937, there were 10,457 pupils enrolled in the 37 primary schools and 151 pupils in the 2 secondary schools.

Arrowroot, sirup, sugar, coconuts, sweet potatoes, cotton, cassava, and plantains are the chief products. The 1937-38 production of arrowroot starch totaled 39,442 bbl. In 1937 imports were valued at £203,304; exports, £187,086. Revenue for

1937 totaled £94,380; expenditure, £97,072. In 1938 revenue was estimated to total £90,170; expenditure, £89,874; public debt (Dec. 31, 1937), £95,390 against which the sinking funds amounted to £9797. St. Vincent is under the Governor of the Windward Islands but has its own executive and legislative councils. The islands of the Lesser Grenadines are administered from St. Vincent. Administrator, Arthur Alban Wright. See **WINDWARD ISLANDS**.

SAKHALIN, sā'kà-lēn'. An island off the east coast of Siberia. The area north of 50° N. is a district of the Far Eastern Territory of the R.S.F.S.R. Area, 15,826 square miles; population (1933), 69,000. Capital, Aleksandrovsk-on-Sakhalin (8100 inhabitants). Fish, oil, and lumber are the principal products. For the Japanese part of the island, see **KARAFUTO**.

SALT LAKE CITY. See **AQUEDUCTS**.

SALT RIVER DAMS. See **DAMS**.

SALVADOR, EL (ēl sāl'vā-dōr'). A republic of Central America. Capital, San Salvador.

Area and Population. The smallest and most densely populated of the Central American states, El Salvador has an area of 13,176 square miles and a population estimated at 1,665,000 on Dec. 31, 1937 (1,549,999 at the 1933 census). Indians and mestizos constitute the vast bulk of the population, but the small ruling class is largely of Spanish descent. Living births in 1937 numbered about 66,150 (40.1 per 1000); deaths, 33,784 (20.5 per 1000); marriages, 6337. Populations of the principal cities at the beginning of 1934 were: San Salvador, 99,360; Santa Ana, 41,914; Santa Tecla, 21,865; San Miguel, 17,668; Sonsonate, 16,006.

Education and Religion. Illiteracy remains widespread, although elementary education is nominally free and compulsory. The school enrollment in 1933 was: Primary, 63,387; secondary, 1216; National University, 395. Roman Catholicism is the dominant religion.

Production. Coffee, the chief crop, accounted for 92 per cent of the value of all 1937 exports. Coffee production in 1937-38 was about 46,000 metric tons (75,300 in 1936-37). In 1936 exports of rice were 2,800,000 lb.; henequen fiber, 2,365,000 lb.; sugar, 277,000 lb.; balsam, 144,000 lb.; indigo, 27,000 lb. Corn, beans, and tobacco are grown for local consumption. The forests yield indigo and cabinet woods. The 1935 livestock census showed 609,255 cattle, 424,808 swine, 180,750 horses, mules, and asses, 21,575 goats, and 14,166 sheep. Some gold and silver is mined. Manufactures are few and are for local consumption.

Foreign Trade. According to preliminary returns, imports in 1937 totaled \$9,982,000 U.S. currency (\$8,435,000 in 1936); exports, \$15,514,000 (\$10,098,000 in 1936). Cotton fabrics, petroleum and its products, iron and steel were leading 1936 imports; the value of coffee exports in 1936 was \$9,009,000. Of the 1937 imports, the United States supplied 40.4 per cent (38.6 in 1936); Germany, 31.1 (33.3); United Kingdom, 11.4 (10.8). Of the 1937 exports, the United States took 60.7 per cent (57.4 in 1936); Germany, 11.2 (14.3); Norway, 6.6 (6.8). United States exports to El Salvador in 1938 were \$3,527,214 (\$3,628,135 in 1937); imports from El Salvador, \$5,672,190 (\$8,563,488).

Finance. Actual returns of budgetary operations for the fiscal year ended June 30, 1938, placed ordinary revenues at 19,714,000 colones and ordinary expenditures at 18,351,000 colones. The extraordinary budget returns were not available. For 1938-39, total budget estimates placed revenues at

21,961,000 colones (ordinary, 17,354,000) and total expenditures at 21,158,000 colones (ordinary, 17,325,000). The public debt as of June 30, 1938, was 39,699,000 colones (foreign, 34,678,000; internal, 5,021,000). Service of the foreign debt was suspended temporarily Nov. 26, 1937. The unit of currency is the colon, the exchange value of which remained practically stable at 2.50 to the U.S. dollar during 1938 and several preceding years.

Transportation. There are 375 miles of railway line and about 3000 miles of roads (375 miles of passable motor roads). The Santa Ana-San Salvador and San Salvador-San Miguel sections of the Pan American Highway were completed in 1938 and work was proceeding on a road from Chalatenango to Ocotepeque in Honduras and from San Salvador to Zacatecoluca. There were 3152 automobiles in the country on Jan. 1, 1938. Air lines connected the capital with Tegucigalpa, Guatemala City, and all points on the inter-American air network. In 1936, 703 vessels entered the three chief ports—La Union, La Libertad, and Acajutla.

Government. The Constitution of 1824, with its various amendments, vested executive power in a president elected for four years and legislative power in a National Assembly of 42 members elected by popular suffrage for one year. Provisional President Maximiliano H. Martinez, who seized power by a coup d'état on Dec. 2, 1931, was declared constitutional President by Congress on Feb. 5, 1932, and was re-elected Jan. 13-15, 1935. There are no political parties with definite programs.

History. The preparations made by President Martinez in 1936 and 1937 to perpetuate his dictatorship beyond the expiration of his term of office in 1939 (see 1937 YEAR BOOK, p. 671) encountered obstacles in 1938. As usual the President hand-picked the members of the National Assembly elected in January. But opposition to a third term for the dictator was expressed by an unexpected number of prominent citizens, and by some members of the government, who resigned. The government sought to overcome this opposition by a well organized propaganda in the press, the moving picture theaters, and over the radio, while repressing all efforts at resistance. The editor of the leading newspaper *Diario de Hoy* was deported in August, allegedly for refusing to publish an editorial advocating the re-election of Martinez. It was reported during the same month that numerous opponents of a third term had been jailed. Meanwhile the government press bureau made public many pleas from interested groups that the President succeed himself.

Although the Constitution had been amended in 1937 to facilitate the dictator's re-election, a new Constitutional Congress was chosen on October 22-25 from another hand-picked slate of candidates. The President's ticket was made known on the morning of October 25 and no opportunity for registering an opposing vote was given. The regular session of the National Assembly closed November 14, with a call for the election of a President and Vice-President on Jan. 8-10, 1939. On the following day the Constitutional Congress met to revise the Constitution in accordance with the dictator's wishes. A popular demonstration in favor of the President's continuance in office marked the beginning of Congress's active sessions on November 21. On November 26, however, a group of business and professional men signed a petition for the restoration of constitutional guarantees and the termination of the state of siege that had been in

effect throughout the Martinez regime. The dictator rejected the petition and when opposition demonstrations broke out in a number of towns early in December he proclaimed martial law and canceled the presidential elections scheduled for January (December 12). At the year end the Constitutional Congress was preparing to extend the dictator's term without the formality of an election.

At least part of the opposition to the continuance of Martinez in office was due to his anti-democratic tendencies and close collaboration with the Nazi-Fascist dictators, noted in previous YEAR BOOKS. In January the lay teachers, protesting that Spanish priests were teaching fascism in the Liceum San Luis in Santa Ana, formed the Salvadorean Teachers' Union to oppose fascism and defend democracy. The government, however, repressed pro-democratic tendencies, openly favored the Insurgent cause in Spain, and entrusted a large Italian aviation mission with the development of the Salvadorean air force. Six Caproni bombing planes were ordered from Italy in August. President Martinez was decorated by the Emperor of Manchoukuo in September and by Emperor Hirohito of Japan in October. Strong Nazi influence was exercised by the German Consul in San Salvador, Baron von Hundelhausen, who was also manager of the government-owned Farm Loan Bank, and by Gen. Eberhardt Bonstedt, German director of the military schools and instructor of the Salvadorean army.

A definitive boundary treaty with Guatemala was ratified by the National Assembly on April 27 (see GUATEMALA under *History*).

SALVATION ARMY, THE. A world-wide organization with international headquarters at 101 Queen Victoria St., London, England, whose purpose is the salvation of mankind from all forms of distress—spiritual, moral, temporal. The movement was first organized as The Christian Mission in the East End of London in 1865 by William Booth, a minister of the New Connection Methodists. In 1878 the name was changed to The Salvation Army. It spread rapidly throughout England and, in 1880, was extended to the United States. American incorporation took place in New York City in 1899. The government is military in character with General Evangeline Booth as international head. The higher command is divided into territories, each territory usually being a separate country, or colony, led by a commissioner, and subdivided into divisions consisting of corps, posts, and institutions under the direction of officers of varying ranks. There are four such territories in the United States.

The doctrine of The Salvation Army is a simple evangelical creed based on the Methodism from whence it came. It does not concern itself with fine theological differences, but bases its activities on the belief that "They serve God best who serve their fellowmen."

The Salvation Army is now active in 96 countries and colonies, carrying on its work in 100 languages. There were in its service in 1937, 26,877 officers and cadets; 9980 persons without rank wholly employed; 167,377 honorary local officers and bandmen; 82,097 songsters; 35,770 corps cadets; and 17,567 corps and outposts in operation. Social Welfare institutions and agencies numbered 1627, free day schools 1093, and Naval and Military Homes 35. It published 126 periodicals, with a total average circulation of 1,550,422 copies per issue.

There were in the United States in 1937, 1682 corps and outposts, 4 Training Colleges, 4681

officers and cadets, and 40,582 honorary local officers and bandmen. Converts during the year numbered 72,341. Social welfare institutions included 97 men's hotels and 19 residential hotels for young women, accommodating a total of 12,692. Men's Social Service Centers numbered 106 with accommodation for 4417; 9 children's homes with accommodation for 863; 36 women's homes and hospitals with accommodation for 2095; and 3 dispensaries which treated 12,983 patients. At Thanksgiving and Christmas free dinners were given to 405,851 persons, and toys to 335,159 children. During 1937, 7501 prisoners on discharge were assisted by The Salvation Army; 53,068 mothers and children were given summer outings; 82,861 men and women were given employment through the Army's free employment bureaus; and 727 missing persons found.

The National Headquarters of The Salvation Army in the United States are at 120 West 14th Street, New York City. National Secretary, Commissioner Edward J. Parker.

SALZBURG. See AUSTRIA; MUSIC.

SAMOA. A group of 14 islands in the Southern Pacific, about 4000 miles southwest of San Francisco. The islands of the group east of 171° W. longitude belong to the United States; those west of that line are administered by New Zealand under a mandate of the League of Nations.

American Samoa. American Samoa comprises the islands of Tutuila, Tau, Olosega, Ofu, Annuu, and Rose Island. Swains Island is included in the administrative district of American Samoa. The total area is 76 square miles and the estimated population on July 1, 1938, was 12,241 (11,956 Polynesians and half-castes, 278 Caucasians, and 7 Orientals). The Naval Station at Pago Pago is the seat of government. The population of the town and its vicinity was approximately 5000. The harbor is one of the best in the South Seas. The average school enrollment in 1937-38 was 2500. Instruction is in English. Copra is the chief export crop. Copra produced and exported in the fiscal year 1937-38 totaled 940 tons valued at \$66,270. The value of imports during the same year was \$215,304; of exports, \$129,850. Governmental revenues in 1937-38 were \$117,034 and expenditures \$104,736. On June 30, 1938, the net value of the general fund was \$74,590 and total financial assets were \$88,875. The islands are under the jurisdiction of the U.S. Navy Department and are administered by the commandant of the naval station at Pago Pago. There is a native advisory council called the Fono, which meets annually. Governor in 1938, Capt. Edward W. Hanson, U.S. Navy.

Western Samoa. The islands under New Zealand's control are officially known as the Territory of Western Samoa. Savaii and Upolu, with areas of 700 and 430 square miles, respectively, are the two largest islands. Of the seven smaller islands, only two are inhabited. Apia, on Upolu, is the chief harbor and seat of government. The population of Western Samoa at the census of Nov. 4, 1936, totaled 55,946 (Europeans, 367; Samoan natives, 52,266; half-caste Europeans, 2708; Chinese laborers, 502; other Chinese, 20; Melanesian laborers, 83). The natives are Christians. There are about 16,000 pupils in the government and mission schools. Copra, bananas, rubber, and cacao are the chief products. Imports in 1937 were valued at £267,868; exports at £352,436. For the fiscal year ended Mar. 31, 1937, governmental revenues amounted to £117,908 and expenditures to £116,613 (New Zealand currency). There were 160 miles of highways. Dur-

ing 1936 a total of 84 vessels of 112,139 tons entered the port of Apia. Regular shipping services connect the port with Fiji and New Zealand. There is a powerful wireless station at Apia. Administrator in 1938, A. C. Turnbull, who was responsible to the New Zealand Minister of External Affairs.

SAN JACINTO TUNNEL. See TUNNELS.

SAN MARINO, *sān mā-rē'nō.* An independent republic near the town of Rimini, encircled by Italian territory. Area, 38 square miles; population (1936 estimate), 14,000. Capital, San Marino (4000 inhabitants). Cattle, wine, and building stone are the chief exports. The financial estimates for 1937-38 balanced at 4,997,901 lire (lire averaged \$0.0526 for 1937). Legislative power is vested in a grand council of 60 members from whom two are appointed every six months to act as regents.

SANTA CRUZ DE TENERIFE. See CANARY ISLANDS.

SANTO DOMINGO. See DOMINICAN REPUBLIC.

SÃO THOMÉ (*soun' tō-mă')* AND **PRINCIPE**, *prēn'sē-pē.* Two islands in the Gulf of Guinea, West Africa, belonging to Portugal. Area, 384 square miles; population (1936 estimate), 60,000. São Thomé (capital) had 3187 inhabitants in 1921. The chief products are coffee, cacao, coconuts, palm oil, and cinchona. In 1935 imports were valued at 17,021,901 escudos; exports, 31,836,169 escudos (escudo averaged \$0.0446 for 1935). In 1937 there were 169 miles of roads. For 18 months ended Dec. 31, 1936, revenue totaled 14,288,390 escudos; expenditure, 10,680,574 escudos (escudo averaged \$0.0451 for 1936). The colony is administered by a governor.

SARAWAK, *sā-ră'wāk.* An independent state in northwest Borneo, under British protection. Area, 50,000 square miles; population (1936 estimate), 600,000. Kuching, the capital, had 25,000 inhabitants in 1931. The chief products are sago, pepper, rubber, petroleum, gold, jelutong, and cutch. In 1937 imports were valued at S\$22,899,415 (crude oil, S\$3,973,000; rice, S\$2,414,000; tobacco, S\$1,722,000; iron and steel and their manufactures, S\$1,629,000); exports, S\$32,691,247 (plantation rubber, S\$17,282,000; liquid fuel, S\$4,978,000; benzine, S\$1,874,000; gold, S\$1,161,000; sago flour, S\$1,171,000; kerosene oil, S\$928,000). In 1937 revenue totaled S\$4,801,236; expenditure, S\$4,104,082 (Straits S\$ averaged \$0.5797 for 1937). Rajah, Sir Charles Vyner Brooke (succeeded, 1917).

SASKATCHEWAN, *sās-kāch'ē-wōn.* A prairie province in western Canada. Area, 251,700 square miles; population (1938 estimate), 941,000 compared with 930,893 (1936 census). During 1936 there were 19,125 births (20.5 per 1000), 6314 deaths (6.8 per 1000), and 6168 marriages (616 per 1000). Chief cities (with 1936 census figures in parentheses): Regina, the capital (53,354), Saskatoon (41,734), Moose Jaw (19,805), Prince Albert (11,049), Swift Current (5074). In 1936 there were 273,593 students enrolled in schools of all kinds, including 4835 in the colleges and universities.

Production. The estimated gross value of agri-

cultural production for 1937 was \$91,902,000 (\$185,532,000 for 1936) of which field crops accounted for \$52,187,200 (\$141,793,400 for 1936). Other important items in the 1936 total of agricultural production were farm animals, \$18,246,000; dairy products, \$15,926,000; poultry and eggs, \$6,547,000; fruits and vegetables, \$1,318,000. Livestock in the province (1937): 873,600 horses, 1,441,200 cattle (including 563,700 milch cows), 345,000 sheep, 228,900 swine, and 8,825,300 poultry. Fur production for the year ended June 30, 1936, totaled 1,401,809 pelts valued at \$1,152,373. The 1936 output of the forests equaled 77,267 M cu. ft. valued at \$2,038,647. In 1937 the fisheries catch was valued at \$527,199.

Mineral production (1937) was valued at \$10,271,463 of which gold (65,886 fine oz.) accounted for \$2,305,351; copper (22,436,843 lb.), \$2,934,290; zinc (32,750,910 lb.), \$1,605,449; coal (1,049,348 tons), \$1,494,337; sodium sulphate (79,804 tons), \$617,548; silver (821,818 fine oz.), \$368,840; Cadmium (144,553 lb.), \$237,067. In 1936, from the 694 manufacturing plants, with a total of 5782 employees, the net value of products was \$51,604,510 (central electric stations, and dyeing, cleaning, and laundry work ceased to be regarded as "manufacturing" industries for 1936).

Government. For the year ended Apr. 30, 1936, revenue amounted to \$17,838,692; expenditure, \$18,890,607; net funded debt, \$183,050,318. The government is vested in a lieutenant-governor, advised by a ministry of 9 members who also are members of the legislative assembly of 52 members elected for a term of five years by popular vote of the people. The number of members in the legislative assembly was reduced from 55 to 52 by a redistribution bill of March, 1938. At the provincial general election of June 8, 1938, the standing of the parties in the legislative assembly was: Liberal, 36; Co-operative Commonwealth Federation, 10; Social Credit, 2; Independent, 2. In the Canadian parliament, the province is represented by 6 members in the Senate (appointed for life) and 21 members in the House of Commons. Lieutenant-Governor, A. P. McNab (appointed Oct. 1, 1936); Premier, W. J. Patterson (Liberal). See ALBERTA under History; CANADA.

SAUDI ARABIA. See ARABIA.

SAULT STE. MARIE, CANALS AT. Transits of vessels of all kinds through the canals at Sault Ste. Marie showed a decrease of 44 per cent for the season of 1938 over the preceding year and reached a total of 11,201 vessels as against 19,982 in 1937. Registered net tonnage totaled 30,147,671 for 1938 (68,391,220 in 1937), and the freight amounted to 40,042,739 short tons (87,633,699 in 1937), a decrease of 54 per cent. Passengers carried totaled 41,552 (47,253 in 1937). The United States Canal was opened 248 days from April 12 to December 15, and the Canadian Canal 243 days from April 18 to December 16. Vessels through the United States Canal totaled 7860 and carried freight eastbound amounting to 27,372,787 short tons and 10,402,486 westbound. Vessels through the Canadian Canal totaled 3341, with eastbound freight of 1,679,934 short tons and 587,532 westbound.

Transportation of freight by principal commodities in 1938 as compared with 1937 is shown in the table in preceding column.

SAXONY. See GERMANY.

SCANDINAVIAN LITERATURE. Dan-

ish. Poetry. In *Alt kræver jeg* (I Demand Everything), Poul la Cour regretfully looks back to an earlier optimistic view of life which he has felt forced to abandon. Hans Bjerregaard made his debut with *Blæsten* (High Wind), a collection of poems showing strong satirical power.

Fiction. Hans Scherfig's *Den forsvundne Fuldmægtig* (The Official Who Disappeared) is an unusual mystery story and at the same time a satire on Denmark's bureaucratic system and, in general, on the traditions which force men into a uniform and monotonous scheme of existence. In *En Kvindes Kamp* (A Woman's Struggle), Harry Spøberg portrays a woman's heroic efforts to keep together a home that her husband is on the point of losing. In Agnes Henningsen's *Det rigtige Menneske* (The Real Man), love, instead of being the main theme, as in that author's earlier stories, merely furnishes the background. The hero is a magistrate who suffers defeat in his fight for truth and honesty. Knuth Becker continued the story of Kai Götsche, begun in *Det daglige Brød* (Daily Bread), in *Uroligt Foraar* (Restless Springtime), a work remarkable alike for its excellent character delineation and for its picture of present-day Denmark. In *Kaj Lykke*, as in last year's *Griffensfeld*, Palle Rosenkrantz gives a realistic portrait of a highly unique historical character. The milieu, in this case the Dano-Swedish War of the 17th century, is also well drawn.

Memoirs, etc. Under the title *En Sprogmands Levned* (The Life of a Language Man), the well-known Anglicist, Otto Jespersen, gives an interesting account of his life, including his student years in Denmark and abroad, his activities as a researcher, and his experiences as a university professor. Robert Andersen's *Jorden rundt efter Guld* (Around the World in Search of Gold) is a fascinating account of the author's work as a gold-digger in different parts of the world. In *Min anden Ungdom* (My Second Youth), Peter Freuchen tells of his experience as an explorer, traveler, and journalist.

Norwegian. Fiction. Lars Hansen's *Storfossen* is a dramatic story centering around the Læstadius movement in Lapland during the middle of last century. In *Det ensomme hjerte* (The Lonely Heart), a story dealing mostly with youth, Sigurd Christiansen gives a more intimate view of the human heart than in his earlier works. Much of the material used is autobiographical; in fact, Jörgen, the most complex and the most interesting of the characters, has many of Christiansen's own traits. In *De vergeløse* (The Defenseless), Gabriel Scott champions the cause of the underprivileged in the manner of Dickens and Hugo. The hero is a boy who, forced to make his home with strangers, has to suffer unendurable privations and hardships. Sigurd Hoel's *Sesam Sesam* ("Open Sesame") is

* Includes broken stone, gravel, and sand.

a protest against the mania for panaceas characteristic of the present time. In *Ung må verden ennu være* (The World Must Become Young Again), a story of international scope whose scene is laid in five different countries, Nordal Grieg forcefully points out the necessity of finding an escape from the existing world confusion. Lillemor von Hanno, in *Hele verden står dig åpen* (You Have the World Before You), portrays the difficult life of the young artist in the earlier years of his career. Håkon Melberg made his debut with *Solen går aldri ned* (The Sun Never Sets), which with intense realism shows the influence of a catastrophe on a sensitive adolescent. The hero of Kåre Fast-ing's *Jakob og sønnene hans* (Jacob and His Sons) is a fisherman who, like Job of the Old Testament, loses everything and yet even in his last desperate struggle for life clings to his faith.

History and Religion. In *Det norske folks liv og historie i vår tid* (Life and History of the Norwegian People in Our Times), Wilhelm Keilhau deals with the national, economic, and foreign-political tendencies since 1905. Ronald Fangen's *Kristendommen og vår tid* (Christianity and Our Times) is an examination of nazism, communism, and democracy in the light of Christian philosophy.

Swedish. Poetry. In *Sångerna om samvetet och ödet* (Songs about Conscience and Fate), Berit Malmberg gives expression to his newly found religious faith, acquired partly under the influence of the Oxford movement. Josef Nilsson's *Emigrant* (Emigrant) gives in lyric form the emotional reactions of emigrants from Småland as they attempt to adjust themselves to conditions in the New World.

Fiction. Sten Söderberg's *Vita hästar* (White Horses), the story of a family through six generations, is especially good in indicating the social, cultural, and economic conditions against which the characters play their parts. Harald Beijer's new book, *Dynamit* (Dynamite), reflects the author's conviction that society and not the individual bears the chief responsibility for the world's ills and that under the present world order any personal efforts at establishing just relationships are futile. Berit Spong, who had made a name for herself as a writer of poetry and short stories, this year turned to the novel in *Spelet på Härnevi* (The Drama on Härnevi), a powerful story which shows the tragic effect on a sensitive woman of her union with a cold and prosaic husband. The unselfish and idealistic heroine of Elin Wägners *Hemlighetsfull* (Secretive) is drawn with the usual psychological insight of the author against a clearly outlined background of post-war Europe. In *Det är bara ovanan, damen* (It Is Only the Bad Habit, the Lady), Waldemar Hammenhög continued last year's story of *Anna Sevardt*. The heroine, whose ambition was shown in the earlier volume, is now seen as a capable business executive who considers all personal relationships secondary to her career.

Miscellany. In *Från forntid till nutid* (From Antiquity to Modern Times), Eirik Holmborg, the foremost Finnish-Swedish historian, produced a work of high scholarly and artistic merit. Axel Strindberg's *Bondenöd och stormaktsdröm* (Poor Peasants and Empire Dreams) was greeted as the first consistent effort to subject the literature of an entire epoch of Swedish history to a sociological analysis. SCHWEINITZ, shwi'nits, GEORGE EDMUND DE. An American ophthalmologist, died in Philadelphia, Aug. 22, 1938, where he was born on Oct. 26, 1858. The son of Edmund A. de Schweinitz, Bishop of the Moravian Church, he was educated at Moravian College (A.B., 1876) and took his medical degree at the University of Pennsylvania in 1881, when he received the Hodge gold medal for proficiency in anatomy.

Upon graduation he was appointed ophthalmic surgeon to the Children's Hospital and the University of Pennsylvania Hospital, and in 1883 entered into general practice, specializing in ophthalmology in 1887. Dr. de Schweinitz served as ophthalmic surgeon to the Children's Hospital, Philadelphia (1885-92); as professor of ophthalmology at the Philadelphia Polyclinic and the College for Graduates in Medicine (1891-92); as clinical and later full professor of ophthalmology at Jefferson Medical College (1892-1902); as professor of ophthalmology at the School of Medicine, University of Pennsylvania (1902-24); as consulting ophthalmic surgeon to the Orthopedic Hospital (1924-28), and as professor of ophthalmology at the Graduate School of Medicine, University of Pennsylvania (1924-28). He was retired as professor emeritus in 1928.

At the entrance of the United States into the World War, Dr. de Schweinitz offered his services to the government and was commissioned a major in the reserve corps. He saw active service in France and England from November, 1917, to March, 1919, and thereafter was commissioned a lieutenant-colonel on duty in the surgeon general's office in Washington, D. C. He was honorably discharged in 1919, and in 1923 was commissioned a brigadier general in the reserve corps, and in 1927 a brigadier general in the auxiliary medical corps.

An author of many articles and monographs on ophthalmological and neurological subjects, and a lecturer of note, he delivered the Bowman lecture in London in 1923, later published under the title *Certain Ocular Aspects of Pituitary Body Disorders*, and also lectured before the Société française d'Ophtalmologie in 1924. He was awarded the Leslie Dana Medal of the National Society for the Prevention of Blindness in 1930 for "the most outstanding work in behalf of prevention of blindness," when he delivered an address on "The Heritage of Sight: Its Conservation."

A leader in the field of ophthalmology, he was awarded the Alvarenga prize of the Philadelphia College of Physicians (1894) for his essay on *Toxic Amblyopias*, published in 1896; the bronze plaque of the Société française d'Ophtalmologie (1923); the Howe medal of the American Medical Association (1927), and the Huguenot Cross (1927). He held membership in the leading scientific societies, including the American Association for the Advancement of Science, and was president of the International Congress of Ophthalmology held in Washington in 1922, of the Ophthalmological Society in 1915, and of the American Medical Association in 1922.

Dr. de Schweinitz was the author of *Diseases of the Eye* (1892; 10th ed., 1924); *An American Textbook of Diseases of the Eye, Ear, Nose, and Throat*, with Dr. B. Alexander Randall (1899); American editor of *Haab's Ophthalmoscopy and External Diseases of Eye and Operative Ophthal-*

mology (3 vol., 3d ed., 1909), and editor, with Dr. T. B. Holloway, of *Pulsating Exophthalmos*, and with Drs. Edward Jackson and T. B. Schneidemann, the *Ophthalmic Year Book* (1905-09). Also, he contributed to the *American System of Obstetrics* (1889); the *Cyclopædia of Diseases of Children* (1890), and *System of Therapeutics* (1892).

SCOTTSBORO CASE. See ALABAMA.

SCULPTURE. Sculpture assumed an unusually large place among activities in the world of art in 1938. Important competitions were held, large commissions given, notable works completed, and numerous exhibitions set forth under the auspices of professional organizations and art museums.

The two World's Fairs to be held in 1939, in San Francisco and New York, were responsible for a large part of this activity, many sculptors being employed on works purposed for their adornment.

Early in the year the Government announced a national competition for two heroic figures to be placed on the towers of the Federal Building in the New York Fair. Sculptors from 38 States submitted 424 models. The award was made to John Poole Camden, Assistant Professor of Art at Cornell University.

Interest attaches to a competition for two sculptural groups to be placed on the new Apex Building, assigned to the Federal Trade Commission, Washington, D. C. The winner was Michael Lantz, but because of the merit of the work submitted, 26 sculptors were invited to execute works for post offices in various parts of the country.

Felix Schlag of Chicago won the \$1000 prize for a Jefferson commemorative nickel, which was struck and placed in circulation in 1938.

A heroic statue by James Earle Fraser of Benjamin Franklin was ceremoniously unveiled in the Franklin Institute, Philadelphia, on May 19.

In October, a bronze statue of Gen. Artemas Ward, of Revolutionary fame, the work of Leonard Crunelle and gift of Harvard University, was given permanent placement at the intersection of Nebraska and Massachusetts Avenues, Washington, D. C.

A life-sized statue by Florence Rich of an army nurse in uniform was unveiled in the National Cemetery, Arlington, Virginia, on November 8, in commemoration of the Army and Navy nurses.

A frieze for the main entrance of the Columbus Gallery of Fine Arts, Columbus, Ohio, comprising full-length figures in relief of 68 great artists from Phidias to George Bellows, the work of Robert Aitken, was completed.

The installation of three works of sculpture in Fairmount Park, Philadelphia, marked the progress of the Ellen Phillips Samuel Memorial, which, when completed, will consist of 18 figures and groups in sculpture, emblematic of the history of America. These were a group, "Spanning the Continent," by Robert Laurent, and figures of "The Miner," by John Flanagan and "The Plowman," by J. Wallace Kelly.

To be reckoned among the important events of the year was the dedication of Carl Milles' monument in commemoration of the landing of the first Swedish colonists on the banks of the Delaware River, for which occasion the Crown Prince of Sweden came to this country.

Milles was awarded the Architectural League's Gold Medal for distinguished achievement in sculpture for 1938 for his monumental work, "Indian God of Peace," executed for the City Hall, St. Paul, Minn.

The Society of Medalists issued to its member-

ship in 1938 two medals: One by Stirling Calder, entitled "Life as a Dance"; the other by Gertrude K. Lathrop in the interest of the conservation of wild life.

A new organization, the "Sculptors' Guild," was formed in New York in 1938 and scored great success in an outdoor exhibition held on a vacant lot in the heart of the city early in the spring, as well as in a somewhat similar exhibition held at the Brooklyn Museum in the autumn. From the latter exhibition, this Museum purchased a large lead bust, "Semitic Head," by José de Creeft, a Spanish modernist.

An unusual commission for sculpture was given by the Brotherhood of Longshoremen and Auto Truck Drivers of Oakland, Calif., for works to decorate their meeting hall.

Several museums of the country made notable purchases of sculpture during 1938, ranging from the early Egyptian to the present day.

Numerous additions were made to the works by American sculptors at "Brook Green," the gift of Mr. and Mrs. Archer M. Huntington.

Heavy loss was occasioned through the death of R. Tait McKenzie, George Grey Barnard (q.v.), David Edstrom, and Paul Troubetskoy, all sculptors of outstanding achievement and international fame.

SECURITIES AND EXCHANGE COMMISSION. See FINANCIAL REVIEW.

SEISMOLOGY. C. Davison has just completed an extensive investigation of earthquake sounds. Broadly speaking, earthquake sounds are of two types: (1) Sounds of long duration and (2) sounds of short duration. These can be further classified into six groups, thus under (1) there are the sounds resembling (a) movement of heavy vehicles, (b) thunder (not thunder claps), (c) wind; and under (2) there are the sounds resembling (a) the fall of a heavy body, (b) explosions, (c) the roll of a distant drum. In all cases the sound which accompanies an earthquake is of very low pitch, so low that it is just audible to many observers and quite inaudible to a few. Davison finds that the less the intensity of the earthquake, the more likely is the sound to be one of short duration. Naturally as the distance from the origin increases the audibility of the sound decreases but in doing so the sound becomes smoother and more monotonous. The intensity of the sound increases to a maximum with the strength of the shock and then dies away with it. As a rule the beginning of the sound precedes that of the shock, the epochs of maximum intensity coincide, and the end of the sound follows that of the shock. A person is more likely to hear the sound before the shock than after the shock is over. Davison explains all of his findings by saying that in its simplest form, the seismic focus of an earthquake consists of a central region of the fault surface from which come the vibrations that form the shock, surrounded by a marginal region from which sound vibrations alone proceed.

An earthquake in Pennsylvania on July 15 reached intensity V on the Mercalli scale. No seismographic records of this shock were obtained. Landsberg made a careful study of all reports about this earthquake and on the basis of this macroseismic evidence computed the focal depth to be about 7.5 km. This earthquake at Clover Creek, a region of unusual seismic stability, is convincing evidence that no region of the earth is absolutely free from earthquakes. Its failure to be recorded on any seismograph shows that a close network of

seismological observatories is necessary in order to bring less conspicuous shocks to the attention of the seismologist.

The connection between microseisms and weather is well established, so much so that observations of microseisms have been used as an aid to forecasting weather. A. W. Lee has investigated this relation again recently and finds many unexplained facts about it. A well-pronounced barometric depression, appropriately situated, is a necessary condition for the development of microseisms, but some other agency or combination of circumstances must be involved and at present no satisfactory explanation has been given. Lee has shown weather maps having no change in the intensity of the barometric depression while the microseisms steadily increased. Also he has pointed out deep depressions of the same type and location but not equally effective in producing microseisms; the lines of equal microseismic activity conform with the run of the isobars, but there is a striking contrast between the amplitudes of microseisms for different occasions. Until these anomalies can be explained the problem of microseisms remains a challenge to meteorologists and seismologists alike. See EARTHQUAKES.

SEWERAGE AND SEWAGE PURIFICATION

CATION. Records of the Federal Emergency Administration of Public Works show that the 1938 PWA program included 147 projects for sanitary sewers costing \$37,100,000 and 319 sewage disposal plants costing \$70,756,000. For the period 1933-38 the corresponding figures were 465 sanitary sewer projects costing \$89,253,000 and 889 disposal plants costing \$326,341,000. A country-wide survey showed that 4662 communities in 47 States had sewage-treatment plants in 1938 compared with 3471 in 44 States in 1935. Corresponding populations (1930 census) are 41 and 24 millions. Activated-sludge plants gained about 100 per cent in number in three years and trickling filter installations, 43 per cent. A total of 535 communities collect gas from sludge-digestion tanks, using it mostly for heating but in 51 cases for power. Some part of the sludge was used or sold for fertilizers in 156 communities (From an article to be published early in 1939 in *Engineering News-Record*). The sewage-treatment works now in use go far in reducing the pollution of coastal and inland waters, thus abolishing offense to eye and nose and in many cases reducing or eliminating menaces to health caused by the pollution of water supplies or oyster beds. That much remains to be done is shown by the inclusion in the Six-Year Water Control Program of the Water Control Committee of the National Resources Committee of 3484 sewage-diversion and treatment projects to cost \$667,000,000, to be constructed chiefly without Federal aid. To cope with the pollution of waters common to several states, a number of interstate agencies have been formed. Recent additions to states with these joint bodies are New York, New Jersey, Pennsylvania, and Delaware, to protect the Delaware River; Pennsylvania, District of Columbia, Maryland, Virginia, and West Virginia, to safeguard the Potomac River; and the eight Ohio River Basin States of New York, Pennsylvania, West Virginia, Tennessee, Kentucky, Ohio, Indiana, and Illinois. In April, President Roosevelt signed an act authorizing

Minnesota and the two Dakotas to make a compact for flood and pollution control of their interstate waters.

At midnight, December 31, the Sanitary District of Chicago reduced to 1500 cu. ft. per second the diversion of water from Lake Michigan to the Chicago Drainage Canal to dilute the sewage of the district on its way southward to the Mississippi River system. This was in compliance with the order of the U.S. Supreme Court in the notable Lake Michigan diversion suit. Meanwhile the district had nearly completed its sewage-treatment program, including some of the largest sewage-treatment works in the world. (See 1930 YEAR BOOK for court order and subsequent issues for progress on sewage treatment, under SEWERAGE.) See WATER WORKS.

New Treatment Works. At Buffalo, N. Y., sewage-treatment works and trunk sewers leading to them were officially opened on July 1. At the same time the city began to charge for sewerage service—a practice which is steadily increasing in the United States. The works clarify and chlorinate the sewage, the latter for the protection of downstream water supplies. Sludge is burned. The project cost about \$15,000,000. (For detailed description, see *Municipal Sanitation* [New York], September, 1938.) Atlanta, Ga., put the largest of several new plants in use in September. It has a daily capacity of 42 million gal. It consists of bar screens, comminators for the screenings, grit collectors, aeration tanks, clarification tanks, and sludge-digestion tanks and vacuum type sludge dryers. At low stages of the Chattahoochee River, clarification will be aided by chemical precipitation. Gas produced in the sludge-digestion tanks operates an 180-h.p. engine to generate electricity for heating the digestors and buildings. Three other new plants have been completed for Atlanta. A sewer is being built to convey the sewage from an obsolescent plant to the large works. A 123-million gal. activated-sludge plant was opened at Cleveland on August 21. It is the largest of three plants at Cleveland. Partly because of its location on the shore of Lake Erie, in a high-class residential district, the sludge is piped 13 miles to another plant for treatment, where it is digested, dewatered, and incinerated. One of the largest sewage-disposal plants in the world, including 10 miles of intercepting sewers and a sedimentation and chlorination plant to treat 420 million gal. a day, is being built at Detroit. Dewatered sludge will be incinerated in a plant with a daily capacity of 1200 tons. (See *Engineering News-Record* [New York], Aug. 18, 1938.) As a result of litigation, begun in 1924, Milwaukee settled for \$818,000 patent claims on the activated-sludge process. Dedication of the sewage disposal works built by the Minneapolis-St. Paul Sanitary District took place on May 16. Including 10 miles of intercepting sewers, the project cost \$16,000,000. The plant was designed to treat an average daily flow of 134 million gal. and a maximum flow of 610 m.g.d. It includes screen and grit chambers, flocculating and settling tanks, vacuum sludge filters, and sludge incinerators. When the Mississippi River is very low, chemicals will be used to aid sedimentation. (See *Municipal Sanitation* [New York], July, 1938.) For storing gas produced in the digestion of sludge, spherical-shaped tanks have been erected at Cleveland, Ohio, Beaver Dam, Green Bay, and Sheboygan, Wis. To divert sewage causing a nuisance in Wolf River, Memphis, Tenn., is building an intercepting sewer 14,000 ft. long, 90 ft. below the ground surface. It

will discharge into the Mississippi River, which has more than ample volume for disposal of the sewage by dilution only.

Canada. Of 120 municipalities in Canada having sewage-treatment works, 47 have plants of the activated-sludge type.

London, ENGLAND. A novel type of activated-sludge plant has been built by the London County Council to treat sewage delivered at Barking on the Thames. Sewage charged with re-aerated activated sludge is forced by paddles through 66 two-tier channels, going the length of the upper and returning through the lower. The channels are 6 ft. wide and 5 ft. deep and are grouped in six units of 12 each, with a combined length of 6400 ft. Excess final sludge is digested in tanks. The daily capacity of the plant is 66 million gal.

Bibliography. Bevan and Rees, *Sewers* (London and New York); Steele, *Water Supply and Sewerage* (New York).

SEXUAL PATHOLOGY. See MEDICAL JURISPRUDENCE.

SEYCHELLES, sā'shēl'; -shēlz'. A British colony consisting of 92 islands in the Indian Ocean. Mahé (55 sq. mi.; pop., 25,367) and Praslin are the largest islands. Total area, 156¼ square miles; total population (Jan. 1, 1937, estimate), 30,461 compared with 27,444 (1931 census). Capital, Victoria (on the island of Mahé).

Copra, cinnamon, phosphate guano, patchouli and other essential oils, and fresh fish are the chief products. For local consumption, tobacco, coffee, sugar cane, maize, vegetables, manioc, bananas, and breadfruit are grown. In 1937 imports were valued at Rs1,263,351; exports, Rs1,503,310 (rupee averaged \$0.3733 for 1937); revenue, Rs1,008,872; expenditure, Rs903,902; public debt, £26,730. The government is administered by a governor assisted by an executive council and a legislative council. Governor and Commander-in-Chief, Sir Arthur F. Grimble.

SHAN STATES. See BURMA.

SHASTA DAM. See DAMS.

SHEPARD, HELEN MILLER GOULD (Mrs. FINLEY J. SHEPARD). An American philanthropist, died at Roxbury, N. Y., Dec. 21, 1938. Born in New York, June 20, 1868, the eldest daughter of Jay Gould, she was educated privately. At the outbreak of the Spanish-American War in 1898, Mrs. Shepard contributed \$100,000 to the United States Government and aided camps and hospitals established for the soldiers. She herself took over the Women's War Relief Association and reorganized it efficiently. For her work she received a gold medal from Congress. New York University was a frequent recipient of her benefactions. To it she gave the library (1895), the Hall of Fame (1900), and made many donations to it for books and scholarships, as well as to the Engineering School, the School of Applied Science, and the Medical College. With Mrs. Russell Sage she gave to the Young Men's Christian Association a building in Brooklyn in 1900 and other valuable gifts, particularly to the Railroad Men's branch. She donated a dormitory to Northfield Seminary and made many other gifts to charitable and educational organizations. In late years, Mrs. Shepard assisted in opposing Communism and the birth-control movement, and encouraged the greater spread of religious devotion.

She was married to Finley Johnson Shepard on Jan. 22, 1913.

SHIPBUILDING. Nearly 350,000 gross tons more of merchant vessels were launched during

1938 than in 1937, according to Lloyd's Register of Shipping, covering returns from all maritime countries, except Russia, for which no authentic records have been available for some time. All merchant shipping of 100 gross tons each and upward is included in the returns, which show that last year's launchings aggregated 3,033,593 gross tons. This is the largest annual output for the world since 1921, but the figure is 300,000 tons lower than the production in the last pre-war year, 1913.

TONNAGE OF VESSELS LAUNCHED
[Gross tons]

	1938	1937
Great Britain and Ireland	1,030,375	920,822
United States	201,251	239,445
Other countries	1,801,967	1,530,313
World total	3,033,593	2,690,580

Only two of the 10 leading maritime countries launched less tonnage in 1938 than in 1937. For the United States a decrease of 38,000 gross tons was reported, and for Japan one of 10,000 tons. The greatest gain was made by Great Britain and Ireland, one of 110,000 tons, followed by Italy's increase of 72,000 tons. For Germany there was an advance of 45,000 tons, as also for the Netherlands of 56,000 tons, France 21,000 tons, Denmark 27,000 tons, Norway 13,000 tons, and Sweden 5000 tons.

About 60 per cent of all tonnage launched in 1938 was composed of motor vessels, as compared with 56 per cent of the year 1937. The tonnage of motor vessels being built in 1938 was the largest ever reported, exceeding the high figure of 1930 by 240,000 tons. Tanker tonnage amounted to 907,000 tons, about 80 per cent being motor driven. Sailing vessels and barges aggregated 57,651 tons or less than 2 per cent of the entire output of merchant vessels.

Large vessels (each over 20,000 gross tons) under construction in 1938 were the following: *Queen Elizabeth* and *Mauretania* for the Cunard White Star Line, *Andes* for Royal Mail Line, *Dominion Monarch* for Shaw, Savill, and Abdon, *Stockholm* for the Swedish American Line, and *America* for the United States Lines. Of those completed may be mentioned *Nieuw Amsterdam* of Holland American Line, *Oslofjord* of Norwegian American Line, *Stratheden* and *Strathallan* of Peninsular and Oriental Steam Navigation Co., and *Capetown Castle* of Union Castle Co. Outstanding motorships put in service were *Capetown Castle*, the largest ship sailing regularly from Southampton, Eng., to Capetown, South Africa; and *Prins Albert* built for the Belgian Government to run from Dover, Eng., to Ostend, Bel. The *Prins Albert* is one of the fastest merchant motorships afloat.

Besides the general world-wide shipbuilding activities as reported by Lloyds, attention is called to those in the United States of the Maritime Commission. The Maritime Commission is interested in the construction of:

- 1 21-knot, 1200-passenger ship for the U.S. Lines' trans-Atlantic service, for which the name *America* has been selected.
- 4 16½-knot cargo ships for the Export Lines' Mediterranean service.
- 10 16½-knot cargo ships of the C-3 type.
- 20 15½-knot cargo ships of the C-2 type.
- 12 16½-knot tankers, 2 of which have been sold to the U.S. Navy, and 2 to a private company.
- 3 16½-knot passenger and cargo ships.

and is preparing plans for three 23-knot ships of about 35,000 tons displacement with accommoda-

tions for 800 passengers, to be operated in the trans-pacific service. Likewise plans for cargo ships somewhat smaller than the C-2 type, and to be known as the C-1 type, are being developed. These ships will be about 7000 tons total deadweight, with a speed of approximately 14 knots, and will be suitable for some foreign trades where the faster 15½-knot ship with the larger deadweight cannot be used economically. The American Bureau of Shipping on November 1 reported there were being built in the United States yards 51 seagoing vessels aggregating 423,250 gross tons, and 78 miscellaneous vessels aggregating 36,525 gross tons, making a total of 459,775, while on Nov. 1, 1937, there were 102 vessels of 315,220 gross tons.

Relative to the design of merchant ships, improved materials are being used in both hull and propelling machinery, and increased safety at sea is secured by them. Welding is replacing riveting in many parts of the hull; in fact, all-welded ships have already been built. Internal combustion engines (Diesel) are being built in larger sizes, and installed not only in tankers and cargo vessels, but also in those primarily intended to carry passengers. The newest and fastest Atlantic liners as *Queen Elizabeth*, *Mauretania*, and *America* will be turbine driven. The use of electricity for cooking, heating, and other purposes has still further increased, and is an important feature of the modern vessel. See NAVAL PROGRESS.

SHIPPING. Unfavorable economic conditions in many countries, the political situation in Europe, and exchange difficulties have collectively caused a falling off of world trade. In some foreign ports, and particularly in Pacific Coast ports of the United States, shipping has been seriously affected by strikes and labor trouble. However, toward the latter part of 1938, a better understanding seemed to have been arrived at between labor and shipping men. Besides labor troubles, the business depression has affected shipping to such an extent that steps have been taken by foreign governments and also by the United States to build up shipping. In Great Britain, the International Scheme of Volunteer Co-operation introduced in January, 1938, has been successful in maintaining rates in controlled markets so there is a profit above the cost of operating ships. The constantly rising cost of building ships has retarded the placing of orders by companies for new tonnage.

In the United States, the Maritime Commission, created by the Merchant Marine Act of 1936, has been active not only in making studies of foreign trade routes, but also in preparing plans for passenger, cargo, and passenger and cargo vessels, and in awarding contracts for their construction. Contracts for some 50 vessels have been awarded, and others will be in 1939. In some cases the Commission has re-organized established lines, and taken an important part in the operating of the vessels. From information from the Commission, there are 13 lines subsidized by the Government, which are as follows:

United States Lines—from North Atlantic ports to Europe.
American Export Lines—from North Atlantic ports to Mediterranean.
American Scantic Line—from North Atlantic ports to Scandinavian and Baltic.
American Republics Line—from North Atlantic ports to the East Coast of South America.
Seas Shipping Co.—from U.S. Atlantic ports to South Africa.
South Atlantic Steamship Co.—from Southern Atlantic ports to Europe.
The Grace Line—from North Atlantic ports to West Coast of South America.

The New York & Cuba Mail Steamship Co.—from New York to Cuba and Mexico.
Lykes Bros.—from the Gulf to Europe and to the Far East.
The Mississippi Shipping Co.—from the Gulf to the East Coast of South America.
The American President Lines—trans-Pacific service and Round-the-World service.
Matson Line—from the West Coast to Australia.
P.A.B. Line—from the West Coast of the United States to the East Coast of South America.

There were, at the end of 1938, a total of 143 ships under subsidy and the annual subsidy payments amount to approximately \$13,000,000. The construction subsidy on the ships ordered by the Commission will doubtless exceed \$50,000,000. Not only are ships being built to supplement the American merchant marine, but progress is being made in the improvement of the efficiency of the personnel to man the ships, by the establishing of training ships and stations. About 1400 seagoing vessels of 2000 gross tons and over are running under the American flag. Of these, less than 300 are in foreign trade, about 700 are in coastwise service, and the rest are operating on the Great Lakes.

SHOE INDUSTRY. The 1938 production of shoes in the United States was estimated by the *Boot and Shoe Recorder* to be approximately 380,000,000 pairs, or about 7½ per cent less than in 1937, when 411,969,000 were produced, and 8½ per cent under the 415,000,000 record of 1936.

Estimates based partly on a survey for the first half of the year, made by the U.S. Bureau of the Census, place the sales of retail shoe stores for 1938 in excess of \$42,000,000, which is less than 7 per cent lower than in 1937 and more than 10 per cent greater than in 1935. Per capita consumption of shoes by women in 1938 approximated 3.6 pairs, which, although lower than for 1937, was higher than in the 10 years prior to 1937. Men consumed about two pairs during 1938, representing the lowest per capita consumption since 1934; boys 1.3 pairs or the same as in 1937. Per capita consumption of shoes by misses and children in 1938 was in excess of three pairs, the highest recorded since 1929.

Nearly 1400 independent shoe stores throughout the United States with aggregate sales in 1937 of \$44,856,000 reported to the Bureau of the Census that their sales for the second quarter of 1938 increased 43.5 per cent over the preceding quarter. Sales during the first half of 1938 were off 6.8 per cent as compared with the sales for the same period of 1937. The first quarter of 1938 showed a loss of 10.2 per cent and the second quarter a loss of 4.3 per cent in comparison with the corresponding quarters of 1937.

Covering 1938, the U.S. Bureau of Foreign and Domestic Commerce reported imports of footwear partly or entirely of leather amounted to 6,292,476 pairs valued at \$3,977,279 and exports of 2,241,050 pairs valued at \$4,390,781.

SIAM. An independent monarchy of southeastern Asia. Capital, Bangkok; King in 1938, Ananda Mahidol; the royal authority is exercised by a council of regency.

Area and Population. Siam's area is 200,148 square miles. Its population, by the census of 1937, is 14,464,489. By the last previous census (1929) the population numbered 11,506,207. The city of Bangkok had (1937) 886,150 inhabitants. While the great majority, possibly nine-tenths, of the inhabitants are of Siamese origin, there are many Chinese, Indians, Malays, and Cambodians. The numbers of these groups were reported, in 1929, as follows: Chinese, 445,274; Indians and Malays

(counted together), 479,618; Cambodians, 60,668. Europeans and Americans numbered 1920.

Education and Religion. The number of inhabitants of school-going age—from 5 to 14 years—was stated, for 1937, as 3,500,000. There were, on Mar. 31, 1938, 10,616 schools, of the governmental, primary, municipal, and private groups. The pupils taking ordinary courses in these schools numbered 727,163 boys and 567,378 girls. Students in professional courses numbered 12,370 boys and 3108 girls. The estimated proportion of illiterates among the population of age to read was about 35 per cent in 1938, as against 90 per cent in 1921, at the adoption of a law for compulsory education. Higher education is provided at Chulalankarana University, at Bangkok, and at a University of Moral and Political Sciences, where law, political science, and economics are taught and public servants are trained. The predominant religious belief of the country, Buddhism, was estimated in 1930 to have 10,958,462 followers; the Mohammedans were then reported to number 498,211; the Christians, 49,426.

Production. While Siam has active mineral and lumbering industries, about 83 per cent of the population is thought to gain its support directly by agriculture. Rice forms the bulk of the people's diet; it also provides the country's greatest export. The rice crop of 1938 (year ending March 31) was estimated at 9730 millions of pounds. For the corresponding year 1937 the yield of rice was 8098 millions of pounds. The quantities of other crops produced in 1937 follow: Corn, 179,000 bu.; sesame, 1,520,000 lb.; peas, 10,896,000 lb.; cotton, 8,881,000 lb.; tobacco, 15,588,000 lb.; pepper, 437,000 lb. The cut of teak (season, 1935-36) totaled 101,908 trees, giving 91.5 million board feet; this industry was mainly in British control. Rubber trees, numbering 41,292,000 in 1935, occupied 287,600 acres.

The mining of tin, the chief of the country's mineral industries, produced in the year ending with Mar. 31, 1938, ore having 15,686 tons of tin content. An ore of tungsten (wolframite), also mined, yielded 113 long tons shipped for export in 1937. The manufacturing industries run by private enterprise were still for the most part, in 1938, rice mills and saw mills, but a brewery, a cement-making establishment, and a number of industries that could operate on a smaller scale than these, were reported as in business. The government, moreover, carried on a cotton mill, a paper factory, a sugar mill, a distillery, and a manufactory of airplanes, and had in construction a refinery for oil.

Foreign Trade. For the fiscal year ended Mar. 31, 1938, total imports were 111,780,823 bahts (110,-043,648 in 1936-37) and total exports were 180,-773,109 bahts (184,361,155 in 1936-37). United States trade figures for the calendar year 1938 showed exports to Siam of \$3,267,041 (\$3,682,314 in 1937) and imports from Siam of \$310,507 (\$526,-882). Among the imports for the 1936-37 fiscal year, translated into U.S. currency at average exchange rates, cotton piece goods to the sum of \$5,522,000 held the chief place. Imported foodstuffs of divers sorts (including \$1,452,000 of canned milk) approximately equalled in cost the importations of cotton goods. Imports included \$1,113,000 for electric machinery, \$2,438,000 for other machinery, and \$665,000 for automobiles. The importations of gasoline, kerosene, and cigarettes each approximated \$1,700,000. More than half of the exports, by value, consisted of rice, to the total of \$43,175,000. Tin ore, to the value of \$13,414,000,

was shipped out of the country. Exports of rubber, which had increased eightfold in value (trebling in quantity) in four years, amounted to \$9,494,000. Those of teak came to \$3,893,000. The year's imports came chiefly from Japan (25.9 per cent), Singapore (16.3), the United Kingdom (10.2), and Hong Kong (8.8); exports went largely to Singapore (27.1 per cent), the United Kingdom (13.5), and Japan (2.8).

Finance. For the fiscal year 1939 (ending with March 31) the budget carried estimated ordinary revenue at 109,425,940 bahts (1 baht = \$0.45 U.S., approximately, in 1938); ordinary expenditure, 109,397,988 bahts; and extraordinary, or capital, expenditure, 22,108,524 bahts; this left an estimated deficit of 22,080,572 bahts. The results for the fiscal year 1938 were: Revenue, 110,058,910 bahts; ordinary expenditure, 101,627,102 bahts; extraordinary expenditure, 23,785,321 bahts; 3,216,-575 bahts of allocations to local authorities; consequent total expenditures of 128,628,998 bahts; and deficit for the year, 18,570,088 bahts. Two years' budgets thus led toward a combined deficit of about 40,600,000 bahts. In the five years preceding the fiscal year 1938, on the other hand, a succession of yearly surpluses had built up a substantial reserve in the treasury; even after the deficit for the fiscal year 1939, the treasury was expected to have 38,020,000 bahts left over.

Siam carried a moderate public debt, amounting (Mar. 30, 1938) to 81,482,775 bahts, of which all but 10,000,000 bahts was in sterling loans. The monetary unit, the baht (formerly called the tical), bears a fixed value in relation to sterling, their ratio having been permanently set in 1928 at 11 bahts to the pound.

Communications. Railroads in Siam, mainly a line northward and another eastward from Bangkok, operate an aggregate of 2059 miles of track. British, French, and Dutch lines of commercial aviation offer the means of travel by airplane between Bangkok and Europe, Hong Kong, the United States, and the cities of the Far East. A company owned in Siam operates airplanes over several lines within the country. In 1937 six airports were in use and four in course of construction; post offices numbered 1062; telephones, 3351; licensed radio sets, 29,329; vessels entering the port of Bangkok numbered 804, and their registered tonnage totaled 1,098,539. The system of highways was still little developed; of the 1445 miles of highways existing in 1937, 59 miles were graded as first-class, 119 as second-class, and the remaining 1267 as third-class.

Government. The constitution of December 10, 1932, which changed Siam from an absolute into a limited monarchy, forms the basis of the government. The King's executive powers are exercised through a State Council, whose members, numbering from 14 to 24, are appointed by the King but are responsible to the National Assembly. The National Assembly, the legislative body, is a single chamber composed in equal parts of members elected by popular vote for four years and members appointed by the Crown. The constitution authorizes it to aid the Crown in the exercise of the royal power of lawmaking, and in effect the will of the legislative majority, supported by the State Council, gives the country its laws. The constitution requires that 14 members of the Council be appointed from among the members of the Assembly. Ministers (heads of administrative departments) are chosen among the State Council's members. The right to participate in the popular vote belongs

to those of either sex who have attained the age of 20 years. A Council of Regency (distinct from the State Council) acts on behalf of the King during his minority. Its members are Prince Aditya Dibabha (president), Chao Phya Yomraj, and Gen. Chao Phya Bijayendra Yodhin. The president of the State Council in 1938 was Col. Phya Phahol Pholphayuha Sena, until December 15; thereafter, Col. Luang Bipul Songgram. The present King of Siam is Ananda Mahidol, who was born on Sept. 20, 1925, was proclaimed King at the abdication of Prajadhipok, his uncle, on Mar. 2, 1935, and is to assume the royal power on attaining his majority, at the age of 16 years.

History. The Ministry headed by Colonel Sena fell as the result of a popular election of members of the National Assembly, held on Nov. 12, 1938. This election had followed an order (September 11) of the Council of Regency, dissolving the Assembly, by reason of disagreements between Assembly and Ministry. Colonel Songgram, who had been Minister of Defense in the outgoing Ministry, became (December 15) Prime Minister and President of the State Council. While no strict party lines existed in the Siamese political world, Songgram was regarded as an advocate of nationalist policies and in particular of strengthening the army. He was thought, by some, less favorably disposed to the British, in any deviation of British and of Japanese interest, than had been his predecessor; but his proposals took the form of advocating an impartial neutrality to either power. Attempts on Songgram's life were made on November 10, when his valet reportedly tried to shoot him, and early in December, by poison. Songgram owed his rise to the prominent part that he had taken in suppressing the conservative counter-revolt of 1933.

Engaged in negotiating new treaties with other governments, Siam made some progress in this direction: A treaty with the United States, ratified by the U.S. Senate, was put into effect (October 8), and a treaty of amity with France was approved by the French Chamber of Deputies (December 14). Within a year, up to May, 1938, Siam made new treaties with a dozen governments, Great Britain and Japan included.

The scheme of cutting a canal for ships through the neck of the Malay Peninsula, at the Isthmus of Kra, within Siamese territory, attracted keener attention in 1938 by reason of the divergence of British and Japanese interests; negotiations on the part of representatives of Japan, for permission to cut such a canal, were feared for the reason that the completion of such an enterprise would enable vessels to pass from the China Sea to the Indian Ocean without passing Singapore. Foreign Minister Mahudharm declared, amid this situation, in an interview dated May 7, that Siam had not granted any special industrial or commercial privilege to Japan, and that the new treaty with Japan contained no secret clauses.

SIBERIA. The general name of the Asiatic part of the U.S.S.R., extending east from the Ural Mountains to the Pacific and north from Manchuria, Mongolia, and the Kazakh S.S.R. into the Arctic. Siberia was divided into administrative units of the Russian Soviet Federated Socialist Republic (one of the 11 constituent republics of the U.S.S.R.). The chief divisions include the *provinces*: Sverdlovsk (part of), Chelyabinsk (part of), East Siberian, Omsk; *territories*: Far Eastern, Krasnoyarsk, West Siberian; *autonomous provinces*: Jewish, Khakass; *autonomous soviet socialist republics*: Buryat-Mongolian, Yakut. Esti-

mated total area, 4,994,819 square miles; estimated population (1931), 21,500,800. Chief towns (with 1933 populations in parentheses): Sverdlovsk (400,800), Novosibirsk (278,000), Omsk (227,000), Vladivostok (190,000), Irkutsk (158,500), Tomsk (128,400), Barnaul (109,200), Krasnoyarsk (101,500), Khabarovsk (89,500), Yakut (10,558). See RUSSIAN SOVIET FEDERATED SOCIALIST REPUBLIC; UNION OF SOVIET SOCIALIST REPUBLICS.

SIERRA LEONE, si-er'a lê-ô'nê. A British colony and protectorate in West Africa. Total area, 31,000 square miles, of which the part administered as a colony (Sierra Leone peninsula; the Tasso, Banana, Turtle, and York islands; and the town of Bonthe on Sherbro island) equaled 256 square miles. Total population (1931 census), 1,768,480 of whom 96,422 were in the colony. Freetown, the capital (62,314 inhabitants in 1936), is the finest seaport in West Africa and is a second-class Imperial coaling station. In 1937 there were a total of 155 schools, the number of pupils enrolled—16,461.

Production and Trade. Kola nuts, palm kernels and oil, ginger, diamonds, gold, iron ore, platinum, piassava, hides, and rice are the main products. Mineral production (1937) included iron ore, 633,985 tons; platinum, 308 oz. troy; gold, 39,151 oz. troy; diamonds, 913,401 carats; chromite, 729 tons. In 1937 (including bullion and specie) imports were valued at £1,839,482; exports (including re-exports of £23,563), £2,843,540 of which diamonds represented £1,070,384; palm kernels, £884,812; iron ore, £325,605; gold, £269,465; ginger, £97,622. The chief imports were tobacco, coal, rice, metals, machinery, and wearing apparel. Great Britain received 69.07 per cent of the exports and sent 69.79 per cent of the imports.

Communications. In 1937 there were over 900 miles of roads suitable for motor traffic, 311 miles of open-line railway (2 ft. 6 in. gauge), 12 miles of motor-bus service operated by the railway, 790 miles of telegraph lines, and 850 miles of telephone lines. The radio broadcast service (inaugurated in May, 1934) is owned and controlled by the government. Vessels entering the ports in 1937 aggregated 2,740,408 tons. A weekly air service in both directions between Bathurst (Gambia) and Freetown, which links up with the Empire air service, was started during 1938.

Government. For the year ended Dec. 31, 1937, revenue totaled £1,025,709; expenditure, £919,266; public debt, £1,718,259 against which the accumulated sinking funds, for its amortization, amounted to £519,461. The colony and protectorate are administered by a governor assisted by an executive council of 5 members and a legislative council of 22 members (the governor, 11 official members, 7 nominated unofficial members, including 3 paramount chiefs of the protectorate, and 3 elected members). Governor and Commander-in-Chief, Sir Douglas Jardine (appointed May 21, 1937).

History. During 1938 a special coastal defense force was being organized and the regular garrison was to be re-established as part of a regular defense scheme in view of the importance of Freetown as a port of call.

SILESIA, si-lê'shî-a; -sha. (1) A part of the province of Moravia and Silesia in Czecho-Slovakia. (2) A county of Poland. (3) The two Prussian provinces—Lower Silesia and Upper Silesia. For the transfer of part of Silesia from Czecho-Slovakia to Germany and Poland in 1938, see those countries under *History*.

SILK. See TEXTILES.

SILVER. World silver production in 1938 was estimated by the *Handy & Harman Annual Review of the Silver Market*, at 264,000,000 oz., apportioned as follows in millions of fine oz.:

	1937	1938
United States	69.3	61.4
Mexico	85.7	85.
Canada	24.5	23.3
South America	32.7	32.4
All other countries	62.5	62.7
Total production	274.7	264.8

The total production showed a reduction of 9,900,000 oz., or about 3.5 per cent under 1937; the United States' decrease was over 11 per cent.

Based on data now available, total U.S. Government acquisitions for 1938 are estimated at 403,200,000 oz. divided into the following classifications: From domestic ores 60,300,000 oz., from nationalization 4400 oz., from inter-government agreements and open-market purchases, including miscellaneous deposits at the mints and assay offices 342,900,000 oz. The past year's acquisitions are the largest on record with the exception of 1935 when a figure of 534,900,000 oz. was reached. The total for 1938, added to the 2,171,800,000 oz. on hand at the beginning of the year, amounts to 2,575,000,000 oz., which represents an estimate of Treasury silver holdings Dec. 31, 1938, including coin in circulation. Silver in process of refining or remelting is not included in the above figure, even if it is ultimately destined for the Treasury.

In spite of a considerable improvement in the rate of consumption during the last quarter of 1938, only 27,500,000 oz. of silver were estimated as used during 1938 by the arts and industries of the United States and Canada, a decrease of nearly 13 per cent from the preceding year. This decrease was distributed among the various classifications as follows: Sterling silverware 15 per cent, silver-plated ware 5 per cent, jewelry 15 per cent, motion pictures 5 per cent. Less silver was also used in the dental trade. In the purely industrial field as distinct from the arts, a decline of approximately 35 per cent occurred. However, this situation is at-

tributable specifically to the past year's general business shrinkage, as basic conditions indicate a continued growth for the industrial use of silver.

Under the Silver Purchase Act of 1934, the President proclaimed on Dec. 31, 1938, a price of 64.64 cents per oz. for silver, at which price the Government will purchase silver to June 30, 1939. On this date the Gold Reserve Act will expire and when it does, the price of silver and gold will depend on legislation passed by Congress.

According to the U.S. Bureau of Foreign & Domestic Commerce, silver to the amount of \$7,082,000 was exported in 1938 and \$230,531,000 was imported.

The total mine production of recoverable silver in the United States (Territories included) as reported by the U.S. Bureau of Mines, was 61,560,737 fine oz. in 1938, a decrease of 15 per cent from 1937. The production and value for 1938, by States and Territories, are shown in the accompanying table at the bottom of the preceding column.

SIMMONS COLLEGE. A nonsectarian college for women in Boston, Mass., founded in 1899. The enrollment on Nov. 1, 1938, was 1515. The summer-school enrollment in 1938 was 137. The faculty numbered 163. The productive funds of the institution amounted to \$3,698,922, and the income for the year was \$591,944 (exclusive of gifts). There were 85,396 volumes in the libraries. The College received \$200,000 from the Paul Wilde Jackson Trust for the establishment of the Henry Clay Jackson Fund to be used for scholarships. A new residence hall was under construction. President, Bancroft Beatley, Ed.D.

SLUM CLEARANCE, NATIONAL CONFERENCE ON. An organization called into being by the Mayor and the City Council of Cleveland, Ohio, pursuant to a resolution adopted June 5, 1933. Its membership is composed of various Housing experts, public officials, technicians, and others interested in slum clearance, housing, and planning. The Conference provides an agency through which operators of large-scale housing projects, social workers, public officials, planners, realtors, material manufacturers, engineers, and architects can exchange experiences and discuss the solution of problems arising out of the existence of slums, blighted areas, and inadequate housing facilities. This is made possible through its conferences. It published *Proceedings* in 1933. The publication was widely distributed to all libraries, universities, Chambers of Commerce, Builders Exchanges, etc. The chairman is Ernest J. Bohn, Housing Center, West Mall Drive, Cleveland, Ohio, and the secretary is John H. Miller, Chicago, Ill.

SMITH COLLEGE. A nonsectarian college for women in Northampton, Mass., founded in

* Silver valued in 1938 at \$0.6464+, the amount per ounce returned to depositors of newly mined domestic silver produced in 1938.

1871. The enrollment for the autumn of 1938 was 2131, while that for the summer was 289. There were 247 faculty members. The productive funds amounted to \$6,564,989, and the income from such funds was \$258,961. The volumes in the library numbered 257,742. President, William Allan Neilson, Ph.D.

SMITHSONIAN GALLERY OF ART.

See ART MUSEUMS.

SMITHSONIAN INSTITUTION. An organization founded in 1846 according to the terms of the will of James Smithson of England, who in 1826 bequeathed his property to the United States of America "to found in Washington, under the name of the Smithsonian Institution, an establishment for the increase and diffusion of knowledge among men." The purposes of the Institution are carried out by scientific research, exploration, and publication. It also administers the following bureaus which are supported by Congressional appropriations: The United States National Museum, National Collection of Fine Arts, Bureau of American Ethnology, International Exchange Service, National Zoological Park, and Astrophysical Observatory. It also administers the Freer Gallery of Art and the Division of Radiation and Organisms. The new National Gallery of Art was established as a bureau of the Institution but is administered by the Board of Trustees of the Gallery.

The expendable income of the Institution for 1938, consisting of income from investments, income from miscellaneous sources, and gifts for special objects (excluding income from the Freer endowment) was approximately \$200,000. Its endowment funds (exclusive of the Freer endowment) totaled \$1,987,294. The Institution and the government bureaus under its direction published 67 volumes and pamphlets, of which 129,478 copies were distributed to libraries, educational institutions, and individuals. The secretary is Charles G. Abbot, D.Sc.; the assistant secretary, Alexander Wetmore, Ph.D.

SOCIALISM. Despite an ideological unity rarely witnessed in the annals of the Socialist Party in America, this group apparently was meeting with more and more rebuffs at the hands of the American voter as the year progressed. Not only was it failing to establish itself as a significant third party, but its inability to indoctrinate with its political ideas the growing ranks of organized labor pointed to the conclusion that the future history of the Socialist Party as such was likely to be short-lived in the United States. The willingness of American Socialists to accept this decision, forced by the circumstances of the day, was evidenced late in the year when the New York State Socialist Party went out of existence and authorized its members individually to enter into the ranks of the American Labor Party in that State. Paradoxically enough, all this occurred in the face of the spirited and harmonious discussions and decisions which took place at the Twenty-first National Convention of the party in April. On the most vital issue before it—that of war—the Convention reaffirmed its faith in the principles of Socialism and declared

—as the Party had done similarly in 1917—that Socialists would fight to the bitter end to defeat any and all plans designed to push this country into war. On April 23 the war resolution adopted at the Convention in Kenosha, Wis., called for an implementation of the following program to keep the United States out of the war and advance peace in the world: (1) The immediate withdrawal of American ships and marines from China and the evacuation of American Nationals. (2) A people's boycott of Japanese goods. (3) The immediate lifting of the embargo against the democratically elected Loyalist government of Spain. (4) "Opposition to huge army and navy bills; national and international action toward disarmament; refusal to vote the military budgets." (5) Abandonment of all plans for industrial mobilization, notably as outlined in the May bill. (6) The abolition of military training in the public high schools. (7) An amendment to the Constitution providing for a war referendum, the so-called Ludlow referendum, so as to give to American citizens the right to vote on war. (8) The abandonment by the United States of all imperialist ventures in Latin America. (9) The granting of independence to American colonial possessions. (10) International co-operation for the lessening of economic friction between the nations of the world resulting from the struggle for trade, investment areas, raw materials, or from credit or currency policies, "but no alliance with any nation or group of nations for war, declared or undeclared, under any name or on any pretext." And the resolution terminated on the following:

Should, despite these efforts, war imminently threaten, agitation among the workers for whatever effective economic and political pressures they can bring to bear—including the general strike—to prevent the outbreak of war. In case of such outbreak, the use of political and economic pressure by the workers for the bringing about of a speedy peace; the organization of labor for higher living standards and in opposition to military conscription; the development of international working-class solidarity across military lines; and the strengthening of all forces leading to the abolition of capitalism and to the emancipation of mankind.

In the November elections, except for the unexpectedly large vote polled by Mr. Jasper MacLevy (who actually was not a member of the Socialist Party as such but of the more conservative Social Democratic Federation) in the Connecticut gubernatorial campaign, Socialist candidates everywhere were confronted by declining votes. Mr. Norman Thomas, in New York for example, despite an energetic campaign, was unable to attract more than an insignificant following, and polled something less than 25,000 votes in the whole State. It may be that the smallness of his vote was due to the anticipated closeness of the contest between Governor Lehman and District-Attorney Dewey and the fear on the part of many liberal-minded persons that a vote for Thomas might imperil the chances of Governor Lehman's re-election. In any case, the Socialist Party, as a result, was forced off the ballot in New York State and on December 24 it took the decision to dissolve and request its members to join the American Labor Party as individuals. This decision of the Socialists to join the American Labor Party marked the passing of a party which had existed in New York State since 1901. In the announcement reporting the decision to dissolve, Harry W. Laidler, State Chairman of the Socialist Party, said that the members of his group would continue their activities in education in Socialist principles and Socialist organization. The Socialists looked forward to the early appearance of a National Farmer-Labor Party which they

would be able to support if the Democratic Convention of 1940 failed to nominate a liberal candidate. The Socialist leadership had been inclining toward the formation of such a labor party for some time, again as the result of the decline in their following. Thus in February, 1938, Mr. Laidler had drawn up a platform in which he stressed the desirability of forming such a party by co-operation with the La Follette Farmer-Labor Progressive Federation of Wisconsin, the Farmer-Labor Party of Minnesota, and similar groups in North and South Dakota, Michigan, Illinois, Ohio, Iowa, Pennsylvania, Connecticut, California, Washington, and Oregon.

SOCIAL PROGRESS, INTERNATIONAL ASSOCIATION FOR. An international association, of which the American Association for Labor Legislation is the American section, created in 1925 by amalgamating three former allied organizations, the International Association for Labor Legislation, the International Social Insurance Committee, and the International Association on Unemployment. See LABOR LEGISLATION, AMERICAN ASSOCIATION FOR.

SOCIAL PSYCHOLOGY. See PSYCHOLOGY.

SOIL MECHANICS. See DAMS; FOUNDATIONS.

SOILS. Especially notable progress was made in 1938 in the discovery of new knowledge and practical application of it in the conservation, improvement, and efficient use of soils. There never has been wider, keener, or more active interest in this subject than at the present time on the part of farmers as well as scientists. It is evident that the people of the country have become "soil conscious" and are determined to conserve and use to better advantage their rich heritage of soil fertility, so long neglected and abused. Striking evidence of the vast, varied, and rapidly accumulating knowledge available for this purpose is furnished by the reports and bulletins of the State agricultural experiment stations and the bureaus of the U.S. Department of Agriculture and especially in the voluminous and exhaustive *Yearbook* of the Department for 1938, entitled *Soils and Men*. The scope, purpose, and spirit of the *Yearbook* is plainly indicated by the titles of its major subdivisions, viz., the Nation and the soil, the farmer and the soil, soil and plant relationships, fundamentals of soils science, and soils of the United States. The book is appropriately dedicated to the memory of that master mind in soil science, Dr. Curtis Fletcher Marbut, so long in charge of the soil survey work of the U.S. Department of Agriculture and the builder of a true science of soils, who died Aug. 25, 1935, in Harbin, Manchuria, on his way to study the soils of China.

Soil Surveys. Carefully made soil surveys are recognized as a basic requirement in intelligent land use and management and for research relating thereto. The U.S. Department of Agriculture, in co-operation with the State agricultural experiment stations and other agencies, has for many years been engaged in such surveys. The Bureau of Chemistry & Soils of the Department of Agriculture reports that—

Approximately 23,000 square miles of rural lands in the United States and Hawaii were mapped by the Soil Survey Division during the past year. The total area [411,111,040

acres] covered by the soil survey is more than one-half of the arable lands of the Nation. The soil maps, together with the accompanying reports giving descriptions of the soils and their uses, provide farmers, research workers, extension leaders, and local officials with a practical working handbook of the land for the area covered.

In connection with the surveys there has been developed a useful system of rating land for crop production.

Minor Soil Constituents. So-called minor or trace elements in soils have continued to receive increasing attention with results of much practical importance in both plant and animal nutrition. In fact, it is being very definitely shown that many of these minor elements, in limited amounts, are just as essential as nitrogen, phosphorus, potassium, and calcium, mainly relied on in ordinary fertilizers for the production of foods and feeds.

The bad effects of zinc deficiency have been shown to be especially pronounced in the case of citrus fruits, and small applications of zinc salts have been found to be effective in controlling various plant diseases.

Of especial interest in this connection is the discovery by the U.S. Department of Agriculture and the South Dakota Agricultural Experiment Station of the relation of selenium in small amounts in the soils of certain range areas of the West to so-called alkali disease of livestock, which in some cases causes heavy losses to stockmen. A survey made by the U.S. Department of Agriculture revealed a seleniferous area of more than 3000 sq. mi. in southeastern Colorado. A highly seleniferous but less extensive area was also discovered in New Mexico. Some evidence has been found that sulphur and arsenic may aid in correcting or preventing the harmful effects of selenium.

Deficiency of cobalt in soils has recently been recognized as having a harmful effect in both plant and animal nutrition. The Florida Agricultural Experiment Station has described a type of malnutrition in calves fed locally grown Natal grass hay, shelled corn, and dried skim milk, presumably deficient in cobalt, which was corrected by the addition of a small amount of cobalt (chloride or sulphate) to the ration. Similar observations in Australia and with hogs and goats are reported. It is believed that soils containing less than three parts of cobalt per million are deficient.

Soil Erosion. Soil erosion, which takes such a heavy toll of soil fertility, has been characterized as inexcusable and largely the result of man's interference with Nature's processes. An erosion survey recently made by the U.S. Department of Agriculture brought out some rather startling facts. For example, of the present cropland area of the United States, "practically 61 per cent—about 253,000,000 acres—is either subject to continued erosion or is of such poor quality as not to return a satisfactory income to farmers at the price levels assumed. To continue present practices on the part of this land subject to erosion is to mine it and progressively destroy it. Over half of it is badly in need of good soil conservation practices to prevent serious damage.

It follows that only about 39 per cent—some 161,000,000 acres—of the present cropland area can be safely cultivated under prevailing practices or should be cultivated under the price levels assumed. But some land that is not now in cultivation could be safely cultivated. Adding this to the 39 per cent gives a total of about 211,800,000 acres as the maximum that can be safely cultivated under prevailing practices. This is equivalent to a little less than half of the present cropland area. Under prevailing practices, then, our agricultural plant would have to be reduced by half if we wanted to save the soil. . . .

It has been estimated that some 3,000,000,000 tons of

soil are washed annually from overgrazed pastures and cultivated or barren fields, to be poured into streams, harbors, reservoirs, lakes, and oceans, or deposited on bottom lands and flood plains.

Mechanical methods such as dams, contour furrows, terraces, and the like, but especially improved cropping systems, are doing much to arrest this devastating squandering of the land resources of the country. Reforesting, keeping in grass and other cover crops, and strip cropping have proved to be especially effective means of curtailing this waste.

A recent nation-wide survey by the Soil Conservation Service of the U.S. Department of Agriculture shows that farmers in increasing numbers are using strip cropping to protect their fields from soil erosion. A million or more acres are now planted to alternate strips of open-tilled and close-growing crops. Strips of legumes or other close-growing crops between strips of corn, cotton, tobacco, and other open-tilled crops on sloping fields slow down surface water with its load of soil in suspension. The denser vegetation filters out the soil particles, and larger quantities of water soak into the soil. Strip cropping is most effective with contour cultivation—rows running around the hillside instead of straight up and down—which also retards erosion.

Land-use Programs. A far-reaching reorganization of the U.S. Department of Agriculture announced near the close of the year is expected to have a profound effect on land use and conservation and crop-adjustment policies of the Department by providing for larger and more effective participation of farmers and farm organizations and research agencies in a comprehensive agricultural land-use program.

Protection of Highways from Run-off Waters. The unrestrained run-off of flood waters from land through highway ditches is proving to be a serious menace to the highways. The Soil Conservation Service of the Department of Agriculture is co-operating with local highway departments and farmers to control such erosion and thus to prevent decrease of land values and increase of taxation for road maintenance.

Tenancy and Deterioration of Farm Lands. The relation of tenancy to deterioration of farm lands is beginning to receive serious attention in recognition of the fact that lack of security and permanence in tenure results in great loss not only to tenants but to landlords through poor farming and consequent deterioration of land. Tenant farming will no doubt be greatly improved if conditions of tenure are such as to attract good farmers and encourage them to use efficient methods of farming and maintenance of soil productivity.

Soil Biology. There is encouraging evidence of a revival of interest in new approaches to the study of biological processes in the soil as a major factor in soil productivity, particularly fixation and transformation of nitrogen. Conventional methods of studying the subject had in large measure ceased to be productive. The history, progress, present status, and outlook in this interesting and important field of research are fully reviewed and interpreted in the Yearbook of the U.S. Department of Agriculture for 1938.

It has recently been shown that the maintenance of the fertility of rice soils in India is due in a measure to blue-green algae growing in the irrigation waters which have the power to absorb nitrogen from the atmosphere and thus, after decay, to enrich the soil, a fact which may prove of impor-

tance in rice growing generally and with other crops.

Irrigation and Drainage. Irrigation and drainage continue to play an important part in reclaiming and maintaining the fertility of farm lands but there have been few especially noteworthy recent developments in this field.

Hydroponics. Strange as it may seem with the great advances in soil conservation and use and research relating thereto, there has developed a lively interest in growing plants without soil—the so-called "soilless agriculture," or hydroponics, in which natural soil is replaced by solution, sand, and similar cultures. An impetus has been given to this interest, especially by the California, New Jersey, Indiana, Ohio, and New York State Agricultural Experiment Stations, but also by amateur experimenters and commercial growers. The results of these experiments indicate that such methods may have practical value, especially for use in greenhouse and similar culture. Suggested advantages include absolute control of nutrients, frequent and complete aeration of roots, economy of fertilizers, few or no soil-borne insect pests and diseases, quicker root development, automatic feeding and watering operations with lowered labor costs, and possibility of extending the range of production of crops narrowly restricted by natural climatic and soil conditions. For example, it has been found possible with such a method to grow at Casper, Wyo., a mile above sea level, peanuts, sweet potatoes, cotton, and tobacco, which cannot be grown there under natural conditions. Use of methods of this kind, however, are considered still in the experimental stage, and attempts at large-scale use of them by amateurs are cautioned against.

BIBLIOGRAPHY.—The most important recent contribution to the subject of soils was, as already indicated, the *Yearbook of the U.S. Department of Agriculture for 1938*, entitled *Soils and Men*. This treats the subject exhaustively and gives a detailed list of special literature cited in the text.

Current progress in soils research continued to be reviewed in the *Journal of the American Society of Agronomy* (Geneva), *Soil Science* (Baltimore, Md.), and *Experiment Station Record*, published monthly by the Office of Experiment Stations of the U.S. Department of Agriculture. Other publications of special importance appearing during the year were:

The Wasted Land, G. W. Johnson (Univ. of N. C. Press), which deals with wasted human values as well as wasted land; *To Hold This Soil*, R. Lord, U.S. Department of Agriculture Miscellaneous Publication No. 321; *Selected Bibliography on Erosion and Silt Movement*, G. R. Williams et al., U.S. Geological Survey, Water Supply Paper 797; *Soil Blowing on the Southern Great Plains*, E. F. Chilcott, U.S.D.A. Farmers' Bulletin 1771; *Terracing for Soil and Water Conservation*, C. L. Hamilton, U.S.D.A. Farmers' Bulletin 1789; *Soil-Depleting, Soil-Conserving, and Soil-Building Crops*, A. J. Pieters, U.S.D.A. Leaflet No. 165; *Strip Cropping for Soil Conservation*, W. V. Kell, U.S.D.A. Farmers' Bulletin 1776; *Changes in Erodiability of Soils Brought About by the Application of Organic Matter*, G. M. Browning, Soil Science Society of America Proceedings, 1937 (W. V. Agricultural Experiment Station Scientific Paper 195); *Soil Defense in the South*, E. M. Rowalt, U.S.D.A. Farmers' Bulletin 1809; *Soil Defense in the Northeast*, G. K. Rule, U.S.D.A. Farmers' Bulletin 1810; *Selenium Occurrence in Certain Soils in the United States with a Discussion of Related Topics*, H. G. Byers et al., U.S.D.A. Technical Bulletin 482, 530, and 601; *Recent Studies on Boron in Soils*, J. A. Naflet, American Fertilizer (Philadelphia, Pa.), Oct. 1, 1938; Report of the Chief of the Bureau of Chemistry and Soils, U.S. Department of Agriculture, 1938.

As previously noted, a considerable bibliography of hydroponics has rapidly accumulated. One of the most important contributions is a mimeographed circular entitled "Growing Plants Without Soil by the Water Culture Method," issued by the California Agricultural Experiment Station, where the technic of the method was first developed. Information regarding the subject will be found in a book entitled *Hydroponics*, by C. D. Dawson and M. V. Dorn (Los Angeles, Calif.), and in a quarterly magazine of the same title (Detroit, Mich.). Another book on the

subject is *Soilless Growth of Plants*, by C. Ellis and M. W. Swaney (Reinhold, N. Y.).

SOLAR SYSTEM. See ASTRONOMY.

SOLOMON ISLANDS. An archipelago in the Pacific, east of New Guinea (Papua). See NEW GUINEA, TERRITORY OF; SOLOMON ISLANDS, BRITISH.

SOLOMON ISLANDS, BRITISH. A British protectorate in the South Pacific, comprising the islands of Guadalcanal, Malaita, Ysabel, San Cristoval, New Georgia, Choiseul, Shortland, Vella Lavella, Kulambangra, Santa Cruz, Vanikoro, Rennell, and numerous smaller islands (including the Lord Howe atoll). Total land area, 11,000 square miles; population (1931 census), 94,066 including 478 Europeans. Capital, Tulagi.

The main products are copra, trochus, ivory nuts, timber, green snail shell, and bêche-de-mer. In 1936-37 exports totaled £331,438; imports, £197,967; revenue amounted to £68,136; expenditure, £63,027. Administration is under a resident commissioner acting under the High Commissioner for the Western Pacific, aided by a nominated advisory council. Resident Commissioner, Francis N. Ashley.

SOMALILAND (sô-mä'lê-länd), BRITISH. A British protectorate along the Gulf of Aden in Africa. Area, 68,000 square miles; population (estimated), 344,700 including 2683 non-natives. Chief towns: Berbera (capital), 30,000 (cold season) and 15,000 (hot season) inhabitants; Hargeisa, 20,000 to 15,000; Burao, 10,000; Zeilah (Zeila), 5000; Erigavo; Borama.

Production and Trade. Agricultural crops included sorghum, maize, barley, and wheat. Livestock raising is the main occupation of the people. The protectorate had (1936 estimate): 2,500,000 sheep, 2,000,000 goats, 1,500,000 camels, 30,000 cattle, 2000 donkeys, and 1000 horses. In 1937 imports were valued at £685,481; exports, £286,821. Rice, dates, sugar, and textiles were the main imports. The chief exports were hides and skins, gum and resins, ghee, and livestock. During 1936 shipping entered and cleared totaled 57,287 tons and 55,921 tons, respectively.

Government. For 1937 revenue totaled £214,749; expenditure, £213,139. The protectorate is administered by a governor (with headquarters at Sheikh) who is represented by a district officer in each of the five administrative districts (Berbera, Burao, Erigavo, Hargeisa, and Zeilah). Governor and Commander-in-Chief, Sir Arthur Lawrance (appointed June 18, 1932).

SOMALILAND, FRENCH. A French colony in Africa. Area, about 8492 square miles; native population (July 1, 1936, estimate), 44,240 including 27,380 Somalis, 4200 Arabs, 12,000 Danakils, 304 Abyssinians, 239 Hindus, and 117 Jews. Djibouti (capital) had 14,870 inhabitants in 1936; there were 1221 Europeans, of whom 923 were French. The coast fisheries, salt mines, and inland trade are the main sources of livelihood. Cotton goods, cattle, sugar, and coal are the main imports. Coffee, hides and skins, animal wax, and salt (1936 production, 22,000 metric tons) are the chief exports. In 1937 the estimated value of merchandise imports (in old U.S. gold dollars) was \$6,400,000 (1936, \$5,300,000); exports, \$3,700,000 (1936, \$3,000,000). A railway connects Djibouti with Addis Ababa, capital of Italian East Africa (q.v.). Part of the shares of the French-owned railway company were transferred to the Italian Government in 1935. The transit trade with Ethiopia was valued at 73,313,000 francs in 1935. In 1937 there

were 131 miles of roads. The budget for 1936 was balanced at 12,100,000 francs (franc averaged \$0.0611 for 1936). A governor, assisted by an administrative council, administers the colony. Governor, M. Annet (appointed, December, 1935).

SOMALILAND, ITALIAN. A former Italian colony in East Africa, incorporated with Ethiopia and Eritrea into a single colony known as Italian East Africa, by the decree law of June 1, 1936. See ITALIAN EAST AFRICA.

SOUTH, UNIVERSITY OF THE. A Protestant Episcopal institution for the higher education of men in Sewanee, Tenn., founded in 1857. The enrollment for the autumn term of 1938 was 267, of whom 251 were registered in the college and 16 in the theological school. The faculty had 27 members. The income from productive funds was \$61,099, while the receipts from all sources totaled \$479,350. The library contained 48,444 volumes. President, Alexander Guerry, B.A., D.C.L.

SOUTH AFRICA, UNION OF. A self-governing dominion of the British Commonwealth of Nations. Capital, Pretoria; seat of the legislature, Capetown.

Area and Population. The area by provinces and the population by provinces and racial composition at the 1936 census are shown in the accompanying table.

SOUTH AFRICA: AREA AND POPULATION
[Census of May 5, 1936, final]

Province	Area, sq. miles	Euro- peans	Bantus	Asiatics & mixed
Cape of Good Hope	277,169*	791,574	2,045,570	692,756
Natal	35,284	190,549	1,553,629	202,290
Transvaal	110,450	820,756	2,444,380	76,334
Orange Free State	49,647	200,978	553,110	17,972
Total	472,550	2,003,857	6,596,689	989,352

* Including Walvis Bay (430 sq. miles).

The total census population was 9,589,898 in 1936 and 6,928,580 in 1921. The estimated mean population on June 30, 1938, was 9,979,900 (Europeans, 2,081,400; Bantus, 6,870,900; Asiatics, 227,600; mixed, 800,000). European births in 1937 were 51,289 (25.10 per 1000 of population) and deaths numbered 20,432 (10 per 1000). Excluding passengers in transit, 84,284 Europeans and 5049 non-Europeans arrived in the Union during 1937 and 77,282 Europeans and 2894 non-Europeans departed. Populations of the chief cities, including suburbs, at the 1936 census were, with the number of Europeans in parentheses: Johannesburg, 519,384 (257,671); Capetown, 344,233 (173,412); Durban, 259,606 (95,033); Pretoria, 128,621 (76,935); Port Elizabeth, 109,841 (53,461); Germiston, 79,440 (32,564); East London, 60,563 (31,311); Bloemfontein, 64,233 (30,291). The Witwatersrand, center of the Union's gold-mining industry, contained 402,223 Europeans and 614,967 non-Europeans, or more than one-tenth of the Union's total population, at the 1936 census. The same census showed that the home language of 1,120,770 persons (55.93 per cent of the European population) was Afrikaans, 783,071 (39.08 per cent) English, 50,411 (2.52 per cent) English and Afrikaans, 17,810 German, and 17,684 Yiddish.

Education and Religion. In 1936 there were 4609 state and state-aided schools for Europeans with 375,157 pupils and 4540 schools for non-Europeans with 500,130 pupils. The total normal state expenditure on these schools for the year was £8,956,345. There are four universities, at Capetown, Stellenbosch, Witwatersrand, and Pretoria, the latter having branches at Bloemfontein, Wellington, Gra-

hamstown, Pietermaritzburg, and Potchefstroom. In 1936 the average number of university students was 8358; the number of professors was 237, and the state expenditure £359,260. At the 1926 census 49.61 per cent of the European church adherents belonged to Dutch churches, 18.57 per cent were Anglicans, 6.28 per cent Methodists, 4.28 per cent Hebrews, and 4.25 per cent Roman Catholics.

Production. Agriculture, stock-raising, mining, and manufacturing are the chief occupations. The area under cultivation in 1936 was 13,121,000 acres (cereals, 9,229,000 acres). Estimated production of the chief crops in 1937-38, with final 1936-37 returns in parentheses, was: Wheat, 10,167,000 bu. (15,420,000); corn, 64,721,000 bu. (100,457,000); oats, 5,973,000 bu. (7,354,000); potatoes, 7,135,000 bu. (7,598,000); cane sugar, 446,000 short tons in 1936-37; tobacco, 20,260,000 lb. (20,462,000); kaffir corn, 26,000 short tons (54,000); peanuts, about 19,200,000 lb. (30,311,000). The figures for wheat, oats, potatoes, cane sugar, and tobacco are for European cultivation only. The wine output in 1936-37 was 37,904,000 gal.; wattle bark extract (1937), 91,535,000 lb. In the calendar year 1937 the output of creamery butter was 28,350,000 lb.; factory cheese, 10,253,000 lb.; factory bacon and ham, 9,433,000 lb. Wool production in 1937-38 was about 230,000,000 lb. The 1936 livestock census showed 10,904,000 cattle, 619,000 swine, 39,705,000 sheep, 85,000 angora goats, and 5,546,000 other goats. In 1930 there were 1,665,000 horses, mules, and asses, and 32,000 ostriches. Figures for swine and ostriches refer to those owned by Europeans.

The value of all mineral production in 1936 was 87,399,000 South African pounds (gold, £79,495,000, including the gold premium). Output of the leading minerals in 1937 was: Gold, 11,740,891 fine oz. (12,156,629 in 1938); asbestos, 27,821 short tons (exports); coal, 16,718,000 short tons (sales); copper, 14,021 short tons (sales); tin, 948 short tons (sales shipped); diamonds, 1,030,000 carats; silver, 1,101,000 fine oz.; osmiridium, 5,274,000 troy oz. (sales); platinum, 30,125,000 troy oz. (sales shipped). Dividends of the gold-mining companies in 1938 were £17,262,216. One of the world's largest deposits of high-grade iron ore was reported to have been revealed by tests made near Wolmaransstad in the Transvaal in 1938. In 1935-36 the manufacturing establishments of the Union employed 303,557 persons and produced goods to the value of £150,378,000 (£75,618,000 added in process of production).

Foreign Trade. General imports in 1937 were valued at 103,368,000 South African pounds (£86,282,000 in 1936) and exports at £121,261,000 (£109,444,000 in 1936). Iron and steel and their manufactures, machinery and apparatus, automobiles, cotton piece goods and other textiles were the leading imports. The value of the chief exports was, in U.S. currency computed at average exchange value: Gold bar, \$405,066,000; wool, \$61,914,000; fruits, \$17,824,000; diamonds, \$16,246,000; corn, \$15,639,000. The United Kingdom furnished 42 per cent of the 1937 imports; United States, 20.6; Germany, 5.5. Of the exports, 37.5 per cent went to the United Kingdom, 12.8 per cent to Germany, 8.6 to Japan, 6.4 to France, and 6 per cent to Belgium. United States trade figures for 1938 showed imports from South Africa of \$15,982,835 (\$14,402,112 in 1937) and exports to South Africa of \$70,064,955 (\$88,723,029 in 1937).

Finance. For the fiscal year ended Mar. 31, 1938, ordinary budget receipts amounted to £43,610,741 (£43,087,000 in 1936-37) and ordinary ex-

penditures were £39,258,741 (£37,711,000 in 1936-37). Budget estimates for 1938-39 placed receipts at £42,346,000 and expenditures at £42,846,000. The net public debt on Mar. 31, 1938, was £256,000,000 (external, £101,000,000) as compared with £254,936,935 on Mar. 31, 1937. Gold payments on the South African pound were suspended Dec. 29, 1932, but it remained pegged to the pound sterling at par.

Transportation. For the year ended Mar. 31, 1937, the Union railways, including those of South-West Africa, had 13,893 miles of line (all government-owned except 680 miles) and carried 96,496,000 passengers and 27,074,000 short tons of freight (excluding livestock), the gross receipts totaling £31,893,000. In 1937 the Union had 83,232 miles of roads of all kinds. A six-year road construction program was inaugurated by the National Roads Board in April, 1936. Up to June 30, 1938, about 1000 miles of gravel roads (313 miles bituminous-surface treated) were completed by the Board. Forty bridges out of 117 authorized had been finished. The number of automobiles in the Union on Jan. 1, 1938, was 324,084.

Services on all routes of the South African airways (Rand-Durban, Durban-Capetown, Rand-Capetown, Rand-Port Elizabeth, Rand-Windhoek, Rand-Bulawayo, Bulawayo-Kisumu, and Rand-Lourenço Marques) were increased effective Nov. 1, 1938. Imperial Airways linked the South African cities with London. An agreement for a South African-Angola air service was reached in 1938. During 1937 a total of 2163 vessels of 8,971,000 net registered tons entered South African ports in the foreign trade. Work on the extensive Capetown harbor improvements, to be completed in 10 years at an estimated cost of £6,000,000, was begun on May 10, 1938. Port works at Durban, to cost about \$9,000,000, were also approved.

Government. United (May 31, 1910) by an enactment of the British Parliament, the South Africa Act of 1909, the former colonies of the Cape of Good Hope, Natal, the Transvaal, and Orange River form the present Union, which is governed as provided by that act. The Union holds all state property, railroads included, and carries the debts of the former colonies. The present provinces' powers of taxation are limited by acts of the Union; they collect certain taxes, receive subsidies from the Union, and have charge of schools, primary and secondary, and of roads, hospitals, and poor-relief.

The Union is governed by an executive, the Governor-General, appointed by the sovereign, and by the Parliament, a legislature of two houses. The Governor-General is aided by an executive council, or ministry, which in practice depends on the confidence of Parliament for its tenure. The Parliament consists of a Senate and a House of Assembly. Of the members of the Senate, each province elects 8, and 8 are nominated by the Governor-General in Council: the members from the several provinces are elected by a body in each province, composed of the provincial council and the province's members of the House of Assembly. The popular vote of male and female adult British subjects of European descent elects, one from each electoral division, 150 members of the House of Assembly. These members serve for five years, unless the House be dissolved earlier. The Senate, until lately, consisted of 40 members, the House of 150. An act of 1936, however, provided that Cape natives should have a voice in the election of four additional Senators and three additional members of the House. The Governor-General in 1938 was

Sir Patrick Duncan, who took office in 1937; Premier and Minister of External Affairs, Gen. J. B. M. Hertzog, leader of the United Party, who took office in 1934.

HISTORY

Parliamentary Elections. The popular vote of the Union, cast on May 18, 1938, elected to the House of Assembly 111 members of the United Party, 27 of the Nationalist Party, 8 of the Dominion Party, 3 Laborites, and 1 independent. Thus constituted, the new House had 6 less of the United group, 7 more Nationalists, 3 more Dominionists, and 4 less of the remaining groups. Though the United Party of General Hertzog lost half a dozen seats, its retention of nearly three-fourths of the seats in the House constituted a victory in the judgment of its friends. It had won the election of 1933 as a coalition of two pre-existing parties, of which one, the old Nationalist group, had broken with Hertzog thereafter, the new Nationalists becoming the chief element in the parliamentary opposition. Thus in 1938 the United Party for the first time went before the voters as a single organization; its chiefs had held office for five years, not without the usual chance of losing the support of some by the very consequence of being in power; the international relations of Europe, moreover, had already become sufficiently disturbed to give point to the Nationalists' advocacy of abstention from any British war.

Relations with Britain. South Africa and Great Britain were more or less at variance on a number of specific matters, of which all, however, seemed well within the power of the parties to settle. The Union wanted its authority to extend over Bechuanaland, Basutoland, and Swaziland, three protectorates maintained by British authority as a safeguard for the interests of the colored populations. The British government had reason to want the South Africans to bind themselves more definitely to the British commonwealth of nations, while the Union, preparing to expend money for the improvement of its own defenses, was not by any means unqualifiedly ready to pool its defensive policy with Great Britain's. Important as these issues might be, they were eclipsed for a time by the controversy over the rival anthems (British and Boer) for official use on ceremonial occasions. While the dispute involved nothing of immediate and material character, it had to do, like the earlier controversy over the Union's flag, with symbols that corresponded to two ideals not easily to be merged. Premier Hertzog made a statement on the anthems in the House of Assembly on February 21, denying that "Die Stem van Suid Afrika" (Boer song) would supersede "God Save the King"; both, he said, would be sung; while "Die Stem" would serve as an anthem of the South African nation, "God Save the King" would be regarded literally, as an invocation of divine protection "for our King." This formula guided the government in the end, not indeed until the omission of the British anthem from the official programs of military parades on Union Day, at Pretoria, Capetown, and Johannesburg had led Minister of the Interior Stuttaford to offer his resignation by way of protest. The resignation was withdrawn when Stuttaford became satisfied that the military authorities' omission would not be repeated, and that the cabinet as a whole affirmed the position earlier taken by Prime Minister Hertzog.

The project of ending the British protectorates over Basutoland, Bechuanaland, and Swaziland

made some headway in 1938. The difficulty of carrying out the plan, as the Union desired, lay in the British authorities' promise not to transfer these territories into South African authorities' control until after careful consideration of the wishes of the natives involved in the transfers. The subject was left for settlement by mutual agreement, to be reached by Great Britain and South Africa, as to terms on which the territories should be transferred to the Union. Late in the year, terms were yet to be proposed by the government of the Union.

Policy toward South-West Africa. A body of colonists of German extraction, who continued to dwell in South-West Africa, received some sympathy among Afrikaners and others, in attempts to restore German influences in this neighboring area, held by the Union in virtue of a mandate of the League of Nations. Dr. E. Macmillan, a former moderator of the Presbyterian Church in South Africa, suggested that the Union voluntarily surrender the mandate over South-West Africa to Germany, "as a hostage to peace." The *Cape Times*, condemning this proposal, asserted that the German population in the area in question was in the minority by two to one. The Union's Legislature, prior to the Legislative elections of May, rejected demands of the German party in South-West Africa for the extension of the Union's citizenship to the mandate and for recognition of German as a third official language.

South African Defense. Early in its first session the newly elected House of Assembly gave attention to the subject of the Union's means for its defense, along with the related matters of the attitude for the Union to take in case of British entry into a distant war (such as the then-apprehended break with Germany over the rights of Czecho-Slovakia) and the facilities to be afforded to Great Britain for its naval needs. The attitude of the Union in case of Great Britain's going to war was thus expressed by General Smuts: It was inconceivable that South Africa should stand aside, but she would not automatically be at war, as she had been in 1914; the people would have to decide. Premier Hertzog thereafter said that the government refused to bind itself in advance on the advisability of joining Great Britain in war, and that such a question would be for the people to decide. Minister of Defense Pirow presented to the House the plans of the Ministry to expend £6,000,000 on the means of defense of the Union, in the course of the next three years. The plans included strengthened coastal works at Capetown, Durban, and other places, and the military enrollment of a citizens' force of 67,000 to be aided by organized rifle associations including 70,000 men. Pirow visited London in November to discuss technical points in the defensive plans with British experts.

Voortrekker Centenary. At Pretoria, on December 16, was observed the hundredth anniversary of the Great Trek led by Andries Pretorius from Natal into the interior; a throng of 150,000 people attended the laying of a foundation stone for a Voortrekker monument. The day was that on which Pretorius's band had defeated an army of Zulus on the Blood River. Apparently convinced that the Afrikaners would feel enraged if "God Save the King" were heard at this centenary of the Boers' trek to escape out of British jurisdiction, both the Premier and the Governor-General stayed away; thus the ceremony was strictly unofficial, and the strains of the British anthem did not sound.

SOUTH AMERICA. See articles on the various South American countries; **EXPLORATION.**

SOUTH AUSTRALIA. An Australian State. Area, 380,070 square miles; population, exclusive of full-blood aboriginals, 591,755 (Mar. 31, 1938, estimate), compared with 580,949 (1933 census). During 1937 there were 8985 births, 5247 deaths, and 5340 marriages. The principal cities are Adelaide (capital), with 318,190 inhabitants, including suburbs, on Dec. 31, 1937; Port Pirie, 11,677 (1933); Mount Gambier, 5542 (1933). In 1936 the 1088 State schools had 88,593 pupils; the 190 private schools, 17,007 pupils; there is a State university at Adelaide.

Production. Wheat (43,428,000 bu. estimated in 1937-38), barley, oats, hay, grapes, wine, and dried fruit are the main agricultural products. Livestock in the State (Dec. 31, 1936): 328,013 cattle; 200,-870 horses; 85,048 pigs; 8,904,402 sheep (1937 estimate). The principal dairy products for 1936-37 were butter, 20,418,765 lb.; cheese, 11,847,457 lb.; bacon and ham, 7,753,620 lb. Wool (greasy) produced during 1938 was estimated to total 85,-500,000 lb.

The estimated value of mineral production for 1937 was 2,502,795 Australian pounds, of which gold accounted for £A60,372. In 1936-37, from the 1916 factories, with 40,710 employees (including working proprietors), the estimated value of production was £A12,271,563 (Australian £ averaged \$3.9594 for 1936; \$3.9394 for 1937).

Government. For the year ended June 30, 1938, revenue totaled £A12,460,000; expenditure, £A12,-336,000; public debt, £A107,450,000. The 1938-39 budget estimates were: Revenue, £A12,517,140; expenditure, £A12,744,329. Executive power is vested in a governor, assisted by an executive council of responsible ministers. Legislative power is vested in a parliament consisting of a legislative council of 20 members (10 re-elected every 3 years) and a house of assembly elected for 3 years. The house of assembly, election of Mar. 19, 1938, comprises the following parties: Liberals, 15; Labor, 9; Independent Labor, 2; Independents, 13. Governor, Maj.-Gen. Sir Winston Dugan (appointed, Mar. 26, 1934); Premier, R. L. Butler. See **AUSTRALIA** under *History*.

SOUTH CAROLINA. Area and Population. Area, 30,989 square miles; included (1930) water, 494 square miles. Population: Apr. 1, 1930 (census), 1,738,765; July 1, 1937 (Federal estimate), 1,875,000; 1920 (census), 1,683,724. Charleston had (1930) 62,265 inhabitants; Columbia, the capital, 51,581.

Agriculture. Acreage, production, and value of the chief crops of South Carolina, for 1938 and 1937, appear in the accompanying table.

Crop	Year	Acreage	Prod. Bu.	Value
Cotton	1938	1,253,000	650,000 ^a	\$28,925,000
	1937	1,695,000	1,023,000 ^a	43,798,000
Corn	1938	1,846,000	26,767,000	16,060,000
	1937	1,663,000	24,945,000	16,214,000
Tobacco ..	1938	102,000	98,430,000 ^b	21,851,000
	1937	112,000	108,080,000 ^b	22,481,000
Hay (tame) .	1938	551,000	431,000 ^c	5,474,000
	1937	603,000	501,000 ^c	6,914,000
Oats	1938	467,000	10,648,000	4,366,000
	1937	458,000	10,076,000	5,844,000
Sweet potatoes	1938	66,000	6,468,000	4,204,000
	1937	57,000	5,130,000	3,796,000
Potatoes	1938	24,000	2,784,000	1,949,000
	1937	26,000	3,120,000	2,496,000
Wheat	1938	161,000	1,771,000	1,417,000
	1937	149,000	1,416,000	1,637,000

^a Bales. ^b Pounds. ^c Tons.

Finance. State expenditures in the year ended June 30, 1937, as reported by the U.S. Bureau of the Census, were: For maintaining and operating governmental departments, \$22,012,300 (of which \$3,296,874 was for highways and \$5,305,371 was for local education); for interest on bonded debt, \$1,712,203; for capital outlay, \$9,123,199. Revenues were \$36,340,841. Of these, property taxes furnished \$3,002,577; income taxes, \$3,260,103; sales taxes, \$11,967,634 (including tax on gasoline, \$8,706,161); departmental earnings, \$1,717,970; sale of licenses, \$6,563,658; unemployment compensation, \$2,617,037; Federal or other grants-in-aid, \$6,224,344. Funded debt outstanding on June 30, 1937, totaled \$41,595,752, not to include \$24,-385,001 of county-reimbursement road bonds. Net of sinking-fund assets, the debt was \$40,770,528. On an assessed valuation of \$363,333,058, the State levied in the year ad-valorem taxes of \$2,939,594.

Education. South Carolina gave much attention in 1938 to matters of vocational education. Twelve months of training, at public expense, in homemaking were provided for both women and girls. New buildings were erected so as to permit of an increase in agricultural training.

Charities and Corrections. The Department of Public Welfare and the Board of Public Welfare, both administrative units of the State government and both dealing with groups of the population requiring special public care, were nevertheless separate as to organization and function. The Department of Public Welfare, under the State's laws as to Social Security, administered public support under that head, save for unemployment compensation, handled by the Unemployment Compensation Commission. The State Board of Public Welfare, a body headed by the Governor, supervised four institutions having among them, by the latest count in 1938, 1291 inmates. These institutions were: South Carolina Industrial School for Girls, at Columbia; South Carolina Industrial School for Boys, Florence; Reformatory for Negro Boys, Columbia; and State Training School, Clinton.

Legislation. The General Assembly met in regular annual session early in January. It passed an act limiting labor in the textile industry to not over 40 hours, nor over 5 days, a week. The limit was to terminate May 1, 1939, unless Congress should impose the same limit on textile labor throughout the country. The State's law of 1933 excluding from the highways motor trucks above the weight limit of 20,000 pounds and the between-wheel spread of 90 inches was amended; load weights up to 40,000 pounds were permitted, also between-wheel widths up to 96 inches. An appropriation bill somewhat higher than that of 1937 was voted. An effort to repeal workmen's compensation and a plan to retire farmers at 60 and pension them at \$300 a year were both beaten. See **CHILD LABOR**.

Political and Other Events. Charleston was struck (September 29) by a band of four tornadoes; one of these tore through the center of the older city; 29 persons were killed, hundreds injured, and damage in excess of \$2,000,000 was done to property. The non-material damage was serious, for some of the old residences and public buildings that gave the city distinction and charm were harmed; among the latter were St. Michael's Church and St. Philip's Church.

An organizing campaign of a branch of the C.I.O.—the Textile Workers' Organizing Committee—was reported as making much headway among textile workers, despite slackness of em-

ployment in the industry. The State's act of 1933 limiting the breadth and weight of motor trucks, long in litigation, had not been enforced. The U.S. Supreme Court's decision (February 14), pronouncing the act constitutional, rendered enforcement practicable. The State Highway Patrol started enforcement (May 16) of the act as amended by the year's legislative session. Governor Johnston charged (March 8), in a communication to the Legislature, that the State Highway Department had exceeded the legal limit of its bonded debt. A convention of the State's Democratic party (May 18) modified that party's rule requiring members not to vote against the regular Democratic nominees; the rule was made no longer to apply to candidates for President and Vice-President. This action was opposed in the convention by a group who called it a slap at the President and the New Deal, but its supporters denied any such intention. Severe forest fires in Aiken and other western counties, as well as in eastern Georgia, broke out early in February, at about the same time in a number of spots; they ruined much timber.

Elections. The Democratic nominees were as usual all elected, at the general election (November 8). U.S. Senator Ellison D. Smith won a sixth term. Burton R. Maybank, Mayor of Charleston, was chosen for Governor. The subordinate elective offices of the State government and the State's six seats in the U.S. House of Representatives were also filled. The Democratic candidates had either perfunctory opposition or none. Senator Smith's opponent, J. D. E. Meser, made no campaign.

The Democratic primary election, giving the virtually conclusive party nomination, was contrastingly strenuous. Senator Smith was marked by the Federal Administration for elimination from the Senate, his record of votes on legislation being regarded as disloyal to the President. Governor Johnston, issuing from conference in the White House offices on May 16, announced that he would enter the primaries against Smith, offering "a record of constant, unshakable loyalty to the Democratic platform and . . . President Roosevelt." Johnston's active campaign was considerably weakened by the charge of an opposing faction, that he had given aid to Huey Long and to Governor Talmadge of Georgia when the two were hostile to President Roosevelt. The primary gave Smith for Senator a nominating vote. Its vote for Governor did not give a nominating majority, but a run-off primary (September 13) named Maybank.

Officers. South Carolina's chief officers, serving in 1938, were: Governor, Olin D. Johnston (Dem.); Lieutenant-Governor, J. E. Harley; Secretary of State, W. P. Blackwell; Treasurer, E. P. Miller; Attorney-General, John M. Daniel; Comptroller, A. J. Beattie; Superintendent of Education, James H. Hope.

Judiciary. Supreme Court: Chief Justice, John G. Stabler; Associate Justices, Jesse F. Carter, Milledge L. Bonham, D. Gordon Baker, E. L. Fishburne.

SOUTH CAROLINA, UNIVERSITY OF. A nonsectarian, State institution of higher education in Columbia, chartered in 1801. Enrollment for the autumn session of 1938 totaled 1717; in the summer session, 682. The faculty numbered 100. The State appropriation amounted to \$325,000 from July 1, 1938, to July 1, 1939. The library contained 130,000 volumes. President, J. Rion McKissick, A.M., LL.D.

SOUTH DAKOTA. Area and Population. Area, 77,615 square miles; included (1930) water, 747 square miles. Population: Apr. 1, 1930 (census), 692,849; July 1, 1937 (Federal estimate), 692,000; 1920 (census), 636,547. Sioux Falls (1930) had 33,362 inhabitants; Pierre, the capital, 3659.

Agriculture. Acreage, production, and value of the chief crops of South Dakota, for 1938 and 1937, appear in the accompanying table.

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1938	2,974,000	35,688,000	\$15,346,000
	1937	3,130,000	43,820,000	19,719,000
Wheat	1938	3,043,000	27,777,000	14,444,000
	1937	2,738,000	15,381,000	14,766,000
Oats	1938	1,535,000	46,050,000	7,368,000
	1937	1,462,000	30,702,000	7,368,000
Barley	1938	1,315,000	28,930,000	8,390,000
	1937	1,384,000	20,068,000	8,228,000
Hay (tame)	1938	848,000	870,000 *	3,741,000
	1937	1,081,000	948,000 *	5,214,000
Rye	1938	636,000	10,176,000	2,951,000
	1937	509,000	6,108,000	3,726,000
Potatoes	1938	29,000	1,624,000	893,000
	1937	26,000	1,534,000	951,000

* Tons.

Mineral Production. As usual in South Dakota, one mineral, gold, provided about nine-tenths of all the yearly yield of the State's minerals, and one mine, the Homestake, in Lawrence County, produced about nineteen-twentieths of the gold. This situation, evidenced in full data for 1936 published in the *Minerals Year Book* of 1938, apparently was true for 1938 as well. The production of gold rose somewhat to 594,000 (Bureau of Mines' approximation) for 1938, from 581,544 oz. (1937); by value, to \$20,790,000, from \$20,354,040. A little silver, to the value of some \$100,000 a year, was obtained, mostly with the gold.

Finance. South Dakota's State expenditures in the year ended June 30, 1937, as reported by the U.S. Bureau of the Census, were: For maintaining and operating governmental departments, \$12,003,226 (of which \$2,339,340 was for highways, \$2,274,980 for charities, and \$1,950,894 for local education); for interest on debt, \$2,154,800; for capital outlay, \$6,260,570. Revenues were \$22,625,472. Of these, "selective" property taxes furnished \$236,559; income taxes, \$485,620; sales taxes, \$8,391,625 (including tax on gasoline, \$4,093,295); departmental earnings, \$1,966,947; sale of licenses, \$1,565,250; rents and interest, \$1,640,417; unemployment compensation, \$503,179; Federal or other grants-in-aid, \$6,961,401. Funded debt outstanding on June 30, 1937, totaled \$44,869,000. Net of sinking-fund assets, the debt was \$2,510,748. No assessed valuation of real property was made for 1937, and the State levied in the year no general ad valorem taxes on such property. It did, however, levy a small sum (\$50,940) on money, credits, and private car lines, the three being assessed at \$44,679,815.

The State operated a cement manufactory, keeping separate accounts. This enterprise showed, for the fiscal year, expenditures totaling \$672,700; its receipts came to \$838,430 earned and \$556 received from the State.

Education. Inhabitants of school age (from 6 to 21 years) were reckoned for the academic year 1937-38 at 191,872. Enrollments of pupils in the public schools totaled 142,514. This comprised 104,785 in elementary study and 37,729 in high schools. In addition, enrollments in private and in parochial schools numbered 6960 elementary and 1173 in high schools. The year's expenditures for public-school education, exclusive of retirement of bonds, totaled

\$12,164,333. Teachers numbered 8267. The year's teaching salaries averaged \$688 for elementary and \$976 for high-school positions.

Consistent progress was made in 1938 in building schools in divers parts of South Dakota, according to the *Journal* of the National Education Association.

Political and Other Events. Chandler Gurney (Rep.) was elected U.S. Senator, defeating ex-Governor Tom Berry (Dem.) at the general election (November 8); the seat, vacated by the death of Senator Peter Norbeck in December, 1936, had been temporarily filled but was now filled by vote for a new term. Running for Governor, Harlan J. Bushfield (Rep.) defeated Oscar Fosheim (Dem.). Two Republicans were elected U.S. Representatives.

The primary elections (May 3) had a bearing on national politics, as the incumbent ad-interim Senator, Herbert E. Hitchcock, failed to win the Democratic nomination for a full Senatorial term. Hitchcock, known as possessing a perfect record of voting conformity with the legislative proposals of the President, was defeated by Berry, who also declared himself for the New Deal but was thought the less thoroughgoing of the two.

Officers. The chief officers of South Dakota, serving in 1938, were: Governor, Leslie Jensen (Rep.); Lieutenant-Governor, Donald McMurchie; Secretary of State, Goldie Wells; Auditor, Raymond A. Kelly; Treasurer, W. H. Hinselman; Attorney-General, Clair Roddewig; Commissioner of School and Public Lands, Ben Strool; Superintendent of Public Instruction, J. F. Hines.

Judiciary. Supreme Court: Judges, Everett D. Roberts (Presiding Judge), Samuel C. Polley, Frederick A. Warren, St. Clair Smith, and Herbert B. Rudolph.

SOUTH DAKOTA, UNIVERSITY OF. A State institution of higher education at Vermilion, founded in 1882. The enrollment for the autumn term of 1938 was 950 and for the summer session 484. The faculty and staff numbered 165. The operating income for the year 1937-38 was \$372,952. President, I. D. Weeks, LL.D.

SOUTH DAKOTA STATE COLLEGE OF AGRICULTURE AND MECHANIC ARTS. A State college of agriculture and mechanic arts at Brookings, founded in 1881. The enrollment for the autumn of 1938 was 1221 collegiate students, 175 vocational school of agriculture students, and 22 students in the two-year vocational course in aviation mechanics. The 1938 summer school had an attendance of 209. On the teaching staff were the equivalent of 101 full-time teachers and officers of general administration in the collegiate departments and 10 in the secondary vocational courses. The income for 1937-38 was \$566,149. The library contained approximately 60,215 volumes (June 30, 1938), 20,000 pamphlets, and 478 periodical subscriptions. (The above does not include data in connection with the experiment station and agricultural extension.) President, Charles W. Pugsley, D.Agr.

SOUTHERN CALIFORNIA, UNIVERSITY OF. An institution of higher education for men and women in Los Angeles, Calif., founded in 1879. The enrollment for 1937-38, including summer session and extension classes, was 16,721. In the autumn of 1938 there were 583 members on the faculty. The endowment was \$1,554,600; the income from tuition and fees, \$1,941,100; and other income, \$154,000. The library contained 238,182 volumes. President, Rufus B. von Klein Smid, Sc.D., J.D., LL.D.

SOUTHERN RHODESIA. See RHODESIA, SOUTHERN.

SOUTH GEORGIA; SOUTH ORKNEYS. See FALKLAND ISLANDS.

SOUTH-WEST AFRICA. A territory administered as a part of the Union of South Africa (q.v.) under a mandate approved by the League of Nations. Total area, 317,725 square miles; population (1936 census), excluding Walvis Bay, 357,787, including 261,724 natives and 30,677 Europeans (of whom 9632 are German speaking and of these 6244 are British or South African subjects). Chief towns: Windhoek, the capital, 10,651 inhabitants in 1936; Lüderitz, 2560; Keetmanshoop, 2716; Swakopmund, 1976; Walvis Bay. In 1937 there were a total of 10,640 pupils enrolled in the 169 primary and secondary schools.

Production and Trade. Agriculture is not carried on in a large way because of the low rainfall. The raising of livestock is the principal industry. Livestock in the territory (1937): 806,669 cattle, 25,447 horses, 1050 mules, 88,051 donkeys, 11,541 pigs, 2,897,791 sheep, and 1,295,559 goats. Mining is an important industry—the chief minerals being diamonds (196,802 carats produced in 1937), copper, lead, vanadium, tin, and gold. In 1937 total imports were valued at £2,420,753 (foodstuffs, textiles, metals and manufactures, vehicles, and oils were the chief items); total exports, £3,705,488 of which hides and skins accounted for £1,285,761; diamonds, £916,968; vanadium ore, £202,286; copper ore, £189,007; butter, £344,215.

Communications. In 1937 there were 1891 miles of railway line and this was supplemented by a total of 902 miles of road motor services. During 1937, 252 vessels entered the ports and 80,947 tons of cargo were landed and 59,270 tons were shipped. Telephone and telegraph lines totaled 8514 route miles in 1937. The public roads extended over 20,000 miles.

Government. For the year ended Mar. 31, 1937, revenue totaled £868,116; total expenditure, £991,992 (including capital expenditure of £187,806). The budget estimates for 1937-38 indicated revenue of £708,250 and expenditure of £746,645. South-West Africa is regarded as part of the Union for the purposes of customs and excise duties and a sum approximating the customs and excise duties paid on goods consumed in the territory is paid over each year to the administration. Under the Union Act No. 49 of 1919 the exercise of the mandate is vested in the governor-general who, by Proclamation (Union) No. 1 of 1921, delegates his powers to an administrator appointed by the Union government. The constitution (Union Act No. 42 of 1925) provides for an executive committee (5 members), an advisory council (8 members), and a legislative assembly (12 elected members and 6 members appointed by the administrator subject to the approval of the governor-general). Administrator, Dr. D. G. Conradie (reappointed, Apr. 1, 1938).

History. The Union of South Africa Government, as a result of the findings of the South-West Africa Judicial Commission on the question of interference from Germany in the internal affairs of South-West Africa, stated (during December, 1937) that it could not recognize dual allegiance, nor permit either outside interference or the management of any political party by aliens taking their instructions from foreign organizations. During March of 1938, legislation was enacted under which no alien was entitled to be a member of any organization declared to be political or of certain

public bodies, or to be declared as such by competent authority, or to participate in the political activities of the people of South-West Africa. Conviction could be followed by deportation.

Almost at once, the Führer of the Bund, Herr Neundorff, wrote to members of that organization in language which was regarded by the local administration as defiant. The administrator then published a list of political parties in the territory, which included the United Party of the Union Section and the Deutsche Bund. This meant that the existing Führer and many of the office bearers and members of the Bund would have to leave it. Germany protested but there was no reason to suppose that the local administration or the Union Government would modify the action taken or refrain from enforcing the law. A new German party, said to have a "democratic basis," was formed to take the place of the Deutsche Bund. See SOUTH AFRICA, UNION OF, under *History*.

SOVIET CENTRAL ASIA. A region in central Asia, including the territory formerly known as Russian Turkestan. Administratively it comprises the divisions, affiliated with the U.S.S.R., shown in the accompanying table.

Division	Sq. m.	Population	Capital
Tajik S.S.R.	55,040	1,500,000 (1936)	Stalinabad
Turkmenistan S.S.R.	171,384	1,268,900 (1933)	Ashkhabad
Uzbek S.S.R.	66,392	5,044,300 (1933)	Tashkent
Kara-Kalpak A.S.S.R.	46,154	338,100 (1933)	Nukus
Kirghiz S.S.R.* ..	75,926	1,302,100 (1933)	Frunze

* According to the new constitution of the Union of Soviet Socialist Republics, adopted on Dec. 5, 1936, the Kirghiz A.S.S.R. was made one of the 11 constituent republics of the U.S.S.R.

The chief towns are: Tashkent, 491,000 inhabitants in 1933; Samarkand, 154,600; Andizhan, 97,700; Kokand, 84,700; Namangan, 80,784; Ashkhabad, 79,000; Frunze, 71,680; Stalinabad, 60,000 (1935). See UNION OF SOVIET SOCIALIST REPUBLICS, as well as the several constituent republics under separate headings.

SOVIET UNION. See UNION OF SOVIET SOCIALIST REPUBLICS.

SPAIN. A state of southwestern Europe. Capital, Madrid. After the outbreak of the civil war in July, 1936, the capital of the Loyalist Government was successively Madrid, Valencia, Barcelona, and Madrid, while that of the Insurgent Government was at Burgos.

As little statistical information on Spain has been available since 1935, the following statistical summary is in the main a reproduction of material contained in the 1937 YEAR BOOK.

Area and Population. Spain has an area of 195,258 square miles, including 2894 square miles in the Canary Islands. The estimated population on Dec. 31, 1935, was 24,849,000, compared with 23,563,867 at the 1930 census (555,128 in the Canary Islands). Living births in 1935 were 631,561 (25.2 per 1000 inhabitants); deaths, 383,935 (15.3 per 1000); marriages, 146,084 in 1934 (6.0 per 1000); emigration in 1934, 64,553. Estimated populations of the chief towns on Jan. 1, 1935, were: Barcelona, 1,148,129; Madrid, 1,048,072; Valencia, 352,802; Seville (Sevilla), 238,727; Málaga, 203,844; Saragossa, 189,062; Bilbao, 175,898; Murcia, 166,341; Granada, 128,681; Córdoba, 117,919; Valladolid, 97,528; Cartagena, 102,705 (1933); Palma (Majorca), 93,014; Santander, 90,774; San Sebastian, 86,929; Las Palmas, 83,553; Coruña, 79,614; Ali-cante, 78,383; Oviedo, 78,045; Cádiz, 75,393.

Education and Religion. According to the 1930 census, 43 per cent of the population of over 10 years of age were unable to read or write. Enrollment in primary schools in 1933 was 2,397,562; in secondary schools (1932-33), 114,645; university (1932-33), 31,905. The Constitution of Dec. 9, 1931, deprived the Roman Catholic faith of its status as the official religion and established liberty of worship and freedom of conscience. The great majority of Spaniards adhere to the Roman Catholic Church.

Production. Primarily an agricultural country, Spain in 1933 had 39,973,000 acres of arable land (32 per cent of the total area), 57,812,000 acres of pastures and forests, and 10,621,000 acres of fruit trees, vineyards, etc. The value of field crops in 1933 was 8,535,000,000 pesetas. Estimated yields of leading cereals in 1936 were (in metric tons): Wheat, 3,306,500; barley, 1,709,600; rye, 458,600; oats, 552,600; corn, 735,500 in 1935. The production of rice in 1935 was 14,467,000 bu.; potatoes, 177,716,000 bu.; beet sugar (1935-36), 224,000 metric tons; olive oil, 143,743,000 gal.; wine (must), 450,071,000 gal. The wool production in 1935 was 29,900 metric tons.

The value of crude mineral products in 1934 was 463,341,236 pesetas; of refined mineral products, 986,586,363 pesetas. Production of the chief mineral and metallurgical products in 1935 was (in metric tons): Coal, 7,017,000; lignite, 304,000; coke, 736,000 in 1934; iron and copper pyrites, 2,286,000; pig iron, 356,000; iron ore, 2,633,000; steel ingots and castings, 580,000; copper (smelter), 10,800; lead (smelter), 62,700; zinc (smelter), 7600 (7800 in 1936); mercury, 1096 in 1934; superphosphates, 1,032,823 in 1934; cement, 1,362,000 in 1934. The cotton textile industry in 1933 had 2,048,549 spindles and 71,950 looms. Paper, glass, and other manufactures were produced. The total catch of the fisheries (mainly sardines, tunny fish, and cod) totaled 387,800 metric tons, valued at 307,300,000 pesetas, in 1934.

Foreign Trade. General imports in 1935 were valued at 878,298,000 pesetas and exports of merchandise at 583,449,000 pesetas. In old U.S. gold dollars the totals were: Imports, \$169,511,000; exports, \$112,606,000. The value of the leading 1935 imports was (in 1000 gold dollars): Chemicals and related products, \$24,529; raw and waste cotton, \$17,948; machinery, \$16,150; automobiles, \$10,780; mineral oils, \$8027. Leading 1935 exports, by value, were (in 1000 gold dollars): Fresh fruits, \$23,696 (including oranges, \$20,062); olive oil, \$10,496; wines, \$7842; chemicals and related products, \$7793; almonds, \$7264. The percentage distribution of the value of imports by countries of origin in 1935 was: United States, 16.8; Germany, 13.7; United Kingdom, 10.4; France, 5.5; Argentina, 2.5. The United Kingdom purchased 21.7 per cent of the value of all 1935 exports; Germany, 12.7; France, 11.7; United States, 9.5; Argentina, 5.4. United States trade figures for 1938 showed imports from Spain of \$9,157,413 (\$13,806,402 in 1937) and exports to Spain of \$12,225,913 (\$6,012,026 in 1937).

Finance. Ordinary budget receipts, in the calendar year 1935, amounted to 4,455,000,000 pesetas, including loans of 316,000,000 pesetas, and ordinary expenditures were 4,557,000,000 pesetas. By the law of July 3, 1936, the 1935 budget was extended into 1936. However, the subsequent civil war (see *History*) threw the financial system into complete chaos. The 1939 budget for Loyalist Spain, as approved by the Cortes, placed revenues at 8,309,-

636,320 pesetas and expenditures at 8,403,042,633 pesetas. The public debt on Jan. 1, 1936, totaled 21,-850,522,510 paper pesetas, as compared with 21,-608,317,219 pesetas on Mar. 31, 1935. The funded debt on Jan. 1, 1937, was 19,012,300,000 pesetas. The exchange value of the peseta averaged \$0.1368 in 1935, \$0.1286 in 1936, \$0.0605 in 1937, and \$0.0560 in 1938.

Communications. The Spanish railways, with 10,340 miles of line in operation, carried during 1934 a total of 107,667,000 passengers and 38,856,-000 metric tons of freight; the gross receipts amounted to 845,609,000 pesetas. Highways of all kinds in 1937 extended 70,760 miles; the number of automobiles was 155,368. The gross tonnage of the merchant marine on June 30, 1938, was 958,900 (1,054,700 on June 30, 1937). During 1935 the net tonnage of overseas shipping entering Spanish ports with cargo and in ballast was 32,106,000.

Government. The Constitution of Dec. 9, 1931, declared Spain a democratic republic of workers of all classes, organized as an integral state but with autonomy for municipalities and certain regions such as Catalonia (q.v.). Legislative power was vested in the people, who exercised it through the unicameral Cortes, or Congress of (473) Deputies, elected for four years. The President was elected for six years conjointly by the Cortes and by an equal number of electors chosen by universal, secret suffrage. He was ineligible for re-election for six years after the end of his term. The President appointed the Premier and also the members of the Premier's cabinet on nomination of the latter.

Following the military revolt that broke out in July, 1936, the Constitution remained in effect only in the dwindling territory in the possession of the Loyalist forces supporting the constitutional government. The composition of the Cortes following the election of Feb. 16, 1936, was: Left parties, 248; Right parties, 175; Center parties, 50. The parties of the Left and Center continued, in the main, to function within Loyalist territories during the civil war. President of Loyalist Spain in 1938, Manuel Azaña, who was elected May 10, 1936, by a presidential convention and assumed office May 11, 1936. Premier, Juan Negrín (Socialist), heading a Popular Front cabinet of the Left Republican, Socialist, Catalanian Left, Basque Nationalist, and Communist parties, formed May 17, 1937.

In the territories controlled by the Insurgent forces led by Generalissimo Francisco Franco, all political groups, including the pre-revolutionary Right parties, were merged on Apr. 19, 1937, into a single party under his control called the Spanish Traditionalist Phalanx of National Syndicalist Workers Youth (see 1937 YEAR BOOK, p. 693). The new party adopted as its program the 26-point platform of the Spanish Fascist movement and was organized on a basis similar to that of the Italian Fascist party. For political developments in both Loyalist and Insurgent territories during 1938, see *History*.

HISTORY

Progress of Civil War. The sanguinary civil conflict precipitated by the military revolt of July 17, 1936, continued its bloody course throughout 1938. At the end of the year, the United Press estimated that the struggle had cost Spain 55 billion pesetas (of prewar value), about one million lives of soldiers and civilians, and some 250,000 other casualties. It estimated that 750,000 casual-

ties were incurred during 1938 alone, testifying to the increased intensity of the fighting and of air bombardments of cities behind the front lines. The tide of the war turned more definitely than in 1937 in favor of the Insurgents, who succeeded in driving a wide wedge between the Loyalist forces in Catalonia and in east central Spain.

At the end of the year the Insurgents held 30 of the 47 provinces of Spain, the Loyalists held 9 and the remaining 8 were divided between them. About 71 per cent of the total population was in Insurgent territory and 39 per cent under the Loyalist banner. Yet the war seemed far from ended, with 800,000 Insurgents and 1,000,000 Loyalists still under arms. The Loyalists, while more numerous than their foes, were handicapped by lack of arms, munitions, airplanes, and tanks, with which the Insurgents were plentifully supplied from Italy and Germany. The Insurgent preponderance of *matériel* was largely responsible for the gains made during 1938 and for the progress achieved in the great offensive against Catalonia that got under way in the last days of December. See 1936 YEAR BOOK, p. 704, for map of Spain.

Recapture of Teruel. As described in the preceding YEAR BOOK, the Insurgent plan of campaign was upset late in 1937 by the successful Loyalist drive into Teruel, spearhead of the Insurgent salient in northeastern Spain from which a drive eastward to the Mediterranean was planned. The Insurgent counter-offensive, launched on December 28, met stubborn resistance and was unable to relieve some 2000 troops and civilians trapped in the Teruel Seminary and other buildings, who were forced to surrender to the Loyalists on Jan. 7, 1938. It was February 22 before Franco's troops finally forced the Loyalists out of Teruel by recapturing the heights dominating the city.

The Aragon Offensive. General Franco followed up his advance into Teruel by launching an offensive on March 9 along a 60-mile front in Aragon south of Saragossa that achieved sensational results. In this offensive the Insurgents used their superiority in the air and their heavily mechanized and motorized forces with great skill. Repeatedly they picked out weak spots in the Loyalist lines, pierced them with the aid of terrific air and artillery bombardments comparable in intensity to the battles of the World War, and by rapid flanking movements forced the enemy to retreat from more easily defended positions. By March 17 the Insurgent columns were in Caspé, headquarters of the Loyalist army in Aragon, only 50 miles from the Mediterranean. From Caspé they advanced down the Ebro River toward Tortosa and the sea, capturing Gandesa on April 2, but stiffened Loyalist resistance in the Sierras Mountains stopped them some 25 miles short of their objective.

Meanwhile on March 22 the Insurgents unleashed another drive into the Catalan province of Lerida against its capital of the same name. This force advanced rapidly and within a few days effected a junction with a third Insurgent army, operating in Upper Aragon, which had taken Huesca on March 23. The city of Lerida, considered the key to Catalonia, was occupied after stubborn resistance on April 3. The Insurgents pressed on toward Balaguer, but their army was stalled short of that town on the west bank of the Segre River. A third Insurgent army meanwhile struck eastward from Jaca and Huesca along the foothills of the Pyrenees. By April 7 they had captured nine of the 12 passes over the Pyrenees and

the great hydro-electric station at Tremp, which supplied 60 per cent of Catalonia's power.

No sooner had these three offensives spent their force than General Franco shifted his attack and struck southeastward along the Teruel-Valencia highway. The Loyalists were again caught off guard and their lines crumbled under the powerful and rapidly shifting Insurgent blows. By April 15 Franco's men had sheared through all opposition to the Mediterranean coast at Viñaroz, cutting Loyalist Spain in two and exposing Tortosa to attack from the south. The Loyalist defenders of that port were forced to withdraw to the north bank of the Ebro.

The Insurgent advance throughout March and April was accompanied by repeated disastrous air raids on Barcelona, Valencia, Madrid, and the other cities behind the Loyalist lines. Barcelona, for example, was bombed 18 times on March 16-17. The powerful explosives used made a shambles of large parts of the city and cost hundreds of lives. Gen. José Miaja, the Loyalist commander at Madrid, sought unsuccessfully during March to relieve pressure on the Aragon front by efforts to cut Franco's communications on the Madrid and Toledo-Córdoba fronts. The Loyalists in Catalonia also undertook to recapture the Tremp hydro-electric plant in the Pyrenees, but failed. A division of some 9000 Loyalists, cut off in the Pyrenees, was forced to cross the mountains into France to escape capture. The men were disarmed and returned to Barcelona; later they rejoined the Catalanian army.

The Valencia Offensive. Entrenched behind the Segre and Ebro rivers, the Loyalists blocked further Insurgent progress into Catalonia throughout May. In the second week of May, however, the Insurgents widened the wedge they had driven into Loyalist territory by driving southward along the Teruel-Viñaroz front toward Valencia. Repeating the same tactics employed in the Aragon drive, they drove rapidly ahead in a series of crushing attacks that demoralized the Loyalists and resulted in the capture of large numbers of troops with much armament and war material. By June 13 the Insurgents had advanced southward along the coast road to Castellón de la Plana. A new drive was then launched from Teruel along the highway to Segorbe and Sagunto that carried the Insurgents to Viver, 45 miles from Valencia, by July 22. Two days later it was announced that an Insurgent drive in Estremadura on the western front had conquered 3000 square miles of territory, and forestalled a projected Loyalist drive toward the Portuguese border.

Battle of the Ebro. At this critical juncture, when the fall of Valencia seemed assured, the Loyalist armies in Catalonia launched a surprise attack across the Ebro River on July 25. Some 60,000 shock troops crossed the river during the night and advanced 15 miles to the outskirts of the Insurgent regional headquarters at Gandesa before being checked. From their new foothold on the southern bank of the Ebro, the Loyalists constituted such a threat to Franco's communications that he was forced to halt his drive on Valencia and gather his forces for a counter-attack upon the Ebro salient. This commenced early in August. The battle of the Ebro raged for 14 weeks, with casualties on both sides totaling more than 130,000, before the Loyalists on November 14 were forced to abandon the strategic bridgehead at Moro-de-Ebro, leaving all of the south bank in Franco's

hands except the small and weakly defended Asco sector, which was soon afterward evacuated.

While the great struggle along the Ebro held the center of the stage, minor and indecisive campaigns took place in other sectors. In Estremadura Franco's forces made another drive toward the rich mercury mines at Almaden, the objective of an abortive offensive in 1937, but again they failed. The Loyalists in northern Catalonia had no better success in a renewed effort, beginning November 16, to recapture the hydro-electric plant at Tremp. Early in November the Loyalists made an effort to divert Insurgent pressure from the Ebro front by striking farther north in Catalonia across the Segre River to cut the Saragossa-Lerida highway. This offensive met with only moderate success and after the termination of the Ebro battle the Loyalist forces withdrew across the Segre on November 24.

The Drive on Barcelona. The Ebro battle, however, had effectively interrupted Franco's drive against Valencia and cost him months of severe fighting, with exceptionally heavy losses, to regain the offensive. By the end of November he had restored his lines along the Ebro and the Segre to approximately the positions occupied the previous July. After nearly a month of preparation, he launched a great offensive against the Loyalist lines along the Segre commencing December 23. The Insurgents had developed an overwhelming superiority over the Loyalists in heavy artillery, munitions, airplanes, and tanks, as they had received an uninterrupted flow of war materials from Italy and Germany while Loyalist supplies had been cut off by the closing of the French border early in June and the Insurgent blockade of the sea approaches to Loyalist ports.

Using his heavy armaments with notable skill and repeating the tactics that had proved so successful in the Aragon and Valencia offensives, Franco registered substantial gains during the last week of December, even before the full force of his drive had been developed. The offensive opened in the northern sector of the 100-mile front, between Lerida and Tremp. Balaguer, Villanova, and the last of the hydro-electric plants supplying Barcelona with power fell before the end of the year and Insurgent columns were advancing on Artesa and Pons.

Meanwhile another Insurgent offensive, launched across the Segre south of Lerida at Seros, was making steady headway. Aided by four Italian divisions, this offensive smashed through the Loyalist lines to beyond Grandella on the Lerida-Tarragona highway, 18 miles east of the Segre, by the end of December. This advance forced the Loyalists to withdraw from the apex of the triangle formed by the Segre and Ebro rivers. Meanwhile Barcelona, Tarragona and the other communications centers behind the Loyalist lines were subjected to constant air raids which interrupted the flow of munitions and supplies to the hard-pressed Loyalists. The tide of the war seemed to be turning strongly against them at the year end.

The Blockade. Although denied belligerent rights by most of the governments of the world, including Britain and France, Franco's forces managed to tighten the blockade of the Loyalist coast during 1938. Neutral ships carrying food and other supplies to the Loyalists were frequently attacked by Insurgent ships or airplanes at sea or bombed from the air while resting in Loyalist ports. Many of them were sunk, with the loss of numerous

MUSSOLINI REDUCES HIS FORCES IN SPAIN

Italian troops parading through Naples Oct. 20, 1938, upon their return from service with the Insurgent armies. Of some 40,000 troops officially acknowledged to be participating in the Spanish civil war, Il Duce withdrew about 10,000.

members of their crews. In January and February there was a renewal of the 1937 attacks upon neutral shipping by "pirate" submarines. The submarine blockade was ended again when France and Britain ordered their ships to sink on sight any submerged submarine found in the Mediterranean patrol area.

Despite the loss of the *Baleares*, one of the two strongest vessels in the Insurgent fleet, in a battle with the Loyalist navy off Cartagena on March 6, the Insurgents retained full control of the seas. While many neutral merchant ships managed to run the blockade, they did not suffice to meet Loyalist needs for either war materials or food supplies, particularly after the closing of the French border. Before the year end the food shortage in Loyalist territories, aggravated by the influx of some 3,000,000 refugees from areas conquered by the Insurgents, had become acute. Malnutrition was widespread and thousands of persons in the Madrid area were reported to be suffering from pellagra. Efforts to relieve this food shortage were made toward the end of 1938 by the United States and other neutral governments and by various private relief organizations. But the food situation served to sap morale in the Loyalist regions and contributed to the growing sentiment for peace.

Foreign Intervention. German and Italian intervention on behalf of the Spanish Insurgent cause increased in 1938 and became the decisive factor in Franco's impending victory. But most of the 25 other European governments represented on the London Non-Intervention Committee continued their policy of cutting off arms and munitions shipments to both sides in Spain in an effort to prevent the civil war from spreading and engulfing all of Europe (see 1937 YEAR BOOK, p. 693 f. for "non-intervention" negotiations in that year). The beginning of 1938 found the London Committee still engaged in efforts to secure the agreement of all its members and of the two parties in Spain to the withdrawal of foreign "volunteers." It was months later before the Committee finally agreed that an international commission should arrange for the proportional reduction of foreigners fighting on both the Insurgent and Loyalist sides. This plan was accepted in principle by the Loyalists but was rejected on August 21 by General Franco, who proposed that both sides withdraw 10,000 volunteers. This would deprive the Loyalist army of practically all troops serving in the International Brigades, but since there were some 40,000 Italian troops in Spain, would leave 30,000 to continue the war. The Insurgent leader rejected other points in the plan also, and demanded belligerent rights at once. His reply brought the activities of the London Committee to an end.

Meanwhile Britain and France had agreed to continue their non-intervention policy, which made an Insurgent victory certain, in order to facilitate an agreement with Mussolini (see FRANCE, GREAT BRITAIN, and ITALY under *History*). During Franco's rapid advance in the Aragon offensive, the French in March permitted shipments of Soviet and Czecho-Slovak munitions and arms across their territory to Catalonia. But Premier Blum rejected a personal appeal for direct French aid made on March 15 by the Loyalist Premier, who flew to Paris for the purpose. And after Daladier became Premier, he yielded to British urgings and on June 2 cut off practically all foreign shipments over the French frontier.

The British and French policy was bitterly denounced by Premier Negrin before the League

Assembly on September 20. The next day Negrin announced that the Loyalist Government had decided on "immediate and complete withdrawal of all non-Spanish combatants taking part in the struggle in Spain on the government side." The League Council set up a committee of neutrals to supervise the withdrawals, which took place during ensuing weeks. Meanwhile Franco was reported to have angered Mussolini and Hitler by announcing during the European crisis of September over Czecho-Slovakia (q.v.) that he would remain neutral if war came. At the Munich Conference Mussolini gave Prime Minister Chamberlain new assurances that Italian troops in Spain would be reduced. About 10,000 Italians set sail for Italy from Cadiz on October 15, leaving between 20,000 and 30,000 still in Spain. According to the Loyalists, additional Italian troops and numerous airplanes were sent to Spain during the remainder of the year.

During the September crisis, it was reported that some German technicians and arms were withdrawn from Spain. At Munich Hitler assured Chamberlain and Daladier that he had no designs on Spanish territory. Observers in Spain reported, however, that German influence with the Franco Government was even higher than that of Mussolini's agents. Nazi economic and financial methods were being introduced. It was repeatedly charged that German engineers had established artillery emplacements dominating the Straits and Rock of Gibraltar. These and other activities of Nazi agents aroused Anglo-French fears that Franco was being won over to a policy of alliance with Germany and Italy.

See also BELGIUM, FRANCE, GERMANY, GREAT BRITAIN, ITALY, NETHERLANDS, NORWAY, PORTUGAL under *History*.

Insurgent Political Trends. Serious dissensions developed during the year among the supporters of both the Insurgent and Loyalist governments. Lending substance to frequent reports of friction between Franco's monarchist and the Fascist supporters, the Insurgent leader on January 31 issued a decree substituting a cabinet of 12 ministers for the technical *junta* established in the fall of 1936. Franco retained supreme control as president of the cabinet and commander of the armed forces. The remaining seats were distributed among three generals and eight civilians. The important Ministry of the Interior was given to Franco's brother-in-law, Ramón Serrano Suñer, who became increasingly influential as the year progressed. All three of the principal Insurgent factions—the Fascist Phalanx, the reactionary Carlist monarchists, and the Alfonsists, supporting restoration of ex-King Alfonso or one of his sons—were represented. On January 26 the Carlist pretender, Prince Xavier de Bourbon-Palma, was expelled from Spain by General Franco for allegedly engaging in political activity. On February 2, Gen. Queipo de Llano, commander on the Estremadura front who had won a wide following by his radio broadcasts from Seville, was forced to discontinue his radio talks.

In April, Gen. Juan Yagüe, prominent Nationalist commander sympathetic to the Fascist Phalanx, made a speech at Burgos that was critical of Franco's Italian associates. He urged the release of political prisoners and reconciliation with the so-called "Reds" of Republican Spain. In ensuing weeks the repression of certain Fascist activities in Insurgent territories was reported. A mass break of some 800 war prisoners from the Insurgent

prison at Pamplona on May 22 was attributed to Falangists. The Carlists were gratified by Franco's order of May 4 re-establishing the Jesuits in his territories and restoring their properties confiscated by the Republic on Jan. 23, 1932. But they openly resented the growing influence of Nazi agents in Spain, having been antagonized by Hitler's anti-Catholic policies. A decree promulgated at Burgos on December 15 restored full rights of citizenship to former King Alfonso, who was deprived of his rights and properties in Spain by the Republican Cortes on Nov. 26, 1931. This action was reassuring to both factions of monarchists, who had agreed to back the restoration of Alfonso's son, Prince Juan, to the throne upon termination of the civil war. The Falangists, however, opposed restoration of the monarchy.

Loyalist Government Reorganized. Meanwhile the dissensions that had plagued Loyalist Spain in previous years continued (see 1937 YEAR BOOK, p. 692 f.). Indalecio Prieto, the Socialist Minister of Defense, who had turned the Loyalist Government away from communism and extremism toward liberal, middle-of-the-road policies in the hope of winning British and French aid, strengthened his position in January when Largo Caballero, extremist former Premier, was ousted as executive director of the powerful Socialist General Union of Workers. But with the Loyalist defeat on the Aragon front in March, attributed in part to the treachery of some old-line army officers, Prieto's influence was obliterated. The Communists charged that his action in eliminating the Soviet system of war commissars from the army had caused the setback. At the same time further Soviet aid was promised, while Britain and France rebuffed Loyalist appeals for aid.

Consequently Prieto was dropped from the cabinet in a reorganization effected April 4, that gave Premier Negrin wide executive powers. While Communist party posts in the cabinet were reduced from two to one, the Communist leader Jesús Hernández was made head of the revived system of army commissars and Alvarez del Vayo, regarded as a Communist sympathizer, became Foreign Minister and second in command to Premier Negrin. Gen. Sebastian Pozas, Loyalist commander in Catalonia, was replaced and Gen. José Miaja, the defender of Madrid, was named head of all the Loyalist forces. At the same time the Socialist and Syndicalist unions temporarily forgot their rivalries and united to raise a new force of 100,000 volunteers.

The military crisis was accompanied by a wave of terrorism in Barcelona late in May, attributed to Insurgent supporters of the so-called "Fifth Column." This outbreak was severely repressed by the government. In August a crisis developed within the Negrin Cabinet over the question of militarization of war industries. The issue was resolved in favor of militarization by the resignation of two members of the cabinet and their replacement by a Basque Nationalist and a Catalan, thus preserving the National Union character of the government. But all political activity by the component parties of the government was forbidden and on September 11, the Catalan national holiday, only patriotic and cultural groups paraded.

Seven leaders of the Trotskyist Workers' Party of Unification (P.O.U.M.), charged with fomenting the May, 1937, uprising against the Loyalist Government in Barcelona, went on trial in October. On October 29 the tribunal freed two defendants and sentenced four to 15 years' and one to 11

years' imprisonment. Dissolution of the party was decreed at the same time. On December 9 all police and military forces were centralized under Premier Negrin's control. At the same time a Commissariat General of Religion was created as a step toward the restoration of normal religious worship. It was announced December 15, on the eve of Franco's December offensive against Catalonia, that 200 spies and traitors had been rounded up and condemned to death, while another 200 were sentenced to prison for long terms.

SPANISH-AMERICAN LITERATURES. The following presentation of the year's literary activities must not be taken as exhaustive, nor must the omission of any country be held as evidence that it was non-productive in 1938.

The following works are of general interest: Luis Alberto Sánchez, *Historia de la literatura americana* (fine, well-balanced history of the literatures of Spanish-America); Estela Miranda, *Poetisas de Chile y Uruguay* (critical essays, with quotations); Ildefonso Pereda Valdés, *El negro rioplatense* (interesting, thought-provoking study of Negro influence in language, literature, and music in several South American countries); Gastón Figueira, *Quetzalcoatl* (first of a series of volumes about each of the American republics).

Argentina. Enrique Larreta still enjoys popularity, since new editions have appeared of his *La Gloria de Don Ramiro* and of his dramas *El Linchera*, *Santa María del Buen Aire*, and *Pasión de Roma*.

Prizes. National Prizes for 1933-36, belatedly awarded, were: 1st, *Rubén Dario y su creación poética*, by Arturo Marasso; 2d, *Radiografía de la pampa*, by Ezequiel Martínez Estrada; 3d, *Contribución al tema de la teórica pura*, by Patricio Grau.—Municipal Prizes for 1936 were: Verse—*Romancero del Río de la Plata*, Luis Cané; *Pájaro de fuego*, Juan Fuscaldo; *Romancero de Don Pedro Echagüe*, Elías Carpena; Prose—*Endemoniados*, Lorenzo Stanchina; *El teatro de Pirandello*, José María Monner Sans; *El espíritu y la letra*, Ernesto Palacio.

Fiction. L. A. Arpsella, *La heroína*; Artemio Aran, *Pampa* (short sketches of life on the pampas); and J. Alvaro Sol, *La madre esclava* (mother devotion).

Verse. Luis A. Ledesma Medina, *Fugacidad* (poemas); and María Alicia Domínguez, *Romanzas del lucro* (surpassing her excellent earlier work).

Erudition seems to have outrun all other forms: Arturo Marasso, *Joaquín V. González, el artista y el hombre*; G. Martínez Zuviria, *La Biblioteca Nacional en 1937* (annual report to the Minister of Justice and Public Instruction); Ricardo Levene, *A History of Argentina* (translated by Wm. Spence Robertson) (a social, economic, and literary history brought down to 1933); José Antonio Bergez, *Hacia una democracia orgánica*; Carlos Ibárguren, *Las sociedades literarias y la revolución argentina (1800-25)* (annotated study of the influence of literary societies in the pre-revolutionary and revolutionary years); Lucilo Pedro Herrera, *Sugestiones críticas*; Norberto Piñero, *Los escritos de Mariano Moreno*; Angel Fragarape, *El libro del sentido vital* (essays); Ricardo Rojas, *Echenique, autor de las "Laudaciones"* (Notice by J. Francisco Silva); Juan Rómulo Fernández, *Sarmiento (semblanza e iconografía)*; Eduardo Mallea, *Historia de una pasión argentina* (novelistic account of the psychological and spiritual development of the author).—The Instituto de Filo-

logía, under the direction of Amado Alonso, has published two fine works: Amado Alonso, *Castellano, de español, Idioma Nacional (historia espiritual de tres nombres)*; and *El Español en México, Los Estados Unidos, y la América Central* (a monumental work, reproducing the works of Hills, Semeleder, Marden, Revilla, Nykl, Lentzner, Gagini, and Cuervo, with notes and studies by Pedro Henríquez Ureña, the Dominican scholar who published in 1936 *El Idioma Español en Santo Domingo*).

Necrology. Argentina suffered severely through death: Leopoldo Lugones, born 1874, died by suicide: man of letters (prose and verse), journalist, professor of literature, secretary of the Commission for the centenary of Sarmiento, and author of the *Historia de Sarmiento* (1911). Enrique García Velloso, b. 1880: dramatist, widely traveled (France, Spain, Italy), professor, founder of the Sociedad de Autores Argentinos, author of more than 100 plays, many novels, and a *Historia de la Literatura Argentina*.—Héctor Díaz Leguizamón, b. 1892: lawyer, teacher, diplomat, man of letters (prose and verse), Consul in Norway, 1919–24, pure lyric poet.—Alfonsina Storni, called the deepest feminine voice in Argentina, threw herself into the sea, Oct. 27, 1938.

Bolivia. Five very interesting books have reached us, two in belles-lettres, and three in erudition: Ernesto Vaca Guzmán, *Mirando atrás y 13 de Artillería (comedias de corte moderno)*; Abel Alarcón, *Cuentos del viejo alto Perú* (of special interest to folklorists); Alberto Zelada, *La Universidad y el concepto revolucionario*, and *El Kollasuyo* (study of the origins of the primitive races of Peru and Bolivia); Augusto Guzmán, *Historia de la novela boliviana*.

Chile. Despite certain attractive prizes, national and other, for belles-lettres, the Chilean works that have reached us are primarily erudition.

Prizes. The Chilean Society of Writers awarded their short-story prize to Juan Marin, *El Infierno Azul y Blanco (Paralelo 53 Sur)*, (realistic novel of the Straits of Magellan).—The Atenea awarded its prize for the best Chilean book of 1937 to *Hombres y zorros*, by Mariano Latorre.

Drama. Armando Moock (author of more than 400 plays that have filled the Chilean theaters for years) will soon have a reading public, when people come to know his *Teatro seleccionado* (2 volumes of which, out of a proposed set of 12, have already appeared).

Verse. Rubén Darío, *Poesías y Prosas raras* (compiled and annotated by Julio Saavedra Molina); J. Lagos Lisboa, *Tiempo ausente (poemas)*; José María Souvirón, *Romancero del Alcázar*; Antonio de Undurraga, *La siesta de los peces*.

Erudition. Miguel Luis Amunátegui Reyes, Gregorio Víctor Amunátegui: *Anhelos de un padre recordados por su hijo* (charming volume of important reminiscences); *Don Julio Vicuña Cifuentes (1865–1936)* (tribute published by the Biblioteca Nacional); Domingo Amunátegui Solar, *Recuerdos biográficos* (six outstanding characters of early Chilean history); Eugenio Orrego Vicuña, *Iconografía de San Martín* (with many plates, portraits, and facsimiles); Manuel Antonio Talavera, *Revoluciones de Chile*; Benjamin Vicuña MacKenna, *San Martín: La revolución de la independencia del Perú*.

Colombia. With one exception, the materials received from Colombia have been in the field of erudition: Victor M. Londoño, *Obra literaria, verso y prosa* (complete and definitive edition com-

plied by Cornelio Hispano—real contribution to Colombian letters); Antonio Gómez Restrepo, *Bogotá* (published by the Colombian Academy of History as a tribute to the city on its Fourth Centenary), and *Historia de la Literatura Colombiana, Vol. I* (brings the story down to the end of the 18th century); Daniel Samper Ortega, *Bogotá 1538–1938, Homenaje del Municipio de Bogotá a la ciudad en su IV Centenario* (texto de Daniel Samper Ortega; oleos de Luis Núñez Borda; edición y notas de J. V. Ortega Ricaurte) (splendid quarto volume of 212 pages, richly illustrated), and *Nuestro lindo país colombiano, descripción y antología del paisaje* (beautifully illustrated, won the National Geography Prize); Francisco Rivas Vicuña, *Las guerras de Bolivia*, t. 3; J. M. Restrepo-Millán, *Horacio: su lírica ante el gusto moderno*; Arnoldo Michaelsen, *Dibujos a pluma de la época colonial de Colombia* (extremely interesting pen-and-ink sketches); Germán Arciniegas, *Los Comuneros* (American life at the end of the 18th century).

Necrology. Two deaths have come to our attention: Ismael Enrique Arciniegas, born 1865, poet, lawyer, politician, journalist; in the Floral Games of 1905 his poem *Inmortalidad* won First Prize; and José Alejandro Bermúdez, b. 1886, priest, historian, juriconsult, professor of Canon Law and of the Philosophy of Law in the National University.

Cuba. The Dirección de Cultura of the Ministry of Education awarded a number of literary prizes, the one for 1000 pesos (under the heading General Literature) going to Medardo Vitier for his *Las ideas en Cuba*.

Fiction. Virgilio Ferrer Gutiérrez, *Itinerario (Temas Americanas)*; Enrique Serpa, *Oro en isla de pinos* (won Prize of the Dirección de Cultura); Luis Felipe Rodríguez, *Ciénaga* (powerful novel with the "swamp" as protagonist, awarded National Prize for Letters [novel] for 1937); Enrique Labrador Ruiz, *Cresival, novela*.

Drama. Miguel A. Macau, *Teatro* (containing three dramas performed in La Habana, one in 1925, and two in 1936); Ramón Sánchez Varona, *La Sombra* (Prize of the Dirección de Cultura).

Verse. Miguel A. Macau, *Ritmos del ideal: Paz perdida (versos)*; Emilia Bernal, *América (poesías)* and *Mallorca (prosa y verso)*; Mirta Aguirre, *Presencia Interior* (awarded a Dirección de Cultura Prize); Rafael Rodríguez Vidal, *Las Sinfonías de las Campanas (La Nueva Poesía)* and *El jardín de las revoluciones* (verse); Amparo Rodríguez Vidal (sister of Rafael), *Brote y Ala* (profound human sentiment, intimate association with nature, exquisite melodic values).

Erudition. Ramón Infesta, *Máximo Gómez* (awarded the prize in the extraordinary competition for the centenary of Gómez's birth); *Orbita de la poesía afrocubana 1928–1937 (antología)* by Ramón Guirao (won the Essay Prize of the Dirección de Cultura); Emeterio S. Santovenia, *Genio y acción, Sarmiento y Martí*; Francisco Ichaso, *Defensa del hombre* (fine spiritual portrait of Unamuno); Felix Lizaso, *Pasión de Martí*; Gilberto Gonzáles y Contreras, *Música y poesía*.

The *Academia Nacional de Artes y Letras* has resumed publication of its important *Anales* by issuing Tomo xvii, Año xxi, Julio 1935–Junio 1936.—At the formal opening of the *Academia Nacional* for the year 1938–39, the President thereof, Eduardo Sánchez de Fuentes, read a discourse: *La música aborigen de América*.

Dominican Republic. The following materials have come to hand.

Verse. D. Moreno Jimenes, *Embiste de razas* (poema bucólico-ciudadano); Juan Goico Alix, *Los Poemas del Insomnio* (dainty lyrics); Emilio A. Morel, *Pequeños Poemas* (volume highly praised); Juan B. Lamarche, *Patria recóndita* (won first, second, third, and fourth prizes out of five in a poetic contest).—José María de Heredia, *Los Trofeos* (Discurso preliminar, traducción, apéndices y acotaciones por Max Henríquez Ureña).

Fiction. Juan Bosch, *La mañosa* (la novela de las revoluciones); Andrés Francisco Requena, *Los enemigos de la tierra* (Novela); Ramón Marrero Arísty, *Balsé* (Narraciones, estampas y cuentos); Rafael Damirón, *Estampas, Ciudad Trujillo, República Dominicana, 1938*.

Erudition. Tomás E. Morel, *Del llano y de la loma* (folklore in popular language); Emilio Rodríguez Demorizi, *Poesía popular dominicana*, vol. i (collection of popular poems accompanied by historical notes and an introductory sketch on Dominican popular verse), and *Juan Isidro Pérez, el ilustre loco* (the study won the Ateneo Prize in the competition for the Centenary of La Trinitaria); Sócrates Nolasco, *El General Pedro Flor-entino, y un momento de la restauración*; Angel Rafael Lamarche, *Siempre—el libro de la madre muerta* (devoted to the memory of his mother); Gustavo Adolfo Mejía Ricard, *Crítica de Nuestra Historia Moderna, Primer Período del Estado Independiente de Haití Español*; Gilberto Sánchez Lustrino, *Trujillo, el constructor de una nacionalidad*; Tomás Bobadilla y Briones (prominent statesman, who served Dominica under monarchy and republic), *Discursos* (arreglados por Emilio Rodríguez Demorizi); J. Marino Inchaustegui, *La República Dominicana de hoy*, vol. i (important documents).

The *Academia Dominicana de la Historia* continues its work of investigation into the history of the whole Island and its relations with other countries. Its official bimonthly organ *Clio* publishes much of this and gives timely information concerning the progress of such studies.—The *Academia* published also *Homenaje i Ofrenda a los héroes del Vuelo Colombista*. In its History Competition, the *Academia* awarded the prize to José Manuel Machado for his *Ensayo sobre la obra revolucionaria realizada por Duarte y La Trinitaria desde . . . 1838 hasta . . . 1844*.

Ecuador. Nicolás Rubio Vásquez produced *La Paz Bienhechora* (heartwarming plea for peace, with prologue by the classical scholar, Aurelio Espinosa Polit).—Other belletristic productions are: Wenceslao Pareja, *El canto de las últimas sirenas* (poem awarded the first-class Medal "Al Mérito"); Alfonso García Muñoz, *Estampas de mi Ciudad, Segunda Serie* (searching stories of everyday Quito life); Gerardo Gallegos, *El embrujo de Haití* (powerful short stories of witchcraft among the Negroes), and *El puño del amo* (study of the Venezuelan tyrant, Juan Vicente Gómez).

Erudition. Roberto Agramonte, *Biografía del dictador García Moreno*; Roberto Andrade, *Historia del Ecuador*, 7 vols.; Aurelio Espinosa Polit, *La cooperación de los Padres en la educación*, and *Musicalismo en Virgilio*; Centro de Investigaciones Históricas, *Boletín*, 1937 (in honor of the 400th anniversary of the founding of Guayaquil, 1537–1937; articles concerning history and notable families of the city).

Necrology. Carlos Matamoros Jara, b. 1871, in

Guayaquil, educator, historian, Director of the Municipal Library and Museum of Guayaquil, died Apr. 10, 1938.

Guatemala. Agustín Mencos Franco (of the Academia Guatemalteca), *Literatura guatemalteca en al período de la colonia* (scattered articles collected and published now by order of the Academy); J. Antonio Villacorta C., *Prehistoria e Historia Antigua de Guatemala* (sturdy new study, with maps and facsimiles).

Honduras. Two volumes of verse and two of erudition have been received: Fausta Ferrera, *Alas* (her first book of verse); Juan Ramón Molina, *Tierras, mares y cielos* (preface by Enrique González Martínez, bibliography by Rafael Heliodoro Valle, illustrations by Enrique Galindo); Rómulo E. Durón and Augusto C. Coello, *Las islas del Cisne* (heavily documented report of a Commission appointed to make the study); the Biblioteca Nacional published *Bosquejos biográficos de algunos autores hondureños* (very important).

Mexico. Erudition has far outstripped the other genres in the materials we have received.

Belles-Lettres. Federico Gamboa (Director of the Academia Mexicana, Correspondiente de la Española) gave us *Reconquista* (2d ed. of his novel first published in 1906), *Mi Diario, Mucho de mi Vida, y Algo de la de Otros*, Segunda Serie, II; *La Llagu* (first appeared 1910; new edition 1922; later dramatized, has recently appeared in a dramatic cinematographic version in Mexico and the United States); Julio Torri, *Ensayos y poemas* (essays in poetic prose on philosophical ideas, first appeared in 1917, 2d ed. 1937, translation into English by Dorothy M. Kress, 1938); Gregorio López y Fuentes, *El Indio* (National Prize for Letters for 1935, now translated into English by Anita Brenner); J. Rubén Romero, *La vida inútil de Pito Pérez* (novel); Alfonso Teja Zabre, *Alas abiertas*; and Alfonso Taracena, *Los abrasados* (*Novela tropical*).

Erudition. Alberto María Carreño, *Pastorales, edictos y otros documentos del Excmo. y Rmo. Sr. Dr. D. Pascual Díaz, Arzobispo de México* (37th Archbishop of the Archdiocese), and *Colección de Obras Diversas* (begun in 1936, has now reached vol. vi): IV. *Nuestros vecinos del norte* (criticism of many things in the United States, frankly adverse, but useful), V. *Semblanzas* (*Segunda Parte*), VI. *Temas económicos* (*Primera Parte*); Genaro Fernández Mac Gregor, *Genaro Estrada* (essay read in a meeting held Jan. 4, 1938, in honor of the recently deceased statesman, man-of-letters, and author of the "Estrada Doctrine," and *El Dr. Mora Redivivo, selección de sus obras* (with critical study); Herminio Ahumada, Jr., *José Vasconcelos* ("una vida que iguala con la acción el pensamiento") (well informed, sympathetic study of the man who has been hailed as "the most representative thinker of America"); Manuel Orozco y Berra, *Historia de la dominación española en México, con una advertencia por Genaro Estrada*, 2 vols.; Alfonso Reyes, *Aquellos Dias* (1917–1920), and *Las Vísperas de España* (1914–1924); Alfred Louis Deverdun, *The True Mexico, Mexico-Tenochtitlan* (originally written in Spanish but not published—this translation by P. M. del Campo and P. Cheal—very important); Juan Marinello, *Literatura hispanoamericana* (work of critical acumen, declaring that literature must be the handmaid of progress); and Alfonso Taracena, *Madero: Vida del hombre y del político* (prólogo de José Vasconcelos).

Necrology. Mexico suffered a severe loss in the death of Luis González Obregón, June 20; Director of publications of the National Museum; Director of the *Boletín* of the National Library; Director of the Archives; and chief of the division of Historical Research; author of *The National Library of Mexico, 1833-1910*.

Panamá. Ricardo Miró, *Antología poética (1907-1937)*. The present collection, made by the Secretariat of Education and Agriculture, is part of a tribute to the author, arranged by the students of the Instituto Pedagógico.—Diego B. García Monje, *Anfora* (Ensayos y frases sobre temas esotéricos y espirituales).—Octavio Méndez Pereira (Rector of the National University and Director of the Academia Panameña de la Historia), published *Historia de Ibero-América*, keen study of the development of American ideologies, and ringing summons for all the Americas to lay the bases of the new civilization.

Perú. Sponsored by President Oscar Benavides, and under the General Editorship of Ventura García Calderón (diplomat and litterateur), the *Biblioteca de Cultura Peruana* is being published, and 12 volumes have already appeared, as Series I: vol. 1, *Literatura Inca*; 2, *Los cronistas de la conquista*; 3, *Páginas escogidas*; 4, *Los cronistas de convento*; 5, *El Apogeo de la literatura colonial*; 6, *El lazarillo de ciegos caminantes*; 7, *Los místicos*; 8, *Los románticos*; 9, *Los costumbristas y satíricos*; 10, *Diccionario de peruanismos*; 11, *Tradiciones escogidas*; 12, *Poesías escogidas*. Every volume has a brief biographical and bibliographical sketch.—José Díaz Canseco, *Estampas mulatas* (short stories).—Manuel González-Prada, *Nuevas páginas libres* (continuation of his *Páginas libres* (1894), collection made and edited by his son Alfredo, of all his unpublished writings).

Erudition. Jorge Basadre, *Historia del derecho peruano*; Victor Andrés Belaúnde, *Bolívar and the Political Thought of the Spanish-American Revolution* (very valuable for a broad picture of the whole movement and analysis of Bolívar's thought); Luis E. Valcarcel, *Músicos* (Cuadernos de arte antiguo del Perú, No. 6); Estuardo Núñez, *Panorama Actual de la Poesía Peruana* (sensitive study of Peruvian poetry for the past 20 years); José Antonio Encinas, *La Educación de Nuestros Hijos* (serious psychopedagogical study by the ex-Rector of the University of Lima); Manuel González-Prada, *Figuras y Figuronas . . .* (with critical study by Rufino Blanco-Fombona—another posthumous work); J. de la Riva-Agüero, *Por la Verdad, la Tradición, y la Patria* (Opúsculos), Tomo 2º (continuation of his important series of studies on outstanding persons and events in the cultural history of Perú); Ventura García Calderón, *Ricardo Palma* (brief but searching analysis of the position of Palma in Peruvian letters and culture).

Necrology. Peru suffered a great loss through the death, April 15, in Paris, of the journalist, novelist, and poet, César Vallejo, who was born in 1896. Although he had lived for many years in France, the Association of Writers, Artists, and Intellectuals of Peru paid him a great tribute in August, 1938.

Uruguay. Erudition and belles-lettres are both represented in materials at hand.

Erudition. Víctor Pérez Petit, *Rodó, su vida, su obra* (three volumes of biographical and critical studies by an intimate friend of Rodó); Carlos Travieso, *Montevideo en la época colonial: su evolución, vista através de mapas y planos españoles* (copied direct from the originals in the Span-

ish archives—an Album); Arturo Scarone, *Uruguayos Contemporáneos: Nuevo Diccionario de Datos Biográficos y Bibliográficos* (second revised edition, very important).

Belles-Lettres. Vicente Carrera, *El Cubil de los Leones, novela evocadora*; Alberto Zum Felde, *Aula Magna; o La sibyla y el filósofo* (a mystery, a dramatic dialogue); Ramón F. Díaz, *Liberación, poemas*; Francisco Espinola, *Raza ciega* (short stories in fable form, dealing with illiterate and superstitious negroes and Indians—the "blind race").

Venezuela. Erudition and belles-lettres are the two fields represented.

Erudition. The Academia Nacional de la Historia has resumed its publication of the *Archivo del General Miranda*. Tomo XV has just appeared and is entitled *Negociaciones, 1770-1810*.—Esteban Gil Borges, *Tendencias de la Evolución de los Métodos de Solución Pacífica de los Conflictos Internacionales; Conciliación y Arbitraje*; and *Notas sobre la Estructura Técnica de los Tratados Multilaterales Interamericanos* (three keen studies of international problems by the Minister of Foreign Affairs in Venezuela).—José Nucete-Sardi, *Cuadernos de indagación y de impolítica* (urges that Venezuelans develop their own country and that North and South America co-operate to defeat totalitarianism).

Belles-Lettres. Ada Pérez Guevara, *Tierra Talada* (regional novel); Rómulo Gallegos, *Pobre Negro: Novela*; Julián Padrón, *Candelas de verano* (short stories); Antonio Spinetti Dini, *Hambre* (Poemas de 1934 a 1937), (worthwhile volume of verse on important subjects of the day); José Ramón Heredia, *Los Espejos de más allá*; Marcial Hernández, *Sueño de un mediodía* (tales); and Enrique Bernardo Núñez, *La Galera de Tiberio (crónica del Canal de Panamá)* (the prefatory note remarks that it is a strange tale; but that does not deprive it of interest).

SPANISH LITERATURE. Despite war conditions throughout 1938, there were some creditable literary performances on both sides of the civil war, over and above the works of propaganda.

The following works which are of interest in the Hispanic field may be mentioned.

War. Connected with the Civil War, on both sides, the following have reached us:—*El Romanero de la Guerra* (ballads by thirty poets; all the poems have been translated by American poets, and printed in a volume entitled: ". . . and Spain Sings," edited by M. J. Benardete and Rolfe Humphries); *Lo que han hecho en Galicia* (Episodios del terror blanco en las Provincias Gallegas, contadas por quienes los han vivido); *From Spanish Trenches* (edited by Marcel Acier); *Cancionero General de la Guerra*.—Antonio Ruiz Vilaplana, *Burgos Justice* (translation of the author's *Doy Fe*, an account of his year's experience of Nationalist Spain, as an officer of the Courts of Burgos); Antonio Bahamonde y Sánchez de Castro, *Un año con Queipo (Memorias de un nacionalista)*; N. Sanz y Ruiz de la Peña, *Romances de Guerra y Amor (1936-1937)*; Ramón J. Sender, *Contraataque*; Vicente Saenz, *España Heroica* (account of the rebellion from the beginning until December, 1937); *A Catholic Looks at Spain*, by a professor of the philosophy of law at the University of Madrid, Sr. Sempurn Gurrea; Angel González Palencia (professor at the University of Madrid and visiting professor at Stanford), *The Flame of Hispanicism*; Georges Bernanos (Cath-

lic and monarchist, eye-witness of the White Terror in Mallorca), *Les grands cimetières sous la lune*; Francisco Gonzalbez Ruiz, *J'ai cru en Franco: Procès d'une grande désillusion. Deux mois dans la prison de Séville*; Concha Espina, *Retaguardia* (novela) (pictures of the quick and the dead); Pedro Salinas (visiting professor at Wellesley), *Lost Angel* (volume of selections of his verse, the originals and the English translations on facing pages, the title poem appearing for the first time); and Keith Scott Watson (English journalist), *Single to Spain* (bald statements of scenes witnessed in the trenches and behind the trenches in Spain's civil war—no opinions, no prophecies).

Erudition. Francisco Rodríguez Marín, *Añedones y enmiendas al comentario de mi nueva edición crítica (1927-28) de El Ingenioso Hidalgo Don Quijote de la Mancha*, and *250 Refranes entresacados de los 4,500 que ha reunido en la villa de Piedrabuena* (the octogenarian folklorist and Cervantes scholar does not let a year pass without publishing something); Gregorio Marañón (the great physician, surgeon, and philosopher), *Estudios de endocrinología, primera edición* and *Vida e historia: ensayos, and Crónica y gesto de la libertad* (*Avatar de Tiberio César; Psicología del gesto*) (a searching psychological study into the basis for international peace); Angel Valbuena Prat, *Historia de la literatura española*, 2 vols. (highly praised by scholars of foreign lands); Elliot Paul, *The Life and Death of a Spanish Town* (extremely important from folklore point of view and written in exquisite style); Juan de Zavaleta, *El Día de Fiesta por la Tarde* (ed. by George L. Doty, published by the Gesellschaft für Romanische Literatur); Adolfo Salazar, *La Música en el Siglo XX* (*Ensayo desde el punto de vista de su función social*) (the printing was completed in 1936, but the publication was delayed); and Josephine de Boer, *Mallorcan Moods in Contemporary Art and Literature*—illustrated by José Creff (six charming studies, made on the ground).

The Hispanic Society of America was very active and produced several works of extreme value and helpfulness, to wit:

The Hispanic Society of America Handbook: Museum and Library Collections (highly illustrated, intensely interesting articles on Paintings, Sculptures, Ceramics, Glass, Gold and Silver Work, Ironwork, Furniture, Textiles, Laces and Embroideries, Manuscript Maps, Prints, and Manuscripts and Books, by 10 specialists and the Society's photographic staff);

A. Van de Put, *The Valencian Styles of Hispano-Moresque Pottery, 1404-1455* (companion to the *Apuntes sobre Cerámica Moresca* of the late G. J. de Osma) (12 ills.);

Translations from Hispanic Poets (verse translations, by 17 translators, of poems of 48 Spanish and Portuguese poets from the XIII-XIX centuries; and of poems of 35 poets from 11 Central and South American countries);

List of Books Printed 1601-1700, in the Library of The Hispanic Society of America (vol. xxvi-972 pp.) by Clara Louisa Penney, continuation of the Society's *List of Books Printed before 1601, in the Library of The Hispanic Society of America* (1929).

Necrology. Spain lost heavily through death in 1938. In this article we list only those that have come to our attention in the field of scholarship and belles-lettres. These include Armando Palacio Valdés (q.v.) born in Asturias in 1853 and died

Feb. 2, 1938; Leopoldo Alas and Serafín Álvarez Quintero (see NECROLOGY).

SPECTROSCOPY. See PHYSICS.

SPITSBERGEN. See SVALBARD.

SPORTS. As the final curtain was drawn across the activities of 1938, the world of sports presents a kaleidoscopic view of surpassing achievements in almost every department of athletic competition. Records were shattered with such reckless abandon that one is left almost bewildered in an attempt to pluck the most noteworthy from the wreckage, in order to make any kind of orderly recording of their merit.

Perhaps, at the outset, the greatest victory and one involving an all-time record, was the one in which no actual competition occurred. We refer to the victory of the spirit of Sportsmanship which, influenced by the traditional code of ethical fair play that has elevated athletics into a permanent and important moral attribute to cultural education, caused utterances of protest to reverberate around the entire World. That voice of sportsmanship, raised in protest of what it considered a violation of the code of ethics for which it stands, was responsible for a national government to yield up "for political reasons," its award of the greatest of all international athletic events, the first time such a contretemps has occurred in its history.

Thus the 1940 Olympic Meet will be held in Helsingfors, Finland, instead of in Tokyo, Japan. And, in awarding the event to Finland, one detects, though possibly not intended, an ironical rebuke to the defaulting champion for, what other nation better exemplifies the true spirit of sportsmanship in meeting its obligations and in its international attitude than the land which has produced some of the greatest of modern athletes?

Turning to the world-wide arena of activity we find the high spots of the year's events in the feat of the great Glenn Cunningham running the mile faster than any pair of human legs ever negotiated the distance before; two Englishmen drove their automobiles at a speed in excess of 350 miles per hour, while a third totally wrecked all previous motorboat records for the mile; a precedent was set in Major League Baseball when the New York Yankees won their third successive World Series and in Tennis we had the unprecedented spectacle of Don Budge capturing the four major tennis titles of the World, pacing the United States in its successful defense of the Davis Cup, voted the outstanding American athlete of the year, and closing his amateur career with a professional contract giving him the highest financial guarantee ever offered a tennis player. The year again demonstrated the superiority of American athletes in virtually all international competition.

Archery. Archery, which has been steadily increasing in popularity during the past decade, reached a new high in championship achievement during the month of August at the fifty-eighth annual meet of the National Archery Association held in Golden Gate Park, San Francisco, Cal. Ten N.A.A. records were shattered, two were equaled, and two world records set. The National champions were Miss Jean Tenney, Clearspring, Md., and Pat Chambers, Portland, Ore. Pat Chambers won the National Single and Double York Rounds, setting World records of 139-813 and 262-1614 respectively. Miss Tenney won the National Single and Double rounds with scores of 72-492 and 141-939 respectively. She also won the Single and Double Columbia rounds, equaling the 1936 record set by Mrs. Olive Besco Laver in the

Single (72-550), made a new record in the Double with 144-1088, and won the American Double round with a record score of 177-1271. Men's R.F.S. champion, Gene Warnich, Portland, Ore., 462 yds. 1 ft. 9 in. (record 478 yds., Homer Prouty, 1933). Men's F.S.F.S. champion, Curtis Hill, Dayton, O., 610 yds. 4 in. (Record 614 yds. 6 in., Curtis Hill 1936.) Women's F.S. champion, Gendolene Vineyard, 345 yds. 1 ft. 6 in. (Record Mrs. Millie Hill, 355 yds. 2 ft. 4 in., 1937.) Men's Team Shoot, Greenwood Archers, Oakland, Cal., 382-2440; Women's Team Shoot, Ahwahnee Archers, San Francisco, 376-2192.

Automobile Racing. Out on the Bonneville Salt Flats of Utah two Englishmen of iron nerves drove their machines faster than wheels had ever traveled before while an American won the 500-mile classic at Indianapolis. On September 16, Capt. George E. T. Eyston, retired British Army officer, established an all-time record of 357.5 m.p.h. over the 13-mile course, traversing the measured mile in the center in 10.04 seconds. Two weeks previously he had raised his own previous record from 311.42 to 345.49. On September 15, John R. Cobb, a London fur broker, in his automobile *Railton*, half the weight of Eyston's 7-ton *Thunderbolt*, smashed this record over the same course traveling at an average of 350.2 m.p.h. Within 24 hours, Eyston bettered Cobb's mark by 7.3 miles. Eyston's speed on the north run was 356.44 and on the return trip 358.57 for his 357.5 average. Memorial Day was the date when Floyd Roberts, 38-year-old aviation engineer of Van Nuys, Cal., in a snub-nosed four-cylinder Burd Special, drove his car round the 2½-mile brick and asphalt track at Indianapolis to win the National championship in the 500-mile classic at the unprecedented speed for this distance of 117.200 m.p.h., awarded on a point basis by the American Automobile Association contest board. Roberts drove the entire distance without relief and only one 30-second stop for a tire change and gasoline. Rogers crossed the finish line 5 miles ahead of Wilbur Shaw, 1937 winner, his time for the 500 miles being 4:15:58.40. Roberts was credited with 1000 tallies and Shaw achieved second place with 825. Following in order were Chet Miller of Detroit, Ted Horn of Los Angeles, and the late Chet Gardner of Long Beach, Cal., with 675, 660, and 450 respectively. The previous record was 113.580 m.p.h., which Shaw had created the previous year. Gardner was killed early in September during a trial at the Fair Grounds, Flemington, N. J. Jimmy Snyder of Chicago won the National 100-mile dirt track championship at the Syracuse Fair Grounds. The Midget class increased in popularity and more than 50 tracks were active during the year. Six of these were formed into the Eastern Circuit operating under A.A.A. sanction and included Philadelphia, New Haven, Bridgeport, Nutley, N. J., Cedarhurst, L. I., and the Castle Hill Stadium in the Bronx. Paul Russo of Chicago scored highest points, with Eddie Staneck of Caldwell, N. J., runner-up. European results were: Annual Acerbo Cup, Pescara, Italy, August 14, 412.800 kilometers (256.501 miles), Rudolph Caracciola, 3 hrs. 3 min. averaging 83.770 m.p.h.; Italian Automobile Sporting Federation Cup annual 6-hour race, Frank Cortese driving 669.09 kilometers (414.4 miles), average speed 69.13 m.p.h.; May 15, Tripoli Grand Prix, Tripoli, Lybia. Herman Lang, German, drove over the 325.404-mile course in 2 hrs. 33 min. 17 sec.; Italian 1000-mile road race, Bologna, April 4, team of Biondetti and Stefani, time 11:58.29, an average

speed of 83 m.p.h.; Italian Grand Prix, Monaz, September 11, Tazio Nuvolari; German Grand Prix, Nuremberg, July 24, 311-mile intricate course in the Eifel Mountains, Richard Seaman, Great Britain, Mercedes-Benz, 3 hrs. 51 min. 1 sec., average speed 80.4 m.p.h.

Badminton. Badminton continued its rise in popular favor during 1938, registering a general increase in interest throughout the country. The Championships, held in Philadelphia, March 24-26 resulted in the 1937 champion Walter Kramer, of Detroit, retaining the singles title, defeating a rising young star, William Markham of the Old Sixty-ninth B. C., 15-12, 17-15. Markham, virtually unknown at the start of the season, won impressive victories in the District of Columbia, Eastern, and Metropolitan championships to reach the final of the National event. Mrs. D. Barkhuff of Seattle defeated Miss M. Whittemore 7-11, 11-6, 11-4, to retain the Women's Singles crown, and with Hamilton Law won the mixed doubles with a 15-5, 15-11 victory over Mrs. Wightman and Goss. Law and Dick Yeager won over Goss and Eversoll 15-10, 15-10 to win the men's doubles, and the women's doubles were captured by Mrs. Roy Bergman and Miss Helen Gibson who defeated last year's champions, Mrs. Del Barkhuff and Miss Zoe Smith 18-13, 10-15, 18-14. Henry Henriques of Philadelphia and George McCook, Pasadena, Cal., won the veterans' doubles.

Baseball. For the first time since the institution of the World Series, this great baseball classic was won for the third successive year by one team. It was an exciting race with the Giants, Tigers, Red Sox, Cubs, and Cardinals all bidding for pennant honors up to mid-season, and the Pirates, not considered at the start, hammering their way up to a real threat. The Yankees themselves had a shaky start, but at the half-way mark hit their stride. The Cardinals dropped to a new low, the Giants blew up in August and with the Yankees in an assured position it became a tail-end struggle between the Cubs and Pirates with the Cubs clinching the race on next to the last day. In the grand climax, however, Joe McCarthy's outfit completely overshadowed the Chicago team, submitting them to four straight defeats with scores 3-1; 6-3; 5-2; 8-3. A total of 7 home runs were scored, Crosetti, Henrich, DiMaggio, Dickey, and Gordon each scoring for a total of 5 for the Yankees, and Marty and O'Dea scoring one apiece to tally 2 for the Cubs. The total attendance for the four days was 200,833 and the receipts \$851,166, the highest gate for any series of the same number of games played. The players' share amounted to \$5815 each for the Yankees and \$4674 each for the Cubs.

The 1938 All-Star game played in Cincinnati, July 6, was won by the National League with a score of 4-1.

Jimmie Foxx won the American League batting championship with an average of .349 and Murphy of New York took the pitching honors with an average of .800 per cent. Lombardi, Cincinnati Reds, captured the national batting crown with .342, and Dizzy Dean of Chicago averaged .875 per cent to win the pitching crown. Mancuso, N. Y. Giants, had a batting average of .348, but played in only 52 games against Lombardi's 129. Foxx won the most valuable player award in the American League; Lombardi in the National League. St. Paul won the American Association title and Newark the International crown. Dartmouth won the Eastern Intercollegiate League title and the Western Conference wound up

with a tie between Iowa and Indiana Universities.

Among the highlights in individual performance, Johnny Vander Meer of the Cincinnati Reds pitched two successive no-hit no-run games on June 10 and 15 respectively; Lou Gehrig completed one of the most remarkable sporting feats in history when he wound up his 1938 season with a record of 2123 consecutive games; Rudy York, catcher for the Detroit Tigers tied the major league record of four home runs in a season with the bases loaded, playing against the Chicago White Sox September 3; Hank Greenberg, another Tiger, smashed the major league record for hitting two or more homers in one game when he collected two from the Cleveland Indians September 23. It was the tenth time Hank accomplished the feat during the 1938 season. Frank Higgins, third baseman for the Boston Red Sox, on June 19, broke Tris Speaker's record made in 1920 when he cracked out a double and three singles combined with a walk, and two days later in a double header against the Tigers, collected three singles and a double in the first game and four singles in the second, netting 12 straight hits in 12 times at the bat.

Basketball. Operating through the 1938 season with a new and radically revised code, basketball showed a distinct increase in speed and the game took on an increased popularity. Accepted with reluctance and misgivings by the Easterners, the elimination of the center jump except to start the game and at the beginning of the second half resulted in a speedier game and an increase in scoring averaging about 5 points a contest. Dissatisfaction over the use of the zone or team defense influenced the rulemakers to modify the restriction on the foul lane pivot play, giving teams another weapon with which to attack zones.

A vivid season, crammed with exciting finishes and upsets, hardly a team of prominence went undefeated. Dartmouth won the Eastern Intercollegiate and a powerful Temple University team took the Eastern Conference crown. Purdue led the Big Ten, Kentucky won the Southeastern Conference, and the Pacific Coast Conference was won by Stanford in the Southern Division and Oregon in the Northern Division with Stanford winning in the North-South playoff. Kansas won the Big Six and Oklahoma A and M topped Missouri Valley, while Rhode Island, Montana State, and Arkansas headed the New England, Rocky Mountain, and Southwest Conferences, respectively.

The N.A.A.U. Championships was captured by Healey Motors, Kansas City, at Denver, Colo., March 13-19, defeating Denver Safeways 40-38 in the final game. The women's championship was won by Galveston Anicos which defeated Wichita Thurstons 13-8 at Wichita, Kans., March 21-26.

The Metropolitan Basketball Writers Association inaugurated a post-season national invitation tournament which proved a signal success and was productive of the outstanding game of the entire year. The series was played in Madison Square Garden, and was won by Temple when this great team defeated Colorado in the final game 60-36. In the semi-final, however, between Colorado and N.Y.U., with the latter team leading 47-46 and only 20 seconds to go, Colorado took possession, snatched a goal and won the right to meet Temple in the final with the score at 48-47.

Temple's victory in the final put them on a par with the four outstanding teams of the country. King-pin of the Eastern Conference that had beaten in the regularly scheduled games Stanford Uni-

versity, 3-time ruler of the Pacific Coast Conference; Illinois of the Big Ten; Southern Methodist of the Southwest Conference, and N.Y.U., unbeaten in seven encounters with Metropolitan foes. In the semi-final of the tournament, it had smothered Oklahoma A. and M., three times champion of the Missouri Valley Conference.

Outstanding player of the season and one of the greatest of all time was Stanford's Hank Louissetti who set up an unprecedented record of 1550 points (exclusive of the Pacific Coast play-offs) and a new one-game mark of 50 points against Duquesne.

Billiards. The most important billiard championship passed to Roger Conti, veteran French cue expert, when he defeated Welker Cochran of San Francisco last March in Paris for the World 3-cushion professional championship which Cochran had held since 1926. The tournament was decided on a point basis, 2 for a victory and 1 for a tie, wound up with Cochran and Conti even, but the French ace won two of the three extra games and achieved the crown. The final standing of the players gave Conti 14 points, Cochran 12, and Jake Schaefer of Chicago third place with 8.

Because of no contest, Willie Hoppe did not have to defend his world title in the 18.1 balkline and his cushion-carom honors nor his 71.2 National title.

Pocket Billiards. Only one other important title was contested during 1938, when Arthur Cranfield, youthful Syracuse, N. Y., ace defeated Ted Murray of Burlington, Vt., 375-207 in the play-off series for the amateur pocket-billiard crown after the pair had tied in the finals of the round robin tournament. Cranfield succeeds C. E. Rogers of Glen Cove, L. I.

Ralph Greenleaf of New York, allowed the World pocket-billiard championship to go undefended. Considered the best in the world, Greenleaf refused to participate in the titular event, thus paving the way for Caras to return to top honors.

Bobsledding. Despite the mild winter of 1937-38, bobsledding was not without its achievements. Aubrey (Bucky) Wells of Keene Valley, N. Y., was the dominating figure at Lake Placid and rang up a record as the only pilot in history to win every major American four-man title in one season. He steered the winning crew in the North American, the National A.A.U., the Commissioner Lithgow Osborne Trophy, the Governor Lehman Trophy, and the Packer Trophy events, setting new marks in every start. Wells' crew comprised three veterans who have shared his daring in every race for years, Warren Martin, Hubert Nye, and John Otis. The quartette trimmed the course record over icy Mount Van Hoevenberg, their best time being in the North American four-man when they negotiated the four one-mile heats in 4 min. 24.90 sec. Another team from Keene Valley carried the honors in the two-man events when Ivan Brown and Bob Washbond won the North American and National titles. This pair who won for the United States in the 1936 Olympics, also hung up a record achieving the four one-mile heats in 4:52.63, almost 18 seconds below the old mark. They have been unbeaten since 1935.

Bowling. All the major honors in 1938 bowling were swept into the bag by the Middle West. At the Thirty-eighth American Bowling Congress tournament for men, held at Chicago, and the twenty-first Women's International Bowling Congress meet at Cincinnati, the results were the same.

The A.B.C. victors were Birk Brothers Brew-

ing Company of Chicago in the 5-man team events; Don Johnson and Fannie Snyder of Indianapolis, doubles; Knute Anderson of Moline, Ill., singles, and Don Beatty, Jackson, Mich., all-events. The Birk Brothers quintet won their event with the highest aggregate score ever recorded by a 5-man team—an all-time high of 3234 and, with the team championship, received a \$1000 prize and diamond medals. The previous record was made in 1927 by Milwaukee with a total score of 3190. The Chicagoans also claimed the heroes of the tournament in Jule Lellinger and George Geiser who represented the same company 21 years ago, their team winning the same championship with the then record score of 3061. The tournament itself, which ran from March 3 to April 19, established a record with a total of over 20,800 entries; \$297,000 in prize money, and 15,000 sets of pins used. Over 180,000 games were rolled and one perfect score of 300, the fifth in the 38 years of A.B.C. competition, was made by M. Blazek of Chicago. Cleveland was selected for the 1939 meet.

The Women's I.B.C. champions included the Heil Heat Company of Milwaukee (winners in 1937) in the 5-woman event; Florence Probert and Ethel Sablatnik of St. Louis, doubles; Mrs. Rose Warner, Waukegan, Ill., singles, and Dorothy Burmeister, Chicago, all-events. The Heils team is the first in the history of the championship to defend its title successfully.

Boxing. Throughout the history of the prize ring the Negro race has flashed a spot of color across the limelight, but never before have members of that race dominated the major classes as demonstrated with the close of 1938. With four of the leading crowns resting on the dusky brows of a notable trio, Joe Louis, heavyweight, John Lewis, light heavyweight, and Henry Armstrong carrying both the welterweight and lightweight titles (having resigned the featherweight tiara after being the first to achieve three major titles and hold all three at one time), it would appear that the color line in the fight game has been definitely erased.

Joe Louis successfully defended his title against three challengers during the year, defeating Nathan Mann by a knockout in 1.56 in the third round of their bout at Madison Square Garden February 23. On April 1 he met Harry Thomas in Chicago, knocking him out in 2.50 of the fifth round and on June 23 literally wrecked Max Schmeling in 2.04 of the first round in their second meeting at Madison Square Garden before 70,025 fans and bringing back the long sought "million-dollar" gate. The actual receipts were \$940,096, but with the addition of a \$75,000 share in the cinema and radio rights the total reached \$1,105,096 of which \$349,288 went to the champion. With back injuries that sent him to the hospital, Schmeling sailed for Germany 10 days later with \$174,644 balm for his terrific beating.

Almost overshadowing Louis in the limelight was the spectacular showing of Armstrong. Having captured the featherweight crown the previous year, on May 31, 1938, he defeated Barney Ross for the world welterweight title and, on August 17, won the lightweight title from Lou Ambers and immediately defended his welterweight crown against two contenders within 10 days—Ceferino Garcia and Alf Manfredo. He had not suffered defeat in 40 bouts over a period of two years.

The heavyweight campaign was also marked by the retirement of James J. Braddock after his defeat of Tommy Farr, champion of Great Britain,

in 10 rounds. In 1937 Braddock lost his title to Joe Louis by the knockout route in 8 rounds, yet, two months later the latter was extended to the entire 15 rounds to secure a judges' decision in his championship bout with Farr.

John Henry Lewis was called upon to defend his light-heavyweight title only once during the year, defeating Al Gainer in 15 rounds at New Haven, October 28. He was signed to meet Louis in January, 1939.

Sixto Escobar, Puerto Rican bantam weight, regained his 118 lb. title on February 20 when he defeated H. Jeffra in San Juan, gaining the decision in 15 rounds. The middleweight class was somewhat muddled with Solly Krieger having defeated Al Hostak who won the crown from Fred Steele. Krieger, however, was not recognized in New York and California because he ignored a challenge from Fred Apostoli, the recognized champion in both those localities. With the surrender of the featherweight title by Armstrong, the title was left for contention between Joey Archibald, Providence, R. I., and Leo Rodak of Chicago. The flyweight title was confused for lack of a class leader. Peter Kane won the recognition of the British Board of Boxing Control while Little Dado, a Filipino who defeated Small Montana recently in the West, had the backing of the California moguls.

In the amateur ranks, which had a most successful season, the outstanding event was Army's victory in the Eastern Intercollegiates when West Point's cadet team broke up the ten-year dominance of Syracuse and Penn State and the dividing of honors between Virginia and West Virginia, in the N.I.C.A.A. championships.

In the Golden Glove tournament between the United States and Europe held in Chicago, May 18, the Mid-Western teams defeated teams representing Finland, Germany, Poland, Italy, and Ireland, 5 bouts to 3. A record attendance of 22,234 was present at this event.

Court Games. Court Tennis. The National singles court tennis championship saw the return of James H. Van Alen to amateur titular honors. Ogden Phipps, winner of the title from 1934 to 1937 inclusive, was unable to compete through illness and Van Alen, his closest rival for several years, came through the field to win the crown he last had worn in 1933. Van Alen also won the Tuxedo Gold Racquet event. Recovered later, Phipps, paired with William Rand of New York, won the doubles. The open championship was retained by T. Iannicelli, Forest Hills club professional, who defeated Rowland Dufton of the New York Athletic Club.

Racquets. In this, fastest and most exclusive of all court games, Robert Grant III of the Harvard Club, New York, dominated the amateur competition and added new laurels to his credit. Successfully defending his National singles title, Grant, paired with Clarence C. Pell, Jr., won the doubles. He successfully defended his Canadian singles title and, again with Pell, retained the Canadian doubles crown and the Tuxedo Gold Racquet which he won for the first time in 1937. In addition, Grant entered the first annual invitation open tournament for the Clarence Pell Cup, defeating Kenneth Chantler, professional, and, in the final round, Norbert Setzler, New York professional and winner of the 1937 open championship, 15-9, 15-4, 15-10, 15-12. In the entire season Grant lost only three games in singles play and is rated the greatest racquets player in history.

Squash Racquets. Germain G. Glidden of Englewood, N. J., won his third successive victory in the National singles squash racquets championship tournament, defeating LeRoy Weir in the final round at Cleveland in four games. Hunter Lott, Jr., and William E. Slack of Philadelphia won the doubles. Miss Cecile Bowes, Philadelphia, won the women's singles title. The National Intercollegiate singles title was captured by LeRoy Lewis, Univ. of Pennsylvania. Boston won the National Team championship and A. M. Sonnabend of Boston won the veterans' National title. Al Ramsey of Cleveland won the National professional singles honors, defeating Lester Cummings of New York in the final round. The International Team championship for the Lapham Cup was won by the United States, 18-2.

Squash Tennis. Harry F. Wolf, Montclair, N. J., perennial champion since 1930, again dominated the Squash Tennis competition to retain the National singles championship. Roland B. Haines, who preceded Wolf as title holder, won the National veterans crown, and the National Intercollegiate singles title went to LeRoy Lewis of the Univ. of Pennsylvania.

Cricket. The dominant feature on the 1938 cricket crease was England's record defeat of the visiting Australian team at the Oval in London in August. England won by 579 runs with an inning to spare. The Australians were completely baffled by the bowling of the home team which ran up a total of 903 runs for the loss of only seven wickets. The Antipodeans were retired twice with total of 201 and 123, respectively. In that match Leonard Hutton ran up the record individual score for the test series of 364. Leyland tallied 187 and Hardstaff 169 not out. Australia, however, came out even, each side gaining a victory and two draws. One of the five scheduled games was canceled on account of rain.

The championship of New York and Metropolitan District Cricket Association was won by Philadelphia General Electric Cricket Club with Brooklyn C.C. in second place. The Brooklyn Team toured Canada, winning 1, losing 2, and drawing 2 matches. Philadelphia General Electric C.C. visited New England and Nova Scotia, won 5 and drew 2 games. A Canadian team defeated a picked New York and Metropolitan team and also the Haverford Alumni. C. H. Archer of Philadelphia won the individual batting honors in the New York and Metropolitan District Ass'n with an average of 45 and high score of 104, not out. A. E. Edwards of Brooklyn scored a century, compiling 101 for Hudson County against Bloomfield, N. J., and A. A. McLellan made a record for New York in championship games by taking all 10 wickets in an inning for 33 runs, bowling for Staten Island against Crescent A.C.

Yorkshire won the English County Championship. The annual Oxford and Cambridge University match ended in a draw due to rain. J. B. Hobbs has achieved a record of 197 centuries in first class which, with 43 in minor games, gives him a grand total of 240.

Cross-Country Running. Donald Ray Lash, now a member of the Indiana State Police, won the National A.A.U. cross-country run for the fifth consecutive time and was the only one to retain his title in all the distance running and walking championships decided during the year. He negotiated the 6.25 miles over hill and dale in 34:33.2. Millrose A.A. was the team winner. Lash survived a cramp during the first mile, jockeyed with the

field, depending on the power of his sprint at the end. With young Drygall of Millrose in the lead, Lash caught him 15 yards from the tape, beating him by a step over the line.

The National I.A.A.A. championship at Van Cortlandt Park over a distance of 5 miles was captured by the Manhattan team with Smith of Penn State taking individual honors. Time, 26:33.3. Indiana won the Big Ten championship at Lafayette, Ind., with Truitt of Indiana winning the individual title in 11.8 for the 4 miles. J. Gregory Rice, Notre Dame, won the first National Collegiate A.A. cross-country championship held at East Lansing, Mich. The Metropolitan ended in a dead heat and was won by Manhattan, nine of whose runners crossed the line even, and the Metropolitan A.A.U. was won by New York A.C., McCluskey taking the individual crown.

Curling. With one of the most decisive scores registered in many years, the curling team representing the United States and led by John Anderson, President of the Grand National Curling Club, regained the Gordon International Medal, first competed for in 1884 and lost to Canada in the 1937 contest. Anderson's team defeated the Canadian branch of the Royal Caledonia Curling Club 228 to 145. The U.S. team also scored over a British Empire squad comprised of Canadians and members of the Scottish team which toured Canada.

This is the thirteenth time that the United States has won the coveted Gordon Medal, Canada having had 30 victories. A total of 16 matches were played of which the U.S. Team won 11, Canada 4, and one ended in a draw.

The next most important curling event of the year was won by the Utica, N. Y. Curling Club who annexed the Douglas Medal by defeating the Brookline Country Club team 14-7 in the final round that helped celebrate the golden jubilee bonspiel of the St. Andrew's Golf Club.

Teams winning other fixtures were the Utica Curlers who retained the Munson Shield and the Country Club of Brookline whose team won the Patterson Memorial Cup, one of the oldest trophies in the sport, and the Stockton Cup.

Cycling. Due to the competition for control between the Amateur Athletic Union, Amateur Bicycle League of America, and the National Cycling Association, the cycling competition was somewhat marred during 1938. The N.C.A. seems to have gained control.

The Netherlands annexed the amateur and professional sprint titles and only two champions were able to defend successfully their titles. In Europe, Jan Van der Vyver of the Netherlands retained his crown as amateur sprint champion of the world and on this side of the Atlantic, Mickey Francoise of Montclair, N. J., held for the third successive year his title as amateur sprint champion of the United States. Van der Vyver outsprinted Bruno Loatti of Italy in the final of the World sprint race and two other Hollanders took third and fourth places, Derksen and Oems respectively. Francoise is the first amateur to win the U.S. title three times in succession since the days of Marcus Hurley who held it from 1901-04 inclusive, in which latter year he also captured the world title in London.

The most astounding upset of the year was the defeat of the veteran, Joseph Scherens of Belgium, who for six consecutive years held the professional world sprint crown, and yielded his title to Arie Van Vliet of Holland, the latter winning the first and third heats of the final race for the world

championship. Only one other sprinter—Thorwald Ellegard of Denmark—held the title six times in the history of the sport, but not consecutively as in the case of Scherens.

Albert Sellinger of Newark, winner in 1935 of the amateur sprint crown, became the champion of the National professional when he defeated Mathias Engel of Germany. Tino Riboli won the American paced championship, dethroning Gerard Debaets of Belgium. Eric Metz, of Germany, led his compatriot Walter Lohman, 1937 Champion, over the tape to win the World professional motor-paced title. The German team of Gustav Kilian and Heinz Vopel repeated their victory of 1937 in the New York six-day event which they also won in 1935 and 1936.

In the National A.A.U. road racing championship held in Chicago September 17-18, Stanley Gadrin, Chicago, won the mile in 2:36.3; Albin Jurca, Kenosha, Wis., won the 5-mile in 13:34.6; James Matthews, Los Angeles, Cal., won the 10-mile in 22:49, and Norman Aprile, Hawthorne, N. J., won the 25-mile event in 57:33.9.

Dogs. Because he is an imported dog, the one who is generally agreed to be the greatest dog in America today was ineligible for the American Kennel Club awards. Nevertheless, with a total of 39 best-in-show awards during 1938 to his credit, a record unsurpassed if even equalled, Champion Nornay Saddler of the James M. Austin kennels, Westbury, L. I., is undoubtedly the king-pin of the show class. Saddler is a smooth fox terrier. The A.K.C. award went to the white standard poodle bitch Champion Blakeen Jung Frau, a Hoyt entry from Blakeen Kennels with 32 variety group victories to her credit. Intense rivalry between Jung Frau and the smooth dachshund dog Champion Herman Rinkton, owned by Mrs. Annis A. Jones, S. Orange, N. J., caused so serious a situation that after an investigation the A.K.C., subsequently made sweeping changes in the regulations to avoid another such complication. The two entries were deadlocked with 31 points each when Anton Rost awarded the "dach" third in the hound group and Harry Rushton put up the poodle in the non-sporting class.

At the Morris and Essex out-door show, with the largest entry in its history, 4213 dogs for a single day show, Leonard Collins' Old English Sheepdog, Champion Ideal Weather, carried off the honors and repeated at the new International Kennel Club exhibit in Chicago. Dwight Ellis's Daro of Maridor, English setter puppy, was the winner at the Westminster Kennel Club's exhibit at Madison Square Garden. In the gun class, the Fraser Horn entry, Finglen Johnnie, received the "Field and Stream" award for the best springer spaniel and Gordon B. Kelly's magnificent Labrador retriever, Nigger of Barrington, won that magazine's retriever award. A. G. Sage's Sedgfield's Nigger, was accorded the "American Field" futurity derby award.

American breeding of thoroughbred dogs showed steady progress; there was an increase of exhibitors and the bench shows increased from 317 in 1937 to 336 last year. A.K.C. Field trials jumped from 83 in 1937 to 96.

Fencing. Topping the list as the finest all-around swordsman in the United States in 1938, Dr. John R. Huffman, New York A.C., for the fifth time won the National Senior Individual saber championship, defeating his perennial opponent of the past nine years, Norman C. Armitage. To clinch his supremacy, Dr. Huffman also annexed

the three-weapon laurels. Other National champions were: Foil, Dernel Every, N.Y.A.C.; Epee, Jose R. de Capriles, Salle Santelli, N. Y., who also won the out-door Epee title; Out-door Saber, Dr. John R. Huffman; Women's Foil, Helene Mayer, Los Angeles; Team championships, Foil, Salle Santelli, N. Y.; Epee, New York A.C.; Saber, New York A.C.; three-weapon, New York A.C.; Women's Foils, Salle d'Armes Vince, N. Y. New York University retained the three-weapon crown in the National Intercollegiate Team championships and also the team saber laurels. The foil and epee team titles were divided between Yale and Navy. The individual intercollegiate champions were Danny Bukantz, of City College, N. Y., Foils; Harry Foley, Jr., Navy, Epee; and W. W. Thackeray, Army, Saber. Seton Hall College won the team honors in the Eastern Intercollegiate Conference. Junior National champions included Ted Gold, Salle Santelli, foils; William Randall, Yale, Epee; Bruce Wallis, Columbia, Saber, and Miss Dorothy Grimmelmann, Salle Santelli.

Football. Despite the usual academic criticism decrying its commercialism, whether this be justified or not, as far as popular interest and alumni support is concerned, football, during the 1938 season, more than lived up to its reputation as the dominating sport feature on the entire competitive program. Throughout the country, record attendance was frequent, the game gave evidence of improvement, and the teams of greater strength than ever. Attendance reached climactic heights at the Army-Navy game in Philadelphia with 102,000 braving weather conditions that could hardly have been more uncomfortable and in which Army was victorious 14-7. The Southern California-Notre Dame meeting saw the Los Angeles Coliseum packed with 101,000 enthusiasts who witnessed the Trojans deliver the only defeat suffered by the South Bend team, shattering their championship hopes as in 1931. Southern California-California drew 95,000. In nine games Notre Dame played to nearly 500,000 devotees and in the East, four games drew attendances of 70,000 on one day, the largest in the history of that section. Thrilling, almost split-second, finishes with the forward pass and field goal prominent elements in such hair raising rallies, attractive schedules, and the two changes in the code, were contributing factors to one of the most successful seasons the game has had. Elimination of the penalty for a pass into the end zone prior to the fourth down and bringing the ball out 15 instead of 10 yards when it has crossed the side line between the goal lines are the changes referred to. They increased the offensive trend, resulting in the highest scoring average since 1931.

The Conference champions were as follows: Big Ten (Western) Minnesota; Pacific Coast, shared by Southern California and California; Southern, Duke; Southeastern, Tennessee; Southwestern, Texas Christian; Big Six, Oklahoma; Ivy League, Cornell. Harvard won the Big Three title, Rutgers the Middle Three, and Amherst the Little Three.

Undoubtedly, the ranking teams of the season, in order, were Texas Christian, Tennessee, and Duke. But for their defeat by Southern California, Notre Dame, box-office magnets of the season, might have headed the list. Duke, the only major team to hold all its opponents scoreless was invited to meet S. California in the annual Rose Bowl contest. Texas Christian, unbeaten and untied was selected to meet Carnegie Tech., beaten only by Notre Dame, in the Sugar Bowl contest.

at New Orleans and Tennessee vs. Oklahoma, both unbeaten and untied were the scheduled attraction for the Orange Bowl in Miami. In addition to the leaders, there were numerous undefeated teams, some tied, the three best being Carnegie Tech., Pittsburgh, and Holy Cross, Carnegie's defeat of the other two causing its preference for the Sugar Bowl contest. Deserving of special mention was Villanova's record in completing two successive seasons without defeat, a fact responsible for its coach, Maurice (Clipper) Smith's country-wide popularity.

Davy O'Brien was deservedly awarded the Heisman and Maxwell trophies as the outstanding player of the year, due to his leading T.C.U., in the strongest all-round offensive play exhibited by any team. Other outstanding performers were Goldberg of Pittsburgh, Young of Oklahoma, Wolff of Santa Clara, Aldrich of T.C.U., Heikkinen of Michigan, and Beinor of Notre Dame. The East was well represented in addition to Goldberg and Aldrich by Luckman of Columbia, MacLeod of Dartmouth, Wysocki of Villanova, and Holland of Cornell. Carnegie Tech. received the Lambert Memorial trophy.

Professional football also gained in popular favor, over 1,100,000 fans attending the National League games. A huge financial success, it furnished another thrilling race in which the New York Giants, at the bottom of the league standing in the early part of the season, spurred ahead to capture the National championship, defeating the Green Bay Packers, Western champions, 23-17. Danowski, the Giants' offensive key-man established a league record by completing over 50 per cent of his passes. With the brilliant offensive tackle, Ed Widseth and Mel Hein, captain and unrivaled center, Danowski was named on the All-League team.

Golf. The golden anniversary of American golf was made notable by some performances that will add historical luster to the game. It was just 50 years ago that the "Apple Tree Gang," a small group headed by the late John Reid, father of the present head of the U.S.G.A., founded the first organized club in America, St. Andrews, improvising a 6-hole course laid out in an apple orchard in Yonkers, N. Y. The year also was the 25th anniversary of the triumph of Francis Ouimet over Harry Vardon, which gave the American game a new impetus.

Premier honors for 1938 go to Ralph Guldahl, who performed the rare feat of winning the U.S. National Open championship, over the Cherry Hills course at Denver, twice in succession, flashing home in the final round with a 69, his total score being 284. In 41 years of championship history, only three others accomplished Guldahl's feat—Anderson, McDermott, and Bobby Jones. A week after his open victory, Guldahl clinched his right to pre-eminence by creating a record in winning his third straight Western Open title. The National Amateur was won by Willie Turnesa, who displayed a brand of bunker play that was uncannily brilliant. Paul Runyan, White Plains professional was the outstanding match-play artist of the year, winning the National P.G.A. title for the second time in his career.

With the Canadian Open title his only major triumph, and the only one in his career, Sam Snead, young White Sulphur professional, led the entire professional field in prize winnings throughout 1938, his largest purse, \$5000, coming from his Westchester 108 hole victory.

Across the water, the British Walker Cup Team

celebrated the American Jubilee year by capturing the famous trophy for the first time since its inception in 1922. The British 7-4 victory at St. Andrews, however, was offset by Charley Yates, member of the American team, winning the British Amateur title at Troon. Our women golfers, too, contributed their share by their successful defense of the Curtis Cup, defeating the British team at Manchester, Mass., 5½-3½.

Miss Patty Berg achieved her ambition by winning the Women's National amateur championship, defeating the titleholder, Mrs. Estelle Lawson Page 6 to 5 in Chicago, where also, British threats were turned back. Albert Leach, Cleveland, O., won the National Public Parks crown and J. P. Burke, Georgetown U., was victor in the National Intercollegiate championship. R. A. Whitcombe won the British Open.

Gymnastics. George Wheeler, University of Pittsburgh and member of the '36 Olympic Team, retained his all-around title in the 1938 National A.A.U. Gymnastics Championships. He won 5 of the 9 individual events including calisthenics, long horse, side horse, horizontal, and parallel bars. Miss Helen McKee of Philadelphia dethroned Miss Pearl Perkins of the same city in the women's championships. The Swiss Turners of Hudson Co., N. J., won the team honors with 71½ points.

Handball. A record was made in the National Championships when big Joseph P. Platak, Lake Shore A.C., Chicago, annexed the senior 4-wall singles for the fourth consecutive year, the first time this has been accomplished in the history of the game. Paired with Bob Weiller, however, he lost the doubles title won in 1937 to Eddie Linz and Frank Coyle of New York. The Junior singles 4-wall laurels went to Walter Plekan of Buffalo, N. Y., and the doubles to Jack Schwartz and Paul Pearlman of Washington, D. C. Joe Garber of Brooklyn captured the 1-wall singles title and George Baskin and Harry Goldstein, also of Brooklyn, won the 1-wall doubles. The National Hard Ball singles crown was captured by William Lauro of New York.

Hockey. A record upset closed the 1938 hockey season when the Chicago Black Hawks, under the first year's management of Bill Stewart, former referee, fought through the National Hockey League schedule from third place, hurdled the post-season play-offs, and conquered the Toronto Maple Leafs to win the emblem of world supremacy, the coveted Stanley Cup, defeating Toronto 3-1. In the play-off series the Hawks defeated the Montreal Canadiens 2-1 and the New York Rangers by the same score.

In the International American League, Providence won the Eastern Division title and Cleveland annexed the Western Division crown. The International Intercollegiate championship was won by McGill University. The World's Amateur Championship, held at Prague, Feb. 20, 1938, was won by Canada, with England second, Czechoslovakia third, Germany fourth, Sweden fifth, and Switzerland sixth. The U.S. team was eliminated in the second round. The Allan Cup, Canadian Amateur trophy was won by The Trail (B.C.) Smoke Eaters; Wembley defeated Harringay for the English title, and Oxford defeated Cambridge in their annual meeting 1-0.

Field Hockey. The Women's National Field Hockey Tournament, held Thanksgiving week-end at Merion Cricket Club, Haverford, Pa., ended with the Southeastern team (Philadelphia) winning the laurels. The team selected to represent the

Brown Brothers

CAPT. G. E. T. FYSTON IN HIS "THUNDERBOLT"

Driving this racing car at 357.5 m.p.h., he broke the automobile speed record at Bonneville Salt Flats, Utah, Sept. 16, 1938.

Brown Brothers

THE NEW YORK YANKEES WORLD CHAMPIONSHIP BASEBALL TEAM

This team, under the management of Joe McCarthy, captured the World Series, for the third year in succession; it was the first team to achieve this feat.

SPORTS

United States in England in 1939 comprises the following: Miss Virginia Meryweather, C.F.; Mrs. Catherine Kendig Clegg, R.I.; Miss Anne Parry, R.W.; Miss Barbara Strebeigh, L.H.; Miss Elizabeth Taussig, C.H.; Miss Anne Page, L.F.B.; Miss Anne Townsend, R.F.B., and Miss Francis Elliott, Goal. Miss Page is Captain of the Team. A feature of 1938 was the visit paid to Australia in which 11 matches were played, the American girls won 6, tied 3, and lost 2.

Lacrosse. Navy's midshipmen scaled to top ranking in intercollegiate lacrosse in 1938, defeating Princeton 8-3, Maryland 8-7, and downing their Army rivals 10-3, biggest margin in the history of the series between the two service teams. Hobart was unbeaten and untied in its series, while Baltimore A.C. was topped twice by Mount Washington, which was in turn upset by St. John's of Annapolis, leaving the open championship unsettled. The All-American Ten, selected by the United States Intercollegiate Lacrosse Association, comprised three Navy stars, two each from Army and Maryland, and one each from Princeton, Rutgers, and St. John's of Annapolis.

Motorboating. Foreign invasion dominated the American classics in inboard motorboat honors during 1938. Count Theo Rossi, wealthy Italian nobleman, crashed through all competition to win the American Power Boat Association Challenge Gold Cup, driving his *Alagi* at Detroit, on September 5th, over the 3-mile course at 72.707 m.p.h. and over the 90-mile course at 60.340 m.p.h. At Washington, D. C., the Count won the President's Cup with a speed of 70.866 over the 2½-mile course and 69.675 for the 15 miles on September 25th. Two days later he made a mile record for 12-liter Gold Cup boats of 91.408 m.p.h. In his class, Count Rossi smashed all world records. The *Alagi* is a 20-ft. hydroplane of 400 h.p. The Albany to New York City outboard handicap (135 miles) was won by Ted Roberts, N. Y. City, Class B. motor, at an average speed of 33.02 m.p.h. The 1938 Outboard National high-point champions were, amateur, Wullschleger, Larchmont, N. Y., 15,637 pts., and Fred Jacoby, Jr., No. Bergen, N. J., professional, 25,897 pts. Wullschleger also won the individual Intercollegiate outboard championship and Princeton won the Intercollegiate outboard team championship.

A total of 41 world records were registered in all classes during 1938 in which a total of 2073 boats competed in 380 events. Some of the outstanding performances should be referred to. Jack Rutherford in *Juno*, unsupercharged craft, which split four races with Rossi's *Alagi* in Italy early in the season prior to the latter's coming here, was the fastest of the year in a mile trial in March at Miami Beach, doing 89.776 m.p.h. Jack Cooper's 225 *Tops II* did 75.393 m.p.h., in a mile straightway at Washington and 63.739 for 5 miles in Red Bank competition. Clinton Ferguson who won the interscholastic championship for the second time, drove an international class X of 1-liter displacement 5 miles at 61.393 m.p.h., the first time an outboard motor has made a mile-a-minute in competition over an oval course. Gar Wood, Jr., won two national amateur titles on the Tennessee River and Harry Birdsall, Jr., of Ardsley, coaxed 62.776 m.p.h. from his Class F outboard. In other waters, S. Mortimer Auerbach brought the Duke of York Cup back from England in a 3-race series for 4-liter boats in which his *Emancipator* was victorious and Sir Malcolm Campbell on Lake Halwil lowered his 1937 World's record for unlimited hy-

droplanes when he drove his *Bluebird* 130.930 m.p.h. on September 19th. And now there's talk of resuming the Harmsworth Trophy event.

Olympic Games. As a result of Japan's decision to relinquish voluntarily the award of the 1940 Olympics to Tokyo, an action unprecedented in the history of this world sports classic, the games will be transferred to Helsingfors, Finland. The opening date has been set for July 20 and will close on August 4th. The change in the date from September will benefit the American teams by not interfering with their college semesters. The winter games were awarded to St. Moritz, Switzerland. The change in locale was received with virtually unanimous approval throughout the sports world and the American Committee has revised its budget, organized its sub-committees, and is proceeding with plans for the participation of United States teams.

Polo. Old Westbury repeated its 1937 victory over the Greentree Polo team to retain the United States Polo Association championship 11-7. The victorious team, one of the greatest in recent years, comprised Michael Phipps No. 1 (9 goals); Cecil Smith No. 2 (10 goals); Stewart Inglehart No. 3 (10 goals); C. V. "Sonny" Whitney, back (5 goals). Greentree played the famous Argentine, Roberto Cavanagh at No. 2; Pete Bostwick No. 1; Tommy Hitchcock No. 3 and J. H. (Jock) Whitney at back. In reward for his brilliant season's record at No. 1, Phipps was raised to 10 goals by the National Association. In the Monty Waterbury Memorial Cup the Aknusti team composed of Elbridge and Robert L. Gerry, Jr., Capt. Pat Roark of Ireland, and Raymond Guest sprang two upsets by defeating Greentree in the semi-finals and Old Waterbury in the finals to win the trophy. Smith, injured in the final of the National event, was substituted by Ivor Balding on the Old Westbury team. The National Junior championship was won by Bostwick Field team which defeated Aknusti 8-5, in the finals.

Harvard defeated Yale 7-1 to annex the Intercollegiate laurels. The Indoor championships resulted with the Optimists winning Senior championship; 124th F. A., Juniors; Yale, Intercollegiates; Lawrenceville Academy, Interscholastics. The Field Artillery School of Fort Sill, Okla., won the National Intercircuit title.

Charles Wrightsman took his Texas Rangers to England and won the championship cup corresponding to the American open. Wrightsman, Aldan Roark, Cecil Smith, and Eric Tyrrell-Martin comprised the quartette which played at Hurlingham.

A challenge from Great Britain for a renewal in 1939 of the international series for the Westchester Cup resulted in the U.S. Polo Association appointing the following defense Committee: R. E. Strawbridge, Jr., Devereux Milburn, Thos. Hitchcock, Jr., C. V. and J. H. Whitney. With the raising of Michael Phipps to the highest goal ranking, the United States can now assemble a 40-goal side, higher than that of any other competitive country. The breed of mounts, too, has steadily improved, demonstrated the past season by both Old Waterbury and Greentree.

Rifle Shooting. The National Rifle and Pistol championships sponsored by the National Rifle Association of America, drew a record field of competitors to Camp Perry, Ohio, last September, totaling over 5000 expert marksman and tyros from every state in the Union, its various territories, and from all walks of life. The National All-Around Shooting champion (DuPont Tro-

phy), was Gunner's Mate Melvin O. Wilson, U.S.C.G., 1054 x 1150. National .22 Cal. Grand Aggregate (Critchfield Trophy), Wm. B. Woodring, Alton, Ill., 1593 x 1600. National 50-Meter .22 Cal. (Austin Trophy), Erwen Menzen, Atlanta, Ga., 400 x 400. National .22 Cal. Team (Caswell Trophy), New Jersey First Team, 2391 x 2400. National Grand Aggregate .30 Cal. (Wright Memorial Trophy), Sgt. C. N. Harris, U.S.M.C., 633 x 655. National Individual .30 Cal. Rifle, 200, 300, 600, and 1000 yds., Corp. Malcolm J. Holland, U.S.M.C., 281 x 300. National .30 Cal. team, U.S. Infantry, 2792 x 3000. President's Match, 10 shots, 200, 600, 1000 yds., Sgt. E. V. Seeser, U.S.M.C., 146. Wimbledon Cup, 1000 yds., Sgt. V. J. Kravitz, U.S.M.C., 100-19V's, perfect score equaling 1936 world record. Leech Cup Match, 7 shots, 800, 900, 1000 yds. (1738 entries), Corp. Wadie Giacobe, U.S. Infantry, 105. Team Match, Herrick Trophy, 1000 yds., U.S.M.C., 797 x 800, new world record. International .22 Cal. Team Match, Dewar Trophy, United States won with World record score of 7953 vs. England, 7900.

Pistol. In the pistol competition the U.S. Infantry won the National Pistol Team championship with a score of 1335, just 27 points ahead of the Los Angeles Police team which won the N.R.A. Revolver team trophy with a score of 1069. C. E. Ward of Los Angeles won the National Individual Pistol crown with a world record score of 285-300 and Harry Reeves of Michigan won the N.R.A., .22 Cal. pistol championship with 292 x 300.

Rowing. Two scintillating performances marked the 1938 rowing events, one at home, the other on England's historic Henley-on-the-Thames. On June 27 a great Navy eight broke the 6-year domination of the Pacific coast and tore over the Poughkeepsie 4-mile course in record-breaking time through a tempest of wind, rain, and tossing waters, finishing a doughty winner in 18.19. A close second, the splendid California crew finished in 18.20½, while Washington, Columbia, Wisconsin, Cornell, and Syracuse trailed in that order. California won the Freshman eights in 9.30½ and Washington captured the Junior event 13.49½.

A few days later, on the other side of the Atlantic, Joe Burk of the Penn A.C., Philadelphia, at the Royal British Henley, created a new record for that event when he won the famous Diamond Sculls (the third American to win this trophy), negotiating the 1¼ miles in 8m. 2s. Returning home, Burk successfully defended his National Singles title at Red Bank, N. J., and won the Canadian championship. The West Side R.C., Buffalo, again won the Senior 8-oared National championship, in one of the most successful of the N.A.A.O., regattas. Harvard was victor in the Yale-Harvard regattas.

Among several American crews competing in the Royal British Henley, the Kent School won the Thames Trophy and in the first international interscholastic crew race held in the United States, the Tabor Academy 8-oared crew defeated Radley College of Abingdon, England, at Marian, Mass., August 25. The 95-year-old Oxford-Cambridge classic was won by Oxford over a much favored Cambridge eight, the winning time over the 4¼-mile course being 20.30.

Skating. **Figure.** In a close contest decided at the Philadelphia Skating Rink, Ardmore, Pa., February 24-26, Miss Joan Tozzer, Boston, Mass., 16 years old, won the Women's Senior National Figure Skating title and 18-year-old Robin Lee of Chicago, annexed the Men's Senior championship

for the fourth successive time. The Senior Pair crown went to Miss Tozzer and Bernard Fox of Boston. Miss Nettie Prantell and Harold Hartshorne of New York were awarded the Dancing laurels.

At Stockholm, Sweden, Miss Megan Taylor of England won the Women's World championship and in Berlin, Felix Kaspar retained the Men's World title, while Fraulein Maxi Herber and Ernst Baier again captured World's Pair crown.

Speed. American speed skating, for the first time in the 48-year records of the Amateur Skating Union of the United States, was dominated by a single individual, 21-year-old Vic Ronchetti of Chicago, in 1938. In January at St. Paul, Minn., he won the North American Indoor crown. In February he won the North American Outdoor title at Saranac Lake and a week later at Oconomowoc, Wis., he garnered 130 points by taking the 440 yds., mile, and five-mile events to win the National championship. Miss Janet Milne with 110 points won the Women's National championship, having annexed the Middle Atlantic and North American Outdoor diadems.

In Switzerland, the veteran Ivar Ballangrud won the World's All-Around championship with 1909.07 points and set a new record of 17:17.4 for the 10,000-meter event. Miss Laila Schou Nilsen of Norway took the honors from Miss Verne Lesche of Finland for the Women's World championship.

Skiing. With weather conditions more favorable, skiing, stimulated by a record invasion of foreign talent, reached greater heights of competitive activity and an increasingly popular winter pastime. The National Open Jump championship held at Brattleboro, Vt., February 19-20, was won by B. Ruud, Norway, 216 ft. Class A, Sigurd Ulland, another Norwegian, entered from Lake Tahoe, California. The National Downhill at Stowe, Vt., March 5-6, amateur and open events won by U. Beutter, Germany, 2.35; Slalom by E. Meservey, Dartmouth, 0.55.8; combined, U. Beutter, 253 pts. In the first National championships for women, held at Stowe, Vt., April 9-10, Miss M. McKean, Beverly, Mass., won the downhill (2.56) and the combined, 296.6 pts.; Mrs. G. Lindley, Sun Valley, Ida., won the slalom honors, 2.02.6.

The National Intercollegiate Team championships were won by Dartmouth's crack team with 499.6 pts., followed by McGill U., 445.1 pts., and New Hampshire, 398.5 pts., in 2d and 3d places, respectively. Individual honors were captured by D. Dorrance, Dartmouth, Downhill, 0.43.2; Cross Country, D. Bradley, Dartmouth, 0.39.57; Slalom, T. Hunter, Dartmouth, 0.45.45; Jump, W. Chivers, Dartmouth, 97 ft.

In the International Open at Sun Valley, Ida., March 12-13, Downhill was won by U. Beutter, Germany, 0.4.15-4½ miles; Slalom, W. Prager, Switzerland; combined, D. Dorrance, Dartmouth.

At Helsingfors, Finland, February 27, A. Ruud, Norway, won the World's Jump championship, 226.4 pts.; Combined Jump and Downhill, O. Hoffbrakken, Norway, 432.6 pts. The World's championships held at Engelberg, Switzerland, resulted in J. Coutlet, France, winning the Downhill title, 0.3.17.8; Lisa Resch, Germany, Women's Downhill, 0.3.32.2; All-Round, E. Allais, France, 331 pts.; Slalom, R. Rominger, Switzerland, 0.1.32.2 and 0.1.31.2; Women's Slalom and All-Round championship for women, C. Cranz, Germany. Parsenn Ski Derby, Davos, Switzerland, 7-mile, 6700 ft. drop, won by M. Fopp, Switzerland, 14.49; Women's

3-mile, 3770 ft. drop, D. Friendrich, N. Sudder tied, 9.22. Canadian championships: Cross-Country, 11 miles won by B. Heightveitt, Ottawa, 1.12.00; Slalom, K. Ringer, Germany, 0.1.15, held at Camp Fortune, Que., February 26-27.

Soccer. With 117 clubs in the National Challenge Cup competition, under the sponsorship of the United States Football Association, the championship again went to the West. The East-West finals were won by the Chicago Sparta Club, which defeated St. Mary's Celtics in two home-and-home games 3-0 and 3-2, respectively. The Ponta Delgada Football Club of Fall River, Mass., won the National Amateur Cup, defeating the Heidelberg eleven at Heidelberg, Pa., 2-1. Honors in the National Junior series were annexed by the Light-house Blues of Philadelphia who were victors over the Beadling Juniors of Beadling, Pa., 1-0. The American Soccer League's championship was won by the Scots-Americans of Newark.

In International Soccer, Italy was awarded the championship by defeating Hungary in Paris in the finals. England won the British Isles championship and Preston North End defeated Huddersfield Town for the English Cup. East Fyfe created an upset in the Scottish Cup competition by beating Kilmarnock of the first division. The Scottish League was topped by the Glasgow Celtics and the Belfast Celtics won the honors in the Irish League. Arsenal led the first division and Aston Villa topped the second in the English League.

Swimming. Outstanding features of the 1938 swimming season centered in a successful visit to Central Europe by nine of our leading men swimmers, the achievements of Mrs. Katherine Rawls Thompson and Ralph Flanagan and the promising material evidenced in a group of young girl contestants in the senior events. Among the accomplishments of the touring group was their defeat of an all-Europe team in a dual meet in Berlin, 38-36. Accomplished in 50-meter pools, Takashi Hirose, Otto Jaretz, Paul Wolf, and Peter Fick lowered the world record for the 400-meter relay from 4:02 to 3:59.2; the first three with Ralph Flanagan did the 800-meter relay in 9:03.6, a sound average of 2:15.9 per 200 meters; a notable sprint of 100 meters in 0:59.3 by Jaretz, 16-year-old Chicago lad, and Flanagan's 400-meters free-style in 4:46.2, a rating long-course mark for 1938.

Mrs. Thompson collected 6 National A.A.U. titles—the 440, 880, and mile free-style, 100-yd. breast stroke and the 300-yd. and 300-meter medleys. Flanagan captured the 220, 440, 500, 880 yds., and the mile free-style. Participating in the National A.A.U., senior classes Misses Helene Rains and Gloria Callen, N.Y.W.S.A., Mary Mooreman Ryan and Ann Hardin of Louisville, Nancy Merki and Brenda Helser of Portland, Ore., and Patricia McWhorter of New Brunswick, N. J., all displayed qualities of promise for the 1940 Olympics. Thirteen-year-old Helene Rains amazed in her all-round skill winning the 500-yd. free-style title; forced Mrs. Thompson to cut the record from 4:06.3 to 4:03.2 in order to just about win the National 300-yd. medley and annexed several metropolitan senior titles including the 220-yd. breast stroke and the 220-yd. backstroke.

Of many National records made in 1938, both men's and women's, most replaced figures of old standing and not representative, therefore misleading for comparisons. Outstanding new marks among the men's, however, were Flanagan's 500-meters free-style in 5:56.3 and 100-meters breast stroke in 1:08.6 by Jack Kasley of the University

of Michigan, hung up in 25 pools, both World figures; American records of 2:53.6 for the 300-yd. medley race, short course, made by Albert Vande Weghe, Richard Hough, and Hendrick Van Oss of Princeton; 1:33 for 150-yds. backstroke, 20-yd. course, by Vande Weghe and 4:02 for the 300-meter medley, long course, by Adolph Kiefer of Chicago.

Impressive among the women's events was Mrs. Thompson's short-lived world mark of 23:47.4 for the mile, long course slashing the then listed world record of 24:07.2, but failing to approach the since listed mark made by Miss Ragnhild Hveger of Denmark, 23:11.5; the short course standards of 2:32.4 for 220-yds free-style by Miss Halina Tomaska of Detroit and 1:23.2 for 100-meters breast stroke by Miss Jane Dillard of Austin, Tex.; a long course of 2:11.2 for the 150-meter medley by Miss Rains.

Ohio State University ascended to country-wide supremacy by winning the National A.A.U. all-round indoor and outdoor team championships for men. The women's indoor title went to Washington A.C. of Seattle and the outdoor to the Women's S.A. of New York. Steve Wozniak of Buffalo and Miss Gloria Callen won the laurels in the individual long distance classics while the Scranton Y.M.C.A. and the New York W.S.A. gained the team title. Al Patnik of Ohio State and Miss Marjorie Gestring of Los Angeles lifted the Fancy Diving crowns from springboard and Albert Root of Detroit and Miss Ruth Jump of Los Angeles took the high platform honors. New York A.C. again annexed the hardball and softball titles in water polo. In the National Intercollegiate championships, Michigan, thrice defeated, twice by Ohio State and in the Western Conference title carnival 62-54 accomplished the unprecedented feat of turning the tables on their victors and nosing out the Scarlet team 46-45 for the N.C.A.A. title. In addition to the National Intercollegiate records made by the Princeton trio and Vande Weghe in the 150-yd. backstroke, William Kendall of Harvard created a record in the 440-yd. free-style in 4:46.4.

Tennis. The world of tennis centered on one figure during 1938, a red-thatched young man who rose from 9th place in the National ranking in 1934 to No. 1 two years later. From then on his lethal racquet carried him to achievements never before accomplished in the history of international lawn tennis. When he entered the National Singles championship to defend successfully his title, his last appearance in National amateur tennis, J. Donald Budge had, within one year, the four major tennis crowns, United States, Australia, France, and All-England champion, had won his two singles in the Davis Cup Challenge Round which, with Bobby Riggs' singles victory, kept the greatest single sports trophy in the United States for another year and, was the acknowledged tennis champion of the World. With his doubles partner, Gene Mako, he won the doubles title in both Wimbledon and the United States and with Miss Alice Marble, won both mixed doubles crowns also. Having no other worlds to conquer he joined the professional ranks with the highest guarantee ever offered a professional player.

For the first time in his career, Mako reached the National Singles final to face his doubles partner and while Budge permitted him to win a set, the ultimate end was a foregone conclusion. Bobby Riggs, who had won 14 major tournaments during the season, including the National Clay

Court, and had made a creditable showing in his first appearance in defense of the Davis Cup was expected to be the runner-up to Budge, but due to an unexplicable laxity in his playing was eliminated before he reached the semi-finals. With Budge out of the running, the problem of a strong enough Davis Cup team to match the formidable Australian threat is a serious one. Riggs will undoubtedly be the key man around whom selections must be made from Bryan Grant, Sidney Wood, Frank Shields, Joe Hunt, Elwood Cooke, Jack Kramer, possibly W. R. Sabin, and Mako a strong contender for the doubles team.

The Australians are virtually certain to present the most formidable Davis Cup contenders. Jack Bromwich is a power to be reckoned with and will probably be stronger in 1939. If Quist can overcome his tendency to foot-fault, Schwartz coming up, and Crawford by no means out of the reckoning their chances for victory would be a cause for worry. The British Isles are hardly in the reckoning, and France is unable yet to replace her "four horsemen" of a decade ago. Von Cramm, released from his imprisonment last summer, banned from German participation, will be ineligible to play for any other country for two years, the rules calling for that period of residence before National representation can be realized in any country. Unless a "dark horse" develops Australia looks the favorite.

The first 10 in the 1938 United States National ranking in Men's singles and doubles and Women's singles are as follows: Men's Singles, 1—J. Donald Budge, Oakland, Calif. 2—Robert L. Riggs, Chicago. 3—C. Gene Mako, Los Angeles. 4—Sidney B. Wood, Jr., New York City. 5—Joseph R. Hunt, Los Angeles. 6—Bryan M. Grant, Jr., Atlanta, Ga. 7—Elwood T. Cooke, Portland, Ore. 8—F. A. Parker, Beverly Hills, Calif. 9—Gilbert A. Hunt, Jr., Washington. 10—Francis L. Kovacs, Oakland, Calif. Men's Doubles: 1—J. D. Budge and C. Gene Mako. 2—Wilmer L. Allison and J. Van Ryn. 3—J. R. Hunt and S. B. Wood, Jr. 4—R. L. Harman and F. L. Kovacs. 5—R. Bobbitt and F. D. Guernsey, Jr. 6—E. T. Cook and W. R. Sabin. 7—Mort Ballagh and Verne Hughes. 8—G. Mulloy and George Toley. 9—G. A. Hunt, Jr., and E. M. Sutter. 10—Chester and William Murphy.

Women: 1—Miss Alice Marble, Los Angeles. 2—Mrs. Sarah Palfrey Fabyan, Cambridge, Mass. 3—Miss Dorothy May Bundy, Santa Monica, Calif. 4—Miss Barbara Winslow, Hollywood, Calif. 5—Miss Gracy W. Wheeler, Santa Monica, Calif. 6—Miss Dorothy E. Workman, Los Angeles. 7—Miss M. Osborne, San Francisco. 8—Miss H. Pedersen, Stamford, Conn. 9—Miss Virginia Wolfenden, San Francisco. 10—Miss Katharine Winthrop, Boston.

F. D. Guernsey of Rice Institute won the National Intercollegiate title with J. R. Hunt and L. Wetherell, S. California, taking the doubles crown. The National Indoor Singles went to Donald McNeil, the doubles captured by F. J. Bowden and J. Pitman.

Mrs. Helen Wills Moody staged a come-back at Wimbledon, winning the singles diadem from a hopelessly crippled Helen Jacobs, suffering from an injured ankle, but refusing to default. With Miss Marble and Mrs. S. P. Fabyan winning the doubles, the All-England classic closed with an All-American victory.

In the Wightman Cup competition, the United States Team defeated the British aggregation 5

matches to 2, the Americans losing 1 singles and 1 doubles match.

The season was marked by the death of one of the greatest and most colorful women players ever to have graced a court, Mlle. Susanne Lenglen of France who died in Paris, July 4, 1938, in her 39th year.

Track and Field. The outstanding event in track and field performances during 1938 was undoubtedly the brilliant feat of the redoubtable Kansan, Glenn Cunningham, when, on the chilly night of March 3, on Dartmouth's 6½-lap spring-board track in Hanover, N. H., he ran the fastest mile ever traversed by a human being. Unfortunately, the A.A.U. rules do not recognize indoor records, but this fact does not dim the glory or correctness of Cunningham's performance. Paced by six undergraduates handicapped from 5 to 600 yards, and shortly after the International A.A.F. had formally replaced Glenn's world mile record of 4:06.8 with Sidney Wooderson's 4:06.4, with this new incentive, the mighty runner from the Cornbelt bounded off in quest of a shattering figure, planning to do the mile in 4:5. He ran the first quarter in 58.5 seconds. When he crossed the tape he was clocked at 4:04.4.

A total of 15 world track and field records were smashed in indoor and outdoor games during 1938. In outdoor events eight new records were registered as follows: 500-meters, 1:01.5, Mallot, U.S., old record 1:02; 800-meters, Wooderson, England, 1:48.4, old record 1:49.6; 880-yds., 1:49.2, Wooderson, Eng., old record, 1:49.6; 10,000-meters, 30:02, Maki, Finland, old record, 30:06.2; Javelin Throw, 258.2½, Nikkanen, Finland, old record, 253.4½; Hammer Throw, 193.7½, Blask, Germany, old record, 189.6½; ¾-mile run, 3:00.3, W. Rideout, U.S., old record, 3:00.4; 440-yd. Relay, 0:40.5, Un. So. California, old record, 0:40.8. *Indoor:* 60-yds., 0:06.1, Ben Johnson and Perrin Walker, old record, 0:06.2; 65-Meter Hurdles, 0:08.5, Allan Tolmich, old record, 0:08.6; 600-Yds., 1:11.1, James Herbert, old record, 1:11.3; 600-meters, 1:20.3, Herbert, old record, 1:21; 1500-meters, 3:48.4, Glenn Cunningham, old record, 3:49.9; mile run, 4:04.4, Cunningham, old record, 4:08.4; 1½-mile medley, 7:27.5, No. Texas State, old record, 7:29.6.

Cunningham won 13 races in succession before he was defeated in the Casey 600, a secondary effort after his 4:07.4 mile, in which he placed a close third as Herbert, N.Y.U. sophomore created his record of 1:11.1. The Kansan's record in the 1500-meters was better than Bronson's outdoor figures. Outdoors, Cunningham continued to dominate, winning the Princeton mile in 4:07.2, fastest cinder mile of the season in which San Romani stumbled and almost fell as Cunningham drew level 50 yds. from the tape. He also retained his National A.A.U. 1500-meter crown, beating off Fenske's great challenge. Other brilliant performers of 1938 included Columbia's Ben Johnson who won 24 straight heats, semi-finals at 40, 50, and 60 yds., and 60 meters before he finally dropped a decision at the season's close, compiling a matchless record, placing him on the all-time list. He broke or equaled the 60-yd. record 11 times, returning 6 flat and 6:1. Allan Tolmich, Detroit hurdler, also broke or tied records at assorted distances 11 times in heats, semi-finals, and finals, beating Spec Towns, Olympic champion in 3 of 5 meetings before turning professional to train the Georgia team. Mallott, winner of the N.C.A.A. and A.A.U. ¼-mile titles; Woodruff of Pitt, un-

beaten again in the 440 and 880 (did not defend his A.A.U. title) and the two products of 1938, Wolcott of Rice, blond hurdler unknown at the start of the season went through the "highs" and "lows" unbeaten, and Nick Vulmanic, Penn State sophomore, undefeated in the javelin throw.

With Woodruff defaulting his National 800-meter A.A.U. crown, Howie Borck, Manhattan, consistent "runner-up" of previous campaigns, picked it up with a brilliant 1:51.5. Borck had record breaking firsts in the I.C. 4-A indoor 600 and outdoor mile. In the latter, his 4:13.9 in his first championship mile erased John Paul Jones' 25-year-old meet record and one time world record of 4:14%. Springing into stardom or retaining their pristine brilliance, other 1938 performers included Louis Zamperi, U.S.C. sophomore in his N.C.A.A. triumph over Fenske in 4:08.3 for the mile; Mozel Ellerbee, Tuskegee 100-yd. sprinter, N.C.A.A. winner; Clyde Jeffrey, Riverside, Jr., in the 100 and 220; Cornelius Warmerdam, California vaulter, and Mel Walker ex-Ohio State high jumper. Only six 1937 outdoor National titlists repeated—Mallott, Cunningham, Pentti, Jack Patterson (Rice, 400-meter hurdles) Irving Folswarthshny, R. I. State (hammer) and Lou Lepis, N.Y.A.C. (56-lb. weight).

New York A.C. won the A.A.U. National Indoor and Outdoor team championships with 23 pts., Michigan won the Western Conference (Big Ten) championships with 61½ pts. The I.C.A.A.A. Indoor Championships went to Columbia at 27 pts., and Princeton won the Ivy League with 59½ pts.

At the Knights of Columbus Meet in Brooklyn in January, Archie San Romani nipped Don Lash at the tape to set a new American record of 8:27.4 for 3000-meters. Lash's time was 8:27.5.

The touring American athletes in Europe made an excellent showing, winning most of the track events, in which they entered. While few records were broken, they demonstrated the superiority which has characterized U.S. competition in virtually all international events. In London, the picked 13-man team dominated the international track and field meet held in August in White City Stadium, against the combined opposition from 16 other nations. Four British records were broken, one by an American, and the United States, competing in 12 events, winning or placing in all of them and winning 1 of the 14 points. In Berlin, Germany, they competed in a 40-man, 20-event, two-day dual meet, the first of its kind in which our athletes ever competed. The meet was witnessed by 160,000 in Berlin's Olympic Stadium. The U.S. Team, picked on the basis of results in the National A.A.U. championships at Buffalo, had only one 1936 Olympian, Eino Pentti, the 10,000-meter champion, of the Millrose A.A. Germany, Europe's champion, assembled its strongest force, consisting mainly of Olympic veterans. The United States, however, won 122 to 92 points, 15 to 6 in first places, yielding only the 800-meter event. Frank Ryan's (Columbia) defeat of Woelke, Germany's shot-put Olympic champion; Pentti, Gregory Rice, Notre Dame, and Forrest Efaw, Oklahoma, winning the 10,000, 5000 meters, and steeplechase and Ray Mallott's defeat of Rudolph Harbig, considered by Germany invincible, in a 46.9 second "400," contributed the best performances. Another American international success was achieved by the Princeton-Cornell Team defeating Oxford-Cambridge in London, 9 points to 3. Oxford defeated Cambridge in their annual meet,

60-57. At Warsaw, Poland, Miss Stella Walsh, of Poland, made a broad jump of 19 ft. 9⁵/₁₆ in., eclipsing the record made by Miss Kinuye Hitomi of Japan of 19 ft. 7⁷/₁₆ in. in 1928. In the National A.A.U. Women's championships, Tuskegee won the Team honors.

In the Annual Senior Metropolitan A.A.U. championships held in Jersey City in March, Joe McCluskey, former Fordham star, ran the fastest 2-mile steeplechase ever negotiated indoors, in 9:43.3, smashing his own indoor mark by more than 3 seconds.

Trapshooting. Over 1000 contestants were on the lists for the Grand American Trapshooting tournament at Vandalia, Ohio. Joseph Heistand, Ohio farmer, made an all-time record run of 966 targets, to carry off the major honors. Fred S. Tomlin, Glassboro, N. J., professional, had made a record early in the season of 702 which eclipsed the mark of 621 that dated back to 1921. At the Grand American he had bettered his score with a 714. Heistand won the championship for the third time in four years but lost to Phil Miller of French Lick, in the Class AA Handicap, on a shoot-off. Other major trophies were won by Mrs. Lela Hall, who won the women's clay-target title for the fourth straight year; Otello W. West, who won the Grand American Handicap Shoot, and Mrs. George Peters who took the corresponding title in the women's division.

The National Amateur championships were decided over the Travers Island traps of the New York A.C. The winner was Roger Fawcett, a Winged-Foot gunner, with a score of 199 x 200. Walter S. Beaver of Conshohocken won the National Amateur Doubles.

Skeet. Three World records were hung up in the National Skeet Shoot, held at South Hills Country Club in Tulsa, Oklahoma. H. B. Joy, Jr., of Michigan, completed his all-gauge program with a perfect score of 250, to break the first one. The Gilmore Red Lions of California, did their share by scoring 1238 out of 1250 to set the second World mark, the previous score being 1217. Finally, Grant Isling of California established a new long-run record of 506 straight targets. The tournament was attended by the largest number of skeet enthusiasts in the history of the sport.

Turf. This was an exceptionally brilliant year throughout racing, with thoroughbreds of unsurpassed class in competition for the events of tradition and atmosphere. Interest, however, centered on three great horses and one outstanding event. El Chico, little son of John P. Grier, unbeaten 2-year entry in 7 races with a winning score of \$84,100 in his first year, was something of a sensation. Ineligible for the rich futurities at Belmont or Pimlico, he went into retirement after the Junior Champion at Aqueduct in which he defeated Volitant, Johnstown and Porter's Mito, the latter winner of the Belmont Futurity.

Stagehand, unable to enter the Derby, won by Lawrin, the Preakness, captured by Dauber, nor the Belmont in which Pasteurized was victor, because he was out of condition with a cough, nevertheless proved to be the champion 3-year-old of the season. Virtually unheard of as a 2-year-old, he won the Santa Anita Derby and then nosed out Seabiscuit to win the \$100,000 Handicap. Seabiscuit, with 11 starts, 6 won and 5 placed and War Admiral with 11 starts, 9 won and 1 placed, developed into rivals for championship honors and after several postponements, this greatest race of the year was finally staged at Pimlico on Novem-

ber 1. Seabiscuit, running the $1\frac{1}{16}$ mile in 1:56 $\frac{3}{4}$, clipping $\frac{1}{8}$ second from the track record, defeated War Admiral by four lengths.

The Grand National Steeplechase was won by the first American horse to conquer this difficult English classic, Battleship, a son of Man-o'-War and owned by Mrs. Marion DuPont Scott.

The English Derby victor was Bois Roussel P., owned by R. L. Beatty and the Grand Prix De Paris went to Nearco, owned by Tesio Frederico.

Harness Racing. 1938 was made unique in trotting and pacing history since, for the first time in almost a half century, the record in both classes was broken. Greyhound, already the fastest trotter ever seen, lowered his 1937 record of 1.56 to 1.55 $\frac{1}{4}$. Billy Direct, 4-year-old free-legged pacer, holding the 3-year-old record of 1.58, lowered the 4-year-old mark to 1.55, lowering all past records for any age. Dean Hanover, the all-time champion of 3-year-olds won the 4-year-old championship for 1938, missing Greyhound's record mark for this age by a little more than a second. McLin, fastest 3-year-old trotter of the season, won the \$37,000 Hambletonian Stake and the Kentucky Futurity.

Yachting. While the 1938 season was one of great activity in the yachting firmament, racing interest was confined to the three major events of the year. First in order was the Bermuda race in which a newcomer proved victorious. The yawl *Baruna*, owned by Henry C. Taylor, who attained the sports' highest honors in his first sea-going venture, won four of the major trophies in this race, including the Bermuda Trophy for the best corrected time in the fleet; the trophy for the best time of any boat in Class A; the trophy for the first yacht of the fleet to finish, and the prize for the winning sloop or yawl. Richard J. Reynolds' sloop *Blitzen*, another new ocean racer took Class B honors and was second to *Baruna* on corrected time of the whole fleet. Other prize winners were the sloop, *Highland Light* (Dudley Wolfe); schooner, *Santana* (W. L. Stewart); yawl, *Avanti* (Walter N. Rothschild), and Nat Rubinkam's sloop, *Rubaiyat*.

In the Fishermen's Series, probably the last to be held, the old veteran *Bluenose*, Capt. Angus Walters' Canadian champion, with 1000 square feet more sail, proved one too many for Capt. Ben Pine's *Gertrude L. Thebaud*, of Gloucester. The latter put up a fine battle especially in heavy weather, but *Bluenose* was too much for her in the lighter going and successfully defended the championship of the banks which she has held for 17 years.

The Six-Meter International event off Oyster Bay, most outstanding yachting event in nearby waters, ended in two victories for American yachts and one for Scotland. In the first series for the Scandinavian Gold Cup, the American Sloop *Goose*, ably handled by George Nichols, defeated a whole fleet of British and Scandinavian challengers decisively. The Americans again won comfortably in the next series of team races, four British and four American yachts. The American entries were *Goose*, Paul V. Shields' *Rebel*, Henry S. Morgan's *Djinn*, and Briggs S. Cunningham's *Lulu*. The Americans, however, suffered a rude shock in the final series when *Goose*, best of the American boats, was matched against J. H. Thom's *Circe* for the Seawanhaka Cup. Aided by two days of strong winds and heavy seas and some of the finest match-racing work by Mr. Thom and his crew, the Scottish sloop won three straight races to capture the Cup.

The world's championship series of the Star Class was held on the west coast and was won by the German entry, *Pimm*, sailed by Walther von Hutschler and J. Weiss. Harry G. Nye's *Gale* was runner-up.

In the larger group, sailing around the waters of New England and New York, Walter H. Wheeler's Class Q sloop, *Cotton Blossom*, won the Astor Cup.

STANFORD UNIVERSITY. A privately endowed institution of higher education, nonsectarian and coeducational, founded in Santa Clara County, California (near Palo Alto), in 1885 and opened in 1891, in memory of Leland Stanford, Jr. The total enrollment in 1937-38 was 5103. The 1938 summer quarter had an enrollment of 1063. In the autumn quarter of 1938 the enrollment was 4163 and the faculty numbered 712, including 146 teaching assistants. The endowment funds amounted to \$30,207,500, and the budget income for the year was \$3,276,700, plus gifts of \$329,451. In September, 1938, the School of Education Building, the gift of Dean and Mrs. Ellwood P. Cubberley, was completed. The library contained 710,000 volumes. President, Ray Lyman Wilbur, M.D., LL.D., Sc.D.

STARS. See ASTRONOMY.

STATISTICAL ASSOCIATION, AMERICAN. A scientific organization founded in Boston in 1839 to foster an interest in statistics and to promote scientific methods of collecting and interpreting statistical data. The official publications are the *Journal* of the American Statistical Association and the American Statistical Association *Bulletin*. The Association has 16 chapters in important American cities. It has a number of committees in various statistical fields, some of which conduct special conferences at various times during the year.

The Association's one-hundredth annual meeting was held in Detroit, Mich., Dec. 27 to 30, 1938. Several joint meetings were held with the American Economic Association, the American Sociological Society, the American Marketing Association, the American Farm Economic Association, the American Association for Labor Legislation, the Econometric Society, and the Institute of Mathematical Statistics, which were meeting in Detroit at the same time. A special meeting of the Association was held in Ottawa, Canada, June 28 and 29, 1938, in connection with the summer meeting of the American Association for the Advancement of Science.

The following officers were elected for 1939: President, Raymond Pearl, The Johns Hopkins University, Baltimore, Maryland; Vice-Presidents, O. C. Stine, Alfred J. Lotka, Ewan Clague, Joseph Berkson, J. Frederic Dewhurst, Robert W. Burgess, William J. Carson, Vergil D. Reed. Secretary-Treasurer, Frederick F. Stephan, 1626 K St., N.W., Washington, D. C.

STATISTICS. Consumer Incomes in the United States. One of the most significant statistical analyses released during the year was that called "Consumer Incomes in the United States," the work of the National Resources Board. This study presented for the first time a comprehensive picture of how the national income was distributed among the various consumer groups in the country. The survey was based on the study of consumer purchases conducted by the Bureau of Home Economics of the Department of Agriculture, and the Bureau of Labor Statistics of the Department of Labor, in co-operation with the WPA. Accord-

ing to this inquiry, during the year 1935-36, it was estimated that nearly \$47,680,000,000 was distributed among 29,400,000 families of two or more members, comprising in all 116,000,000 persons. In addition, approximately 10,058,000 single persons received \$11,580,000,000 and 2,000,000 persons, in institutions, hospitals, the CCC, and the country's military and naval forces, received \$724,300,000. The total income distributed to all consumers in question was nearly \$60,000,000,000. If the total family income of \$47,680,000,000 had been divided equally among the 29,400,000 families (including those on relief), each family would have received an annual income of \$1622. The actual distribution was obviously far different. The top tenth of the 29,400,000 families received a total income of \$17,164,000,000, or an average annual income of \$5838 per family. The same number of families in the lowest tenth received a combined income of \$906,000,000 or \$308 per family per year. A large number of the families in the lowest tenth received less than an average of \$308 per year, while many families in the top tenth received a much larger income than the average of \$5838 per year. Nearly 9,460,000, or 47.9 per cent of the 24,910,000 non-relief families, were families of wage earners. Out of every 1000 of these families 105 received an income of less than \$500, 282 from \$500 to \$1000, 289 from \$1000 to \$1500, 172 from \$1500 to \$2000, 80 from \$2000 to \$2500, and 72 an income of over \$2500. In other words, more than one-third of the non-relief wage-earning families received an income of less than \$1000 and more than two-thirds of the families received less than \$1500. About one out of every seven non-relief wage-earning families received an income of \$2000 or more.

STEAM BOILERS. See **BOILERS, STEAM.**

STEAM TURBINES. A most important step affecting the future design and application of steam turbines was the establishment, in the fall of 1938, of a set of preferred standards for capacities, initial steam pressures, steam temperatures, vacuums, back pressures, speed and voltage of turbine-generators of over 10,000 kilowatts output. These standards were drawn up by a subcommittee of the National Defense Power Committee consisting of representatives of the Federal Power Commission, the electric utilities, and the turbine manufacturers, the object being to expedite production and delivery of such electric generating equipment and, incidentally, reduce its cost. Nine sizes of condensing turbines, ranging from 10,000 to 100,000 kw, were provided and eight sizes of superposed units, ranging from 10,000 to 60,000 kw. For the smaller sizes of condensing turbines within this range, steam conditions of 650 lb. per square inch and 825 degrees F. were set up; for the intermediate sizes 850 lb. and 900 deg.; and for the larger sizes 1250 lb. and 900 deg. Machines up to 50,000 kw are to run at 3600 r.p.m. and those of greater capacity at 1800 r.p.m. For superposed turbines, ranging in capacity from 10,000 to 60,000 kw, steam conditions at the throttle of 1250 lb. per sq. in. and 925 deg. F. temperature were prescribed, as well as a rotative speed of 3600 r.p.m.

These preferred standards are expected to apply, for the present, principally to new plants in the central station field and among large industrials, although the committee contemplates extending the standards to turbines of smaller capacities which will then affect a greater number of industrial power applications.

At the present time the largest turbine-generator in the world is rated at 208,000 kw. This is of the

cross-compound type consisting of a high-pressure and two low-pressure elements. The largest tandem-compound unit, consisting of a high-pressure and a low-pressure cylinder mounted on the same shaft with a single generator, is rated at 160,000 kw. The largest single-casing machine, operating at 29 inches vacuum, is of 80,000 kw capacity. These all run at 1800 r.p.m. Of machines running at 3600 r.p.m. the largest is rated at 50,000 kw.

The capacity at a given speed is determined largely by the discharge area of the last stage and by the vacuum which determines the density of the steam at exit. For a given capacity the greater the rotative speed, the shorter the last stage buckets; hence a machine running at 3600 r.p.m. has a much smaller low-pressure cylinder diameter than one running at 1800. The present limit in the tenon speed of such buckets is about 820 m.p.h.

Developments in metallurgy have played an important part in the design and construction of modern turbines and permitted taking advantage not only of higher steam pressures, but also, more recently, the thermal economy of high steam temperatures. Before a metal can safely be used in a modern high-speed turbine its creep characteristics under the severe working conditions must be known, for at 900 deg. F. the steam is so hot that the metal within the turbine actually glows a dull red. The necessity for guarding against creep applies to casings, bolts, and other parts, as well as the blades which are subjected to the combined action of high temperature, centrifugal force, and steam impact. All such material is tested under conditions simulating operating conditions.

Many turbines are operating in central stations and in a few large industrial plants at 1250 to 1300 lb. per sq. in. and 900 to 925 deg. F. total steam temperature. Some of these are condensing units while others are superimposed units exhausting at around 200 lb. to low-pressure equipment. Most of the superimposed turbines operate at 3600 r.p.m. and their generators are hydrogen cooled. In other newer stations steam conditions of 800 to 900 lb. and 900 deg. F. will be found, while units in the older stations operate at lower pressures and temperatures. One turbine is now building for an extension to a central station in the Middle West which will take steam at 2300 lb. pressure.

Among industrial plants a greater variety of conditions are met owing to process steam requirements at different pressures, which influence the attainment of a favorable heat balance. Thus, one finds turbines of several types including condensing, back-pressure, extraction, and mixed-pressure types. The following tabulation taken from a recent paper by C. W. E. Clarke before the American Society of Mechanical Engineers lists industrial plant turbines installed in 1936 and 1937, according to types:

Throttle pressure, lb. per sq. in.	Total number of turbines	Types of Turbines				
		Con- dens- ing	Condens- ing ex- traction	Back pres- sure	Back pressure ex- traction	Mixed pres- sure
1200	5	0	1	3	0	0
700-900	15	0	5	7	3	0
500-700	13	0	4	7	2	0
400-500	58	3	26	16	11	2
200-300	27	2	9	11	5	0
Total	118	5	45	44	21	2

The trend among industrial plant installations is toward larger capacities and higher steam pressures, 400 to 500 lb. initial pressure being the most popular, 500 to 900 lb. common for the larger plants, and 1200 to 1400 lb. in a few outstanding

plants such as that of the Ford Motor Co., the Dow Chemical Co., and the Firestone Tire & Rubber Co.

STEEL. See IRON AND STEEL.

STEVENS INSTITUTE OF TECHNOLOGY. A college of engineering at Hoboken, N. J., founded in 1870. The enrollment for the autumn of 1938 was 559 undergraduate and 259 graduate students. In the summer school 119 were enrolled. There were 69 members on the teaching staff. The income for 1937-38 was \$326,168. There were over 29,000 volumes in the library. President, Harvey Nathaniel Davis, Ph.D., D.Eng.

STOCK EXCHANGE REGULATION. See FINANCIAL REVIEW.

STOTESBURY, EDWARD TOWNSEND. An American capitalist, died in Philadelphia, Pa., May 16, 1938, where he was born, Feb. 26, 1849. Educated in the public schools of his native city and at the Friends' Central School, he first worked for a wholesale grocery firm, and in 1866 entered the employ of Drexel & Co., bankers, as a clerk. In 1882 he was admitted to partnership and subsequently became chief resident partner of the Company in Philadelphia. His rise in the firm brought him membership in the firm of J. P. Morgan & Co., New York, and in 1913 upon the death of the elder Morgan, he became senior partner. For 50 years, few important enterprises were begun without his aid and financial guidance, and his activities, although centered in banking, touched steel, coal, railroads, electric power, and street railway systems. Among corporations with which he was associated were the Reading Co., the Beaver Coal Corporation, the Lehigh & Hudson River Ry. Co., Highland Coal Co., etc. Mr. Stotesbury gave valued assistance in financing the great International Chinese Loan in 1909.

Actively interested in the artistic and civic affairs of his native city, he was president of the Fairmount Park Commissioners; a member of the Art Jury; a director of the Pennsylvania Academy of Fine Arts, a trustee of the University of Pennsylvania and the Pennsylvania Museum of Art; and treasurer of the Opera Co. In 1932 he loaned his valuable art collection to the Pennsylvania Museum of Art. Also, Mr. Stotesbury was a director of the Benjamin Franklin Memorial; treasurer of the Philadelphia Council of Boy Scouts; and a trustee of the Grant Monument Association.

For a time interested in the rearing of thoroughbred horses, he was honorary president of the Riders and Drivers Association and honorary vice-president of the Bryn Mawr Horse Show, and at one time was president of the National Horse Show of America, Ltd. In 1908 he was American representative of the International Horse Show at the Olympic meet in London. Politically, Mr. Stotesbury was a Republican, and he was treasurer of the Republican National Committee during the Roosevelt campaign of 1904 and the Taft campaign in 1908.

In 1917 he gave \$100,000 to the War Work Council of the Young Women's Christian Association; \$75,000 for the rehabilitation of wounded French soldiers; and in 1931, \$250,000 to the United Fund for hospitals and charities in Philadelphia, and \$100,000 for the Philadelphia Relief Fund.

STRAITS SETTLEMENTS. A British crown colony comprising the four settlements of Singapore (with Christmas and Cocos-Keeling islands), Penang (with Province Wellesley), Malacca, and Labuan. Total area, 1356 square miles; population (Jan. 1, 1938, estimate), 1,310,969, com-

pared with 1,114,015 (1931 census). During 1937 there were registered 52,483 births, the rate (per 1000) being 42.13; the crude death rate (per 1000) was 22.15. Chief towns (with 1936 populations): Singapore, the capital, 490,155 inhabitants (1936); George Town (Penang), 149,408; Malacca, 38,042; and Victoria, 2022. In 1937 the 759 schools for primary and secondary education had 137,392 students enrolled. In addition there are various vocational and industrial schools, a college of medicine, and a college of arts and science.

Production and Trade. Rubber, rice, coconuts, pineapples, coffee, fish, tin, phosphate of lime (162,568 tons exported from Christmas Island during 1937), and tobacco, were the chief products. In 1936 the colony had 19,662 cattle, 18,833 buffaloes, 35,893 sheep and goats, and 200,389 swine. The fishing industry employed 12,084 men and 4576 boats of all kinds. Tin smelting is an important industry, the production (chiefly from imported ore) for 1937 amounting to 94,721 tons. The trade of Singapore and Penang consists mainly of the collection and distribution of commodities for the whole of Malaysia, especially the Netherlands Indies. Singapore is a natural distribution point for oil and shipments are made to Australia and Africa. In the direct foreign trade of the Straits Settlements for 1937 imports totaled S\$628,000,000; exports, S\$703,000,000 (Straits \$ averaged \$0.5797 for 1937).

Communications. Merchant shipping that entered and cleared the ports during 1937 aggregated 47,709,291 tons. There were 1169 miles of roads. The railways in the colony are owned by the government of the Federated Malay States. In 1937 there was a daily air service between Singapore and Penang, a biweekly air service to England and Australia, and a weekly air service to Hong Kong which connected with the Hong Kong to San Francisco air service across the Pacific. Singapore and Penang are ports of call on the thrice-weekly Amsterdam to Batavia (Netherlands Indies) air service. There is a connecting service between Penang and Medan (Sumatra) three times a week, and also a weekly service between Singapore and Batavia by way of Palembang (Sumatra). During the year the west wharf extension, 3316 ft. long with a minimum depth of 33 ft. alongside, was completed. This gives the port of Singapore a total of 2½ miles of continuous berths for ships.

Government. For the year 1937 revenue amounted to S\$37,348,383; expenditure, S\$42,038,482; public debt (3 per cent Straits Settlements local loan), S\$30,000,000. Budget: (1938) revenue, S\$37,782,900; expenditure, S\$39,604,900; (1939) revenue, S\$39,484,280; expenditure, S\$43,630,867. The government is under a governor who is aided by an executive council of 11 members (8 ex officio and 3 unofficial) and a legislative council of 26 members (13 ex officio and official, 11 nominated unofficial, and 2 unofficial members elected by the Singapore and Penang Chambers of Commerce). Governor and Commander-in-Chief, Sir Shenton Thomas.

History. The naval base at Singapore was virtually completed when Sir Shenton Thomas, the governor, opened the new graving dock on Feb. 14, 1938, in the presence of many distinguished people including the First Lord of the Admiralty of Great Britain, representatives of the Dominions, and the Malay rulers. A cruiser squadron of the U.S. Navy attended the opening. Early in 1938 serious anti-Japanese demonstrations by Chinese and Indians occurred during the celebrations of India's China

Day. Special police protection was offered to the Japanese in Singapore. During 1938 barracks and sites for batteries were being constructed in Penang. The government imposed a quota on Chinese women refugees, as from May, 1938, who had been entering Singapore at the rate of approximately 8000 a month. It was announced on Dec. 3, 1938, that the Straits Settlements government had authorized a grant of \$510,000,000 for Imperial defense; payments were to be spread over a period of five years.

STRAUSS, JOSEPH BAERMANN. An American engineer, died at Los Angeles, May 16, 1938. Born in Cincinnati, Ohio, Jan. 9, 1870, he was educated at the University of Cincinnati (C.E., 1892; Sc.D., 1930). Upon graduation he entered the employ of the New Jersey Steel & Iron Co., as a draftsman, but in 1894 he became an instructor in the college of engineering at the University of Cincinnati. After a year he left to enter the employ of the Lassig Bridge & Iron Co., Chicago, as a detailer, inspector, estimator, and designer. Thereafter, he was a designer and squad boss in the Sanitary District of Chicago (1897-99); principal assistant engineer in charge of the office of Ralph Modjeski (1899-1902); in private practice as a consulting

STRECKER CASE. See IMMIGRATION.

STRIKES AND LOCKOUTS. Strikes in the United States. Largely as the result of the business recession which set in in the late summer of 1937 and which continued into 1938, although in a measure as well due to the success of the initial C.I.O. drive for the organization of the great mass-production industries of steel and automobiles, industrial disputes during 1938 definitely tapered off. Whereas in January, 1937, total man-days lost as a result of strikes and lockouts came to 2,720,281, in January, 1938, the total was only 470,138. And, whereas in June, 1937, the total of man-days lost was 4,998,408, in June, 1938, the total was 824,627. During 1938 the country saw no such serious labor disputes as had occurred in 1937, particularly among the maritime workers and the steel workers. Such industrial conflicts as took place during the year were, for the most part, on a local basis and included strikes among truckers, department-store workers, and stoppage at individual industrial plants. As was the case in 1937, stoppages were largely due to refusal on the part of employers to accord trade-union recognition to workers. The following table presents the trend of strikes month by month during 1938.

STRIKES IN 1938

1938 Month	Number of strikes				Workers involved in strikes			
	Continued from preced- ing month	Begin- ning in month	In progress during in month	Ended in month	In effect at end of month	Beginning in month	In progress during month	Man-days idle during month
Jan.	120	151	271	155	116	34,865	55,386	470,138
Feb.	116	176	292	167	125	52,314	76,426	504,001
Mar.	125	245	370	214	156	53,484	102,145	748,355
Apr.	156	243	399	235	164	78,428	108,927	810,261
May	164	261	425	264	161	80,950	121,964	1,144,011
June	161	193	354	215	139	51,085	92,409	824,627
July	139	177	316	179	137	48,096	81,194	737,481
Aug.	137	212	349	220	129	45,243	76,801	804,744
Sept.	129	176	305	190	115	90,547	125,551	948,016
Oct.	115	196	311	183	128	50,167	108,475	821,969
Nov.	128	175	303	183	120	40,000	70,000	600,000
Dec.	120	155	275	165	110	35,000	60,000	550,000

engineer (1902-04), and after 1904 president and chief engineer of the Strauss Engineering Corporation, consulting engineers.

One of the foremost of his profession, Strauss built nearly 500 bridges in the United States, Canada, and abroad. He held some 20 patents on the trunnion-bascule bridge and several on "lift" bridges. The first of the former type was built for the Wheeling & Lake Erie R.R. at Cleveland in 1905; the latest and largest was one spanning the mouth of the Chicago River in the Outer Drive Viaduct opened in 1937. Perhaps the most noteworthy work with which he was connected was the Golden Gate Bridge at San Francisco, of which he was appointed chief engineer in 1929. However, he had long been an advocate of this bridge and his original design was first presented in 1919. It may well be called his monument, for without his promotional work it might never have been built. Other outstanding works with which he was associated as designer and engineer were: The Montreal-South Shore Bridge for the Montreal Harbour Commission; the Columbia River Bridge at Longview, Wash.; the Arlington Memorial Bridge at Washington, and the George Washington Bridge, New York.

A member of the leading engineering societies, he was a founder of the fraternity *Sigma Alpha Epsilon*, of the Citizen-Training Corps, and of the American Citizenship Foundation, which he served as president.

Curbs on Labor in the West. In California, Oregon, and Washington, voters were confronted by initiative measures whose purpose was the placing of definite limitations upon the right to strike. Undoubtedly arising out of the existence of rivalry between labor factions on the West coast with resulting turbulent industrial relations, but as much due to close and careful organization on the part of employer groups, measures were proposed for the imposition of definite limitations upon trade unions in the conduct of industrial disputes. In *California*, where the initiative measure was notably comprehensive, definitions were laid down for lawful and unlawful picketing, boycotting, and the display of banners. The initiative measure in this State prohibited seizure of private property, coercion, intimidation, obstruction, or interference with the use of highways and wharfs, use of abusive or misleading statements or threats of violence. While the proposed law recognized the right of workers to bargain collectively, it set up a system of civil damages and criminal punishments as well as injunctions.

In *Washington* the initiative measure provided for a secret ballot of employees to determine whether or not they wished to go on strike. Also, strikes could not be called until the lapse of 30 days after the refusal on the part of the employer of all offers of negotiation, mediation, or conciliation.

These two initiative measures were defeated by the electorates of California and Washington. On the other hand, the initiative statute in *Oregon* was

adopted by a vote of 197,771 to 148,460. The new Oregon law, which is the first of its kind to have been placed on the statute books of American jurisdictions, was therefore being closely scrutinized by labor and employer groups throughout the country. This law prohibited strikes and picketing except by a majority of a company's employees in a direct dispute over wages, hours, and working conditions. It limited the collection of money to the actual needs of the union and required a strict accounting of union funds. It forbade union intimidation and coercion of non-union workers and prevented union interference with any lawful commercial, manufacturing, or farming operations. According to spokesmen for organized labor, the act was calculated to "prevent collective bargaining and placed workers at the mercy of unscrupulous employers." It was also being contended that the act was vague and indefinite, making it impossible for labor unions to know when their conduct was legal or illegal. And finally, that it was arbitrarily discriminatory since it subjected labor unions to regulations not applied to employers' organizations.

Organized labor, in this case, by a joining of hands of the representatives of the A. F. of L. and the C.I.O., indicated its preparedness to fight the act on two fronts. In the first place, an appeal to the Oregon courts was to be taken on the grounds that the statute was in violation of the State and Federal constitutions and also conflicted with the Wagner National Labor Relations Act and the Norris-LaGuardia Anti-Injunction statute. In the second place, an action was begun against the law before the Social Security Board on the ground that the new act so affected the operation of the Oregon Unemployment Compensation Act as to deprive the State of the right to a tax credit under the Federal Social Security Act. Arguing that the limitations imposed upon organized labor in the State of Oregon militated against the free exercise of their constitutional rights, representatives of the A. F. of L. and the C.I.O., appearing before the Social Security Board in December, called for the refusal of the credit of 90 per cent of the State against the 3 per cent Federal tax on payrolls. By the close of the year no decision had yet been handed down by the Social Security Board. It would be interesting to ascertain, however, whether the Social Security Board would accept the argument of organized labor's spokesmen who sought to persuade a Federal administrative body to bring pressure to bear, through the withholding of tax remissions, for the purpose of causing the repeal of State legislation. Success of this plea would write into the body of American constitutional law a new kind of review, that by administrative boards.

French General Strike. On November 30, French workers, under the leadership of the C.G.T., engaged in a one-day general strike as a reply to the decree laws of the Daladier government whose purpose it was to revoke many of the social security benefits which workers had been granted under the Blum regime in June, 1936. The most significant of these decree laws was that which called for the scrapping of the 40-hour week. The Daladier government moved energetically for the purpose of preventing the success of the general stoppage, and impartial observers were agreed that, as a result of these governmental measures, the strike was in considerable measure a failure. A decree was promulgated requisitioning workers in the public services and placing persons engaged in them under virtual military law. This had the effect of preventing most of the railroad workers and

those engaged on municipal transportation and in the public utilities from going out. In the second place, troops were employed in many areas to prevent the downing of tools. The upshot was that only about 2½ million of the 5 million registered members of the C.G.T. obeyed the general strike order. The measures of the Daladier government were followed by sharp reprisals launched by French employers. Early reports indicated that close to a million workers had been dismissed from their jobs and from the government services, and many hundreds of leaders were placed under arrest and charged with "inciting to violence" and "rebellion." Scattered protest strikes broke out in many parts of the country in reply to these punitive measures. An effort of the maritime union to call a general walkout was met by the requisitioning of all steamships by the government. Nevertheless, Le Havre and other ports were tied up for several days. Within two weeks, however, peace in industrial relations once more had been re-established, due to the urging on the part of Premier Daladier that an end to lockouts and dismissals take place. Concessions also were made to the working populations in the promise of certain minor reforms in the decree laws.

SUEZ CANAL. Statistics made available by the Suez Canal Co. showed that traffic through the Canal and receipts for the first six months of 1938 were considerably below the almost record levels during the corresponding period of 1937. Comparing the first six months of 1937 with 1938, vessels using the Canal (1937) numbered 3407 and (1938), 3094; net tonnage of vessels 18,546,462 and 17,170,422; merchandise passing through Canal (tons) 16,420,000 and 14,390,000; receipts from cargo, passengers, and miscellaneous sources, £5,705,400 and £4,834,700. With the exception of vessels under the Netherlands and French flags, decreases were recorded with the heaviest proportionate loss, 25.3 per cent, falling on Norwegian ships. British and Italian interests also sent fewer ships through the Canal, and tonnage under these two flags was considerably less than during the corresponding six months of 1937. The Board of the Suez Canal Co. decided on Sept. 5, 1938, that the transit tariff to be applied on and after December 15 shall be reduced to the following rates: Loaded ships 5s. 9d. sterling per Suez Canal net ton of 100 cu. ft.; ships in ballast 2s. 10½d. sterling per Suez Canal net ton of 100 cu. ft.; passengers 5s. 9d. sterling.

SUGAR. Estimates issued by Willett and Gray on Nov. 10, 1938, placed the world's cane-sugar production for the season of 1937-38 at 18,938,367 tons and the yields in short tons of the leading countries as follows: India 3,689,136 tons of gur, a low-grade product, and 1,104,000 tons of white sugar, Cuba 3,017,718 tons, Java 1,369,239 tons, Formosa and Japan 1,206,544 tons, Brazil 961,965 tons, Puerto Rico 961,720 tons, Philippine Islands 940,350 tons, Hawaii 900,000 tons, and Australia 800,000 tons. Unlike the beet-sugar season in temperate climates the cane-sugar season of the differ-

ent tropical and subtropical countries varies to such extent in length and in time of year that production is in progress somewhere in each of the 12 months.

The output of raw beet sugar for the season of 1938-39 as reported by 25 countries to the International Institute of Agriculture was approximately 12,133,026 short tons. The leading countries and their estimated yields in short tons were reported as follows: The Soviet Republics 3,000,000 tons, Germany 2,302,526 tons, France 1,000,000 tons, Czecho-Slovakia 720,000 tons, and Poland 630,700 tons. A preliminary estimate by the Department of Agriculture placed the 1938 beet-sugar outturn of the United States at 1,719,000 tons, compared with 1,363,300 tons in 1937.

The 1938 sugar-beet crop of the United States was placed at 11,292,000 short tons, exceeding by 262,000 tons the record crop of 1933. The area harvested in 1938 was 921,000 acres and the average yield per acre 12.1 tons. The yields of the leading States were reported as follows: California 1,993,000 tons, Colorado 1,984,000 tons, Nebraska 1,081,000 tons, Michigan 1,028,000 tons, and Idaho 1,019,000 tons. The 1938 sugar-cane crop of Louisiana and Florida, including cane for seed, was estimated at 6,237,000 tons and 839,000 tons, and was equivalent to 484,000 and 73,000 tons of sugar respectively. The molasses production from cane ground for sugar in these States was 40,386,000 gal. The 1938 sugar-cane sirup production reported by 8 states was 22,221,000 gal. and the sorgo sirup production reported by 16 states 11,467,000 gal. The yield of maple products reported by 10 states comprised 1,084,000 lb. of maple sugar and 2,777,000 gal. of maple sirup.

During the fiscal year ended June 30, 1938, the United States exported 58,000 short tons of refined sugar, 7,304,000 gal. of molasses, and 425,000 gal. of sirup, including maple sirup, and imported 2000 short tons of beet sugar, 1,071,000 short tons of cane sugar from the Philippines, 1,625,000 from Cuba, and 117,000 tons from other countries. Other imports included 2000 lb. of dextrose, lactose, and levulose, 71,000 lb. of maple sirup, 5,531,000 lb. of maple sugar, 10,390,000 gal. of edible molasses, and 217,307,000 gal. of molasses for other than human consumption.

SULFANILAMIDE. See MEDICINE AND SURGERY; TENNESSEE; VETERINARY MEDICINE.

SULFAPYRIDINE. See MEDICINE AND SURGERY.

SULPHUR. According to the U.S. Bureau of Mines, the production of sulphur in the United States in 1938 decreased to 2,393,408 long tons, or 13 per cent compared with the record output of 1937 of 2,741,970 tons. Shipments declined 34 per cent and amounted to 1,628,847 long tons, valued at about \$27,300,000 compared with 2,466,512 tons valued at about \$44,300,000 in 1937.

Production in Texas decreased from 2,392,680 long tons in 1937 to 2,060,845 tons in 1938, and shipments dropped from 2,030,315 tons in 1937 to 1,331,014 tons in 1938. In Louisiana, production declined from 342,230 long tons in 1937 to 328,405 tons in 1938, and shipments dropped from 429,602 tons in 1937 to 294,235 tons in 1938. The output of sulphur in California and Utah in 1938 was 4158 long tons compared with 7060 tons in 1937.

Imports of 51 long tons of sulphur ore, valued at \$562, were recorded by the U.S. Bureau of Foreign and Domestic Commerce in 1938. In 1937, 398 long tons, valued at \$4724 were imported. Chile supplied all sulphur ore received in the United States in 1938 and in 1937. Exports of

crude sulphur in 1938 totaled 575,957 long tons compared with 675,297 tons in 1937, a decrease of 15 per cent.

SUMATRA. See NETHERLANDS INDIES.

SUNDAY-SCHOOL UNION, AMERICAN. A nonsectarian society, organized in Philadelphia in 1817 to establish and maintain Sunday schools in the rural and mountain sections of the United States and to publish and circulate Christian literature. Its board of managers and missionary force are composed of men representing many of the Protestant denominations. For the year ending Feb. 28, 1938, the society maintained 3569 Union Sunday schools, with 156,384 teachers and scholars, and conducted 951 daily vacation Bible schools, with 25,741 in attendance. During the same period it established 195 young people's societies, conducted 42 young people's Bible Conferences, opened 74 preaching stations, organized 11 churches which were turned over to the various denominations chosen by their constituencies, and erected 8 church buildings. The officers were: President, E. Clarence Miller, LL.D.; vice-presidents, Robert L. Latimer and James F. Shrader; national secretary of missions, Elliott D. Parkhill, D.D.; editor of publications, Arthur M. Baker, Ph.D.; and treasurer, John H. Talley. The national office is at 1816 Chestnut Street, Philadelphia, Pa.

SUPERNOVAE. See ASTRONOMY.

SUPREME COURT. See UNITED STATES.

SURGEONS, AMERICAN COLLEGE OF. A college or guild (not a teaching institution) organized in 1913 by some 500 surgeons of North America to elevate the standard of surgery. Fellowships in the organization are granted on the basis of merit only, with reference to professional ability and moral and ethical fitness. In 1938 these numbered approximately 12,600.

The college's twenty-eighth annual congress was held in New York, Oct. 17-21, 1938, with an attendance of 3000 surgeons. The organization's official journal is *Surgery, Gynecology, and Obstetrics*.

The officers for 1938-39 were: President, Howard C. Naffziger, San Francisco; first vice-president, Vernon C. David, Chicago; second vice-president, Fraser B. Gurd, Montreal; treasurer, Dallas B. Phenister, Chicago; secretary, Frederic A. Besley, Waukegan, Ill.; Officers-elect; President, George P. Muller, Philadelphia; first vice-president, Henry W. Cave, New York; second vice-president, David E. Robertson, Toronto. The Board of Regents consisted of George Crile, Cleveland, chairman; Irvin Abell, Louisville, vice-chairman; G. A. B. Addy, Rotheray, N. B.; Arthur W. Allen, Boston; Donald C. Balfour, Rochester; Frederick A. Collier, Ann Arbor; William Darach, New York; John R. Fraser, Montreal; Harry S. Gradle, Chicago; John E. Jennings, Brooklyn; James Monroe Mason, Birmingham; George P. Muller, Philadelphia; Alexander R. Munroe, Edmonton; Howard C. Naffziger, San Francisco; Alton Ochsner, New Orleans, and Arthur M. Shipley, Baltimore.

Since the death of Dr. Franklin H. Martin, the directorship is invested in an Executive Committee, consisting of Dr. George Crile, chairman, and Drs. Irvin Abell, John R. Fraser, Harry S. Gradle, Donald C. Balfour, George P. Muller (ex officio), Howard C. Naffziger, Dr. Malcolm T. MacEachern and Dr. Bowman C. Crowell are associate directors and Dr. M. N. Newquist, Dr. Harold Earnheart, and Dr. E. W. Williamson are assistant

directors. Headquarters are at 40 East Erie St., Chicago, Ill.

SURGERY. See MEDICINE AND SURGERY.

SURINAM, sōō'ri-nām' (**NETHERLANDS GUIANA**). A colony of the Netherlands, in northern South America. Area, 54,291 square miles; population (Jan. 1, 1937), 169,471 including the Negroes and Indians in the interior. During 1936 there were 4536 births, 1916 deaths, and 386 marriages. The 122 public and private schools had a total of 32,130 pupils in 1936. Paramaribo, the capital, had 52,705 inhabitants.

Production and Trade. The chief products (1937 production figures in metric tons) are sugar (18,300), coffee (4000), rough rice (34,200), maize (1600), and bauxite (392,300). Bananas, cacao, rum, molasses, gold (14,242 oz. troy produced in 1936), and salt are other products. Livestock in the colony (1936): 20,439 cattle, 4204 goats, and 6937 swine. In 1937 (in old U.S. gold \$), imports were valued at \$2,500,000; exports, \$1,900,000. During 1936, 284 vessels aggregating 358,748 register tons cleared the ports.

Government. For 1938 local revenue was estimated at 3,719,000 guilders, the State subvention was 2,786,000 guilders; expenditure, 6,505,000 guilders. A governor heads the colony and he is aided by an advisory council of 5 members (the governor as president, a vice-president, and three others) all nominated by the Queen of the Netherlands. The representative body of the colony is the Colonial States which is made up of 13 members elected for 6 years. Governor, Prof. Dr. J. C. Kielstra (appointed Aug. 16, 1933).

SVALBARD, swål'bär. An archipelago owned by Norway, comprising West Spitsbergen, North East Land, Prince Charles Foreland, Edge Island, Bear Island, and adjacent islands. Total area, 24,294 square miles; population (wintering force in 1936-37), approximately 2500. Capital, Longyearbyen. The mining of coal is the chief industry. In 1936, 784,000 metric tons of coal were produced and 707,117 metric tons were exported. The budget for the fiscal year 1936-37 was balanced at 156,000 kroner (krona averaged \$0.2497 for 1936; \$0.2484 for 1937).

SWARTHMORE COLLEGE. A nonsectarian coeducational institution for higher education in Swarthmore, Pa., founded in 1864 by the Society of Friends. The 1938-39 enrollment was 678. The teaching staff numbered 100. The total endowment was \$7,800,000, and the income for the year was \$746,000. The library contained 108,702 volumes. President, Frank Aydelotte, LL.D.

SWAZILAND, swā'zē-länd. A British protectorate in South Africa. Area, 6704 square miles; population (1936 census), 156,715, including 153,270 Bantu (natives), 2740 Europeans, and 705 colored (other than Bantu). Capital, Mbabane.

Production. The chief agricultural crops are maize, tobacco, groundnuts, cotton, and millet. In 1937 there were 403,000 cattle; 149,000 native sheep and goats (1935); and 2205 horses (1935). Large numbers of sheep are brought from the Transvaal each year for winter grazing. During 1937, 154 tons of tin (valued at £37,158) and 2410 fine oz. of gold (£16,783) were exported. Large deposits of coal exist in the low veld. Swaziland is considered as a part of the Union of South Africa for customs purposes, according to an agreement with the government of the Union, dated June 29, 1910, and receives a fixed percentage of the Union total each year. See MOZAMBIQUE under *History*.

Government. For the year ended Mar. 31, 1938,

ordinary revenue totaled £119,288; expenditure, £151,320. The government is administered by a resident commissioner under the British High Commissioner for South Africa. Resident Commissioner, Charles L. Bruton (appointed Nov. 2, 1937). See SOUTH AFRICA, UNION OF, under *History*.

SWEDEN. A constitutional monarchy of Scandinavia. Capital, Stockholm. Sovereign in 1938, Gustaf V, who succeeded to the throne Dec. 8, 1907.

Area and Population. Sweden has an area of 173,341 square miles (land area, 158,394) and a population of 6,284,722 (1937 census) as compared with 6,142,191 at the 1930 census. The urban population in 1937 was 2,237,362. Live births in 1937 numbered 89,942 (14.3 per 1000); deaths, 75,278 (12.0 per 1000); marriages, 54,442 (8.8 per 1000). Populations of the chief cities as of Dec. 31, 1937, were: Stockholm, 556,954; Göteborg, 269,581; Malmö, 147,796; Norrköping, 68,474; Helsingborg, 60,759.

Education and Religion. School attendance is compulsory and there is practically no illiteracy. Of 792,439 children of school age (7 to 14 years) in 1935, 697,410 were attending elementary schools. In the autumn of 1936, there were 36,362 students in government high schools and 12,181 in universities. The Lutheran Protestant Church, to which 6,124,490 persons adhered in 1930, is recognized as the state church. There were also 6653 Jews, 4763 Roman Catholics, 3981 Methodists, 805 Baptists, and 1499 others.

Production. About one-half of the working population is engaged in agriculture and the remainder chiefly in fishing, lumbering, manufacturing, and commerce. In 1936 there were 9,318,000 acres of arable land, 2,696,000 acres of meadows and pastures, and 54,962,000 acres of woods and forests. The value of all crops except sugar beets was estimated at 1,085,000,000 crowns for 1938, compared with 1,121,000,000 crowns in 1937. Yields of the chief cereals in 1938 were (in metric tons): Wheat, 821,100 (700,000 in 1937); barley, 259,000 (206,600); rye, 400,900 (412,800); oats, 1,424,200 (1,265,300). The harvest of other crops in 1937 was: Mixed grain, 554,000 metric tons; potatoes, 69,338,000 bu.; sugar beets, 2,077,000 metric tons; beet sugar (1937-38), 345,000 metric tons; sown hay, 5,491,000 metric tons; forage roots, 2,659,000 metric tons. The European Timber Exporters' Convention allocated Sweden a woodgoods export quota of 820,000 standards for 1937, 690,518 standards for 1938, and 656,000 standards for 1939.

The gross value of industrial production was estimated at 8,024,000,000 crowns in 1937 as compared with 4,331,000,000 in 1932 (low point of the depression), 5,677,000,000 in 1929 (pre-depression high), and 2,164,000,000 in 1913. The major industrial products in 1937 were: Iron ore, 14,953,000 metric tons; pig iron, 648,000 metric tons; steel ingots, 1,106,000 metric tons; coal, 460,465 metric tons; cement, 875,541 metric tons; rough lumber, 4,223,000 cu. meters; planed lumber, 1,937,000 cu. meters; wood pulp, 3,523,452 metric tons; cardboard and paper, 978,355 metric tons; flour-mill products, 651,070 metric tons; malt drinks, 2,709,000 hectoliters (hectoliter equals 26.42 U.S. gal.); tobacco products, 148,885,000 crowns; margarine and coconut butter, 61,751 metric tons; yarn, 53,890 tons; cloth, 43,015 tons; knit goods, 90,310,000 crowns; clothing, 236,359,000 crowns; matches, 20,464 metric tons; artificial fertilizers, 241,297

metric tons; mechanical workshop products, 888,-552,000 crowns.

Foreign Trade. According to preliminary figures, merchandise imports in 1938 were valued at 2,068,074,000 crowns and exports at 1,838,852,000 crowns, as compared with 2,123,356,000 and 2,000,-383,000, respectively, in 1937. The leading 1937 imports were iron and steel, coal, machinery, automobiles, fruits and nuts, coke, gasoline, raw cotton, green coffee, and chemicals. The principal exports in 1937 were wood pulp, other wood products, iron and steel, iron ore, and machinery. Of the 1937 imports, Germany supplied 20.3 per cent by value, United Kingdom 13.2; United States 14, Denmark and Norway 6.5. Of the exports, the United Kingdom took 22.5 per cent, Germany 15.4, United States 11, and Denmark and Norway 11. United States trade figures for 1938 showed general imports from Sweden of \$45,103,656 (\$58,654,567 in 1937) and exports to Sweden of \$64,230,813 (\$64,452,444 in 1937).

Finance. Budget estimates for the fiscal year ended June 30, 1939, placed total operating revenues at 1,294,700,000 crowns and expenditures at 1,294,-669,000 crowns. The surplus of 31,000 crowns was to be placed in the Budget Equalization Fund and loans of 233,625,000 crowns were to be raised for capital investments. The combined regular and supplementary budgets for the fiscal year 1937-38 showed an actual surplus of 93,510,000 crowns. On July 1, 1938, the Budget Equalization Fund, which replaced the cash reserve fund under the new cyclical budget system, stood at 118,735,026 crowns. The national debt was 2,508,000,000 crowns on Dec. 31, 1938, as compared with 2,341,950,000 crowns on Dec. 31, 1937. The foreign debt at the end of 1938 was estimated at about 90,000,000 crowns, or 4 per cent of the total debt. The average exchange value of the Swedish crown (krona) was \$0.2549 for 1937 and \$0.2520 for 1938.

Transportation. With 10,273 miles of line, the state and private railways in 1936 carried 76,338,-000 passengers and 39,134,000 metric tons of freight, gross receipts totaling 338,427,000 crowns. Highways and roads in 1937 extended 89,616 miles; the number of automobiles on Jan. 1, 1938, was 191,947. Civil aviation statistics for 1937 were: Miles flown, 1,545,126; passengers, 56,531; mail, 1,252,812 lb.; baggage and freight, 1,843,101 lb. The merchant marine on June 30, 1938, comprised 1246 vessels (of 100 tons or over) with an aggregate capacity of 1,575,701 gross tons. During 1937, 18,755,000 net registered tons of shipping entered Swedish ports with cargo in the international trade and 4,709,000 tons in ballast. Gross earnings of the Swedish merchant marine were estimated at 357,-360,000 crowns in 1937.

Government. The Constitution, adopted in 1809 and since then much modified, fixes the authority of the hereditary King and of the elected Diet, or Riksdag. The King has supreme executive and judicial authority, but exercises it only as the King in Council; that is to say, he must act through a council of ministers, who rely on the support of the Riksdag. The King shares the legislative power with the Riksdag; its acts require the Crown's assent, save that the imposition of taxes is vested in the Riksdag alone; the Crown may initiate legislation and commonly does so. The Riksdag consists of two chambers. The First Chamber has 150 members, who serve for eight years and are elected at the rate of one-eighth each year, by the vote of municipal and provincial councils, according to a system of districts. The Second

Chamber consists of 230 members, elected quadrennially (latest year, 1936); the elections are held according to constituencies, 28 in number, among which the representation is apportioned on the basis of population; the electors are all the males and females at least 23 years old and not excluded by statutory disability. Disagreement between the two chambers over certain sorts of financial legislation may be settled by the majority of individual votes of a joint session of the two chambers. In practice the Second Chamber has the predominant influence; its membership (1938) comprises 115 Social Democrats, 44 Conservatives, 36 Agrarians, 27 of the People's Party, and 8 who are unqualified Socialists or Communists. The Cabinet in 1938 was headed by Premier Per Albin Hansson, a Social Democrat, and includes both Social Democrats and Agrarians.

History. King Gustaf V reached the age of 80 years on June 16. The day was marked by a great popular celebration in Stockholm. A contribution amounting to \$1,000,000 in U.S. money was raised before the birthday among about a million Swedes and presented to the King as the nation's birthday gift. He turned it over to be used to check infantile paralysis and rheumatism. Later in June, Crown Prince Gustaf Adolf and his son Prince Bertil went to the United States to attend the tercentenary of the settlement of the Swedes in Delaware (see DELAWARE).

The country experienced some of the economic decline felt in many parts of the world in 1938. Efforts to maintain the Swedish position in foreign trade shared with questions of future national security the attention of the government. The convention concluded by Sweden and the other Oslo powers at The Hague in May, 1937, to promote the mutual reduction of trade barriers, expired June 30, 1938, after vain effort, in the face of adverse economics, to effect its extension (see DENMARK under History). The Co-operative Federation of Stockholm, through a subsidiary, obtained in November a contract to construct buildings for a university in Tehran and docks on the Shat-el-Arab in Iran, for which the Swedish firm was to receive Iranian products to the value of about 6,000,000 crowns according to the plan of barter that had become frequent in large international dealings.

Foreign Minister Sandler declared to the Riksdag in January that the sanctions decreed by the League of Nations had become inoperative; this declaration carried notice that one of the reliances of Swedish international relations had been lost. In particular, the failure of the League's restraining influence virtually stripped from the Åland Islands, between Sweden and Finland, at the mouth of the Gulf of Bothnia, the security that they had obtained as a neutralized area in 1921. Accordingly Sweden began in September a series of conferences with Finland, looking to an agreement of the two governments for the defense of these islands (see FINLAND under History).

In April Sweden took part at Oslo in a conference, with representatives of the Norwegian, Danish, and Finnish governments, to plan the four nations' co-operation in the event of a war in Europe; Foreign Minister Sandler advocated strengthening national defense as means for supporting the policy of neutrality, but he counseled against a military alliance as unavailing and even capable of bringing risks. In September, Sandler, in a speech at Gothenburg, condemned pressure brought on Swedish firms doing business in Ger-

many to cast out non-Aryan employees. To meet impudence with submission, he declared, was not the right method. Swedish firms adopted the practice of answering German questions on the racial status of their employees with the simple statement that these were Swedish.

Political and social action during 1938 included the enactment of a law requiring employers to give year-round workers a yearly vacation of 12 days (Sundays not counted) and proportionate vacations to those employed less than a year but at least six months; the law went into effect on June 2. The government submitted a special budget of expenditures to be made for the relief of the destitute in case, only, of increasing economic adversity in the fiscal year 1938-39. Local elections of members of councils were held in September; as these officials voted yearly to elect one-eighth of the membership of the Swedish First Chamber, the September vote had a national bearing; its partisan shift was toward greater liberalism. The number of Social Democrats in the councils rose by 150, to 866; that of Communists by 11, to 26; that of the People's Party by 9, to 163; the number of Agrarians diminished by 37, to 175; that of the Conservatives, by 105, to 287.

SWEDISH LITERATURE. See SCANDINAVIAN LITERATURE.

SWEDISH TRICENTENARY IN THE UNITED STATES. See DELAWARE; LUTHERAN CHURCH.

SWIMMING. See SPORTS.

SWITZERLAND. A federated republic of central Europe. Capital, Bern (Berne).

Area and Population. Switzerland has an area of 15,944 square miles and a population estimated on Jan. 1, 1938, at 4,183,000 (4,066,400 at the 1930 census). The urban population in 1937 was estimated at 1,760,000. Living births in 1937 numbered 62,480 (15 per 1000); deaths, 47,274 (11.3 per 1000); marriages, 30,394 (7.3 per 1000). Estimated populations of the chief cities at the end of 1937 were: Zurich, 321,000; Basel, 161,000; Geneva, 123,000; Bern, 121,000; Lausanne, 87,000; St. Gallen, 64,000; Winterthur, 57,000; Lucerne, 53,000. The 1930 census showed 2,924,313 German-speaking Swiss, 831,097 French-speaking, 242,034 Italian-speaking, and 44,158 Romansch-speaking.

Education and Religion. There is no illiteracy among persons over 10 years of age. Enrollment in the schools in 1935-36 was: Primary, 476,088; secondary and preparatory, 89,662; manual arts instruction, 29,208; university (1936-37), 10,523. According to the 1930 census, 57 per cent of the Swiss people were Protestants, 41 per cent Roman Catholics, and 0.4 per cent (17,973) Jews.

Production. About 45 per cent of the working population is engaged in industry, 21 per cent in agriculture, and 15 per cent in commerce. About 12 per cent of the total area is arable and there are some 4,161,000 acres of meadow and 2,372,000 acres of forests. The value of agricultural production in 1936 was 1,164,500,000 Swiss francs, derived as follows (in million francs): Cereal grains, 51.7; potatoes, 37.8; vineyards, 42.2; fruit culture, 67.4; vegetable culture, 64; cattle for slaughter, 209.4; horses, 20.8; swine, 158.2; poultry, 57.9; milk and milk products, 414.6; other agricultural products, 40.5. The 1938 cereal crop was as follows (in metric tons): Wheat, 165,900 (168,300 in 1937); barley, 8700 (8400); rye, 32,500 (32,900); oats, 24,600 (24,000). Livestock statistics for 1937 showed 1,638,000 cattle and 936,000 swine; in 1935 there were 139,000 horses, 175,000 sheep, 218,000 goats,

and 5,581,000 poultry. Dairy production in 1936 was: Fresh milk, 6,031,448,000 lb. (6,097,655,000 in 1937); butter, 59,524,000 lb.; cheese, 107,805,000 lb.; powdered and condensed milk, 13,228,000 lb.

The output of hydro-electric energy in 1936-37 was 6,855,000,000 kilowatt-hours. Other industrial production for the same year was: Beer, 56,270,000 gal.; watch cases, 654,000; conditioned silk, 783,000 lb.; manufactured gas, 256,700,000 cu. meters; salt, 80,950 metric tons. There were in 1937 about 21,000 textile looms and 1,098,000 cotton spindles. The hotel industry in 1937 had 3,508,000 patrons (3,019,000 in 1936).

Foreign Trade. Total imports in 1938 were valued at 1,606,900,000 Swiss francs and exports at 1,316,600,000 francs. In 1937 imports for consumption were 1,797,134,000 francs; exports of Swiss products, 1,283,826,000 francs. The chief 1937 import items were gold bullion (\$98,296,000, U.S. currency); iron and steel, textile piece goods; coal, coke, and briquets; wheat, chemicals and explosives, raw cotton, and fruits and nuts. Leading 1937 exports were (U.S. currency): Machinery, \$45,277,000; watches, \$32,970,000; cotton piece goods, \$22,516,000; coal-tar dyes, \$19,504,000; watch movements, \$14,058,000; aluminum and manufactures, \$13,203,000; medicines and perfumery, \$13,633,000. Of the 1937 imports, Germany supplied 22.3 per cent; France, 13.5; United States, 7.0; Italy, 6.5; United Kingdom, 6.1. Of the 1937 exports, Germany took 15.6 per cent, United Kingdom 11.2, France 10.8, United States 8.8, and Italy 7.9 per cent. United States imports from Switzerland in 1938 were \$23,035,698 (\$26,897,248 in 1937); exports to Switzerland, \$10,584,766 (\$9,622,389).

Finance. Budget estimates for 1939 balanced at 524,800,000 Swiss francs. Revised estimates for 1938 placed receipts at 522,300,000 francs and expenditures at 579,800,000, leaving a deficit of 57,500,000 francs. Actual general receipts for 1937 were 522,068,000 francs; expenditures, 537,008,000 francs (including 8,000,000 francs for railway rehabilitation and 32,499,400 francs contributed to the "railway fund"). The public debt on Dec. 31, 1937, amounted to 5,799,950,000 Swiss francs (general, 2,592,870,000; railway, 3,207,079,000). The average exchange value of the Swiss franc was \$0.2294 in 1937 and \$0.2287 in 1938.

Transportation. Excluding funiculars and cog-wheel railways, the Swiss railways in 1936 had 3251 miles of line and carried 145,456,000 passengers and 19,097,000 metric tons of freight, with gross receipts of 345,033,000 francs. The mileage of roads and highways in 1937 was 10,263; number of automobiles, Jan. 1, 1938, 73,200. Civil aviation statistics for 1938 (summer season, Mar. 27-Oct. 1) covering international and local services operating in Switzerland were: Route mileage, 6693; miles of flight, 1,603,403; revenue passengers, 53,987; mail, 991,551 lb.; excess baggage, 492,921 lb.; passenger-miles, 10,689,391.

Government. The Constitution, on which the Federal Government is founded, provides for a Federal Assembly, dealing with legislation; a Federal Council and, allied with it, a President, who form the executive branch; a Federal Court, the chief judicial body; and a direct popular vote, which extends to the use of the initiative and referendum. The Federal Assembly consists of two chambers; the one, known as the Council of States, has 44 members, of which each canton chooses two, elected for such a term as the canton may choose;

the other, called the National Council, has 187 members, elected quadrennially by popular vote of males and females not under 20 years of age (latest election, 1935). The Federal Assembly in joint session quadrennially elects the seven members of the Federal Council and annually chooses among this body's members a President and a Vice-President. Each of the seven members is the head of a ministerial department. Dr. Johannes Baumann was President in 1938; Philipp Etter, who was Vice-President in 1938, was elected President for 1939.

History. Switzerland, highly dependent on exportation to enable it to procure goods outside the range of its own natural resources, maintained until the middle of 1938 about the same level of business as for 1937, but there followed a period of moderate economic recession. Plans were made in December, by which the National Bank was to grant, out of its profits from the devaluation of the Swiss franc in 1936, a credit of 75,000,000 francs to the Federal Government and a like credit to the cantons, for meeting the cost of providing work for destitute persons.

Having at close range the current spectacle of German territorial expansion and being keenly aware of the activities of another contiguous nation, Italy, the Swiss authorities found it needful to give close attention both to maintaining the country's means of defense and to observing a punctilious neutrality, such as would not give neighboring powers the occasion for hostility to Switzerland. Former President Motta, now Minister of Foreign Affairs, sought, in the interest of more complete neutrality, to effect an alteration of the position of Switzerland in the League of Nations. He informed the League in May of this purpose but indicated that the government had no wish to constrain the League to take quarters elsewhere. The League adopted (May 14) a resolution exempting the Swiss Government from participation in any of the League's economic or other non-military sanctions. As Switzerland had entered the League exempt from the military sanctions, it now became completely exempt from measures that the League might take against any nation. German and Italian official notes welcomed the release that Switzerland had thus obtained and gave assurance that Swiss neutrality would be respected.

In spite of such assurance the Swiss Government continued to meet with trouble in maintaining its neutral position. Early in October it suspended for three months the publication of the *Journal des Nations*, a periodical appearing in Geneva and covering news about the League of Nations, this journal having published comment on the Munich conference containing terms deemed offensive to the German Nazi regime. On the other hand, repressive measures were taken on several occasions against organizations in Switzerland agitating for Fascist or Nazi ideas. Early in August the police had an encounter at Zurich with people engaged in an unlawful demonstration on behalf of a group known as the Fascist National Front; at the outset of November, President Baumann conferred with local chiefs of police on measures to be taken against groups then engaged in spreading Nazi ideas; and late in December the Federal Attorney-General was instructed to bring prosecutions in connection with two such groups, the Bund Treuer Eidgenossen and the Volksbund. In Germany the *Voelkischer Beobachter* published attacks, in the course of December, upon alleged undue latitude allowed in Switzerland to anti-German propaganda.

The year's alarms in neighboring countries caused the Swiss to strive to strengthen their defenses in many ways. Laws were passed providing 350,000,000 francs for additional forts and armaments, lowering to 18 years the age at which young men became liable to military service, and authorizing the Federal Council to accumulate stocks of goods needful in case of war or blockade, order increased agricultural production, and subsidize the development of natural resources and the output of manufactures; the Federal Council received powers to requisition the goods of individuals and to prevent profiteering. In July the importation and exportation of materials of war was limited to cases for which permits might be granted. Concrete bases were built during the summer, in the beds of roads from the frontiers, in which barriers of steel rails could be set. Bridges and tunnels near the frontiers were mined in September.

Jews escaping from Germany and Austria entered the country in great numbers; they were put under restrictions in order that they should not become permanent residents relying on public support or displacing Swiss workers. The Federal authorities sought the aid of the Intergovernmental Committee in order that the refugees might promptly be removed to other countries.

On July 3, Switzerland adopted by popular referendum a uniform Federal penal code replacing and doing away with the separate and diverse criminal laws of the individual cantons. Though the majority of the cantons, 12½, voted against the uniform code, only 9½ favoring it, the total of individual votes for the code, 357,784, exceeded the 310,108 cast against it; thus the more populous and urban cantons prevailed over the more numerous and economically less advanced members of the Federation. The penalty of death had been maintained in a few cantons; the vote of July 3 had the effect of abolishing it. Some of the cantons, principally Geneva, had lately adopted criminal laws against Communist and other non-democratic organizations; the adoption of the Federal code put these laws also out of existence.

SYRACUSE UNIVERSITY. A nonsectarian institution of higher learning for men and women in Syracuse, N. Y., founded in 1870. The 1938 autumn enrollment was 6601. The summer session had an attendance of 2473. The faculty numbered 673. The productive funds amounted to \$4,650,865, while the income for the year was \$3,740,171. The library contained 299,724 volumes. Chancellor, William Pratt Graham, Ph.D.

SYRIA AND LEBANON. A mandated territory of France situated between Turkey and Palestine on the east coast of the Mediterranean. Beyrouth (Beirut) is the administrative seat of the French High Commissioner.

Area and Population. The area and population of the Syrian Republic, its subdivisions, and the Republic of Lebanon are shown in the table on page 716, based on data in the *Statistical Year-Book of the League of Nations, 1937-38*. The mandated territory is subdivided politically in accordance with the agreements of 1936 and 1938 (see *Government and History*).

About 35,000 square miles of the total area is desert. The population is predominantly Arab and Arabic is the language most widely used, but there are considerable numbers of Turks, Kurds, Turkomans, Circassians, Armenians, Iranians, and Jews as well as a few Europeans. The 1935 populations of the chief cities were: Damascus, 193,912; Aleppo, 177,313; Beyrouth, 134,655; Homs, 52,792;

SYRIA AND LEBANON: AREA AND POPULATION

<i>Political Unit (Capital)</i>	<i>Area, sq. mi. ^a</i>	<i>Population ^b</i>
Republic of Syria (Damascus)	74,490	2,596,000
<i>Syria Proper (Damascus)</i>	67,550	1,940,000
<i>Latakia (Latakia)</i>	2,310	360,000
<i>Hatay Republic or Alexandretta (Antioch)</i>	1,930	228,000
<i>Djebel Druse (El Suweideh)</i>	2,700	68,200
Republic of Lebanon (Beyrouth) ..	3,470	862,600
Total	77,960	3,458,800

^a Approximate. ^b Estimates of December, 1937, for the Republic of Syria and its subdivisions; census of 1935 for Republic of Lebanon. ^c Excluding about 15,000 nomads who spend part of their time in Djebel Druse.

Hama, 39,960; Tripoli, 37,260; Antioch, 28,000; Latakia, 21,404; Zahlah, 20,985; Alexandretta, 13,997.

Education and Religion. Statistics for the entire mandated territory for 1936 showed 704 public schools, with 79,011 pupils, 1214 private schools with 104,092 pupils, and 589 foreign schools with 61,541 pupils. Of the 244,644 pupils in all schools, 134,407 were Christians, 89,623 Moslems, 10,376 Druses, 4612 Melkites, and 4535 Jews. The Syrian University at Damascus had 287 students in 1936, the French University at Beyrouth 559, and the American University at Beyrouth 444.

The religious distribution of the population was: Moslems, 1,514,755; Christians, 505,419; Alawites, 227,930; Druses, 86,125; Jews, 16,526; Ismailians, 14,772. The Lebanese Republic in 1935 had 342,388 Christians and 292,247 Moslems.

Production. Agriculture and livestock raising are the chief occupations. The area under cultivation in 1936 was 2,332,000 acres. Yields of the chief crops in 1937-38 were (in metric tons): Wheat, 468,400; barley, 246,600; corn, 26,700; rice, 3700; potatoes, 45,700; tobacco, 3400; cotton-seed, 12,100; sesamum, 4400; olive oil, 19,300; cotton, 5700; hemp (Syria only), 4800. The 1937 wool clip was 6800 metric tons; raw silk output, in 1936, 80 metric tons. The wine production in 1937-38 was 80,000 hectoliters (1 hectoliter equals 26.42 U.S. gals.). Grapes, figs, apricots, and citrus fruits are grown. The livestock statistics for Jan. 1, 1937, showed 2,195,175 sheep, 172,755 camels, 449,114 oxen, 1,722,893 goats, and 106,077 asses. Some iron and lignite are mined. The extent of other mineral resources is unknown. One section of the pipeline from the Kirkuk, Iraq, oil fields terminates at the port of Tripoli in Lebanon. There is little manufacturing; flour, refined petroleum, soap, and silk thread are the chief products.

Foreign Trade. Merchandise imports into Syria and Lebanon in 1937 were valued at 53,844,000 Syrian pounds (28,836,000 in 1936) and merchandise exports at 25,716,000 Syrian pounds (16,476,000 in 1936). (The Syrian pound equals 100 piastres or 20 French francs; average exchange value in 1936, \$1.32; 1937, \$0.81.) Textiles and animal and vegetable products are leading articles of trade. The chief sources of imports, in order of value in 1936, were France, Japan, Great Britain, Turkey, and the United States. Exports went mainly to Palestine, France, Iraq, and the United States, in the order named.

Finance. The State budget for 1937 showed receipts of 11,734,694 Syrian pounds (11,216,900 in 1936) and expenditures of 10,889,947 (11,189,607), while the common interest budget, to which customs receipts represent the major contribution, showed receipts of 10,638,700 Syrian pounds for 1937

(8,721,212 in 1936) and expenditures of 8,459,100 (7,486,001).

Transportation. The mandated territory in 1937 had 890 miles of railway lines; 6362 miles of highways, with 11,230 automobiles; three bus routes across the desert from Beyrouth to Baghdad; and an airline connecting Tripoli and Marseille. Direct railway connections between Aleppo and Baghdad via Mosul, Iraq, were opened in 1938. Beyrouth is the chief port, handling 2,294,298 of the 4,351,196 tons of shipping entering all ports in 1936. Extensions to the harbor works at Beyrouth costing about 45,000,000 francs were completed and officially inaugurated by the French High Commissioner on June 13, 1938. A new civil airport near Beyrouth also was opened in 1938.

Government. By the Constitution of May 14, 1930, the Syrian Republic achieved a virtually independent status, except that control of defense, foreign relations, and certain other functions was retained by France as the mandatory power. The Constitution provided for a legislature of 69 members elected for four years and a president elected by the legislature for five years. President in 1938, Mohammed Ali Abed. The Constitution of the Lebanese Republic, dated 1926, was similar to that of the Syrian Republic. It was suspended in May, 1932, but was restored Jan. 4, 1937. President in 1938, Emile Eddé, elected Jan. 20, 1936. Latakia and Djebel Druse, which are semi-autonomous districts of the Syrian Republic, were administered by French governors, assisted by partly nominated and partly elected councils. A French and colonial army of about 10,500 men was in occupation of the country.

Treaties of alliance signed by France with the Syrian Republic on Sept. 9, 1936, and with the Lebanese Republic on Nov. 13, 1936, provided for the establishment of Syria and Lebanon as independent, federated states under French protection after a three-year transition period, the termination of the League mandate, and the admission of both states as members of the League of Nations (see 1936 YEAR BOOK, pp. 721-722 for details). By the Franco-Turkish agreement of Jan. 26, 1937, which went into effect Nov. 29, 1937, the Sanjak of Alexandretta was to be demilitarized and given complete internal autonomy within the Syrian Republic, which was to control its customs and foreign relations. All internal governmental functions were to be exercised by a democratically elected assembly of 40 representatives of the various ethnical and religious groups, i.e., Turks, Arabs, Armenians, Greek Orthodox, Kurds, etc. Special safeguards were granted the Turkish minority through a High Commissioner to be named by the League Council. Turkish was made an official language of the sanjak and Turkey was authorized to lease part of the port area of Alexandretta (see 1937 YEAR BOOK, p. 712).

HISTORY

The Hatay Republic. As a result of Turkey's diplomatic intervention, backed by the threat of armed force, the Sanjak of Alexandretta in 1938 became a virtually independent state known as the Hatay Republic. It remained under the nominal jurisdiction of the Syrian Republic but was controlled by the Turkish minority and seemed destined for eventual incorporation in Turkey.

At the beginning of the year a commission appointed by the League of Nations to put the Franco-Turkish agreement of Jan. 26, 1937, into effect

was at work in the sanjak on preparations for the assembly elections, scheduled to be held not later than April 15. The French had apparently promised that the Turks in Alexandretta should have a majority of the 40 members of the assembly. The Turks, however, comprised less than half of the 228,000 inhabitants of the sanjak. It became evident that a bloc of Arabs, Alawites (heretical Moslems), Armenians, Kurds, and other groups would, under the arrangements made by the electoral commission, outvote the Turks and control the assembly, thus insuring Alexandretta's permanent connection with the Syrian Republic.

To prevent this, the Turkish Government in January secured the appointment of a committee of the League Council, containing a Turkish representative, to supervise the work of the electoral commission in Alexandretta. Nevertheless, the situation in the sanjak went from bad to worse as the electoral campaign developed. Turks and Arabs accused the League Commission of discrimination in preparing the election lists. They charged each other with importing voters and seeking by fraud and violence to secure control of the assembly. Mounting disorders led the electoral commission to postpone the election until July 15.

Early in June the Turkish Government demanded that France maintain order in the sanjak and fulfill its promise to permit Turkish control of the assembly. This demand, backed by some 30,000 Turkish troops concentrated on the Alexandretta-Turkish frontier, led France to proclaim martial law in Alexandretta on June 3. Meanwhile, Franco-Turkish negotiations for an understanding covering all their mutual problems had been under way at Paris and Ankara, in which the Turks pressed their demand for effective control of Alexandretta. These negotiations were supplemented by conferences between French and Turkish military authorities in Antioch beginning the middle of June. On June 22 Turkey notified the League of Nations that it no longer recognized the League's commission in Alexandretta. Receiving no support from France, the League commission was forced to withdraw from the sanjak on July 1.

Two days later (July 3) France and Turkey signed (1) a treaty of friendship and non-aggression, considered tantamount to a military alliance, (2) a declaration making the Sanjak of Alexandretta an autonomous state within the Syrian Republic under joint Franco-Turkish administration, and (3) a military agreement authorizing 2500 Turkish troops to enter the sanjak to assist an equal number of French troops and 1000 local troops to maintain order until the new autonomous regime was functioning normally. Ultimately both French and Turkish troops were to be withdrawn, leaving the 1000 local troops as the only armed force.

The Turkish troops marched into the sanjak on July 5 and simultaneously martial law was ended. The Turkish forces occupied all of the region north of a line touching Alexandretta, Antioch, and Rihanieh, while French troops remained in occupation of the territory south of the line. In accordance with Turkey's demand, the French formally agreed that the Turks in the sanjak were to dominate the autonomous government and the ensuing elections were so controlled as to return a Turkish majority to the assembly. The Turkish Government, on the other hand, declared that it had no territorial claim to the sanjak. However, the equivocal language of the Franco-Turkish agreements led observers to conclude that France had agreed to permit Turkish

annexation of the district at a later date when it could be done with less flagrant violation of France's obligations as mandatory of the League of Nations.

The Turkish-controlled assembly met at Alexandretta early in September. On September 3 it passed a resolution changing the name of the sanjak to the Hatay Republic. The statutes of the new republic, approved by the assembly September 8, made Antioch the capital and declared Hatay "a distinct republican state upheld by the Turkish majority and enjoying absolute independence in its internal affairs." Legislative power was vested in the National Assembly of 40 members elected for four years. The National Assembly elected the President of the republic for five years and the latter appointed an executive council responsible to the Assembly. Tayfour Seukmen, a Turk, was elected the first President. He immediately addressed a message to the Turkish National Assembly at Ankara describing "Kemalism" as the guiding principal of his government.

The Franco-Turkish agreements envisaged a complementary treaty between Turkey and the Syrian Republic covering such questions as boundary limits and customs. Negotiations were opened between Syrian and Turkish representatives in Ankara but broke down in the middle of July. The Syrians, deeply dissatisfied with the Franco-Turkish settlement in Alexandretta, attempted to secure a revision of that agreement. The proposals, including one for partition of the sanjak between Turkey and the Syrian Republic, were rejected by the Turks.

Other Developments. Meanwhile the governments of the Lebanese and Syrian Republics were having troubles of their own. The sporadic fighting between Moslems and Christians in the Jezireh district of northeastern Syria that broke out in 1937 continued in 1938. The Arab Christians demanded that Moslem officials appointed by Premier Djemil Mardam of the Syrian Republic be replaced by French officials. The Druses and Alawites also complained that their rights were being disregarded by the Moslem majority and the Alawite representatives withdrew from the Syrian Parliament. An abortive attempt to assassinate Premier Mardam on June 13 was attributed to Syrian Nationalists dissatisfied with the government's acquiescence in the Franco-Turkish bargain in Alexandretta. The same sentiment was believed to have inspired the resignation of the Syrian Cabinet on July 26, but President Mohammed Ali Abed requested Premier Mardam to form a new ministry.

A widespread conspiracy to overthrow the Lebanese Government and establish a dictatorship was reported frustrated by the Beyrouth police through the arrest of 20 ringleaders on May 15. Nor could the Syrian and Lebanese Governments come to terms regarding their projected customs union, designed to permit the continuance of their economic relations upon termination of the French mandate. The Arab-Jewish conflict in Palestine (q.v.) continued to disturb the Arabs in Syria, while economic conditions were adversely affected by the further devaluation of the French franc, to which Syrian currency was pegged.

Dissensions in the Lebanon Republic caused the formation of a new Cabinet under the Moslem Deputy Abdullah Yafi on November 1. Meanwhile the Foreign Affairs Committee of the French Senate had decided almost unanimously to oppose ratification of the 1936 treaties with the Syrian and Lebanese Republics. This led the Syrian Na-

tionalists late in 1938 to demand complete independence. The French Government at the year end was preparing to send a mission to Syria to negotiate another agreement that would leave Syrian defense and foreign affairs in French hands.

See FRANCE and TURKEY under *History*.

TACOMA, WASH. See BRIDGES.

TAHITI. See OCEANIA, FRENCH ESTABLISHMENTS IN.

TAIWAN. See FORMOSA.

TAJIK SOVIET SOCIALIST REPUBLIC. One of the 11 constituent republics of the U.S.S.R., according to the constitution adopted Dec. 5, 1936. It includes the Gorno-Badakhshan Autonomous Province. Area, 55,040 square miles; population (1936), 1,500,000. Stalinabad, the capital, had 60,000 inhabitants in 1935.

Production, etc. The chief occupations are cattle-breeding, horticulture, and farming. In 1938 there were 895,622 acres of spring sowing, by collectives, of chief grain crops. Mineral products are zinc, lead, brown coal, sulphur, potassium salts, lapis lazuli, emery, corundum, mica, and asbestos. See UNION OF SOVIET SOCIALIST REPUBLICS.

TANGANYIKA (tā'gān-yē'ka), **TERRITORY**. The former German East African area now administered by Great Britain under a mandate approved by the League of Nations. Area, 363,600 square miles; population (1937 estimate), 5,149,496 of whom 9128 were Europeans, as compared with (1931 census) 5,063,544 including 8217 Europeans. Chief seaports: Dar-es-Salaam, the capital (33,147 inhabitants), Tanga, Lindi, Mikindani, and Kilwa. Mwanza and Bukoba are ports on Lake Victoria, and Ujiji and Kigoma are ports on Lake Tanganyika.

Production and Trade. In 1938 the principal crops (with outputs in metric tons) were sisal (93,000), coffee (15,715), cotton lint (8350), groundnuts (10,500), copra (6460), sesame (4100), and beeswax (608). Other products are hides and skins, sisim, ghee, diamonds, gold, and timber (pencil cedar, yellow wood, mvule, ebony). Livestock in the territory (1937): 5,035,033 cattle, 1,645,633 sheep, and 5,814,506 goats. In 1937 (exclusive of bullion and specie) imports were valued at £3,924,095 (the chief items being machinery, cotton piece goods, foodstuffs, and motor vehicles); exports, £5,311,464 of which sisal accounted for £2,079,204; cotton, £603,594; gold, £526,277; coffee, £429,501; groundnuts, £257,807. During 1937, 567 ships aggregating 2,592,395 tons cleared the ports.

Government. For 1937 revenue totaled £2,345,004; expenditure, £2,173,922. The revenue for 1938 was estimated at £2,213,000. In the budget for 1939, revenue was estimated at £2,161,000 and expenditure at £2,275,000. Under an Order in Council of July 22, 1920, Tanganyika is administered by a governor who is aided by an executive council of 6 nominated members, and a legislative council of 23 members (13 official and 10 non-official nominated). Governor and Commander-in-Chief, Sir Mark A. Young (appointed, 1937).

TANGIER. An internationally administered seaport and surrounding territory in northwestern Africa adjoining Spanish Morocco near the Strait of Gibraltar. Area, about 225 square miles; population, about 60,000, including 36,500 native Moslems, 16,500 Europeans, and 7000 native Jews. The city of Tangier proper has about 45,000 inhabitants. Commerce, agriculture, fishing, and the manufacture of cigarettes are the principal occupations. Wheat, barley, and chickpeas are leading crops. Imports in 1937 were 80,084,240 French francs; ex-

ports, 8,247,103 francs. A railway links Tangier with Fez in French Morocco. Highways extend 65 miles. An air service connected Tangier with Toulouse, France, and with Casablanca and Rabat in Morocco. A total of 1980 ships of 3,470,947 tons' capacity entered the port of Tangier in 1935.

Tangier was permanently neutralized and demilitarized by the Convention of Dec. 18, 1923, as modified by the protocol of July 25, 1928. For local government there is an international assembly of 27 members, whose acts are subject to the veto of a Committee of Control composed of the French, British, Spanish, and Italian consuls in the city. The assembly delegates administrative responsibility to an administrator, with three assistants in charge of finances, health, justice, etc. Government revenues for 1937 were estimated at 19,927,500 francs (excluding subsidies); expenditures, 25,082,822 francs. Native affairs are in the hands of a Mendoub, representing the Sultan of Morocco. Administrator in 1938, M. Le Fur; Mendoub, Si Mehmed Et-Tazi.

TANNU TUVA, tā'nōō tōō-vā'. An independent republic, organized under Russian auspices and enjoying the protection of the Soviet Union. Situated in Central Asia, it lies between Siberia to the north and Outer Mongolia (of which it formerly was the northwestern corner) to the south. Its boundaries approximately touch the 90th eastern meridian on the west, the 100th on the east, and the 50th parallel on the south. Its area, about 64,000 square miles, is inhabited by possibly 70,000 natives and 12,000 Russians. The capital, called Kizilkhoto in the native tongue and Krasny in Russian, has 10,000 inhabitants, more or less. From this city down to Minussinsk in central Siberia the upper course of the Yenisei River is navigable by steamboat, and a Russian vessel serves the route. The indigenous population are pastoral; inhabitants from outside are interested in prospecting for minerals, mining for gold and asbestos, and trading. The constitution of 1924 is the basis of the government: the Great Huruldan, a body whose members are elected by general suffrage, meets once a year. It chooses a body of 30 members, the Little Huruldan, which in turn names the President and cabinet.

TARIFFS. See AUSTRALIA, CANADA, ECUADOR, GREAT BRITAIN, IRELAND, MEXICO, NEW ZEALAND under *History*.

TASMANIA. An island State of Australia. Area, 26,215 square miles; population, exclusive of full-blood aboriginals, 235,540 (Mar. 31, 1938, estimate), compared with 227,599 (1933 census). During 1937 there were 4841 births, 2225 deaths, and 2042 marriages. The principal cities are Hobart (capital) with 62,450 inhabitants, including suburbs, on Dec. 31, 1937; Launceston and suburbs, 32,820 (1937); Devonport, 5151 (1933).

Production. The chief agricultural products are wheat (551,000 bu. estimated in 1937-38), oats, peas, fruits, potatoes, hops, and hay. Livestock in the State (Dec. 31, 1936): 261,597 cattle, 30,971 horses, 40,021 pigs, and 2,233,655 sheep. The principal dairy products for 1936-37 were butter, 10,918,278 lb.; cheese, 2,994,227 lb.; bacon and ham, 2,132,464 lb. Wool (greasy) produced during 1937-38 was estimated to total 14,000,000 lb.

The estimated value of mineral production for 1937 was 1,955,551 Australian pounds, of which copper accounted for £A759,332; tin, £A260,673; coal, £A66,883; gold, £A176,130; silver and lead, £A308,262. In 1936-37, from the 946 factories, with 12,431 employees (including working proprietors),

the estimated net value of production was £A4,815,604 (Australian £ averaged \$3.9594 for 1936; \$3.9394 for 1937).

Government. For the year ended June 30, 1938, revenue totaled £A3,640,000; expenditure, £A3,633,000; public debt, £A25,841,000. The executive authority is vested in a governor, assisted by an executive council of responsible ministers who are also members of parliament. Parliament consists of a legislative council of 18 members elected for 6 years, and a house of assembly of 30 members elected by proportional representation for 3 years. Governor, Sir Ernest Clark (term: Aug. 5, 1933, to Aug. 5, 1938; extended to Aug. 5, 1940); Premier, A. G. Ogilvie. See AUSTRALIA.

TATAR AUTONOMOUS SOVIET SOCIALIST REPUBLIC. See RUSSIAN SOVIET FEDERATED SOCIALIST REPUBLIC.

TAXATION. The outstanding development of 1938 in the field of taxation was the virtual elimination of the Federal undistributed profits tax and a marked liberalization of the capital gains tax in the Revenue Act of 1938. As in the preceding year, no material increase occurred in the aggregate burden of Federal and State taxation. Agitation for a revision of certain taxes because they tended to discourage industrial expansion and new investment by individuals in private enterprise bore fruit, however, in the shape of the changes in Federal taxation mentioned, despite vigorous opposition from the Administration.

Federal Taxation. The Treasury Department made extensive studies of tax legislation during 1937, but when the new revenue measure was introduced a revolt developed and the changes made both in the House and the Senate departed in several basic particulars from the Administration's wishes. The President did not sign the bill as finally passed, so that it became law without his signature on May 26, 1938. In a public statement on the bill, the President specifically criticized the changes made in undistributed profits and capital gains taxation. He charged that the radical reductions in the undistributed profits tax encouraged tax evasion, while the changes in capital gains taxation were a step away from the progressive principle.

The Revenue Act of 1938 substituted, for the graduated corporate undistributed profits tax of 7 to 27 per cent imposed by the Revenue Act of 1936, a flat tax of 2½ per cent of retained net income. At the same time, the corporate normal tax was increased from 15 to 16½ per cent for corporations earning more than \$25,000. Those earning less than \$25,000 were to pay 12½ per cent on the first \$5000 of their net income, 14 per cent on the next \$15,000, and 16 per cent on the next \$5000, and were not made subject to undistributed profits taxation. An effort by the Administration to impose an additional 20 per cent tax on the income of closely held corporations, which were to constitute the so-called "third basket," was defeated in Congress. Even the 2½ per cent undistributed profits tax was imposed for the calendar years 1938 and 1939 only, so that unless Congress takes action on the subject again this tax will lapse.

The new system of taxation on capital gains and losses imposed by the Revenue Act of 1938 divided such gains and losses into two classes. Short-term gains and losses were those arising out of the sale of assets held 18 months or less, and short-term losses could be applied only against short-term gains. Such gains were to be included in income at 100 per cent, and no deduction was allowed for net short-term losses, although there was provision for

carrying over such short-term losses for one year. The gains or losses on assets held from 18 months to two years were included in income at 66½ per cent, and, if held more than two years, at 50 per cent. Net long-term losses might be deducted from other income up to the amount of these percentages. The tax payer was given the option of paying the flat rate of 30 per cent on net long-term capital gains, where the combined normal and surtax rates would be higher.

The new tax law also extended the time for payment of estate taxes from 8 to 10 years, permitted corporations to change their capital stock value for the purpose of the capital stock tax as of June 30, 1938, and each third year thereafter, and repealed a number of "nuisance" excise taxes, including those on tooth and mouth washes, dentifrices, tooth pastes, toilet soaps, furs, phonograph records, sporting goods, cameras, lenses, chewing gum, matches in books, brewers' wort and malt syrup, and crude petroleum. The tax on distilled spirits, except brandy, was increased from \$2 to \$2.25 per gallon.

The yield from Federal income taxes for the fiscal years ended June 30, 1937, and 1938, compared as follows:

INCOME TAXES IN FISCAL YEARS 1937 AND 1938

[In millions of dollars]

	1937	1938	Change
Current corporation	894.3	1,145.6	+251.3
Current individual	996.0	1,189.0	+193.0
Back taxes	258.3	251.6	- 6.7
Excess-profits tax	25.1	36.6	+ 11.5
Total income taxes	2,173.7	2,622.8	+449.1

State Taxation. Only minor changes were made in taxation by State legislatures during the year. Minnesota and Mississippi made small increases in their income-tax rates, and in New York net capital gains were made subject to half the rates imposed on other income. A few States made changes in their sales taxes, but no new imposts of this kind were imposed by State governments. In Louisiana a 1 per cent general sales and use tax was substituted for the former 2 per cent so-called luxury tax. The Supreme Court held the Indiana Gross Income Tax Act of 1933 unconstitutional because it included revenue from interstate as well as intrastate commerce, reversing the Indiana court on this issue. Similarly, the New York Court of Appeals limited the application of the New York City sales tax by holding that merchandise delivered in New York City from outside the State was exempt from this impost.

The chief change in municipal taxation was the imposition of a 2 per cent sales tax in Philadelphia on Feb. 24, 1938, over the veto of the mayor. This tax was subsequently upheld by the courts. In Seattle, the mayor vetoed a measure imposing a gross income tax upon all business enterprises in the city.

No new chain taxes were levied during the year by State governments, but changes were made in existing measures. Minnesota repealed the 1933 chain-store tax following an adverse court decision, and imposed instead a graduated tax on persons conducting chain stores and mail-order establishments. Wisconsin reduced rates in her chain-store tax law, and in Georgia the State Revenue Commission ruled that voluntary groups of grocery stores were, for tax purposes, to be considered as chain-stores.

Several States imposed additional liquor taxation during the year, Louisiana raising the rate on

intoxicating liquors, fortified and sparkling wines from 60¢ to \$1 a gal., while New York City increased the tax on the sale of alcoholic beverages from 2 to 3 per cent. New York City also imposed a specific tax of 1¢ a package on cigarettes in lieu of the tax on their sale. A number of Middle Western States imposed discriminatory legislation against imports of alcoholic beverages from other States, in some instances for reprisal purposes, and the Supreme Court upheld such restrictions on interstate commerce on the ground that the twenty-first amendment places sales of alcoholic beverages in each State absolutely under the jurisdiction of the State government, even though these beverages cross State lines and so enter interstate commerce.

TELEGRAPHY. Although most commercial telegraph trunk circuits have been operated by printing telegraph methods for some years, Morse code operation has been adhered to generally on way-wires. (Way-wires are lines serving several small or intermediate stations too small to have private wires.) Arrangements for operating way-wires by printing telegraph were developed and reported in 1938 before the A.I.E.E. These included a polar simplex system, a neutral way-wire system, a code-calling bell arrangement, and a multistation customers' printing circuit that provides secrecy by preventing the connection of more than one customer's printer to the line at one time. The wide use of telephones for train dispatching and the increasing use of printers on commercial telegraph circuits have reduced the available supply of Morse code operators, making it desirable in many instances to substitute printer operations for code on way-wires. The conversion to printer operation on way-wire circuits has been retarded previously by lack of simple and reliable equipment suitable for operating such circuits, for calling individual way-stations, and for preventing one station from recording messages intended for another. See RADIO.

TELEPHONY. In the telephone field Pres. W. S. Gifford of the American Telephone and Telegraph Co. was elected president of the Telephone Pioneers of America for the year 1939. Dr. Frank B. Jewett, vice-president of the A.T.&T. and president of the Bell Telephone Laboratories, was awarded at the close of 1938 the John Fritz Gold Medal for 1939 for his "vision and leadership in science and for notable achievement in the furtherance of industrial research and development in communication." This award was made by a board composed of representatives of the American Society of Civil Engineers, the American Society of Mining and Metallurgical Engineers, the American Society of Mechanical Engineers, and the American Institute of Electrical Engineers.

Developments in telephone transmission lines and equipment continued through 1938. The year-end finds us able to hold 12 telephone conversations on a single pair of telephone cable wires, 16 telephone conversations on a single pair of open-line wires, and literally hundreds of separate telephone conversations on the new coaxial conductors previously announced. Refinements in what is known as the carrier-current system have brought this about.

The year of 1938 saw the operation of a fourth transcontinental (U.S.) communication line. It was completed late in 1937; the original was placed in service in 1915. For weather and other reasons the new route west of St. Louis lies through Oklahoma City, Albuquerque, and Flagstaff to Los Angeles. The initial 4 pairs of wires on this line add 16 telephone circuits to the transcontinental facilities and the line is so designed that 48 additional circuits may be obtained through the addition of equipment but without stringing additional wire. A large portion of this new route lies through sparsely settled areas and several of the "repeater stations" are unattended. At such stations windmill generating sets were installed to charge the storage batteries which supply current to the electronic amplifiers or repeaters. If the wind fails a gasoline-engine-driven generator will start automatically when the batteries reach a certain stage of depletion; should this equipment fail, another device automatically will sound an alarm at the nearest attended repeater station.

Telephone statistics published late in 1938 covering the year 1937 show some interesting points. Of the 37,098,084 telephones in service on Jan. 1, 1937, 49.69 per cent were in the United States alone, 53.78 per cent in North America; 2.06 per cent in South America; 36.43 per cent in Europe, 20.78 in Great Britain, Germany, and France alone; 4.56 per cent in Asia, 3.23 in Japan alone; 0.90 per cent in Africa; 1.52 per cent in Australia; 0.75 per cent in other island territories. About 93 per cent of the world's telephones can be reached from the average telephone in the United States. In number of telephones installed per 100 population, the United States leads with 14.39, then come Canada with 11.48, New Zealand with 11.25, Sweden with 10.97, Denmark with 10.89, and the four leading cities of the world are Washington 37.43, San Francisco 37, Stockholm 34.78, and Denver 30.96.

Extensions have been made in facilities providing radio telephone communication between ship and shore. By the close of 1938, 600 or more boats in harbor and coastal waters of the United States and several trans-Atlantic ships could be reached directly from any shore telephone, through one of the 12 ship-to-shore stations.

A new and direct radio telephone circuit to Australia was established from San Francisco during 1938, replacing the original route from New York via London. The new circuit is several thousand miles shorter and a consequent reduction has resulted in the charge for a call to or from Australia. Also, during the year, arrangements were made for direct communication circuits to Switzerland, Italy, and Germany, and, when necessary equipment has been installed, calls now handled from the United States through London to these countries may be handled directly. Further progress was made with the single-side-band radio telephone system introduced during 1937, enabling an additional telephone circuit to be obtained from each of two existing short-wave radio channels to London which previously provided but one circuit apiece.

A new single-channel carrier telephone system known as the "Type H" was announced early in 1938. Improved, and lower in cost, this new equipment enables the economical addition of one circuit at a time as required on open-wire telephone lines over shorter distances than heretofore were economical. A remote-control electric accounting system described before the American Institute of Electrical Engineers early in 1938 utilizes com-

munication circuits and certain other equipment in, for example, a department store to permit expeditious centralized accounting control. Sales, charge authorizations, inventory controls, etc., are served by the system, which in the experimental installation used 250 transmitters, 20 recorders, and 15 credit authorizing units to handle routine operations of a first-class department store at a peak rate of some 9000 transactions per hour, about half of which were charge transactions.

Repair of Storm and Flood Damage. The September hurricane which visited the northeastern states caused the greatest damage to telephone plant which the country has ever experienced and put out of service more than 500,000 telephones. The benefits of standardized equipments and methods were never realized on a greater scale in an emergency than in the restoration of service and rebuilding of the plant in the affected areas.

To assist the local forces, nearly 2500 telephone plant men and over 600 motor trucks and 200 trailers were sent by highway and rail into the stricken areas from states as far away as Nebraska and Virginia. To take care of the greatly increased number of calls, operators were sent from adjoining territories, in some cases by airplane. Telephone material employed for the restoration work included 22,000 poles, 27,000 crossarms, 3,500,000 feet of cable, 54,000,000 feet of drop wire, 275 kinds of hardware totaling 1000 tons, 1200 tons of copper and steel line wire.

TELEVISION. Again the question, "what about television?" So far as the general radio public is concerned, 1938 left television still "around the corner." Technical improvements, of course, have been many, and contributed by many different investigators. Test programs have been broadcast frequently in New York and elsewhere and so far as the technicians are concerned have helped to reveal what methods and equipment are relatively most satisfactory. Although working on different principles, new studio cameras developed both by Farnsworth and the RCA-NBC engineers facilitate studio pickup and have greater fidelity and sensitivity than earlier models. Several of the research groups have come to a mutual agreement on tentative standards of transmission which have been submitted to the FCC for approval. From a technical point of view the tentative transmission standards have established a definite objective toward which the development of innumerable details may be directed. Several new amplifier tubes of improved operating characteristics have been made available during the year. Fluorescent screens have been improved in brightness and in color contrast. The development of the coaxial cable by telephone engineers answered some television problems and brought up others now under investigation. Efforts to improve and reduce the cost of cathode-ray tubes are being pursued. For experimental purposes, expensive and elaborate portable studios and transmitting facilities have been installed in special trucks and buses to enable various outdoor scenes to be picked up and transmitted up to 25 miles to the parent station for rebroadcasting. In so far as the reproduced television picture is concerned, the present tentative standard of a 441-line picture is better than that produced by the average home movie projector. Demonstration receivers indicate that station selection may be simplified down to the push buttons that now characterize the modern broadcast receiver. Not the least of the problems to be answered before television becomes commercially common are the mat-

ters of organization and production cost of the necessary programs which, unlike routine broadcast, cannot be picked up from a phonograph record. The motion picture industry has indicated its interest in the matter of television programs.

Reduced to question form, six of the major problems confronting the budding television industry as discussed in November, 1938, at a joint meeting of the Institute of Radio Engineers and the Radio Manufacturer's Association at Rochester, N. Y., are:

1. What standard name shall be given to the picture tube in a television set, now variously known as picture tube, television tube, cathode-ray tube, kinescope?
2. What standard sizes shall be established for picture tubes to insure interchangeability? Both 5- and 9-in. tubes now are common and others may be introduced.
3. What shall be the standard size of the reproduced picture? For instance, a 9-in. tube might be expected to produce a 5- by 7-in. picture without the corners being cut off on the curved screen.
4. What can be done to secure the maximum simplicity in the operation of television sets? This involves a host of questions ranging from the psychology of the user to the matter of manufacture and subsequent technical servicing.
5. How or by whom shall the set be installed? Surveys must be conducted to determine in what areas the user of any television receiver may expect to pick up an acceptable reproduction. Technical servicing of high caliber would appear to be of even greater importance than with a good radio receiver.
6. What is a television receiver? Is it a set that will give also complete radio broadcast pickup or shall it be limited to the pickup of visual images—and what identifying terminology shall be adopted?

It seems certain that 1939 will see the beginning of television pickup in the American home, at least to a limited extent.

TEMPLE UNIVERSITY. A coeducational institution of higher learning in Philadelphia, Pa., founded in 1884. The 1938 autumn enrollment was 6420 in the three colleges of liberal arts, education, and commerce and 1985 in the eight professional schools of chiropody, dentistry, law, medicine, oral hygiene, pharmacy, theology, and nursing. The 1938 summer session had an attendance of 1420. There were 758 faculty members. The income for the year ending June 30, 1938, totaled \$2,152,116. The libraries of the University contained 150,000 volumes. President, Charles E. Beury, LL.D.

TENNESSEE. Area and Population. Area, 42,022 square miles; included (1930) water, 335 square miles. Population: Apr. 1, 1930 (census), 2,616,556; July 1, 1937 (Federal estimate), 2,893,000; 1920 (census), 2,337,885. Memphis (1930) had 253,143 inhabitants; Nashville, the capital, 153,866.

Agriculture. Acreage, production, and value of the chief crops of Tennessee, for 1938 and 1937, appear in the accompanying table.

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1938	2,689,000	68,570,000	\$38,399,000
	1937	2,772,000	66,528,000	39,917,000
Cotton	1938	791,000	487,000	21,672,000
	1937	989,000	661,000	26,741,000
Hay (tame)	1938	1,660,000	1,850,000	14,800,000
	1937	1,603,000	1,597,000	17,407,000
Tobacco	1938	126,500	111,855,000	17,153,000
	1937	137,500	122,757,000	19,272,000
Wheat	1938	491,000	5,401,000	3,997,000
	1937	540,000	6,750,000	7,222,000
Sweet potatoes	1938	53,000	5,459,000	3,275,000
	1937	55,000	5,610,000	3,815,000
Potatoes	1938	39,000	3,120,000	2,184,000
	1937	39,000	3,081,000	2,311,000

• Bales. • Tons. ° Pounds.

Mineral Production. The value of the annual production of Tennessee's native minerals attained \$32,305,745 for 1936. Coal mining, the leading contributor to this total, yielded 5,292,000 net tons in

1937, as against 5,108,195 tons (value, \$9,460,000) for 1936. Producers' shipments of Portland cement, 3,013,817 bbl. for 1937, about equaled the total of 3,035,406 bbl. for 1936; in value they attained \$4,683,717 (1937) and \$4,741,701 (1936). The value of clay products for 1936 was \$3,047,299. The output of zinc (including that of Virginia) rose to 55,255 tons (value, \$7,183,150) of recoverable metal in ore, for 1937, from 44,916 tons for 1936. The production of phosphate rock, continuing its recent yearly increase, rose to 825,099 long tons for 1937, from 643,822 tons for 1936; by value, to \$3,343,108, from \$2,598,279. The expanding activity of the TVA in mining phosphate rock for the manufacture of fertilizers at Muscle Shoals brought about much of the rise. The yield of stone included (1937) marble for building, to the value of \$1,365,601. Of the 292,681 lb. of primary aluminum (value, \$55,609,000) produced in the Union in 1937, 31 per cent was made at Alcoa, Tenn. As this was simply a treatment of ores from elsewhere, the resulting value did not enter into the aggregate value of production of the minerals of the State.

Finance. Tennessee's State expenditures in the year ended June 30, 1937, as reported by the U.S. Bureau of the Census, were: For maintaining and operating governmental departments, \$33,799,376 (of which \$16,226,189 was for roads and \$4,745,335 was for local education); for interest on debt, \$4,729,759; for capital outlay, \$7,675,729. Revenues were \$49,085,375. Of these, property taxes furnished \$1,218,852; sales taxes, \$21,145,577; departmental earnings, \$4,050,697; sale of licenses, \$9,229,978; unemployment compensation, \$3,900,571; Federal or other grants-in-aid, \$6,812,787. Funded debt outstanding on June 30, 1937, totaled \$104,041,500. Net of sinking-fund assets, the debt was \$91,007,270. In these totals did not appear \$27,416,362 of county-reimbursement road bonds, served by apportionment to counties from the gasoline tax. On an assessed valuation of \$1,474,957,956 the State levied in the year ended June 30, 1938, ad-valorem taxes of \$1,179,966.

Education. Enrollments of pupils in Tennessee's public schools for the academic year 1937-38 numbered 637,920, which comprised 522,138 in the elementary group and 115,782 in high schools. There were 9682 enrollments in the State colleges. The year's current expenditure for public-school education totaled \$21,534,946. Public schools employed 20,093 teachers. Their monthly salaries, by groups, averaged: In elementary positions, \$76.69 in county and \$104.34 in city schools; in high-school positions, \$113.89 in county and \$141.18 in city schools.

An enactment of 1938 increased by about \$3,000,000 the State's aid toward paying the salaries of public-school teachers in Tennessee, supplying rural schools' libraries, furnishing transportation for pupils, and other matters. Regulations of the State Board of Education set definite standards to which rural elementary schools were required to conform.

Political and Other Events. Rulings of the U.S. Supreme Court early in the year (see UNITED STATES: *Judiciary*), defeating efforts of privately owned public utilities to check the PWA and the TVA, favored the plans of public electrification in Tennessee. The Federal Administration, however, to quiet Senate opposition to appropriations, declared that it would try to avoid competition with private purveyors of electric current by buying them out at fair prices. There followed in Tennessee a series of negotiations and accompanying moves

in which the Federal Government, the State administration, and municipalities took part. Previous action had been taken by Chattanooga to put the local service of the Tennessee Electric Light and Power Company out of business by revoking its franchise. The State Supreme Court halted this move by a decision (January 15) upholding the company's right to continue to use its easements in the streets. Governor Browning was reported to favor the joint purchase, by the TVA and the State, of companies that were to be bought out; Senator McKellar wanted the purchasing done by Federal money alone. Knoxville and the TVA signed (June 14) a contract to buy the Tennessee Public Service Company's property at Knoxville.

The State's system of deciding the nomination of certain officers by majority vote according to county units (the vote by counties, weighted to adjust difference in voting power) was overthrown by the State Supreme Court. Its decision, rendered early in the year, held the method unconstitutional because based in part on counties' population. While the invalidated law allowed a county a number of "county-unit" votes determined by its total vote in the last previous election, it limited such total votes to a number equal to a percentage of the population. This was said to work prejudice to Shelby County (including Memphis); this county, which had cast about 60,000 votes in the last general election, would have had the weight, under the law, only of a county casting 38,400 votes. The county-unit act had been passed at a special session of the Legislature in October, 1937. E. H. Crump, long-established leader of the local Democratic organization in Memphis, was generally accounted the prime mover of the relatively high vote of Memphis, and Browning was politically at odds with Crump.

The State established flying schools, under a State Director of Aviation, at five chief airports; the schools were open to all physically qualified citizens of the State over 16 years of age. A drug reported to be an elixir of sulfanilamide, marketed in a number of Southern States in 1937, was blamed for having contributed to about 70 deaths; Samuel E. Massengill, a manufacturer, was prosecuted in a Federal court at Greenville, Tenn., on charges of violation of the Pure Food and Drug Act with regard to this product, and was sentenced (October 3) to heavy fines.

Legislation. Governor Browning, soon after the invalidation of the county-unit voting law, related above, summoned a special legislative session. It enacted a measure, augmenting the State Registration Board's powers, which as was expected might destroy the Crump organization's control of elections in Memphis. A crime commission was created for inquiring into commercialized law-breaking in municipalities; it later obtained alleged evidence of bootlegging in Memphis.

Elections. At the general election (November 8) the normal Democratic majority elected Prentice Cooper for Governor, A. Tom Stewart for U.S. Senator, and seven of the State's nine U.S. Representatives, the other two being Republicans.

The State primary election (August 4) gave the Democratic nominations to the faction headed by E. H. Crump of Memphis, after a bitter pre-primary contest between this group and the followers of Governor Browning. Prentice Cooper won the nomination for Governor from Browning himself, and A. Tom Stewart, gaining the nomination for U.S. Senator, amplified the Crump faction's success, defeating George L. Berry, appointee Sen-

ator, who sought election, supported by Browning. While Memphis heaped up margins around 48,000 for the Crump candidates, the rest of the State's vote also ran somewhat against the chief figures of the Browning ticket. The campaign previous to the primary was marked by charges on either side that voters were being intimidated and votes purchased. The Senate's special committee for investigating the conduct of Senatorial campaigns heard such charges and issued a warning that the election ran risk of being questioned, whichever side won. Governor Browning prepared at the end of July to move troops of the National Guard into Memphis just before primary day, but a Federal injunction was obtained (August 1) to prevent his doing so.

Officers. Tennessee's chief officers, serving in 1938, were: Governor, Gordon Browning (Dem.); Treasurer, Grover Keaton; Comptroller, John Britton; Secretary of State, A. B. Broadbent; Attorney-General, Roy H. Beeler; Commissioner of Education, W. A. Bass.

Judiciary. Supreme Court: Chief Justice, Grafton Green; Associate Justices, A. W. Chambliss, Colin P. McKinney, William L. Cook, W. H. Swiggart.

TENNESSEE, UNIVERSITY OF. A State institution of higher education, nonsectarian, and co-educational, in Knoxville. The enrollment for 1938-39 was 4167. The total enrollment for the 1938 summer session was 2377. The faculty numbered 297. The endowment for the year was \$468,127 and the income amounted to \$2,348,000. The library contained 180,884 volumes. President, James D. Hoskins, LL.D.

TEXAS. Area and Population. Area (1930, with later revision to include 45 square miles gained from Oklahoma in revision of boundary), 265,941 square miles; included (1930) water, 3498 square miles. Population: Apr. 1, 1930 (census), 5,824,715; July 1, 1937 (Federal estimate), 6,172,000; 1920 (census), 4,663,228. Houston had (1930) 292,352 inhabitants; Dallas, 260,475; San Antonio, 231,542; Fort Worth, 163,447; Austin, the capital, 53,120.

Agriculture. Acreage, production, and value of the chief crops of Texas, for 1938 and 1937, appear in the table in next column.

Mineral Production. As reported in the *Minerals Year Book* for 1938, the aggregate value of the annual production of native minerals in Texas, for 1936, was \$638,732,530; this was the highest total for any State of the Union for that year. Petroleum contributed over 70 per cent to the State's aggregate and natural gas most of the remainder. The yield of petroleum subsequently mounted to 510,732,000 bbl. for 1937, from 427,411,000 (value, \$449,400,000) for 1936. Discoveries of additional petroliferous areas continued in 1937. They occurred in many parts of the State; 13 new fields were added to the Gulf-coast district's list of more than 50 fields. The discovery of the foremost potential worth was thought by some to be

Crop	Year	Acreage	Prod. Bu.	Value
Cotton	1938	9,153,000	3,125,000	* \$129,688,000
	1937	12,539,000	5,154,000	* 217,490,000

* Bales. ^b Tons. ^c Pounds. ^d Boxes.

the presence of petroleum at depth in an area beneath the shallow petroleum of the old KMA field in North Texas. The East Texas district, foremost in production, increased its output by active development in 1937 but did not report conspicuous discoveries. The marketed production of natural gas rose to 860 billion cu. ft. for 1937, from 734,561 millions (value, \$113,929,000) for 1936. The figure for either year exceeded one-third of the yearly total for the whole Union. Pipe lines (1937) distributed 402 billion cu. ft. for fuel and light; 300 billion more went into the production of carbon black. Gasoline extracted from natural gas increased to 611,800,000 gal. for 1937, from 520,547,000 gal. (value, \$19,670,000) for 1936. Despite the abundance of natural gas and petroleum, coal was mined at a yearly rate exceeding 800,000 tons; it brought the mines somewhat less than \$1 a ton.

The production of sulphur, the leading non-fuel mineral, rose to 2,339,525 long tons (1937), from 1,630,719 tons (value, \$29,352,944) for 1936. The tonnage of Texas constituted (1937) all but about 400,000 tons of the production of sulphur in the United States. Producers' shipments of Portland cement attained, for 1937, 6,687,719 bbl. (value, \$11,488,866).

Finance. State expenditures in the year ended Aug. 31, 1937, as reported for Texas by the U.S. Bureau of the Census, were: For maintaining and operating governmental departments, \$110,675,438 (of which \$18,188,946 was for highways and \$36,246,450 was for local education); for interest on funded debt, \$1,106,101; for capital outlay, \$41,997,591. Revenues were \$177,220,355. Of these, property taxes furnished \$21,191,754; sales taxes, \$52,832,036 (chiefly tax on gasoline, \$40,551,797); departmental earnings, \$6,310,140; sale of licenses, \$17,798,311; unemployment compensation, \$14,258,506; Federal or other grants-in-aid, \$33,876,594. Funded debt outstanding on June 30, 1937, totaled \$29,390,700. Net of sinking-fund assets, the debt was \$26,648,564. On an assessed valuation of \$3,247,532,305 the State levied in the year ad valorem taxes of \$20,134,700.

Education. Texas kept up, through 1938, the increased apportionment of \$22 per capita of the school population adopted in 1937 for the public schools' support. A new curriculum for the public schools was issued in several volumes. The expenditures of the academic year 1937-38 for public-school education exceeded \$69,000,000, exclusive of some \$13,100,000 for capital outlay and service of

debt. They covered 5715 common-school districts and 1020 independent school districts. About \$41,000,000 of the money for the public schools' expenditure in the year came from the government of the State.

While the apportionment of \$22 per capita made by Texas toward the support of public schools greatly aided their operation, the *Journal* of the National Education Association reported that the grant had not made it possible to give as much as nine months of instruction in all cases.

Charities and Corrections. The State's administrative organization as it stood in 1938 provided support, care, and custody for persons through the Board of Control, the Texas Prison Commission, and the Unemployment Compensation Commission. These were independent units of government, but not of equal scope: The Unemployment Compensation Commission dealt only with the temporary aid for persons who had been thrown out of work; the Prison Commission governed the State's penal institutions and had the care of probation and parole; while the Board of Control, through divisions of its organization, carried on the State's work in poor-relief, administered the support granted to elderly indigents, needy children, and the dependent blind under the system of Social Security, and governed 22 State institutions in which there were, December 1, 20,480 inmates. More than three-fifths of this number were mental patients in the seven State hospitals at Abilene, Austin, Galveston, Rusk, San Antonio, Terrell, and Wichita Falls. An eighth member of the group, at Big Spring, was under construction. The Austin State School cared for 1547. Other institutions under the Board were State School Farm Colony, Austin; Colored Orphans' Home, Gilmer; Confederate Home (39 inmates), Austin; Confederate Women's Home (83), Austin; Deaf, Dumb, and Blind Institute for Colored Youths, Austin; Girls' Training School, Gainesville; Home for Dependent and Neglected Children, Waco; Juvenile Training School, Gatesville; Kerrville State Sanatorium; State Orphans' Home, Corsicana; State Tuberculosis Sanatorium, at Sanatorium; Texas School for the Blind, Austin; Texas School for the Deaf, Austin.

Political and Other Events. Matters of chief concern to Texas during 1938 included the leasing system, control of production, and organization of labor in the petroleum industry; issues with the Federal Government and with neighboring States over the control and distribution of the water of rivers; the prospects offered to the cotton-growers by the new Federal system for regulating agriculture; and the election of State officers and legislators. Governor Allred received (July 11) an appointment as Federal District Judge in the Southern Texas District. The State Supreme Court upheld the constitutionality of the law subjecting the chain stores to a special tax, which had been in litigation since January, 1936.

Land Commissioner McDonald's methods in the leasing of mineral rights in certain public lands to producers of petroleum were investigated early in the year by a committee of the State Senate. Governor Allred called on Attorney-General McCraw to start suits to cancel 10 of the leases of such lands that McDonald had made. The proceedings as to the McDonald leases brought into prominence a belief that the law giving a single officer wide discretionary power in the disposal of so much potential wealth should be changed. The land involved was chiefly submerged territory of the State along

the coast of the Gulf of Mexico, much of it rich in petroleum; this land, set aside by statute for the benefit of the permanent public-school fund, was under the sole administration of the Land Commissioner. The organization of employees in the petroleum industry made progress; the rig-builders in the Houston area were reported in May to have virtually all joined an organization. The dominant unions were connected with the C.I.O.; demands for agreements with employers were in prospect. Diminished demand necessitated a reduction of the output of petroleum in the State early in the year, in accordance with the State's policy of conservation; the Railroad Commission effected the reduction by ordering shutdowns on Sundays (January 22) and later, on Saturdays as well (May 14), which were maintained until July 1.

A flood of the (Texan) Colorado River late in July, following abnormally heavy rain, did severe damage to farms and crops along the river's lower course. The Buchanan Dam, a Federally built structure farther up the river, received the blame for the damage, the sufferers declaring that the release of water at the dam, from the lake above, had been wrongly timed so that it failed to lessen and even out the flood. Criticism fell partly on the Colorado River Authority, charged with having failed to attend properly to the management of the dam, and partly on the PWA, alleged to have subordinated flood-prevention to the generation of power in its choice of the site. Damage in the five flooded counties was about \$5,000,000. See DAMS. Fort Worth bargained for electric current from the Colorado River Authority, to light the streets and supply the city's institutions. It planned also a municipal system for distributing current from the same source to private consumers. A Federal appropriation for a dam on the Red River at Denison brought prospect of early Federal construction there.

The payment of unemployment compensation (temporary support to persons losing employment) began in January, out of a fund of about \$20,000,000 accumulated in accordance with the Federal Social Security Act. The necessary initial payments were relatively small, about \$60,000. The rate of unemployment in the State at the time was less than the average rate for the nation. In connection with the payments the State maintained an Employment Service. See CHILD LABOR.

The construction of the San Jacinto Monument was completed. This monument, 9 feet taller than the Washington Monument and similar in form, was built on the battlefield of San Jacinto to mark the centennial of Texan independence from Mexico; it cost somewhat over \$1,000,000, supplied in part by the State and in part by the Federal Government.

Elections. W. Lee O'Daniel (Dem.) was elected Governor at the general election (November 8); a Republican candidate, Alexander Boynton, also ran, and obtained about one seventh of the vote cast. The 21 Democratic nominees for U.S. Representatives, all incumbents save 3, were elected; only 7 had Republican opposition.

The decisive vote, as usual, was cast not in the general election but in the Democratic primary (July 23). O'Daniel easily won the nomination, against Ernest O. Thompson, Railroad Commissioner, and William McCraw, Attorney-General. Governor Allred, having been appointed to the Federal bench, was not a candidate. Labor's Non-Partisan League, the political arm of the C.I.O., manifested itself in the primary campaign by en-

dorsing Representative Maury Maverick for renomination and urging votes against Representatives Summers, Mansfield, Lanham, Dies, and West. Although the C.I.O. had gained a considerable membership among the employees in the petroleum industry, its efforts failed either to renominate Maverick, who was defeated, or to defeat the proscribed five, all of whom were renominated.

O'Daniel, without political experience, won his nomination for Governor at the primary by conducting a picturesque campaign on singular lines. Previously a flour salesman, personally known to people among whom he had traveled, he toured the State accompanied by a band that he had long employed to perform over the radio in connection with advertising for the goods that he sold. This band rendered "hillbilly" tunes, or "mountain music," at his stops, and O'Daniel made addresses of a moral and semi-religious sort, shunning definite political discussion. His political inexperience was manifested at the Democratic State convention, held at Beaumont, which ratified his nomination. Attempting to explain the significance of a plank on old-age pensions that he wanted in the party platform, he was virtually howled down by unimpressed political veterans whose hostility he did not know how to control.

Officers. The chief officers of the State of Texas, serving in 1938, were: Governor, James V. Allred; Lieutenant-Governor, Walter F. Woodul; Secretary of State, Edward Clark; Treasurer, Charley Lockhart; Comptroller, George H. Shepard; Attorney-General, William McCraw; Superintendent of Public Instruction, L. A. Woods.

Judiciary. Supreme Court: Chief Justice, C. M. Cureton; Associate Justices, Richard Critz, John H. Sharp.

TEXAS, UNIVERSITY OF. A State institution of higher education for men and women, founded in Austin in 1883. For the autumn of 1938 the enrollment at the main university totaled 10,103; that at the medical branch in Galveston was 493. There were 548 members on the faculty. The 1938 summer session had an attendance of 6077. The endowment resources (in part for the Agricultural and Mechanical College of Texas) amounted to more than \$36,000,000. The libraries contained 550,000 volumes. Acting President, John W. Calhoun.

TEXAS STATE COLLEGE FOR WOMEN. A college of liberal and technical arts in Denton, Tex., established in 1901 for the higher education of women by the Legislature of the State of Texas. The enrollment for the fall semester of 1938 includes 2695 students in the day session. There is no evening session. The enrollment for the summer session of 1938 was 1176. The faculty numbers 165. The library contains 73,000 volumes. Seven new buildings, erected at a cost of \$1,300,000, were completed during 1936-37. President, Louis Herman Hubbard, Ph.D., LL.D.

TEXAS TECHNOLOGICAL COLLEGE. A State coeducational institution at Lubbock, Tex., opened in 1925. The enrollment in the fall semester of 1938-39 was 3507 (agriculture, 473; engineering, 821; home economics, 422; arts and sciences, 1791). The 1938-39 enrollment, including both fall and spring semesters, was estimated at 3830. During the summer session of 1938 there were 1839 students enrolled. The teaching staff for 1938-39 numbered 173. The State appropriation for salaries and maintenance amounted to \$496,353 plus \$34,000 for the summer school. The income from student tuition was estimated at \$220,000, including summer school. The library contained 61,404 cata-

logued volumes and public documents. President, Clifford B. Jones.

TEXTILES. Textile mill activity in the United States reflected a sharp increase in operations in the latter part of 1938 as contrasted to the equally sharp decrease in the last months of 1937, according to a review by *Textile World*. For 1938, activity was 18 per cent below 1937.

Textile fiber consumption in the United States, according to the Textile Economics Bureau, Inc., New York, in 1938 for cotton was 2,904,400,000 lb., silk 54,500,000 lb., rayon 274,100,000 lb., and wool 284,400,000 lb. Monthly deliveries of raw silk to United States mills in 1938 averaged 34,300 bales, total for year 411,794, against 35,450 per month, total 425,299 for previous year. Silk consumption in 1938, 391,399 bales, and in 1937, 405,289. Total wool consumption (apparel and carpet) for 1938 was 284,400,000 lb., as against the total, for 1937, of 353,300,000 lb., which averaged a monthly 29,400,000. United States monthly cotton lint consumption 1938, averaged 491,948 bales, total for year 5,903,381; that in 1937, 618,166 and 7,417,991.

Exports of cotton and other textile fibers and manufactures thereof from the United States during 1938, as reported by the U.S. Bureau of Foreign and Domestic Commerce, were valued at \$322,965,000, a decline of about 31 per cent compared with the value of such exports in 1937 (\$437,292,000). Unmanufactured cotton represented 71 per cent of the value of exports of this group in 1938, against 79 per cent in 1937. Exports of raw cotton and linters declined in quantity from 6,023,695 bales in 1937 to 4,561,662 in 1938 and in value from \$368,660,000 to \$228,669,000. Shipments of other textile products, mainly manufactures, were valued at \$98,633,000 in 1937 and \$94,296,000 in 1938.

The United States imported (for consumption) textile fibers and manufactures thereof to the value of \$280,774,000 a drop of 41 per cent compared with the value of similar imports in 1937 (\$476,928,000). Textile raw materials (including waste and rags) accounted for a value of only \$153,942,000 in the 1938 total, against \$287,539,000 in 1937, or 55 per cent of the total value of the imports of the textile group in 1938, against 60 per cent in 1937.

The Wages and Hours Law, which became operative Oct. 24, 1938, may, in 1939, have an important effect on the textile industry. Late in 1938 were appointed committees as the Textile and Apparel Industry to consider wages and hours of workers. See CHEMISTRY, INDUSTRIAL.

THEATER. See DRAMA; FRENCH LITERATURE; GERMAN LITERATURE; LITERATURE, ENGLISH AND AMERICAN, ETC.

THEOSOPHICAL MOVEMENT, THE. The Theosophical Movement, aiming at the changing of the mind and the heart of the race, through the arousing of man's spiritual intuitions and the spread of the realization and the practice of universal brotherhood, promulgates Mme. H. P. Blavatsky's restatement of the once universal but long almost forgotten ancient Wisdom Religion. Its basic tenets are (1) the existence of a boundless omnipresent Divine Principle, incognizable by the finite mind; (2) the universality of the law of action and reaction under which manifestation periodically succeeds non-manifestation, as day follows night and rebirth follows death; and (3) the progress of every soul toward self-redemption by its own efforts, checked by the just results of every action, feeling, and thought.

During 1938 several prominent for years in the Theosophical Movement passed away, including

Judge N. D. Khandalewalla, one of the earliest of the Parsi group which gathered round Madame Blavatsky after her return to India in 1879, and Mrs. Alice Leighton Cleather, who was one of the inner circle of Madame Blavatsky's students in London until the latter's death in 1891 and who had since devoted years to the clearing of the misconceptions of her teachings which had been spread under the name of Theosophy. She was the author of several works in defense of her teacher, including *A Great Betrayal*; *H. P. Blavatsky: Her Life and Work for Humanity*; and *H. P. Blavatsky as I Knew Her*. Another widely known and devoted worker for genuine Theosophy for many years was the late Mr. T. L. Crombie, formerly connected with the Theosophical Society having its headquarters at Adyar, who was one of the original promoters of the United Lodge of Theosophists in London and in Bombay, where he died in November, 1938.

During the year appeared in Bombay two more pamphlets in the U.L.T. series of reprints, mostly from the largely inaccessible writings of the early days of the Movement, i.e. *Theosophy and Education* by H. P. Blavatsky and *Musings on the True Theosophist's Path* by W. Q. Judge.

During 1938 also the Theosophical Publishing House at Adyar brought out a volume entitled *Where Theosophy and Science Meet*, edited by Prof. D. D. Kanga. The philosophy presented, however, is more Neo-Theosophy than the Theosophy taught by Madame Blavatsky. Mrs. Beatrice Hastings, from her home in Worthing, Sussex, after bringing out her *Defence of Madame Blavatsky* in two volumes, has published five pamphlets devoted to the same subject, the title of the series being "New Universe—Try."

THEOSOPHICAL SOCIETY IN AMERICA. The American section of the Theosophical Society, a world-wide organization founded in New York in 1875 by Mme. Helena P. Blavatsky and Col. Henry S. Olcott. World Headquarters were later established by them at Adyar, India, near Madras. In 1937 branches existed in 49 nations, on 6 continents. The Theosophical Society in America had, in 1938, 153 local lodges. The president of the society was Sidney A. Cook. Headquarters are in Wheaton, Ill.

TIBET, tí-bět'; tīb'ět. A central Asian territory, nominally under the suzerainty of China. Area, 463,200 square miles; population, 2,000,000. Lhasa (capital) had about 50,000 inhabitants. Lamaism, a form of Buddhism, is the prevailing religion. Agriculture is the main industry. Gold, borax, and salt are the chief minerals produced. Tibet's first factory, built at Tapchi and operated by electricity produced by water power, makes copper coins, paper money, and army uniforms and equipment.

History. The unprecedented situation created by the death of the Dalai Lama in 1933 and of the Tashi or Panchen Lama in November, 1937, thus leaving the country without either of its traditional spiritual rulers, was further complicated in 1938 by the death of the Regent, who had ex-

ercuted the Dalai Lama's policies previous to the latter's death and subsequently exercised the supreme power. The elimination of the last of the country's three key political and spiritual leaders precipitated a struggle among the landed gentry, the Young Tibetan party, the army, and the head lamas of three large monasteries near Lhasa for control of the government. An attempted revolt in the army was reported to have been crushed, but the political struggle apparently continued.

Meanwhile, bickering between supporters of the old Dalai Lama and the Tashi Lama continued (see 1937 YEAR BOOK, p. 722). A huge retinue of nearly 1000 lamas, retainers, and troops escorting the body of the Tashi Lama from Jyekundo in Western China, where he died in exile, to the traditional burying place at Tashi Lumpo in Tibet, was held up at Kantse on the Chinese-Tibetan border for many months after it arrived there in March, 1938. The partisans of the former Dalai Lama, who had remained in control after his death, were reported to have refused to permit Chinese troops escorting the Tashi Lama's body to enter Tibet.

The sympathy of the Tibetans for China in her struggle against Japan was expressed through the contribution to the Chinese army of 10,000 sheepskins, valued at 500,000 Chinese dollars, donated by monks, officials, and peasants of Tibet. A large Tibetan delegation arrived at Chungking, China, on November 27 to deliver the sheepskins to Gen. Chiang Kai-shek.

TICK FEVER AND CATTLE TICK ERADICATION. See VETERINARY MEDICINE.

TILNEY, FREDERICK. An American neurologist, died at Oyster Bay, L. I., N. Y., Aug. 7, 1938. Born in Brooklyn, N. Y., June 4, 1875, he was educated at Yale (A.B., 1897), and for a year worked as a reporter on the *New York Sun*. Deciding upon medicine as a career he entered the Long Island College Hospital (M.D., 1903), and during 1903-04 studied at the University of Berlin. Upon his return he lectured in embryology at the Long Island College Hospital, and in 1905 entered private practice.

In about 1908, Dr. Tilney became interested in the nervous system and in its diseases, and in the following year he became an instructor in anatomy at the College of Physicians and Surgeons at Columbia University, and also in this year reorganized the neurological department of Vanderbilt Clinic. After taking the degree of Ph.D. at Columbia in 1912, he was promoted to the post of professor of neurology and neuroanatomy at the College, which he held at his death.

In 1916 he became director of the Neurological Post-Graduate Medical School, and in 1919 senior attending neurologist at the Neurological Institute. Although Dr. Tilney suffered a severe stroke in 1925, he recovered and did some of his best work thereafter. In July, 1935, he was elected medical director of the Institute, and established a new department in conjunction with the College of Physicians and Surgeons which concerned itself with the psychology of the nervous system, both in the experimental and clinical fields, and merged the Institute with the Columbia-Presbyterian Medical Center. He became interested in the neurology of children in 1934 and became associate director in charge of the Institute's division of child neurology. In conjunction with this, he made a special study of juvenile delinquents using as the basis for this study the N. Y. State Training

School for Boys, of which he was head of the medical board.

A leader in research work for many years, he was head of the Matheson Survey of the Neurological Institute to study the cases of the socially maladjusted and of criminals; during 1929-30 he undertook a series of experiments in the hope of eliminating certain forms of insanity; and he made a series of experiments and brain measurements to establish the theory of evolution from the earliest known traces of mankind. Other studies were made of infantile paralysis, epilepsy, sleeping sickness, and the behavior of identical twins.

A research associate of the American Museum of Natural History and a member of the American Association for the Advancement of Science, Dr. Tilney's investigations and experiments in cerebral forms and activities were summed up in two scientific works: *The Brain from Ape to Man* (2 vols., 1928) and *The Master of Destiny* (1930), the second a popular rendering of the earlier work. Other of his publications were *A Study of the Hypophysis Cerebri* (1911), written as his doctorate thesis; *Morphology and Evolutionary Significance of the Pituitary Body*, with L. F. Warren (1919); *Epidemic Encephalitis*, with H. S. Howe (1920), and *The Form and Functions of the Central Nervous System*, with H. A. Riley (1920; 1923).

TIMOR, tē-mōr', PORTUGUESE. A Portuguese possession in the Malay Archipelago, comprising the eastern part of the island of Timor together with the territory of Ambeno and islands of Pulo Cambing and Pulo Jako. Total area, 7330 square miles; population (1936 estimate), 460,000. Capital, Dilli (or Dili). The chief exports are copra, coffee, sandalwood, sandal-root, and wax. There are 496 miles of roads. For 18 months ended Dec. 31, 1936, revenue totaled 2,240,560 patacas (pataca equals about \$0.48); expenditure, 1,930,082 patacas; public debt (Dec. 31, 1937), 25,983,127 escudos (escudo averaged \$0.0448 for 1937).

TIN. Consumers of tin in the United States are dependent largely upon the supply from Malaya, Netherlands Indies, Bolivia, and Siam. From the widespread sources of production violent price ranges were common in the United States and other countries, and to prevent this a buffer pool was established by an International Tin Committee, on June 20, 1938. Since the establishment of the pool, with a statistical office at The Hague, The Netherlands, prices have been under better control.

The following table shows tin production on ore basis, expressed in terms of recoverable metal, based on figures supplied by the American Bureau of Metal Statistics.

WORLD PRODUCTION OF TIN IN ORE

[Long tons of 2240 lb.]

Country	1938	Country	1938
Bolivia	25,371	Australia	3,150
Netherlands Indies ..	21,001	British India	4,760
Malaya	43,247	China	10,600
Indo-China	1,575	Japan	2,390
Nigeria	7,305	South Africa	593
Siam	13,616	Great Britain	1,930
Belgian Congo	7,316	Elsewhere *	5,110
Total			147,964

* Including Mexico, Argentina, Portugal, and others.

The total visible stocks averaged 28,500 tons during 1938, and were the highest since 1933. The total visible stocks at the end of 1938 was 29,494 tons, representing a consumption of approximately 11 weeks.

The largest use of tin is for tinplate, the world production of which in 1938 was estimated at over 2,900,000 tons against 4,259,000 tons in 1937. In the United States there was a decline to 1,380,000 tons from 2,420,000 of 1937, or a drop of 43 per cent. In the United Kingdom the decrease was 35 per cent to approximately 620,000 tons against 958,000 in 1937. In Germany tinplate production decreased by only 20,000 tons, whereas in France there was a slight increase.

Exports of tinplate and taggers' tin from the United States for 1938 totaled 352,087,248 lb. valued at \$18,588,841. United States tin imports in 1938 were 49,692 tons.

TIROL. See AUSTRIA.

TOBACCO. The tobacco crop in the United States in 1938 was estimated at 1,455,970,000 lb., 6 per cent below the 1937 crop of 1,552,601,000 lb., but still exceeding the 10-year (1927-36) average production of 1,325,243,000 lb. The harvested acreage totaled 1,626,700 acres compared with 1,735,000 in 1937, while the 1938 average acre yield was 895 lb., the same as in 1937. The cash income was estimated at \$294,063,000 for the 1938 crop versus \$318,305,000 for 1937. The price per pound received by farmers averaged 18.1¢ on Dec. 15, 1938, versus 20.6¢ a year before. Production by types was estimated for flue-cured, 788,060,000 lb.; fire-cured, 99,763,000; air-cured, light; Burley, 387,663,000, and Southern Maryland, 29,250,000; air-cured, dark, 37,863,000; and cigar types, 113,371,000, comprising filler, 46,912,000; binder, 57,429,000; and wrapper, 9,030,000 lb. The total production of cigar types includes the estimated 6,514,000 lb. lost in the September hurricane in the Connecticut River Valley. The decline in the production in 1938 compared with 1937 was contributed to by all classes of tobacco except Maryland and cigar types, being largely accounted for in a decrease of about 8 per cent in production of flue-cured, 13 per cent in fire-cured and 4 per cent in Burley tobacco. North Carolina led the producing States with 519,230,000 lb., and was followed by Kentucky with 339,550,000; Tennessee 111,855,000; Virginia 105,459,000; South Carolina 98,430,000; Georgia 91,820,000; Wisconsin 36,759,000; Pennsylvania 32,690,000; Maryland 29,250,000; Ohio 24,617,000; Florida 19,392,000; and Connecticut 16,726,000 lb.

The 1938 crops of tobacco in other important producing countries, according to official estimates, totaled for Turkey 134,908,000 lb.; Japan 144,602,000; Italy 90,961,000; Greece 84,943,000; Bulgaria 37,817,000; Poland 33,000,000; Germany 73,855,000; Hungary 43,854,000; Czechoslovakia 5,060,000; Chosen 57,869,000; Algeria 35,274,000; Canada 85,142,000 lb. including Ontario 74,000,000 lb. (mostly flue-cured); and flue-cured in northern Asia including China 81,000,000 lb.; Japan 66,832,000; Chosen 12,360,000; Manchuria 12,500,000; and Taiwan 3,527,000 lb. In 1937-38 Argentina produced 17,224,000 lb., Union of South Africa 23,500,000, Nyassaland 11,330,000, and Queensland 2,317,000 lb.

Collections from internal revenue taxes on tobacco in the United States for the fiscal year 1938 amounted to \$568,181,968, an increase of \$15,927,822 or 22.9 per cent over 1937, a record annual collection from this source. Receipts from taxes on small cigarettes amounted to \$493,432,960, which was 86.8 per cent of the total taxes collected on tobacco, and \$17,405,753 over 1937. Taxes collected on smoking and chewing tobacco fell to \$53,982,098 in 1938, from \$55,037,541 in 1937, decreased on large cigars to \$12,750,915, a loss of \$496,044; and

on snuff rose to \$6,678,854, a gain of \$19,345 compared with 1937. Most of the total tobacco receipts were collected in North Carolina, Virginia, Kentucky, New Jersey, Pennsylvania, California, and Ohio in the same order as in the previous year. The Commissioner of Internal Revenue reported that during 1937 there were manufactured 169,969,319,880 cigarettes weighing less than 3 lb. per 1000 compared with 158,893,958,304 in 1936. Exports of unmanufactured tobacco in the fiscal year 1937-38 totaled 459,545,000 lb. versus 416,884,000 in 1936-37 and totaled 434,796,331 lb., valued at \$134,521,209 in the calendar year 1937 and 489,074,065 lb., valued at \$155,670,580 in 1938.

Carroll, U.S. Department of Commerce); *The Farm Outlook for 1939*, *The Tobacco Situation*, and *Annual Report on Tobacco Statistics, 1937*, and processed publications entitled *Tobacco Production and Consumption in China*, *World Acreage and Production of Tobacco by Countries*, and *Income from Tobacco, 1909-1937* (all U.S. Dept. of Agriculture, 1938).

TOBAGO. See TRINIDAD AND TOBAGO.

TOGO, FRENCH. The part of the former German West African protectorate mandated to France by the League of Nations. Area, 21,893 square miles; population (1936), 737,056, including 450 Europeans. Lomé, the capital, had 14,389 inhabitants, including 283 Europeans, in 1936. The chief crops, with production in metric tons, included: Cacao, 10,198 (1936-37); cotton seed, 3500 (1935-36); groundnuts, 6000 (1936); coffee, 163,744 (1936). Exports of other leading crops, in metric tons, were: Copra, 3000 (1937 estimate); palm oil, 1700 (1937 estimate); palm kernels, 9700 (1936). Exports of ginned cotton totaled 1500 metric tons in 1935. In 1937 the estimated value of merchandise imports (in old U.S. gold dollars) was \$2,100,000 (1936, \$1,700,000); exports, \$2,000,000 (1936, \$1,600,000). There were about 65,000 cattle in 1936. In 1937 there were 3105 miles of roads suitable for automobile transportation, and 242 miles of railway line. In 1936, 378 vessels cleared the ports of Lomé and Aneho. The local budget for 1936 was balanced at 28,753,000 francs (franc averaged \$0.0611 for 1936). There was a railway budget of 6,235,000 francs. Government is administered by a commissioner aided by an economic and financial council.

TOGOLAND. The part of the former German protectorate of Togo, confirmed as a British mandate by the League of Nations, and attached to the British Gold Coast Colony for administrative purposes. Area, 13,041 square miles; population (1936 estimate), 349,179 including 54 non-Africans. Cacao, palm kernels, and coffee are the chief products. In 1937-38 it was estimated that 20,000 metric tons of cacao were produced. In 1936 imports were valued at £10,135; exports, £191,523. Cacao exports totaled 1142 tons, and coffee exports, 33 tons, for 1936. Revenue for 1937 totaled £28,935; expenditure, £90,438.

TOLEDO, UNIVERSITY OF THE CITY OF. A municipal, coeducational institution of higher learning in Toledo, O., founded in 1872. The enrollment for the autumn of 1938 totaled 2942, of whom 2028 were day-session students and 856 evening-session students. The faculty had 99 full-time and 34 part-time members. The 1938 summer session enrollment was 567. The value of grounds, buildings, and equipment was \$3,600,000 and the income for 1937-38 was \$388,744. The library contained 62,000 volumes. A men's dormitory, to house 76 students,

was being built and was to be ready for occupancy before September, 1939. President, Philip Curtis Nash, M.C.E., D.Eng.

TONGA (FRIENDLY) ISLANDS. A kingdom under British protection in the South Pacific, consisting of three main groups of islands called respectively Tongatabu, Haapai, and Vavau, together with the outlying islands of Niuafoou, Niuatobutabu, and Tafahi. Total area, 385 square miles; population (census of April, 1937), 32,861 including 1108 non-Tongans. In 1937 there were 1173 births, 479 deaths, and 295 marriages in the Tongan population. Capital, Nukualofa. The chief products are copra, bananas, citrus fruits, and native vegetables. Livestock in 1937 included 4866 horses, 2478 cattle, 3583 goats, 18,060 pigs, and 48,302 poultry. In 1937 imports were valued at £137,365; exports, £164,621 of which copra (12,288 tons) accounted for £158,133. For the fiscal year ended June 30, 1937, revenue totaled £73,471; expenditure, £55,938; public debt—nil; surplus funds, £168,008. Queen, Salote Tubou (succeeded Apr. 12, 1918).

TONKIN (TONGKING). See FRENCH INDOS-CHINA.

TORNADO. See METEOROLOGY; SOUTH CAROLINA.

TORONTO, UNIVERSITY OF. An institution of higher education in Toronto, Ont., Canada, founded in 1827 and supported by the provincial government. The 1938 autumn enrollment was 7408. The faculty numbered 1029 members. The total expenditure for the year 1937-38 for salaries and maintenance was \$2,895,209. The library contained 352,155 volumes and 135,395 pamphlets. President, Henry John Cody, M.A., D.D., LL.D.

TRANSATLANTIC AIRPLANE AND AIRSHIP SERVICE. See AERONAUTICS.

TRANSCAUCASIAN SOVIET FEDERATED SOCIALIST REPUBLIC. A former constituent republic of the U.S.S.R. In the new constitution of the U.S.S.R., adopted on Dec. 5, 1936, the T.S.F.S.R. was abolished and its three constituent republics became constituent republics of the U.S.S.R. See ARMENIAN SOVIET SOCIALIST REPUBLIC; AZERBAIJAN SOVIET SOCIALIST REPUBLIC; GEORGIAN SOVIET SOCIALIST REPUBLIC; UNION OF SOVIET SOCIALIST REPUBLICS.

TRANS-JORDAN. An Arab territory in Asia Minor, under mandate to Great Britain. Area, 34,740 square miles; population, estimated at 300,000 of whom 130,000 are settled, 120,000 are partly nomad, and 50,000 are nomads. Capital, Amman. In the 186 schools there were 11,094 pupils enrolled in 1935.

Production and Trade. A part of the country in the west is fertile and is suitable for agricultural pursuits and for livestock raising. The rest of the country consists of desert lands. Tobacco has been successfully grown and the production is larger than the requirements of the local factories. Phosphate deposits have been developed, and potash is found in the Dead Sea. Statistics of the complete external trade are not available. In 1936 commercial imports cleared for home consumption were valued at £P794,956; exports, £P227,996 of which

£P198,215 went to Palestine (£P equaled the £ sterling).

Government. For 1936-37 estimated revenue totaled £P420,340 and included grants-in-aid of £P142,790 from the Imperial government; estimated expenditure, £P465,462. The territory is part of the British Palestine Mandate, but certain clauses relating to the establishment of a national home for the Jews are excluded from operation within Trans-Jordan. There is a local Arab government under the Emir Abdullah Ibn Hussein, aided by an executive council, and a legislative council of 6 official and 16 elected members. The British High Commissioner for Palestine (Sir H. A. MacMichael) is High Commissioner for Trans-Jordan where he is represented by the British Resident (in 1938, Lt.-Col. Sir Henry Cox).

TRINIDAD AND TOBAGO. A British colony near the north coast of South America, comprising the islands of Trinidad (1862 sq. mi.) and Tobago (116 sq. mi.), and adjacent islands. Total area, 1980 square miles; total population (Jan. 1, 1938, estimate), 456,043, compared with 412,783 (1931 census). During 1936 there were registered 14,625 births, 7230 deaths, and 2097 marriages. Chief towns: Port of Spain (Trinidad), the capital, 77,711 inhabitants; San Fernando, 15,858; Princetown, 5580; Arima, 5613; Scarborough (Tobago), 1371; Roxborough (Tobago), 1515. On Dec. 31, 1937, there were 293 elementary and intermediate schools, and 7 colleges for higher education.

Production and Trade. The principal products are petroleum, asphalt, cacao, citrus fruits, sugar, coconuts, coffee, timber, and fruits. There is a lake of asphalt near La Brea from which 90,872 long tons of asphalt were exported in 1937. The sugar crop for 1938 totaled 133,627 long tons (154,285 long tons in 1937). For 1938-39 the export sugar quota was set at 132,200 long tons. Grapefruit exports for the 1937-38 season totaled 73,000 boxes. Coal, iron, graphite, gypsum, and gold are found in small quantities. In 1937 imports were valued at \$35,815,514, the chief items being foodstuffs, machinery and metal manufactures, cotton goods, carriages and wagons, and wearing apparel; exports, \$31,530,673 including petroleum (\$18,896,422), cacao (\$3,086,995), sugar (\$6,115,294), and asphalt (\$1,194,914). The Trinidad dollar was valued at 4s. 2d.

Communications. In 1937 there were 118 miles of railway open to traffic, 2367 miles of roads, 117 miles of telegraph line, and 22,040 miles of telephone line. The new deep-water harbor at Port of Spain which has been under construction since 1935 was expected to be opened during June of 1939. During 1936 vessels totaling 2844 and aggregating 4,752,140 tons cleared the ports. Three wireless stations are maintained by the government.

Government. For 1937 revenue amounted to \$12,252,785 (\$12,560,314 in 1936); expenditure, \$10,365,848 (\$9,170,685 in 1936); public debt, \$20,013,312 (\$20,274,816 in 1936). Revised estimates for 1938 indicated revenue of \$13,166,369 and expenditure of \$12,635,887. Total revenue for 1939 was estimated at \$12,882,274 and total expenditure at \$12,492,118 including extraordinary expenditure of \$2,383,330. The government of the united colony is administered by a governor assisted by an executive council of which the governor is president. There is a legislative council consisting of the governor as president, 12 official, and 13 unofficial members (of the latter 7 are elected and 6 are nominated). Governor, Maj. Sir H. W. Young (appointed February, 1938).

History. The report of the Royal Commission on the Trinidad riots of 1937, made public during February, 1938, found that the riots were mainly due to delay in adjusting earnings to the rising cost of living, to agitation by an unruly element, and to a hesitant government policy. Among the large number of recommendations were those for the reorganization of the medical services, better control of housing by the government, improvement of general, agricultural, and industrial education, the furtherance of land settlement, establishment of a labor department, an industrial court to be set up, and the workmen's compensation ordinance to be amended.

During 1938 collective bargaining was introduced among various workers in the colony. The government proposed to introduce statutes for fixing wages in industries in which collective bargaining was not practicable. On Nov. 26, 1938, Governor Young's five-year plan, which contemplates the building of an airport, roads, workers' homes, and hospitals, was approved by the legislature of Trinidad and Tobago. See JAMAICA under *History*.

TRINITY COLLEGE. An institution for the higher education of men in Hartford, Conn., founded in 1823 as Washington College and changed to Trinity College in 1845. For the autumn term of 1938 the enrollment was 537. For the 1938 summer session the enrollment was 152. There were 60 members on the faculty. The endowment fund of the college was \$3,492,265 and the income totaled \$348,402. The library contained 130,000 volumes. President, Remsen B. Ogilby, Litt.D., LL.D.

TRIPOLITANIA. See LIBYA.

TRISTAN DA CUNHA, tris-tan' dä koon'yä. The chief of a group of islands in the South Atlantic (37° 6' S. and 12° 2' W.), owned by Great Britain. By Letters Patent, as from Jan. 12, 1938, the islands of Tristan da Cunha, Gough, Nightingale, and Inaccessible, in the South Atlantic, were made dependencies of the island of St. Helena. Area, 45 square miles; population (1937), 185. The original inhabitants were shipwrecked sailors, and soldiers who stayed behind when the garrison from St. Helena was withdrawn in 1817. Potatoes are the staple food. Fish are plentiful. Cattle, sheep, and geese are reared by the people. Resident Chaplain, in Tristan da Cunha, Rev. Harold Wilde.

TROTSKY, LEON. See COMMUNISM; UNION OF SOVIET SOCIALIST REPUBLICS under *History*.

TRUCIAL OMAN. See ARABIA.

TUAMOTU ISLANDS. See OCEANIA, FRENCH ESTABLISHMENTS IN.

TUBUAI ISLANDS. See OCEANIA, FRENCH ESTABLISHMENTS IN.

TUFTS COLLEGE. A nonsectarian institution for the higher education of men and women in Medford, Mass., founded in 1852. The registra-

tion for the autumn term of 1938 was 2147. There were 408 faculty members. The productive funds of the college amounted to \$7,634,771, and the income for the year was \$1,242,719. The library contained 183,000 volumes. President, Leonard Carmichael, Ph.D., Sc.D., LL.D., inducted Nov. 4, 1938.

TULANE UNIVERSITY OF LOUISIANA. An institution of higher education in New Orleans, founded in 1834. The total enrollment for the autumn of 1938 was 3890, of whom 671 were in the H. Sophie Newcomb College for Women. There were 872 students enrolled in the 1938 summer session. The faculty numbered 485. The productive funds for the fiscal year ending Aug. 31, 1938, amounted to \$10,664,447; the income for the year was \$1,223,748. Gifts and bequests to the value of \$395,520 were received. In the libraries there were 215,191 volumes. President, Rufus Carrollton Harris, A.B., LL.B., Juris.D., LL.D.

TUNISIA. A French protectorate in North Africa. Capital, Tunis. With an area of 48,332 square miles, Tunisia had a population of 2,608,313 at the 1936 census, including 2,335,623 Arabs and Bedouins, 59,485 native Jews, 108,068 French citizens, 94,289 Italians, and 7279 Maltese. The 1936 census populations of the chief towns were: Tunis, 219,578; Sfax, 43,333; Sousse, 28,465; Bizerte, 25,872; Kairouan, 22,991. Moslems comprise 89.5 per cent of the total population. The school attendance on Dec. 31, 1936, was 94,198.

Production. Agriculture, stock raising, fishing, and mining are the principal occupations. The cultivated area of about 7,249,914 acres produced the following crops in 1937: Wheat, 17,637,000 bu.; barley, 9,186,000 bu.; oats, 1,963,000 bu.; wine, 38,385,000 gal.; olive oil, 13,209,000 gal. The wool production in 1937 was about 9,921,000 lb. Livestock in 1936 included 539,000 cattle, 3,532,000 sheep, 1,910,000 goats, 119,000 horses, 245,000 mules and asses, and 166,000 camels. The 1937 mineral output was (in metric tons): Phosphate rock, 1,776,300; lead ore, 21,620; iron ore, 947,000; fluor-spar, 2000. The chief native industries are wool spinning and weaving, leather working, carpet and pottery making, etc.

Foreign Trade. General imports in 1937 were valued at \$52,972,000 (\$60,411,000 in 1936) and general exports at \$45,635,000 (\$51,378,000 in 1936). Cotton fabrics, machinery, metal manufactures, peanut oil, and refined sugar were the chief imports in order of value in 1937, and phosphate rock, wine, wheat, olive oil, pig lead, and iron ore were the principal exports. France in 1937 supplied 59.9 per cent of the general imports and purchased 57.3 per cent of the exports. Italy furnished 3.1 per cent of the imports and took 9.3 per cent of the exports.

Finance, etc. The budget for 1938 estimated receipts at 704,151,400 francs (611,319,700 in 1937) and expenditures at 704,061,680 (611,191,651). In 1936 there were 1316 miles of railway lines, which carried 10,447,378 passengers and 3,797,835 metric tons of slow freight. Roads extended 7492 miles in 1937; number of automobiles, 17,411. French and Italian air lines connect Tunis with Ajaccio (Corsica), Marseille, Cagliari, Palermo, Naples, and Rome. In 1936 a total of 7430 ships of 4,868,286 net tons entered Tunisian ports with 927,485 tons of cargo and 71,425 passengers.

Government. Tunisia is a regency under the control of the French Foreign Office, which acts through a Resident-General who is also Minister of Foreign Affairs for Tunisia. There is a ministry of 11 departments (8 French and 3 Tunisian). The

nominal ruler in 1938 was Sidi Ahmed Bey, who succeeded to the throne July 10, 1929. Eirik Labonne succeeded Armand Guillon as French Resident-General on Oct. 22, 1938.

History. The foremost occurrences of 1938 in Tunis had to do with efforts to undermine the power of the French protectorate. These efforts took two forms; some were in the guise of agitation among the Tunisian people on behalf of a Nationalist program similar to the nationalism proposed with much uniformity by agitators in other Moslem subject-lands; other efforts took the shape of pressure from Italy, upon French opinion, for the cession of rights in Tunisia to Italy.

On January 8, shortly after the arrest of a Nationalist agitator named Hassan Nouri, supposed Nationalist sympathizers started a violent popular outbreak in Bizerte. A fight with the authorities led to the death of six persons. This and other disorders, particularly a fatal riot (April 10) in Tunis, led to a decree of the Tunisian ministry, suppressing the Nationalist association on April 14, and to the application of martial law for a period terminating on August 12. To counteract what seemed like a carefully organized spreading of anti-French propaganda by radio, the French Government provided money in March for opening a broadcasting station in Tunisia. Over a hundred persons were arrested for Nationalist agitation or for rioting during the period of martial law, and the bureaus or meeting places of Nationalist locals were closed in several towns. The group that had caused the disorders did not resume activity during the year.

Moves on the part of the Italian government, more or less direct, were made in the effort to displace French influence. In connection with Franco-Italian negotiations in May on the subject of Spain, Italy brought up, as reported in Paris, a proposal that Italians settled in Tunis should have their own courts and schools. An outcry was raised (November 30) in the Italian parliament, for the annexation of Tunisia, Nice, and Corsica; it caused a widespread adverse reaction among Tunisians, which tended to overthrow any advantage that Italy could have derived from the Nationalist agitation. The Nationalist sentiment depended, naturally, on a desire among the native population for self-government, rather than on a wish to be governed by some other European nation. Thousands of persons paraded in Tunis (December 10) bearing derisive placards, such as "Italy for the Negus"; the Italian consulate was guarded from insult, but the white walls of an Italian school were pelted with bottles of red and of blue ink, and some Italian places of business were entered by mobs. Groups of Arabs in the Tunisian parliament made declarations that their people would help defend Tunisia against any Italian attack. See also FRANCE.

The concession, granted to a French company in 1894, for the operation of the three ports of Tunis (La Goulette, Sousse, and Sfax) was bought back in 1938 by the Tunisian government.

TUNNELS. With the holing through of the San Jacinto tunnel of the Colorado River Aqueduct (see AQUEDUCTS), the most remarkable tunneling project of the ages passes into history. The San Jacinto bore was the last and most difficult piece of tunnel work on this great project. Yet, after earlier difficulties with water and bad rock, new records for hard-rock tunneling were achieved in two successive months of the work. In four headings, an average of better than 72-ft.-per-day progress was made and 2237 ft. of main heading was

completed during May. This exceeded by 168 ft. the remarkable record which had been made in April.

Contracts have been let for the tunnel sections of the new Delaware Aqueduct for New York (see also **AQUEDUCTS**) which will be entirely a deep-pressure tunnel project. At the present time, therefore, this is the greatest tunnel project under construction. Its 83 miles of continuous tunnel will make it the longest continuous tunnel in the world, although it is exceeded by the total length of tunnels on the Colorado Aqueduct.

Another interesting land tunnel operation is that now being undertaken by the Pennsylvania Turnpike Commission. This Commission is building the 161-mile South Pennsylvania Toll Road through the mountains from Harrisburg to Pittsburgh—a \$60,000,000 project. They are using for the line the incomplete and abandoned work of a railroad which was started back in the great days of railroad strategy and warfare. A half century ago, the Vanderbilt interests went into the heart of Pennsylvania R.R. territory and spent \$4,500,000 in building a line to compete with the Pennsylvania and thus force it to withdraw its support from the West Shore which was competing with the New York Central. The old roadbed is to be widened to permit four 12-ft. highway lanes with a 10-ft. parting strip, though the road will, for the present, be confined to two lanes in the tunnel sections. The new highway will have the advantage of short length and low grade.

In the field of subaqueous tunneling, interest centers in the new Queens-Midtown tubes, joining 38th St. Manhattan with Long Island City, under the East River. These twin tubes are not only of great size (31 ft. diam.) but are being driven under probably the worst river conditions to be encountered in the New York area. The tunnels are in rock at both ends and the headings will meet in rock (the southern end of the rock ridge forming Blackwell's Island) at the center of the river. In between, however, the depth of cover is very small (requiring an exceptionally heavy clay blanket), the material encountered is normally porous with a high leakage of air, and, in addition, fills of stone and other difficult debris have to be penetrated.

On the Manhattan end the two shields were erected at the bottom of the ventilating shaft in February and March and were moved forward into the tunnel headings which had been excavated in solid rock. In April and May, respectively, the headings were bulkheaded and put under air pressure. A fire in the north heading in June required flooding and delayed progress for over a month, but the heading was recovered in August and, as the year closed, the north shield had been advanced 768 ft. and the south 875 ft. from the ventilating shaft. Air pressures up to 38-lb. per sq. in. have been used and the ground has been very difficult to handle because of broken rock fill, etc.

At the Queens end both shields had been erected by June and work was going forward using concrete saddles placed in a bottom heading in the rock extending over 1000 ft. west of the shaft, as guides. In this section the lower portion of the tunnel is in rock while the upper is in soft river material. A temporary air-tight deck in the shaft permitted shield driving under moderate pressure until the work had advanced far enough to allow the usual tunnel bulkheads to be erected. At the close of the year the north shield was 848 ft. west of the construction shaft and the south 856 ft. The

distance remaining to be tunneled between the two sets of shields was about 2249 ft., and the under-river contract was estimated to be about half completed. Excellent progress has also been made in the work of excavating the extremely long approaches to this tunnel.

The one tube of the Lincoln Tunnel under the Hudson at 38th St., New York to Weehawken, N. J., opened Dec. 22, 1937, showed an operating deficit of about a million dollars for the year. In the opinion of many engineers this project has not been economically justified and will show an operating deficit for many years to come. Fortunately the Holland Tunnel and the George Washington Bridge kept the total operations of the Port of New York Authority on the safe side of the ledger.

A PWA grant was made in December for a 3300-ft. highway tunnel between Mobile and Blakeley Island, Ala. It is proposed to construct this work by floating into position and sinking tunnel sections of about 250 ft. each in length—a plan which was successfully employed in such earlier notable works as the Oakland Estuary Tube.

TURBINES, STEAM. See **STEAM TURBINES**.

TURF. See **SPORTS**.

TURKEY. A republic comprising parts of Asia Minor and the Balkan Peninsula as well as Imbros, Tenedos, and the Rabbit Islands in the Aegean Sea. Capital, Ankara (Angora).

Area and Population. The area, excluding 452 square miles of marshes and 3256 square miles of lakes, is 294,492 square miles (13,012 in Europe and 281,480 in Asia). The population at the census of October, 1935, was 16,200,694 (13,648,270 at the 1927 census). In 1935, 2,686,581 persons (16.5 per cent of the total) resided in communities of 10,000 or more. Populations of the chief cities at the 1935 census were: Istanbul (Constantinople), 740,805 in the municipality and 245,982 in the city proper; Izmir (Smyrna), 170,546; Ankara (Angora), 123,699; Adana, 76,306; Bursa (Brusa), 72,270; Konya, 52,486; Gazi Antep (Aintab), 50,891; Eskisehir, 47,080; Kayseri (Kaisaria), 46,491; Edirne (Adrianople), 36,000; Sivas, 35,207; Diyarbakir, 34,874; Samsun, 33,839; Erzurum, 33,127; Urfa, 31,255; Manisa, 30,746.

Education and Religion. About 45 per cent of the adult population was reported (1934) to be able to read and write. Elementary education is obligatory for children from 7 to 16 years of age. The school enrollment in 1936-37 was: Primary, 814,407; secondary, 59,000; trade and commerce, 5000; colleges, 8950. In 1938 it was decided to add a fully equipped faculty of medicine, costing £T8,500,000, to the University of Ankara. According to the 1935 census there were in Turkey 15,838,673 Moslems, 125,046 Orthodox Church members, 78,730 Jews, 44,526 Gregorians, 32,155 Roman Catholics, 11,229 Armenians, 8486 Protestants, and 12,965 adherents of other religions. Mohammedanism ceased to be the state religion in 1928.

Production. Four-fifths of the population is supported by agriculture. There were in 1936, 19,504,000 acres of arable land and 21,785,000 acres of woods and forests. Yields of the chief cereals in 1938 were (in metric tons): Wheat, 4,366,100 (3,619,300 in 1937); barley, 2,584,700 (2,276,700); rye, 540,200 (337,200); oats, 337,500 (224,000); corn, 714,500 (541,100). Output of the other chief crops in 1937 was: Tobacco, 153,442,000 lb.; olive oil (1937-38), 7,925,000 gal.; raisins, 99,207,000 lb.; figs, 72,752,000 lb.; ginned cotton (1937-38), 121,253,000 lb.; wool, 22,046,000 lb.; mohair, 15,-

432,000 lb.; opium, 692,000 lb. The 1937 livestock census showed 6,551,000 cattle, 16,447,000 sheep, 12,465,000 goats (3,669,000 mohair goats), 651,000 buffaloes, 106,000 camels, and 2,018,000 horses, mules, and asses.

Production of the chief minerals in 1937 was (in metric tons): Coal, 2,306,859; lignite, 116,397; emery, 12,115; chrome ore, 198,460; boracite, 4664; antimony ore, 1254; mercury, about 55,000 lb. A five-year Industrialization Plan was launched in 1933 by the Turkish government. This provided for the construction of 19 plants to cost £T45,580,000; 10 of these plants were in operation at the end of 1937, and five others were under construction. A second five-year plan was started in 1938. It involved estimated expenditures of £T90,000,000 for development of mining, chemical, and food preservation industries, the erection of two large power plants, the expansion of the merchant marine, the construction of three new ports, improvement of the port of Istanbul, and other public works. Industries in operation in 1938 included flour mills, sugar refineries, cement plants, olive-oil presses and refineries, textile factories, paper and celluloid mills, canning factories, leather tanneries, etc.

Foreign Trade. The value of general imports in 1937 was £T114,379,000 (£T92,531,000 in 1936) and exports totaled £T137,984,000 (£117,733,000 in 1936). The leading imports in order of importance in 1937 were: Cotton piece goods, iron and steel, machinery, cotton and wool yarn, chemicals and medicines, hides and skins. The value of the chief exports was (in U.S. currency): Leaf tobacco, \$35,173,000; filberts, \$8,569,000; wheat, \$6,318,000; wool, \$5,249,000; raisins, \$4,761,000; oriental rugs, \$4,587,000. Germany supplied 42.1 per cent of the imports for consumption in 1937; United States, 15.1; United Kingdom, 6.2; Italy, 5.3. Of the 1937 exports, Germany took 36.5 per cent (51.0 in 1936); United States, 13.9; United Kingdom, 6.2; Italy, 5.3.

Finance. Estimated budget revenues for the fiscal year ending May 31, 1939, were £T250,049,000 (£T231,020,000 in 1937-38); estimated expenditures, £T249,954,000 (£T231,018,000 in 1937-38). Actual revenues in 1937-38 were £T262,780,000. The public debt as of May 31, 1938, was reported at £T533,613,687, an increase of £T24,989,771 for the year preceding. Devaluation of the French franc during that period caused a reduction of £T20,171,947 in the consolidated external debt. The total consolidated debt on May 31, 1938, was £T323,693,454; floating debt, £T209,920,233. The average exchange value of the Turkish pound was \$0.8036 in 1936, \$0.8013 in 1937.

Transportation. At the end of 1937, Turkish railways had 4312 miles of line, including 93 miles completed in 1937. The highway mileage on Dec. 31, 1937, was 25,657 of which 11,213 miles were surfaced. The Istanbul-Adrianople motor highway (155 miles) was completed in 1938. The number of automobiles in Turkey on Jan. 31, 1938, was 9504. An air line connected Ankara with Istanbul, Izmir, Adana, and other Turkish cities. The Turkish merchant marine on June 1, 1938, comprised 185 vessels of 220,636 gross tons capacity. During 1935 a total of 91,386 vessels of 23,102,312 tons entered Turkish ports.

Government. The basis of the government is a constitution, adopted in 1921, by act of the Grand National Assembly, and altered by a series of later acts of the same body. Under the constitution the executive and legislative powers rest in the Assem-

bly, which consists of a single house having 399 members; these are elected by popular vote, to serve a term of four years. Males and females who have attained the age of 23 years are entitled to vote. The basic law recognizes a single political party, the People's Party. Each Assembly is required to elect from among its members a chief executive of the government, the President, to whom passes the chief part of the Assembly's vested executive power. The President holds office through the four-year term of the Assembly. The Council of Ministers, assisting the President, is chosen by him. A law of 1937 incorporates into the constitution the principles of the People's Party: namely, nationalism, democracy, evolutionism, the separation of the state from religion, and state ownership of communications, mines, industrial establishments, and public utilities. In practice the President has exercised dictatorial powers.

HISTORY

Internal Developments. Kemal Ataturk (q.v.), President of the Turkish republic, died on Nov. 10, 1938, having held the Presidency for 15 years, or from the origin of the republic, which he, more than any other, had founded. Since throughout those years he had exerted a controlling voice in national matters, his death left the government without the guidance to which he had accustomed it.

Ismet Inonu, former military collaborator with Kemal and Premier under him, had given up the premiership late in 1937, apparently having lost the confidence of Kemal. Shortly before dying, however, Kemal (as was reported October 18) included Ismet among three from whom he recommended that the Assembly select his successor. The Assembly, required by the constitution to elect the successor on the day after a President's death, unanimously voted for Inonu, who took office immediately. He later was made leader, for life, of the People's Party.

The government undertook to control Turkish shipping in accordance with its system of conducting economic enterprises through great corporations. The corporation to be used for the control of maritime transportation was the Deniz Bank, allowed by the Assembly (Dec. 27, 1937) to exert exclusive management in maritime operation. In its direction of the country's economic policy the government started a plan to do away with the foreign experts employed in many industries and financial enterprises; in order to replace these foreigners with Turks, the government imposed a special tax on industrial establishments and insurance companies, to produce the means of paying for the education of Turks as experts in such posts.

The economic position of Turkey in 1938 was fair in respect of current operations but still far from intended goals with regard to improvement of the industrial development. The government still needed to obtain from other countries the material essential for setting up manufacturing establishments, extending the means of travel by railroad and highway, and furnishing the farmers with machinery and irrigation. For these things, it had to undertake to pay with the surplus of its exports over its imports. Hence the foreign trade of Turkey and its relations with other countries were closely connected with its internal economy.

Foreign Relations. The Turkish Government won the object for which it had carried on a long dispute with the French Government over the future status of the Sanjak of Alexandretta (see

SYRIA). The settlement provided for Turkey's sharing with France the military occupation of the area; it also provided an understanding that neither of the two powers should join in an attack on the other and that both should act in concert in case of a situation imperiling the territorial integrity of the sanjak. The treaty was to come into force after the contracting governments had exchanged ratifications and was to remain valid for 10 years.

Turkey's economic position, mentioned above, caused the government to seek to improve its commercial relations wherever it could, by obtaining the goods that it needed in trade for its exports, without binding itself to economic partnership with any single nation or group of nations. Thus, while Turkey was bound to Germany at the outset of 1938 by a trading bargain on which Germany still owed in goods not yet delivered a balance estimated at \$15,000,000, the Turkish Premier declared early in 1938 that no political system of foreign origin could be imported into Turkey and, particularly, gave assurance of the Turks' friendliness toward the Jews, against whom the German government was pursuing a severe policy.

About the same time Turkish agents started negotiations in London and obtained in May a British credit of about £16,000,000 for the purchase of British goods needed for Turkey's industrial development and means of defense, to be paid gradually from the proceeds of Turkish exports. In May Turkey ordered from German producers rolling stock for its railway system, to the value of about £T16,000,000; and in October the German Minister of Economy arranged a credit of Rm 150,000,000 to cover Turkish purchases from Germany; these were expected to consist chiefly of arms, material for military aviation, and equipment for electrical systems and chemical works.

Turkey thus found ready means of doing business both with dictatorial and with the democratic nations, and this despite an interruption of the exchangeability of the Turkish pound in the moneys of other lands. On May 11 the Turkish government suspended the payment of Turkish debts in foreign moneys. This step was said to have been occasioned by the sudden rise of an adverse trade balance with the United States, to a total of £T6,500,000, owing to a slump in American purchases of Turkish goods. A payment of \$407,302 due in New York on July 1 on account of the Turkish match monopoly was suspended, this being reportedly the first default of the existing Turkish Government in a matter of external public debt. Payments of sums due were offered in Turkish pound currency. The seasonal rise of Turkish exports in the latter half of 1938 produced a credit balance, so that Turkey resumed a restricted conversion of creditors' Turkish currency into other foreign money late in December.

In July Turkey and Yugoslavia negotiated an agreement for effecting the migration from Yugoslavia to Turkey of 150,000 inhabitants of Turkish stock; eight years were to be allowed for the process. For Turkey's active role in Balkan and European diplomacy during 1938, see BULGARIA, FRANCE, GERMANY, GREAT BRITAIN, GREECE, ITALY, RUMANIA and YUGOSLAVIA under *History*; BALKAN ENTENTE.

TURKMENISTAN SOVIET SOCIALIST REPUBLIC. One of the 11 constituent republics of the U.S.S.R., according to the new constitution, adopted Dec. 5, 1936. Area, 171,384 square miles; population (Jan. 1, 1933), 1,268,900. Ashkhabad, the capital, had 62,693 inhabitants. Other

important towns are Tashauz, Kerki, Leninsk, and Merv.

Production, etc. The chief products are cotton, wool, Astrakhan fur, ozokerite, sulphur, oil, common salt, and sulphates. In 1938 there were 162,032 acres of spring sowing, by collectives, of chief grain crops. There is an air line connecting Tashauz with Leninsk. See SOVIET CENTRAL ASIA; UNION OF SOVIET SOCIALIST REPUBLICS.

TURKS AND CAICOS ISLANDS. See JAMAICA.

TUSKEGEE INSTITUTE. An institution for the vocational training of colored young men and women at Tuskegee Institute, Ala., founded in 1881 by Booker T. Washington. The enrollment for the term beginning September, 1938, was 1645. Summer sessions, 751. There were 205 members on the faculty. The endowment for the year ending May 31, 1938, was \$7,012,675; the income was \$442,053. The library contained 44,679 volumes. President, Fred D. Patterson.

TUTUILA. See SAMOA under *American Samoa*.

UBANGI-SHARI. See FRENCH EQUATORIAL AFRICA.

UDMURT AUTONOMOUS SOVIET SOCIALIST REPUBLIC. See RUSSIAN SOVIET FEDERATED SOCIALIST REPUBLIC.

UGANDA (ōō-gān'dā or ū-gān'dā) **PROTECTORATE.** A British East African protectorate. Area, 93,981 square miles; total population (Jan. 1, 1938), 3,711,494, composed of 3,692,127 natives, 17,256 Asiatics, and 211 Europeans. The chief towns are Entebbe (capital), Kampala, and Jinja.

Production and Trade. Cotton, the staple crop, is grown almost exclusively by native cultivators, the crop for 1937-38 being estimated at 417,000 bales (of 400 lb.). Other important products were coffee, sugar, groundnuts, simsim, tobacco, rubber, tea, tin, gold, hides and skins, and salt. Livestock (stock census of 1937): 2,609,146 cattle, 1,405,549 sheep, 2,541,077 goats. Uganda and Kenya form a single unit for customs purposes and trade between them is free. In 1937 imports (ex-ship Mombasa, Kenya) were valued at £3,555,754, the cost of freight through Kenya not being included; exports (f.o.b. Mombasa), including re-exports of £322,746, totaled £6,025,482 of which cotton (lint and seed) accounted for £4,661,366; coffee, £420,483; sugar, £123,516; gold £119,416. In addition to the external trade afore-mentioned there is an interchange of imported and locally produced goods among Uganda, Kenya, and Tanganyika.

Communications. There were, in 1937, 6838 miles of highway of all kinds, and 328 route miles of railway. Kampala is connected with most of the principal towns by motor omnibus service. Port Bell, Uganda, is a port of call on the air service operated thrice weekly in each direction between Southampton, England, and Durban, South Africa. Steamer services on lakes Victoria, Kioga, and Albert are maintained by the railways and harbors administration. See KENYA under *Communications*.

Government. For 1937 revenue amounted to £1,950,534; expenditure, £1,740,888; public debt, £2,235,600. Budget estimates: 1938, recurrent revenue was estimated at £1,739,979, and recurrent expenditure at £1,618,015; 1939, ordinary revenue, £1,694,000; recurrent expenditure £1,686,000. The government of the protectorate is administered by a governor who is aided by an executive council of 7 ex officio members, and a legislative council of

10 members (6 ex officio and 4 unofficial). Native kings and chiefs, including some with rights regulated by treaty, are encouraged in carrying out the government of their own subjects, and purely native matters are dealt with by native councils. Annual estimates are compiled for all native administrations and submitted to the governor for approval (in 1937, revenue, £461,524; expenditure, £449,732). Governor and Commander-in-Chief, Sir Philip E. Mitchell (appointed October, 1935).

UKRAINIAN SOVIET SOCIALIST REPUBLIC. One of the 11 constituent republics of the U.S.S.R., according to the constitution adopted Dec. 5, 1936. It includes the provinces of Chernigov, Dnepropetrovsk, Donetsk, Kharkov, Kiev, Odessa, and Vinnitsa, and the Moldavian Autonomous Soviet Socialist Republic. Area, 170,998 square miles; population (Jan. 1, 1933), 31,901,400, of whom 80 per cent were Ukrainians, 9.2 per cent were Russians, 5.4 per cent were Jews, and 5.4 per cent were of other origins. Chief towns (with 1933 populations): Kiev (capital), 538,600 (625,000, Jan. 1, 1936); Kharkov, 654,300; Odessa, 497,000; Dnepropetrovsk, 379,200.

Production, etc. The Ukraine is the most important grain-producing area in the Soviet Union. In 1938 there were 17,166,006 acres of spring sowing, by collectives, of chief grain crops. The chief agricultural products are wheat, cotton, sugar beet, and flax. Livestock (1936) was: 2,793,400 horses, 7,689,700 cattle, 7,100,700 pigs, 3,573,500 sheep and goats. The most important industries are metal, coal mining, sugar, and flour milling. Mineral production in 1936 was: Coal, 68,000,000 tons; pig iron, 8,862,000 tons; steel, 7,995,000 tons; rolled metal, 5,843,000 tons. The value of state industrial production in 1936 was equal to 15,000 million rubles (ruble was worth \$0.20 in the U.S.S.R. during 1936). The total length of the railways was over 7000 miles, and the navigable rivers extended 1782 miles. See **UNION OF SOVIET SOCIALIST REPUBLICS**. For the Ukrainian nationalist movement, see **CZECHO-SLOVAKIA**, **GERMANY**, and **POLAND** under *History* and map on p. 288.

ULSTER. See **IRELAND**, **NORTHERN**.

UNEMPLOYMENT. **Estimates of the Number of Unemployed.** The National Industrial Conference Board of New York City, an employer organization, has preoccupied itself in recent years with the question of estimating the number of the employed engaged in remunerative activity in private enterprise or on the payrolls of regularly established government agencies, on the one hand, and the number of persons separated from remunerative activity, on the other. It includes all those engaged by such agencies as the WPA and the CCC among the unemployed. Its findings have indicated that in the past nine years, two downward movements of employment have taken place. The first carried the total number of employed from the high of 49,678,000 in September, 1929, to the low of 35,940,000 in March, 1933. The upward movement in employment was more gradual. From March, 1933, the number of workers engaged advanced to a total of 47,803,000 employed in September, 1937. There then took place another downward movement so that in February, 1938, the total number of workers employed declined to 42,435,000. From February once more an advance upward began with the employed increasing to 42,955,000 in June and 45,125,000 in October. On the other hand, the unemployed totaled 469,000 in 1929, or 1 per cent of the country's labor force; 14,706,000 in March, 1933, or 29 per cent of the

labor force; 5,651,000 in September, 1937, or 10.6 per cent of the country's labor force; 10,981,000 in June, 1938, or 20.4 per cent of the country's labor force; 9,918,000 in October, 1938, or 18 per cent of the country's labor force. In November the total employed had dropped further to 9,211,000. This last figure included 3,635,000 workers in the WPA, CCC, and other Federal work agencies.

Railroad Unemployment Insurance Act. An act providing a comprehensive system of unemployment insurance for railroad workers engaged in interstate commerce was approved by President Roosevelt in June, 1938. The new unemployment insurance act provided for a system designed to meet the special needs of the railroad industry, and removed the employees from the coverage of other unemployment compensation acts. Contributions were to be made exclusively by the carriers. The costs of the system, including both the payment of unemployment benefits and the administration of the act, were to be paid from funds into which were to be deposited the taxes collected from the carriers. The administration of the act was to be vested in the Railroad Retirement Board.

Employees eligible under the Act were to be paid benefits for each day of unemployment in excess of seven during any half month beginning with June 30, 1939. Employment benefits were to be based upon annual wages. Thus an unemployed railroad worker was to receive for each day of unemployment \$1.75 per day if his annual compensation had been between \$150 to \$200; and up to \$3 per day if his annual compensation had been \$1300 and over. The maximum benefits within a benefit year were not to exceed 80 times the daily benefits payable to each employee. Unemployment benefits were not to be paid for the following reasons: Voluntarily leaving work without good cause; discharge for misconduct; failure without good cause to accept suitable work; and unemployment due to a strike. An employee was not required to accept work if as a condition of being employed he would be required to join a company union or resign from or refrain from joining any bona fide labor organization.

The employer was required to contribute an amount equal to 3 per cent of the compensation (not in excess of \$300 per month), payable by the employer to an employee. The contributions were to be collected by the Railroad Retirement Board and deposited with the Secretary of the Treasury, who was to maintain an account known as "the railroad unemployment insurance account."

Unemployment Insurance. Under the laws of 21 States and the District of Columbia, unemployment insurance benefits became due as of January, 1938, thus ushering in this important provision for the payment of unemployment benefits under the Social Security Act of 1935. The American Association for Social Security estimated that the total number of workers included under these laws was 11,565,000. The funds accumulated by these States up to Oct. 31, 1937, amounted to \$343,490,000, or an average deposit of \$29.44 per worker. The 21 States, where the benefit provisions went into effect with the opening of the year, were Alabama, Arizona, California, Connecticut, Louisiana, Maine, Maryland, Massachusetts, Minnesota, New Hampshire, New York, North Carolina, Oregon, Pennsylvania, Rhode Island, Tennessee, Texas, Utah, Vermont, Virginia, and West Virginia. Before the end of the year eight more States were to join these jurisdictions, that is to say, Indiana, Mississippi, Iowa, Michigan, South Carolina, Idaho, New Mexico, and Oklahoma. With the exception of Georgia,

Illinois, and Montana, where the laws called for the inauguration of benefit payments on July 1, 1939, benefits in the remaining 17 jurisdictions were to become due on Jan. 1, 1939. It became increasingly evident that the handling of the unemployed benefit payments was to encounter serious difficulties as the year progressed. (1) Administrators in the separate jurisdictions were confronted with the tremendous problem of putting the records sent in by employers in shape ready for the payment of benefits. (2) Many employers, despite intensive educational campaigns, failed to report the wages of their employees. (3) There was very serious danger that the administrations would be swamped by the extraordinary number of claims filed virtually simultaneously. This was borne out when the American Association for Social Security reported that within three weeks after the benefit provisions had begun to operate, over two million unemployed workers had filed claims for benefits. In most of the States, the registration figures were well above the totals expected by administration officials late in 1937. In New York State 500,000 claims for benefits were filed up to January 20, or 75,000 more than expected during the entire month. (4) The payments moved out to the beneficiaries after long and heartbreaking delays. According to the Federal Social Security Board, six weeks after the inauguration of the program payments of benefits to unemployed workers produced but a total of 617,806 checks in the 21 jurisdictions. Within that time, the total amount expended was \$6,278,000, making by February 3 an annual average per check of \$10.16. In fully one-quarter of the States these delays took place, New York State, notably, presenting a poor record. With almost one-third of the applications filed in the country representing the claims of New York unemployed, by February 12 New York State had sent out only 9 per cent of the checks.

By midsummer the delays, difficulties, and inefficiency of the program itself and the inadequacies of State administration were so clearly revealed that a storm of protest arose from many regions in the country. Dr. Herman A. Gray, Chairman of the New York Unemployment Insurance Advisory Council, expressed the sentiments of many persons when he bitterly assailed the whole program before the U.S. Senate Committee on Unemployment, and warned that unless the underlying principles of the Social Security Act as they applied to unemployment benefits were reconsidered and the law's operation "fundamentally revised," the Government would not be fulfilling the promise given and the expectation aroused by the establishment of the system. The present program, he declared, was "administratively unworkable" and so "cumbersome, complex and confused" that it offered "no assurance of any real help" to the unemployed. Similar complaints came from the administrators of the unemployment benefit systems of Indiana, Pennsylvania, and New York.

As experiences continued to pile up, it became increasingly apparent that the unemployment insurance benefits were so small that they averaged considerably less than the relief grants. The data released by the Social Security Board indicated that for the first quarter of 1938 an average grant of \$15.46 per month was made to qualified unemployed persons, regardless of whether they were single or had families to support. On the other hand, work-relief wages during 1937 averaged \$53.41 per month throughout the year, while the average of even direct relief was \$23.43 per month during

the same year, or almost \$8 per month more than the average unemployment-insurance benefit. Between January 1 and March 31, the 22 jurisdictions, which began making unemployment-benefit payments in January, spent a total of \$61,652,000. During the same period, however, these jurisdictions collected in payroll taxes from employers, and in five States also from employees, a total of \$79,000,000, or over \$17,000,000 more than was spent. This substantiated the belief of many critics of the system that unemployment insurance was actually withdrawing more income from purchasing power than was actually being increased as a result of benefit payments.

As a result of the inadequate operation of the law, Mr. Epstein, for the American Association for Social Security, presented the following program for necessary changes and amendments in the Social Security Act, pointing out that the experiences of 1938 had "amply demonstrated that the unemployment insurance system established by Congress was totally unsound, too inadequate, cumbersome and costly to administer." He went on to say further that the present unemployment insurance scheme neither provided "adequately for the unemployed persons who are receiving insurance benefits, nor offers any care of the long-time unemployed remaining in the labor market. . . . The benefits it provides are set in a vacuum for they are fixed with no relation to the subsistence needs of the worker, the size of his family, and the length of his unemployment." With a view to improving the legislation, Mr. Epstein proposed the following changes: (1) Instead of leaving the basic provisions of the State acts to the vagaries of each State, it was necessary to amend the Social Security Act to require that each State unemployment insurance law provide for minimum insurance benefits commensurate with subsistence levels and family needs, and for minimum periods of benefit duration of approximately 26 weeks in the year. (2) In place of the present clumsy and expensive tax-credit system, the Social Security Act should make use of the simple method of Federal subsidies for the State unemployment insurance plans. Under the subsidy system only one tax would be levied by the Federal Government. The Federal Government should grant to the States such amounts as they needed for the payment of benefits in accordance with the minimum Federal standards to be prescribed in the Social Security Act. In this way, by making up the difference between the amounts collected and the sums needed in the States, the Federal Government would equalize the burdens among the States on the basis of ability to pay. (3) The problem presented by the long-time unemployed worker could be met only by integrating relief and insurance into a uniform and economical program. (4) The greater portion of the cost of the supplementary unemployment assistance benefits to be paid to the long-time unemployed should be met by the Federal Government, the balance to be borne by the States.

See UNITED STATES under *Congress*; *AUTOMOBILES*; *MICHIGAN*; *PENNSYLVANIA*.

Unemployment in Foreign Countries. During the winter of 1937-38, growing concern was being expressed for the level of unemployment in many foreign countries. In *Australia* statistics of trade-union employment at the end of 1937 showed that the unemployed totaled 37,558, or 8.2 per cent of the organized workers, as compared with 46,863 persons and 10.7 per cent in December, 1936. *Canada* reported a decline in the percentage of the

trade-union unemployment between January, 1937, and January, 1938, from 14.5 per cent to 12.4 per cent. In *France* the number of unemployed in receipt of benefits in February, 1938, totaled 412,000, as compared with 410,000 in February, 1937. After having reached 1,611,000 in February, 1937, the number of unemployed in *Germany* decreased to 508,000 in March, 1938. In *Great Britain* the number of persons registered with employment exchanges totaled 1,628,000 in February, 1937, and 1,810,000 in February, 1938. In *Sweden* in February, 1937, the number of trade unionists unemployed totaled 80,637 or 14.5 per cent of all trade unionists, and in February, 1938, the figures stood at 89,614, making 14.5 per cent of the total trade union body.

In many countries the volume of unemployment in the third quarter of 1938 was higher than the corresponding period of 1937. In *France* and *Great Britain*, available figures showed that the unemployed was heavier in September, 1938, than in September, 1937. However, the number of unemployed on the live register in *Germany* and *Poland* decreased sharply during the same period. Comparing conditions between August, 1937, and August, 1938, the returns for *Canada*, *Denmark*, and *Sweden* indicated that more persons were out of work in 1938 than had been the case in 1937. The following figures present the state of affairs in outstanding foreign countries during the summer of 1938 with comparisons for the comparable period in 1937.

Australia, 39,824 trade unionists unemployed in June, 1938 (8.6 per cent), as compared with 42,145 (9.3 per cent) in September, 1937. *Austria*, 92,000 unemployed in receipt of benefits in July, 1938, as compared with 178,000 in August, 1937. *Belgium*, 114,000 wholly unemployed in July, 1938, as compared with 88,825 in August, 1937. *Canada*, 11.6 per cent of all trade unionists unemployed in August, 1938, as compared with 7.6 per cent in August, 1937. *Czechoslovakia*, 165,000 unemployed on live register in August, 1938, as compared with 233,000 in August, 1937. *Denmark*, 74,475 trade unionists unemployed in August, 1938, as compared with 66,000 in August, 1937. *France*, 338,000 unemployed in receipt of benefits in August, 1938, as compared with 311,000 in August, 1937. *Germany*, 179,000 unemployed registered in August, 1938, as compared with 509,000 in August, 1937. *Great Britain*, 1,759,000 persons registered with employment exchanges in August, 1938, as compared with 1,358,000 in August, 1937. *Netherlands*, 118,000 unemployed and registered with unemployment insurance societies (24.2 per cent) in August, 1938, as compared with 125,000 (26.3 per cent) in August, 1937. *Poland*, 211,000 unemployed registered in employment offices in August, 1938, as compared with 261,000 in August, 1937. *Sweden*, 50,461 unemployed trade unionists (8.1) in August, 1938, as compared with 40,953 (7.1) in August, 1937. *Switzerland*, 33,000 wholly unemployed receiving unemployment benefits (5.8 per cent) in July, 1938, as compared with 35,000 (6.7 per cent) in August, 1937.

UNFEDERATED MALAY STATES. The five States (see below) of the Malay Peninsula, under British protection but not included in the Federated Malay States. The rulers of these five States are aided by State councils, and by British advisers appointed by the British Government.

Johore. Area, 7500 square miles; population (1937 estimate), 613,510 including 268,300 Chinese, 267,500 Malaysians, 72,600 Indians, and 5110 other races. Capital, Johore Bahru, about 97,634 inhabitants. The chief products in 1937 were rubber, coconuts, pineapples, coffee, tapioca, areca nuts, rice, timber (74,216 tons), firewood (131,945 tons), tin ore, and iron ore. In 1937 imports were valued at \$447,288,555; exports, \$105,821,320; revenue, \$20,196,688; expenditure, \$18,397,752 (Straits dollar [\$]) averaged \$0.5797 for 1937). The ruler, who is subject to the advice of a British officer called the general adviser, is assisted by an

executive council and an administrative council. Sultan, Sir Ibrahim (succeeded in 1895).

Kedah, kâ'dâ. Area, 3660 square miles; population (1937), 474,755, including 319,260 Malays, 85,472 Chinese, 56,402 Indians, 631 Europeans, and 13,010 others. Capital, Alor Star, 25,103 inhabitants. The principal products are rubber, betel nuts, coconuts, and rice. In 1937-38 imports totaled \$12,385,148; exports, \$344,625,429; revenue totaled \$7,544,682; expenditure, \$36,625,653. A railway connecting the Federated Malay States and Siam passes through Kedah. Sultan, Sir Abdul Hamid Halim Shah (succeeded in 1881).

Kelantan, kē-lân'tân'. Area, 5750 square miles; population (1937 estimate), 400,378. In 1936 there were 10,811 registered births and 6985 deaths. Kota Bharu, the capital, had 14,843 inhabitants in 1931. The chief products are rubber, rice, coconuts, areca nuts, manganese, fish, tin, and gold. Livestock in 1937 included 102,163 cattle and 37,285 buffaloes. In 1937 imports totaled \$57,941,213; exports, including re-exports, \$10,467,593; revenue, \$3,209,722; expenditure, \$2,757,900; public debt, \$5,182,734. Sultan, Sir Ismail.

Perlis. Area, 316 square miles; population (1937), 52,703, of whom about 43,497 were Malays. Capital, Kangar. The chief products are rice, rubber, coconuts, and tin. Guano deposits exist. In 1937-38 revenue totaled \$728,531; expenditure, \$634,483 (Straits dollar averaged \$0.5797 for 1937; \$0.5692 for 1938). Rajah, Syed Alwi (succeeded, Dec. 20, 1905).

Trengganu, trēng-gā'nōo. Area, 5050 square miles; population (1937 estimate), 198,246. During 1937 there were 6845 live births and 4427 deaths. Capital, Kuala Trengganu (13,972 inhabitants in 1931). In the 22 vernacular schools 2188 pupils were enrolled in 1937. The principal products are rice, coconuts, rubber, areca nuts, fish, iron, tin, and manganese. In 1937 imports were valued at \$6,443,326; exports (including re-exports of \$681,088), \$11,679,578 (iron ore, \$4,495,245; rubber, \$3,701,910; dried fish, \$360,081). In 1937 there were 175 miles of roads in use; 963,233 tons of shipping entered and cleared in 1937. Revenue in 1937 was \$2,660,399; expenditure, \$2,645,686; public debt, \$3,000,000. Sultan, Sir Suleiman Badrul-alam Shah (succeeded in 1920).

UNION COLLEGE. A nonsectarian college for men at Schenectady, N. Y., founded in 1795. The enrollment for the autumn of 1938 totaled 840. The faculty numbered 83. The amount of endowment for the year was \$4,404,297, and the income \$576,028. The library contained 102,350 volumes. President, Dixon Ryan Fox, Ph.D., L.H.D., LL.D.

UNION OF SOUTH AFRICA. See SOUTH AFRICA, UNION OF.

UNION OF SOVIET SOCIALIST REPUBLICS (U.S.S.R.). A republic comprising the greater part of the former Russian Empire. Capital, Moscow.

Area and Population. The area of the Union of Soviet Socialist Republics is 8,213,500 square miles (21,272,900 square kilometers), of which 21.6 per cent lies in Europe, 78.4 per cent in Asia. The population on Jan. 1, 1934, was estimated at 168,000,000. It was 147,013,600 by the census of December, 1926, and 139,700,000 in the same territory in 1914. The census of 1926 gave 71,024,300 males and 75,989,300 females.

The Union at the close of 1937 was composed of 11 Union Republics which in turn included 22 autonomous republics and 9 autonomous provinces as well as lesser subdivisions. The various auton-

omous units represented the principal national groups in the Union, of which there were nearly 200, inherited from the Czarist Empire. The estimated area and population as of Jan. 1, 1933, of the 11 Union Republics are shown in the accompanying table.

SOVIET UNION: AREA AND POPULATION

	<i>Sq. kilometers</i>	<i>Population</i>
Russian S.F.S.R.	16,707,900	105,552,200
White Russian (Byelo) S.S.R.	126,800	5,439,400
Ukrainian S.S.R.	443,100	31,901,400
Uzbek S.S.R.	172,000	5,044,300
Azerbaijan S.S.R.	86,000	2,891,000
Armenian S.S.R.	30,000	1,109,200
Georgian S.S.R.	69,600	3,110,600
Turkmenistan S.S.R.	443,600	1,268,900
Tajik S.S.R.	143,900	1,352,700
Kazakh S.S.R.	2,853,300	6,796,600
Kirghiz S.S.R.	196,700	1,302,100
Total	21,272,900	165,768,400

Estimated populations of some of the chief cities on Jan. 1, 1936, were: Moscow, 3,641,500; Leningrad, 2,739,800; Kiev, 625,000; Tashkent, 565,000; Tbilisi (Tiflis), 426,300; Minsk, 186,500; Kirov, 130,000. Estimates of Jan. 1, 1935, for other cities were: Baku, 670,000; Kharkov, 625,400; Gorki (Nizhni-Novgorod), 512,600; Odessa, 509,000; Rostov-on-Don, 479,000; Sverdlovsk, 450,000; Stalingrad, 390,000; Dnepropetrovsk, 384,900; Saratov, 340,000; Novosibirsk, 310,000; Stalino (Yuzovka), 272,600; Kazan, 271,000; Kuibyshev (Samara), 271,000; Chelyabinsk, 263,300; Astrakhan, 249,700; Omsk, 241,500; Voronezh, 240,000; Vladivostok, 235,000; Archangel, 225,800; Stalinsk (Kuznetsk), 220,000; Ivanovo, 215,400; Yaroslavl, 209,400; Tula, 201,300.

Education. During the two decades ending in 1937, illiteracy was reported to have declined from 67.7 per cent to less than 8 per cent. At the beginning of the 1938-39 school year, there were 33,300,000 children attending 170,764 schools, an increase of 2781 schools since Sept. 1, 1937. In 1937 there were nearly 30,000,000 pupils in primary and secondary schools, 15,000,000 in pre-school kindergartens, 542,000 in universities and colleges, 1,200,000 in technical schools and workers' faculties, and over 1,000,000 students in apprentice schools. In the spring of 1938 the schools of higher education graduated 90,000 students and in the autumn they enrolled 166,000 new students. There were 71,000 new teachers appointed in the Russian S.F.S.R. alone in 1938. Education in the Soviet Union is a charge against each of the 11 Union Republics and against the localities concerned. Expenditures increased from 1,493,000,000 rubles in 1929 to 20,100,000,000 rubles in 1938.

Production, etc. In the Soviet Union transport and communications are conducted as Federal departments. Banking is centralized in a State Bank under government control. Distribution is socialized, with retail trade in the cities conducted mainly by local administrative bodies and in the villages by consumer co-operatives. Industrial production is carried on largely by state enterprises, operating under the general direction of appropriate Commissariats (government departments). A State Planning Commission (Gosplan) plots the objectives for each year and for five-year periods. An Economic Council acts as a co-ordinative body. A commission of Soviet Control checks and supervises results.

State planning is an essential of Soviet economy. The planning system is designed to direct and coordinate the employment of the energies and re-

sources of the country for orderly development. The planning system, however, goes beyond the economic field. It includes science, education, public health, and the extensive social services designed to safeguard the welfare and security of the citizenship.

Under this system the work of Gosplan has assumed a position of primary importance. Its personnel in Moscow includes a considerable number of permanent specialists re-enforced by consultants who are authorities in every field. Under the central body each Constituent Republic has its Gosplan, and there are subordinate planning boards in the various cities.

The first Five-Year Plan was completed Dec. 31, 1932, in four and a half years. Under it the industrial output was increased 119 per cent, and substantial bases in heavy industry were established. In agriculture the whole set-up was recast and in 80 per cent of the agricultural area the small individual strip-farms were replaced by large-scale collective farms, in most cases with a high degree of mechanization. In addition 10 per cent of the total farm area was represented by state farms mechanized in all departments and run on industrial lines.

The second Five-Year Plan, inaugurated Jan. 1, 1933, and concluded Dec. 31, 1937, provided for an increase of 114 per cent in industrial production and an increase of approximately 30 per cent in the output of agriculture (actually total grain production during the second Plan was 27 per cent greater than during the first Plan). No extensive increase in the sown area was provided, the emphasis being on improved methods of cultivation. Capital investments in the national economy for the period were fixed at 130.4 billion rubles (they were 50.5 billion rubles during the first Plan). Upwards of 7000 miles of new rail lines were projected.

The third Five-Year Plan was begun Jan. 1, 1938. Schedules for the first year envisaged an increase in the industrial output of 15.3 per cent and commensurate increases in other lines.

Industry. The increase in general industrial production in 1938 was 12.5 per cent over 1937. The accompanying table shows the output of the lead-

SOVIET INDUSTRIAL PRODUCTION *

<i>Products</i>	<i>1935</i>	<i>1936</i>	<i>1937</i>	<i>% increase over 1936 output</i>
Electric power . . . mill. kw-hr	26,294	33,000	36,600	10.9
Coal . . 1,000 met. tons	108,868	122,700	123,000	0.2
Peat do . . .	19,900	14,266	13,100	-8.2
Crude oil and gas . . . do . . .	26,763	29,293	30,700	5.1
Pig iron do . . .	12,489	14,400	14,550	1.0
Steel do . . .	12,588	16,330	17,800	9.0
Rolled steel products . . . do . . .	8,995	12,470	12,900	3.4
Cement do . . .	4,488	5,849	5,837	-0.2
Timber . . mill. cu. m.	114.14	126.3	93	-26.4
Passenger cars units . .	18,969	3,655	18,176	397.3
Trucks do . . .	77,773	132,917	181,139	36.3
Tractors do . . .	121,500	131,200	220,000	...
Cotton cloth . . mill. m.	2,532	3,109	3,200	2.9
Woolen goods . . . 1000 m.	91,000	97,500	100,300	2.9
Footwear . . 1000 pairs	85,500	139,940	183,000	30.8
Canned goods . . mill. cans	1,155	1,266	845	-27.9
Sugar (granulated) 1000 met. tons	2,750	1,998	2,410	20.6
Average daily carloadings, units . .	68,100	86,200	89,792	4.2

* Figures in some cases are approximate. ♢ Planned output.

Note: m. = meter; met. = metric; mill. = million.

ing industrial products in 1935-37. It is compiled in large part from *Foreign Policy Reports*, June 1, 1938.

Agriculture. Since 1928 the structure of agriculture has been completely reorganized. The small, individual peasant holdings, averaging 12 to 14 acres, have in large measure given way to large-scale collective farms in which the peasants pool their acreage. (Each collective farm family, however, has its own garden plot and domestic farm animals.) This new set-up has made possible better organized methods of production with a high degree of mechanization. The transition was effected largely during the years 1929-33. In 1929 less than 4 per cent of the peasant households were represented in the collective farms, by Jan. 1, 1938, the percentage had risen to 93. There were 244,000 collective farms averaging about 1200 acres, operated by 19,100,000 peasant families in 1938. Some 800,000 peasant households still worked individual holdings. In addition, large state farms operated about 12 per cent of the sown area.

SOWN AREA AND GRAIN HARVEST

	Area of all crops (hectares)	Area of grain crops (hectares)	Grain production (metric tons)
1913	105,000,000	94,400,000	80,100,000
1931	136,600,000	105,500,000	69,480,000
1935	132,500,000	103,700,000	92,010,000
1936	133,000,000	102,400,000	83,000,000
1937	135,200,000	111,000,000

Grain exports, in metric tons, were: 1909-13 (average), 10,700,000; 1931, 5,050,306; 1932, 1,763,298; 1933, 1,689,790; 1934, 771,096; 1935, 1,518,868; 1936, 332,274; 1937, 1,277,534. The accompanying table shows the yields of the principal industrial crops.

PRINCIPAL INDUSTRIAL CROPS

	1935	1936	1937
Cotton (ginned) ..met. tons	530,700	778,100	819,000
Sugar beetsdo...	16,200,000	16,830,000	2,500,000*
Flax (long fiber) do...	550,000	530,000

* Beet sugar.

The backbone of mechanization in Soviet agriculture is furnished by the machine and tractor stations, each of which serves collective farms within its area. These stations grew from 145 in 1930 to 6356 on Dec. 1, 1938. They operated upward of two-thirds of the tractors in the country. Growth of mechanization on farms is shown in the table below.

GROWTH OF MECHANIZATION ON FARMS

Year	Tractors	Combines	Year	Tractors	Combines
1929 ...	34,900	45	1935 ...	379,000	52,500
1931 ...	125,300	6,400	1937 ...	450,200	121,000
1933 ...	204,000	25,000	1938 ...	470,000	137,800

Labor. There were some 27,000,000 wage earners in Soviet industry in 1937, of whom upwards of 80 per cent were members of trade unions. The personnel of industrial workers and employees increased about 150 per cent during the period of the first and second Five-Year Plans (1928-37). There has been no unemployment since 1930. Industry was operated on the basis of a five-day week with a uniform rest day on the sixth day. The seven-hour workday was generally established, with 20 per cent of the workers, those in more arduous or hazardous occupations, employed on a six-hour day. An elaborate system of social insurance provided allowances for sickness, disability, old age,

and death, and furnished free medical care and hospitalization as needed. Annual vacations of at least a fortnight with pay were compulsory. The average wage paid in large-scale industry in 1936 was 2862 rubles per annum.

Electrification. Up to the time of the Revolution, Russia was one of the most backward countries in the world in power development, standing fifteenth among the nations in electric output. By the middle of the second Five-Year Plan it had advanced to third place. A series of large-scale regional power plants, some 75 in all, reinforced by a steadily growing number of local plants, forms the country's power base. Total plant capacity rose from 1,874,000 kilowatts in 1928 (1,098,000 kw in 1913) to 9,500,000 kw in 1937. Output increased from 5 billion kilowatt-hours in 1928 (1.9 billion in 1913) to 32.8 billion kw-hr in 1936 and upwards of 38 billion kw-hr in 1937. Largest plant in operation was that at Dnieproges in the Ukraine, capacity 560,000 kw. Plans were drawn for a giant plant of 2,500,000 kw to be constructed during the third Five-Year Plan at Kuibyshev (formerly Samara) on the Volga River, about 400 miles from its mouth on the Caspian Sea.

Transportation. Railway operations registered marked advances during 1935-37. During the first and second Five-Year Plans freight operations were quadrupled and daily carloadings doubled. New rail construction projects completed during the two Plans included the Taishent-Komsomolsk line in Siberia (2000 miles) paralleling the Trans-Siberian Railway to the north, the Moscow-Donbas trunk line (750 miles), and the Turkestan-Siberian line (900 miles), as well as the complete double-tracking of the Trans-Siberian Railway.

Length of railway lines in 1937 was 53,700 miles, nearly 50 per cent greater than in 1913. Railway freight carried in 1937 aggregated 517,300,000 metric tons (483,200,000 in 1936); passengers, 1,142,000,000. The length of Soviet air lines in 1937 was 72,500 miles. Passengers carried in 1937 numbered 234,000; mail and freight, 48,322 metric tons. Motor transport was growing rapidly and during the second Five-Year Plan upwards of 150,000 miles of new roads were built. The Soviet roads and highway network in 1937 aggregated 1,682,100 miles. The number of automobiles in the Soviet Union on Jan. 1, 1938, was 514,440.

Potential length of inland waterways in the Soviet Union is about 220,000 miles of which 62,000 miles were navigable in 1937. Recent years have seen a rapid expansion. A canal connecting Moscow with the upper reaches of the Volga (80 miles) was completed in the spring of 1937, and another link running to the Baltic was designated to make Moscow a seaport for moderate-sized vessels. Work progressed on a canal linking the Volga to the Don River—thus giving the Volga an outlet on the Black Sea—and on an extensive river-canal chain linking the Southern Urals with the Kuznetz coal basin in West Siberia. Waterway extensions in recent years included the linking of the Baltic and White Seas and the making of the Dnieper River navigable to its upper reaches. Freight carried on inland waterways in 1937 was 84,300,000 metric tons.

Shipping. The Soviet merchant marine had a gross tonnage of 1,280,900 on June 30, 1938 (1,258,200 on June 30, 1937). The total freight carried (including coastwise freight) amounted to 35,500,000 metric tons in 1937.

Foreign Trade. Foreign commerce in the Soviet Union is a governmental monopoly exercised

by the Commissariat of Foreign Trade which maintains trading agencies abroad. Imports and exports are regulated in accordance with the country's system of planned economy. Trade in recent years is shown in the accompanying table compiled from the U.S. *Foreign Commerce Yearbook 1938*.

SOVIET FOREIGN TRADE

Year	Imports (1,000 rubles ^a)	Exports (1,000 rubles ^a)	Imports (\$1,000 ^b)	Exports (\$1,000 ^b)
1934 ...	232,426	418,345	\$200,514	\$360,907
1935 ...	241,374	367,411	209,264	318,534
1936 ...	1,352,535	1,359,104	270,507	271,821
1937 ...	1,341,255	1,728,634	268,251	345,727

^a Gold rubles of a par value of \$0.8713 for 1934 and 1935; the new ruble of three French francs (20 U.S. cents) for 1936 and 1937. ^b U.S. currency dollars.

Values of the chief 1937 imports (in U.S. currency) were: Machinery, \$60,812,000; iron and steel, \$24,184,000; raw or washed wool, \$17,275,000; tin, \$16,547,000; crude rubber, \$15,484,000. The leading 1937 exports were: Wood and its manufactures, \$87,558,000; wheat, \$37,210,000; petroleum products, \$29,483,000; raw fur skins, \$21,267,000; cotton fabrics, \$14,362,000; raw cotton, \$10,350,000. Of the 1937 imports the United States supplied 18.2 per cent by value (15.5 in 1936); Germany, 14.9 (22.8); United Kingdom, 14.3 (15.1); Iran, 6.7 (8.6); China, 5.8 (5.6). The United Kingdom purchased 32.8 per cent of the 1937 exports (26.6 in 1936); United States, 7.8 (9.6); China, 6.2 (6.9); Germany, 6.2 (8.5); Iran, 5.3 (4.7); France, 5.0 (7.6). United States trade figures for 1938 showed general imports from the Soviet Union of \$24,064,113 (\$30,767,804 in 1937); exports to the Soviet Union, \$69,691,498 (\$42,892,010).

Finance. In a country as highly socialized as the Soviet Union the growth of the budget reflects to a large extent the degree of economic progress. The first "firm" budget, that of 1924-25, balanced at 1,400,000,000 rubles. For the calendar year 1938 budget estimates placed receipts at 116,801,000,000 rubles (socialized economy, 92,900,000,000; mobilization of public funds, 11,151,000,000; all other, 12,726,000,000) and expenditures at 115,301,000,000 rubles (national economy, 47,212,000,000; national defense, 27,044,000,000; social welfare, 12,148,000,000; all other, 28,897,000,000). For 1937 the estimates were: Receipts, 96,600,000,000 rubles; expenditures, 93,900,000,000 rubles. Actual budgetary receipts and expenditures during 1933-36, in billions of rubles, were:

	1933	1934	1935	1936
Receipts	39.29	50.82	67.43	89.00
Expenditures	36.00	48.31	66.39	87.50

The only bank of issue is the State Bank, center of the financial system. It has a monopoly of short-term credit operations and it finances the bulk of Soviet foreign trade transactions. Its outstanding credits to various branches of the national economy were upwards of 30 billion rubles in 1937. Its gold fund was over two billion rubles. Soviet savings banks on Dec. 1, 1937, had 14,000,000 depositors with deposits of over 4300 million rubles. During the second Five-Year Plan deposits increased by more than 3300 million rubles.

Government. Supreme political power is vested in a Supreme Council, a two-chambered parliament, deputies to which are elected every fourth year by universal, direct suffrage with the secret ballot. The Supreme Council meets twice a year. The

two chambers in joint session elect a Presidium of 37 members which exercises wide powers between sessions of the Supreme Council, including ratification of treaties and declaration of a state of war in case of invasion of Soviet territory or if called for under treaty. The Supreme Council selects the Council of People's Commissars, or executive cabinet, which operates under the supervision of the Presidium. (For full description of the Soviet Constitution see the YEAR BOOK for 1936).

The Council of People's Commissars was composed as follows at the end of 1938: Chairman, V. M. Molotov; Vice-Chairmen, L. M. Kaganovitch, A. I. Mikoyan, A. Bulganin; Commissar of Foreign Affairs, M. M. Litvinov; Defense, K. E. Voroshilov; Navy, M. P. Frinovsky; Finance, A. G. Zverev; Foreign Trade, A. I. Mikoyan; Railway Transportation, L. M. Kaganovitch; Water Transportation, N. I. Yezhov; Communications (acting Commissar), Yartzev; Aviation Industry, M. M. Kaganovitch; Ammunitions, I. P. Sergeiev; Ship Building, I. T. Tevosian; Armaments, B. L. Vannikov; Fuel Industry, L. M. Kaganovitch; Electric Plants and Electric Industry, M. G. Pervukhin; Ferrous Metallurgy, T. A. Merkulov; Non-ferrous Metallurgy, A. I. Samokhvalov; Chemical Industry, M. F. Denisov; Building Materials Industry, L. A. Sosnin; Light Industry, S. G. Lukin; Textile Industry, A. N. Kosigin; Lumber Industry, N. M. Antzelovich; Heavy Machine Building Industry, V. A. Malishev; Intermediate Machine Building Industry, I. A. Likhatchev; General Machine Building Industry, P. I. Parshin; Fish Industry, P. S. Zhemchuzhina; Food Industry, V. P. Zotov; Meat and Dairy Industry, P. V. Smirnov; Agriculture, I. A. Bendediktov; Grain and Livestock State Farms, P. P. Lobanov; Agricultural Collections, S. E. Skrinknikov; Trade, A. V. Lubimov; Home Affairs, L. P. Beria; Justice, N. M. Richkov; Health (acting Commissar), Propper-Grebenschikov; Chairman, State Planning Commission, N. A. Voznesensky; Chairman, Art Committee, A. J. Nazarov; Chairman, Committee of Higher Education, S. V. Kaftanov; Chairman, State Bank, A. Bulganin.

Joseph Stalin, General Secretary of the Communist Party of the U.S.S.R., while holding no executive governmental post except that of member of the Presidium of the Supreme Council, was the most powerful political figure in the country.

HISTORY

Foreign Relations. As the avowed champion of peoples oppressed by "capitalistic" invasion and conquest, the Russian Soviet Union found its foreign policy involved, during 1938, in three areas beyond Russian frontiers; the cause of the Spanish liberal republic, despite aid of various sorts sent from Russia, sank gradually into defeat, the Japanese progressed in their invasion of China, and the troops of Nazi Germany marched into undefended Austria and Czecho-Slovakia. The effect of these three phenomena in combination was to give an appearance of weakness to the Soviet Union as an effectual comrade of nations menaced by enemies that were the Soviets' own natural or theoretical adversaries. It appeared to some commentators that the Soviet Government had suffered, through the failure of its foreign policy, a setback both to its revolutionary repute and to all that it had until then effected in organizing its foreign and military relations.

The Soviet Union was bound, in the case of Czecho-Slovakia, by an agreement for mutual

assistance, formed in May, 1935; this agreement was not absolute, but depended on the observance by France of an otherwise similar agreement with Czechoslovakia, executed a few days earlier. In the earlier stages of the German proceedings against Czechoslovakia, it appeared that the French Government intended to lend the latter country military aid; the question arose as to how the Soviet Union would act to add its armed support in an effectual manner though separated from the menaced territory by Poland and Rumania.

Foreign Minister Litvinov was quoted as disposing of this point with the phrase, "Where there's a will there's a way," but no definite indication appeared that Russian forces had a specific plan or manner of action for a military commitment against Germany. When the German moves brought a crisis in September, the French made no military move against Germany, and the Soviet Union's obligation to help Czechoslovakia thus never came literally into force. G. E. R. Gedye in a dispatch to the *New York Times* related that the Russian authorities had expressed willingness to support Prague even in the absence of French support, but that conservative Czech Agrarians had prevented their government's acting on the proffer. Litvinov, in a speech (September 20) declared that Britain and France had ignored the Soviet Union's offer of military aid, and the implication was that the Union had no part in the abandonment of Czechoslovakia (q.v.).

In China's case, the Soviet Union gave limited assistance to the invaded country during 1938 in two ways: directly, by sending aviators and military instructors, as well as a certain amount of munitions and some airplanes; indirectly, by engaging with Japanese forces in July on Changkung heights (bordering Manchoukuo), a disputed bit of strategic territory (see MANCHOUKUO).

Army and Navy. The armed forces of the Soviet Union were a subject of surmise rather than of definite data. Troops east of Lake Baikal were commonly supposed to number more than 400,000. The double-tracking of the Transsiberian railroad added greatly to the means of moving and supplying troops in the eastern parts of the Union. The virtually completed building of the Baikal-Amur railroad, paralleling the Transsiberian but 100 miles farther north, strengthened the defense of the Russian East. A railroad under construction in 1938, running southward from the Transsiberian, was to connect with Urga, capital of Outer Mongolia. In the west, according to a current account, the Ukraine was to be made secure against invaders by defensive works, the creation of a belt of waste land, the colonization of border districts with men well qualified to give military service, and the building of strategic railroads.

Premier Molotov in an address (November 6), speaking of the Union's power for war, cried, "If anyone doubts our strength, let him try us." The implication of the phrase was defensive. Kalinin (Chairman of the Presidium), speaking in June, urged the workers, on the other hand, to produce a navy superior to the British, and added, in the spirit of earlier revolutionary war cries, "Our enemy is the capitalist world; we live for . . . the future—for a complete victory of communism throughout the world." Thus it was not yet plain whether the defensive or the offensive ideal ranked uppermost in the military planning of the Soviet Union. The numerous removals of generals, admirals, and officers of lesser rank, in the course of the political purges of 1937 and 1938 (see below) were a feature

of the Union's military situation, for they tended to interrupt continuity of thought and planning. In addition to removing officers, the authorities brought into play, as a device for preventing the commanders from alienating the troops, a system of soldiers' commissars, who kept in touch with the troops, maintained a watch over officers, and exerted authority equal, in theory at least, with that of the commanders.

Internal Economy. Since the communistic system of the Soviet Union involves the government's planning and operation of productive occupation as a whole, the Union's budget bears a close relation to economic activity. The budget adopted for 1938 was variously reported in the United States, in figures that did not agree; for most of the items they differed by not more than 2 per cent. One version showed total income as 125,000,000,000 rubles, derived from taxes and business profits of 117,300,000,000 and loans of 7,700,000,000; and expenditures totaling 124,200,000,000 rubles, of which the national economy absorbed 47,200,000,000, social and cultural activity 31,700,000,000, defense 27,000,000,000, and other expenditure 18,600,000,000. The grand totals were over $2\frac{1}{2}$ times those for 1934. It did not follow that the scale of living of the population as a whole had expanded in proportion, for the purchasing power of the ruble, in terms of the individual's purchases, could not be said to have remained wholly the same; nor did there exist any ready and adequate means for the public outside of Russia to determine the purchasing power of the ruble in 1938, relatively to 1934. Actual prices for goods varied considerably, as between those charged by lawful shops and by speculators; in the case of clothing, rough woolen trousers were reported to be priced at 35 rubles in the shops and obtainable at 80 rubles or more from "speculators" (unlicensed dealers); felt boots, costing 80 rubles in shops, were said to be offered at 180 rubles by the "speculators." Other costs and prices (not necessarily uniform for the Union) were thus given in the press in 1938: Bread for a family of five for a month (about 300 lb.), 90 rubles; cloth shoes, 60 rubles a pair; an automobile cylinder block, 1200 rubles. Some commentators continued to treat the ruble as approximately equal to 20 cents in U.S. currency. Wages, thought to have averaged 251 rubles a month for all workers, late in 1937, were raised by an average of 10 per cent for 1938; the increased pay averaged 319 rubles a month in heavy industry, 216 in light industry, 300 in railroad employment.

Despite the limited spending-power of the people, there occurred in 1938 a widespread and prolonged shortage of manufactured goods for sale. It was attributed in part at least to a paradoxical cause: abundant agricultural production. The supposed working of this cause was, that the agricultural workers, by reason of abundant returns, had more to spend and that they exhausted the market for goods intended for industrial workers. While the harvests were good in the main, they were not uniformly so, as a considerable part of Russia suffered from drought. Foodstuffs were actually more abundant, but in the case of some articles they still either failed to meet the demand or else remained too high in price for the average purchaser's purse; this was the case with the majority of meats and of dairy products, in spite of a generally favorable agricultural trend.

The industrial population, like the agricultural, was receiving more wages than in 1937, and the rate of wages had been rising since 1928; conse-

quently the increase of urban purchasing power was added to the rural purchaser's demand. The situation was summed up in the Russian jest: "Who are the richest of peoples? We are—we cannot spend all that we earn." Secondary causes, too, supposedly contributed to the shortage of manufactured goods; the "speculators" forestalled consumers in the shops, exhausted the local supply of goods in particular demand, and peddled their purchases, taking the risk of punishment; in some shops the employees personally bought up incoming consignments of scarce articles; in some the management, in order to avoid punishment for failing to earn the required profit, shirked restocking with goods that could not be profitably handled, however needful these were to the public—window panes, in particular, were said to be hard to get, although factories had them in considerable stock.

Economic Planning. The third Five-Year Plan went into effect at the beginning of 1938, the second Five-Year Plan having terminated with 1937. While the practice of planning in terms of five years at a time was observed in the naming of the new term, the year did not bring any definite indication whether the authorities had in mind any precise, dominant aim for the period 1938–42. A goal was set for 1938, the design being to produce goods to the total value of 84,300,000,000 rubles, or 15.3 per cent more than the total of 1937; the actual increase in production achieved for 1938 was subsequently estimated as 12 or 13 per cent. As to the outline that the new Five-Year Plan would take, there was some anticipation that it would continue to cultivate the growth of production, with view specially to establishing reserves of productivity and of material; that agricultural production would be required to augment very considerably; that the need to raise the production per capita, both in agriculture and in manufacturing, would be tackled; and that the exploitation of petroleum would be undertaken east of the Volga River.

The manufacturing industries were definitely under the management of the authorities in 1938, but in agriculture, under the lately established system of collective farming, management remained to a great extent in the hands of each farming community. The collective farming units, according to a recent count, numbered 243,000; they contained an estimated 93 per cent of all peasants of the cultivated areas; and they had free use of the land, by grant from the government. While subject to governmental regulation in divers respects, they retained, with the use of the land, a considerable collective freedom in the direction of their own production. The system, though regarded by some as anomalous to the outright rule of public authority that prevailed in manufacturing, had accomplished a fairly thorough, if humane, "liquidation" of the old-style, self-managing cultivator.

The Political Field. The eradication of persons obnoxious to those holding the highest authority continued through 1938. In some cases those to be removed were tried in public and condemned to death or imprisonment; in other cases, men who held or had held positions of importance were removed from office and replaced by others, their own further careers not always being disclosed. In harmony with the reported trial and execution of eight Soviet generals in 1937, correspondence from Riga stated in September, 1938, that the Russian Naval Ministry had admitted the execution, carried out some months before, of Orloff, Commander in Chief of the Navy; Sivkoff, Admiral in command of the Baltic fleet; and Ludry, Admiral at the head

of the Naval Academy; there was uncertainty at the time as to the whereabouts of nine other former high officers of the navy.

A group of 21 defendants were brought to trial (March 2) before the military collegium of the Supreme Court, condemned of treason, and sentenced (March 15); the group included five men of former high political prominence in the Soviet regime: Nikolai Bukharin (q.v.), Alexey Rykov (q.v.), G. G. Yagoda (q.v.), Nikolai Krestinsky, and K. Rakovsky. All were executed, save Rakovsky and two others, sent to prison. The general charge was that these men had formed a bloc of Rightists and Trotskyists, to overthrow the Soviet system and restore capitalism; certain physicians in the group were accused in particular of having murdered Maxim Gorky and others while pretending to treat them. Krestinsky, after the manner of some of the defendants in previous trials of the same type, made a confession in court; he then disavowed the confession and on the following day withdrew the disavowal.

Marshal Vassily Bluecher, commander of the forces on the Union's eastern borders during the engagements with the Japanese at Changkufeng in July, was reported in October to have dropped out of view and it was thought that he might have been arrested; in December, however, appeared an unofficial report that he was serving in the War Office in Moscow. Two officers on the Eastern front, Gen. G. S. Lushkov and Major Franzevitch, fled to the Japanese lines in June. Late in December, a minor political trial led to the conviction and condemnation to death, at Kiev, of five of the staff of the Commissariat of Internal Affairs. The charge against them was that they had compelled persons to make false confessions of counter-revolutionary activity; their methods and purposes in that course were not disclosed in the news on the subject.

In the matter of economic planning, already mentioned, Valery Mezhlauk, chairman of the State Planning Commission, was dropped at the elections held in December, 1937, and replaced by N. A. Vojnesensky; there followed accusations that wreckers and spies for Trotsky and Bukharin had worked their way into the commission in order to ruin the planned economy at its source.

Furtherance of Soviet Theory. The more thorough establishment of Communism was still an object of much public effort. A popular election was held in the Soviet Union on June 26. Although there arose no question of a contest as to the candidates for office, an overwhelming majority—reportedly over 99 per cent—of the registered voters attended and, almost without exception, voted the orthodox slate. Results were alike in the several republics. It was reported that the voters showed beginnings of curiosity about the purpose of the proceeding, as had apparently been anticipated by authorities when they decreed the formality of single-party elections, as a preliminary to an eventual reasoning vote. The Supreme Council of the Soviet Union (legislature created by the constitution of 1936) met for the first time in January, 1938; its chief action, taken in August, was the adoption of the year's budget.

Authorities displayed some concern that greater progress had not been made toward rendering atheism the universal attitude in spiritual matters. Reports of the persistence of many individuals in the permitted religious observances, particularly at the times of the chief Christian festivals, appeared in the news. A dispatch told in October that

the *Teachers' Gazette*, a journal of the Commissariat of Education, had given warning of a revival of religious manifestations among children, as in the singing of Christmas carols; that enemies of the people had sabotaged anti-religious instruction; teachers were accordingly cautioned against indifference on this subject and exhorted to convert children to an active attitude against religion.

See CHINA, FINLAND, FRANCE, GERMANY, GREAT BRITAIN, POLAND, RUMANIA, and SPAIN under *History*; COMMUNISM; MILITARY PROGRESS; NAVAL PROGRESS; POLAR RESEARCH.

UNITARIAN CHURCH. A denomination of independent congregational churches voluntarily uniting themselves together for more efficient religious work. The purpose of the American Unitarian Association, which is the executive arm of the denomination, is:

To diffuse the knowledge and promote the interests of pure religion which, in accordance with the teachings of Jesus, is summed up in love to God and love to man;

To strengthen the churches which unite in the Association for more and better work for the Kingdom of God;

To organize new churches for the extension of our faith in our own country and in other lands;

And to encourage sympathy and co-operation among religious liberals at home and abroad.

The Association recognizes that its constituency is congregational in tradition and polity, and that nothing in these By-laws is to be construed as an authoritative test.

The one hundred and thirteenth annual meeting of the American Unitarian Association was held in Boston, Mass., May 26, 1938. According to the statistics available for 1937-38, the denomination had 355 churches; 58,951 members; 133,905 constituents; 2285 Sunday school officers and teachers, and 14,651 pupils. The denominational publication is *The Christian Register*, a weekly. The officers of the Association are: President, the Rev. Frederick M. Eliot, D.D., LL.D.; Executive Vice-President, the Rev. Everett M. Baker; Secretary, the Rev. Palfrey Perkins, D.D.; Treasurer, Parker E. Marean. Headquarters, 25 Beacon Street, Boston, Mass.

UNITED BRETHREN IN CHRIST. This denomination resulted from the experiences and work of Phillip William Otterbein, a German Reformed pastor, and Martin Boehm, a Mennonite preacher. It was formally organized in Frederick County, Md., in 1800.

The church functions through a General Conference held every 4 years, 28 annual conferences, and a Board of Administration that co-ordinates and promotes the financial support of the General Causes, the Foreign Missionary Society, the Home Mission and Church Erection Society, the Board of Christian Education, and the United Brethren Printing Establishment.

Leading institutions of learning are: Bonebrake Theological Seminary, Dayton, O.; Lebanon Valley College, Annville, Pa.; Otterbein College, Westerville, O.; Indiana Central College, Indianapolis, Ind.; York College, York, Neb.; Shenandoah College, Dayton, Va.

The membership in the United States in 1938 totaled 416,737. The official papers are the *Religious Telescope*, the *Watchword*, and *The Evangel*. Headquarters are in Dayton, Ohio.

UNITED STATES. The area of the United States proper, or the 48 States and the District of Columbia, totaled (1939) 3,026,789 square miles; this excluded open sea and parts of the Great Lakes within territorial limits; but it included 53,013 square miles of other water. The non-contiguous lands under the United States' authority (Alaska, Hawaii, the Philippine Islands, the Pan-

ama Canal Zone, Puerto Rico, Guam, the Virgin Islands, and American Samoa) comprised 711,606 square miles. The combined area of the Union and these lands was 3,738,395 square miles.

The population of the 48 States and the District of Columbia, at the census of Apr. 1, 1930, was 122,775,046. An official estimate for July 1, 1938, made by the Bureau of the Census, placed the total population at 130,215,000. No estimates of the population State by State were made for 1938. The population of the non-contiguous lands (as listed above) totaled 14,233,389, as determined in 1929 for the Philippines and in 1930 for the other lands; the Philippines contributed all but 2,061,570 of this total.

The estimated increase in the population of the Union from Apr. 1, 1930, to July 1, 1938, totaled about 7,440,000; this came to slightly more than 6 per cent of the population of 1930, whereas the population had increased from 1920 to 1930 by 15 per cent. The percentage of yearly increase averaged, for 1930-38 (as estimated), about half of that for 1920-30. Interrupted immigration and a slow rise in the ratio of deaths to births were represented as the causes of the slackening pace of the population's increase. (For States' respective areas and populations, see under each State.)

Agriculture. See AGRICULTURE; AGRICULTURE, U.S. DEPARTMENT OF; sections on *Agriculture* under the various States; and articles on CORN, WHEAT, etc.

Commerce. The general course of business continued downward for the first five months of 1938, touched in June the bottom of the descent that had started in August, 1937, and thereafter improved until early in December. The *New York Times'* weekly business index, a measure of commercial and industrial activity, averaged, for January, about 81 per cent, scored 75, the year's lowest, for the week ended with June 4, and rose to 94.4 for the week ended with December 10; these figures compared with 111 for the second week of August, 1937, and about 64 for the low point of March, 1933. Industrial employment sank to 75.7 per cent, for June, by the Labor Bureau's index, as against 101.1 for June, 1937. Consumers' purchasing power suffered both from the low rate of employment and from a considerable reduction in the year's total of declared dividends. There was an accompanying fall in prices of divers sorts; the Labor Bureau's index of commodity prices reached the year's lowest point, 76.7, in December. Prices for manufactured goods in some industries were cut, as in the case of steel; in other industries, they were lowered by the promotion of cheaper brands, as in the case of cigarettes. The Federal Government's intervention, on the other hand, sought to bolster prices: For agricultural products, by subsidizing exports, purchasing surpluses, and making liberal loans on unsold crops; for capital goods, by financing public works; for the woolen industry, by purchasing and ordering garments for the poor. In the domestic sale of goods, as measured in dollars, the decline was almost universal; but it was more severe in the case of manufacturers' sales than of wholesalers' distribution, which in turn suffered more than did retail trade. Manufacturers' monthly sales averaged about 17 per cent less than for 1937; wholesalers', about 12½; and retailers' sales, according to one computation, fell short of 1937 by 11 per cent. As to time, the most conspicuous declines occurred in April and May; as to kinds of products, they occurred largely in capital goods and those particularly used in automobiles. The year's total

of mercantile retail sales was estimated at \$35,700,-000,000.

Foreign trade, in dollar totals, fell short of that of 1937 by nearly 8 per cent as to exports and 36 per cent as to imports. Exports had the advantage of European demand for many agricultural products through the first half of 1938, due to inferior foreign harvests in 1937; foreign countries also sought aircraft and machinery for working metals. Imports felt the effect of disturbed conditions abroad and of depressed demand. Apart from the trade in goods, the United States received from abroad a net addition of some \$1,973,000,000 in gold, as well as silver valued, for the net importation, above \$223,000,000. Figures on imports and exports follow.

GENERAL EXPORTS AND IMPORTS [In thousands of dollars]

	1937	1938	1937	1938
January	222,665	289,063	240,444	170,689
February	233,125	261,928	277,709	162,955

Mineral Production. The more important minerals mined in the United States are treated in separate articles. There are also paragraphs on mineral production in the articles on the individual States.

Railways. See separate article on RAILWAYS.

Shipping. See articles on SHIPPING and SHIP-BUILDING.

Finance. See article on PUBLIC FINANCE.

Army and Navy. See articles MILITARY PROGRESS and NAVAL PROGRESS.

Education. See the articles EDUCATION IN THE UNITED STATES and UNIVERSITIES AND COLLEGES. Separate articles on the most important universities and colleges also are given under their re-

spective titles. Sections on education are included in the articles on the several States.

ADMINISTRATION

General Conditions. The year 1938 inherited from 1937 a condition of persistent economic debility evidenced by reduced industrial activity, widespread unemployment, increasing insolvency among the railroads, low prices for many commodities, and the inactivity of uninvested private capital. There remained an unfinished conflict of interests between unionized employees and employers and likewise between two great groups of unionized labor, the A.F.L. and the C.I.O. The scene somewhat resembled that of 1931, the year that had bankrupted the prestige of the Hoover Administration. At Washington, because antagonism aroused in Congress in 1937 by the bill to change the Supreme Court's composition remained unhealed, the President had opponents within his own party. The popular tendency to impute the blame for adversity to those who had claimed the credit for prosperity was at work. Elections for a new Congress gave all these factors a field in which to work.

Factors favorable, both to the country and to those in charge of its "planned economy" also were present. The agricultural areas escaped widespread droughts and crop failures such as had been common in the earlier '30's. The divers subsidies and other aid to farmers worked sufficiently well to prevent recurrence of the wholesale ruin that had befallen farmers in the original depression. The dispensations of public support under the Social Security Act preserved great numbers from feeling the full force of bad times; in particular, unemployment compensation, paid to persons losing employment, began or had recently begun in many States. The number of indigents nevertheless increased greatly in the earlier part of the year, and precedent already set made them look to the Federal Government as the chief source of support.

The President. President Roosevelt's activities in 1938 differed in two notable respects from those in the previous phases of his administration. He proposed no new and daring venture in government or in economics; but he gave much attention to efforts to promote the defeat of his Democratic opponents in the elections for Congress. While his thoroughgoing supporters, aware of the impairment of the personal dominance on which his whole direction of National affairs rested, understood this resort to factional hostility to be needful to the security of what he had accomplished, many others, struck by the contrast with his earlier tolerance toward adversaries, and still more by what was thought an encroachment upon the province of the voter, condemned his course.

The President read his annual message to Congress on January 3. He opened with a warning of the need of adequate means of defence, in view of disturbance among other nations. The bill for the regulation of agriculture, which the previous session had left in conference, was recommended for passage. The request, made in 1937, for a law setting minimum wages and maximum hours of industrial employment, was renewed. The message declared that a higher national income was needful and set \$90,000,000,000 or \$100,000,000,000 as "our objective," but proposed no specific legislation toward this end. The Administration's policies as to taxation and incurring deficits were defended. Concentrated control over the property of others, especially in banking, was condemned in general terms. "Fundamental sound economic conditions"

were cited as reason why the "recession" then current should cause little fear. Business was assured of the Government's co-operation, "provided the component parts of business abandon practices which do not belong to this day and age." The message closed with several paragraphs of defensive tone; they contained such expressions as: "Where in some particulars . . . legislation has failed we cannot be sure whether it fails because some of its details are unwise or because it is being sabotaged"; "if private co-operative endeavor fails to provide work . . . those suffering hardship from no fault of their own have a right to call upon the Government for aid"; "it is the opportunity and duty of all . . . to co-operate with the Government . . . in whatever program may be sanctioned by the chosen Representatives of the People"; "I am sure that the Congress . . . will not let the people down."

The budget message (January 5) recommended curtailing expenditure on Federal public works such as highway subsidies to States, Federal buildings, and further projects of reclamation and river and harbor improvement; asked Congress to pass an act or initiate a constitutional amendment to allow the President to veto individual items in appropriation bills; and proposed reducing expenditure for the relief of indigents among the unemployed by \$493,000,000, for the fiscal year 1939, below the total for 1938, subject to change if business should fail to mend; yearly coverage, by the Treasury, of loss to the capital of the Commodity Credit Corporation and the guaranteeing of the Corporation's borrowings were recommended. With the aid of the proposed cut in support to the unemployed indigents, already a doubtful possibility, the budget as submitted showed a deficit (net of postal expenditure offset by earnings and of charges for retirement of debt) of \$949,600,000, the lowest subsequent to that for 1931; receipts were estimated at \$5,919,400,000, expenditures at \$6,869,000,000. The message did not propose any changes in taxation, Congress having the subject in hand.

A special message (January 28) asked Congress to authorize a program for increasing naval and, in lesser degree, military armament, in view of increasing armaments abroad. The cost of the program, supposedly about \$800,000,000, was to be spread over a series of years, and only a minor portion of the proposed total called for expenditure in the fiscal year just ahead (see *Legislation*). A special message (April 14) on the state of business and the needs of the unemployed defended the Administration against the charge of having precipitated the current economic relapse by any of its projects or policies; declared that the nation's income ought to rise within a decade to more than \$100,000,000,000, and that "the Federal debt . . . can only be paid if the Nation receives a vastly increased citizen income"; recommended the appropriation of an additional \$1,250,000,000 for expenditure by the WPA in the seven months to start July 1, as "ammunition of the highest grade for attack on recession"; proposed further appropriations for dispensation by the Farm Security Administration, National Youth Administration, and Civilian Conservation Corps; announced the policy "to make additional bank resources available for the credit needs of the country" by the "deterioration of approximately \$1,400,000,000 of Treasury gold" (i.e. gold that the Treasury had purchased and kept separate from the gold against which it issued monetary paper); proposed to effect through the

Federal Reserve Board a reduction of the required reserves of banks; asked for statutory permission for the U.S. Housing Authority to undertake immediately to build additional housing for the poor, to cost \$300,000,000; recommended the renewal of the PWA's financing, through loans and grants, of public works; and recommended the appropriation of an additional \$100,000,000 for dispensation by the Bureau of Public Roads, for aid to work on highways that could be started within the calendar year. The message also uttered a warning against words and acts harmful to the policy of promoting economic activity: "Appeals to prejudice, the creation of unkindness . . . are offenses against the whole population. . . . Use of power by any group . . . to force its interest . . . is an attack against our national life."

A proposal that Congress take literally the Sixteenth Amendment's authorization "to lay and collect taxes on income from whatever source derived" and enact a statute rendering State and Federal salaries and interest taxable both by the Federal Government and by States was delivered April 25; such action, if sustained by the courts, would have supplied an early addition to the collection of income taxes. A "fireside chat," the eleventh of this series of direct addresses to the population by medium of the radio, gave publicity to the proposals made to Congress on the same day, for moves to combat the new economic depression. A message delivered to Congress on April 29 drew the members' attention to the "concentration of economic power in American industry and its possible bearing on decline in competition" and recommended an appropriation for certain departments' study of the subject.

In unofficial public utterance, President Roosevelt declared (January 8), at a Jackson Day Democratic dinner in Washington, that he opposed only a small minority of bankers, business men, and industrialists, and said of dissidents in his party: "It is not only necessary but it is right that the party slough off any remains of sectionalism and class consciousness." Before an audience at Gainesville, Ga., he asserted (March 23) that wages in the South were far too low and that, as efficiency went "hand in hand with good pay," Southern industries could not compete with those elsewhere; the overwhelming majority of the people of Georgia, he said, opposed "feudalism." At Gettysburg, Pa., addressing the first combined reunion of surviving veterans of the Blue and the Gray, he said of 1863 and 1938: "The challenge is always the same . . . whether each generation can summon the practical devotion to attain and retain that greatest good for the greatest number, which this Government . . . was created to insure." At Kingston, Ontario, attending the opening of an international bridge, he gave his Canadian hearers "my assurance that the people of the United States will not stand idly by if domination of Canadian soil is threatened by any other [than the British] empire." In a "fireside chat" (June 24) he gave the people a review of the record of the Congress, praising its acts to aid agriculture, to regulate wages and hours, and to finance relief and recovery; he condemned the recent defeat of his proposal of 1937 for reorganization of the administrative branch of the Government, and dismissed the defeat in 1937 of the measure to change the Supreme Court with the characterization, "a lost battle which won a war." Also, after reviewing the Administration's handling of needs caused by current economic trouble, he hinted at his intended personal fight against dissident Demo-

crats in the primary campaigns, saying, "I feel that I have every right to speak in those few instances where there may be clear issues between candidates for a Democratic nomination involving these [the Democratic 1936 platform's] principles." He characterized opponents of the New Deal as "defeatists" and "copperheads."

The personal participation of President Roosevelt in primary campaigns among the States took the form of speaking tours in which he expressed approval of Democratic Senators seeking renomination or else signified disapproval and endorsed rival candidates for the Democratic nomination. He showed his attitude as to a few Representatives, but Senators were his main concern. The spectacle of a President's taking the platform in State after State to sway the Senatorial primaries of his party impressed the public and the press as a novel one. By adoption of a word familiar through foreign political news, his course came to be called a party "purge" (see under *Politics*, below).

The first of the President's campaign trips (July 8-17) was devoted to endorsements of favored members of Congress, mainly Senators. On the 8th Senator Bulkley was approved, at Marion, Ohio; Senator Barkley, at Covington, Ky., on the 8th; Senator Thomas, at Oklahoma City (10th); five of the Texan Representatives, at addresses in Texas (11th); Senator McAdoo, at San Diego, Calif. (17th). A brief second speaking tour was made in August on the way north from Pensacola, where the President had landed from a cruise to the Panama Canal Zone; the addresses dealt with two Southern Senators undesirable to the New Deal. At Warm Springs (August 10) Mr. Roosevelt approved the candidacy of Lawrence Camp, who sought the Democratic nomination for Senator in opposition to Senator George; at Barnesville (August 11) the President spoke outright for the defeat of George, "a dyed-in-the-wool conservative," who was on the platform at the time; later, on the same day, he spoke from the car platform at Greenville, S. C., mentioning the desirability of choosing candidates in favor of the New Deal and pointedly failing to mention Senator Smith, who sought to be nominated for re-election, in the approaching primary. In a brief third trip early in September, President Roosevelt went into Maryland and made two addresses supporting Senator Tydings's rival for the Democratic nomination, though not attacking Tydings explicitly. Among the Senators for whom the President spoke, Bulkley, Barkley, and Thomas won in the primaries, while McAdoo lost; the three against whom he spoke, George, Smith, and Tydings, all won. There arose question of consequent impairment of Mr. Roosevelt's prestige with the people, for he had in effect asked them in many Democratic constituencies to follow his judgment in their voting.

The President extended through the Secretary of Commerce an invitation to leaders of the smaller business enterprises to confer in Washington. About a thousand, from 40 States, accordingly met there early in February; in an agitated session the conference unexpectedly voted (February 3) resolutions which, as published in the press, made caustic demands for the termination of some policies of the New Deal. A committee picked to present the resolutions to the President reportedly altered them after conference with Secretary Roper; thus, "unwarranted and malicious attacks on business by Administration representatives should be permanently stopped" reportedly became a proposal that "the Government continue to co-operate with busi-

ness"; "opposed to all forms of Federal wage and hour regulation and legislation" became "question the merits of a standard wage and hour bill because of geographical differentials."

In the Federal proceedings as to the TVA President Roosevelt took an important part by removing (March 22) the Authority's chairman, Arthur E. Morgan, opponent and accuser of the other two members (for these proceedings, see under *Administration*, below).

Organization and Personnel. Another regulative body, the Civil Aeronautics Authority, was organized, as provided by an act of Congress earlier in the year, for the purpose of regulating commercial and private flying, after the manner in which the Interstate Commerce Commission dealt with the operations of the railroads. The Authority was composed of a board of five members, receiving salaries of \$12,000 a year, and an Administrator (Clinton M. Hessian); all took office on August 8. There were at the time 20,076 pilots and 9732 airplanes with certificates to fly. An Air Safety Board of three members came into existence at the same time. A Wage and Hour Division was established in the Department of Labor, as provided in the Fair Labor Standards Act of 1938; Elmer F. Andrews was appointed (July 15) its Administrator.

The Federal system of civil service, by an executive order issued on June 24, was made to extend over a great number, by report more than 100,000, of the persons in the civilian employ of the Government but not previously subject to the civil-service rules. Of this number, 71,000 were said to hold positions in the so-called emergency agencies and corporations that had sprung up in the era of the New Deal. The executive order was issued shortly after, but was distinct from, an act of Congress giving civil-service status to some 15,000 postmasters of the first, second, and third classes. The number of Federal civilian employees prior to the order was about 813,000, which included some 533,000 already holding civil-service status. By virtue of the order, most of the positions without such status, between casual workers and the posts of higher direction, were reported to have obtained it.

Among the leading figures in the Administration, two made ready in December to vacate important positions in the Cabinet: Secretary of Commerce Roper gave his resignation, to take effect on December 23, and Attorney-General Cummings's resignation was to take effect very soon after the turn of the year. To fill Roper's place, the President immediately appointed as Secretary of Commerce, Harry L. Hopkins, Administrator of the WPA, who took office ad interim on the 24th. Press reports indicated that the President had decided to appoint as Attorney-General Frank Murphy, the outgoing Governor of Michigan, nationally noted in 1937 for permitting the C.I.O. to seize properties of industrial employers. Col. F. C. Harrington, U.S.A., was assigned to act as Administrator of the WPA in Hopkins's place.

Dr. Arthur E. Morgan of the TVA (see below) was removed from office and Harcourt A. Morgan was made chairman of the TVA, in his place. Assistant Attorney-General Robert H. Jackson was appointed Solicitor-General in February, after confirmation by the Senate. When examined by a subcommittee of the Senate's committee on the judiciary, prior to confirmation, Jackson upheld the liberal view that the Supreme Court should interpret the constitution in accordance with contempo-

rary popular opinion; The Supreme Court, he said, "must ultimately express the opinion and interests of the American people. I don't think you can maintain, except with the Army, any institution which consistently defies the will of the people." The vacancy filled by Jackson resulted from the resignation of Solicitor-General Reed upon his nomination to the Supreme Court. On January 7 Joseph P. Kennedy, Chairman of the Maritime Commission, was nominated by the President to be Ambassador to Great Britain, and Hugh R. Wilson, Assistant Secretary of State, was nominated Ambassador to Germany. Adm. E. S. Land became Chairman of the Maritime Commission, and Adolf A. Berle, Jr., was made Assistant Secretary of State.

Redistributive Agencies' Predominance.

Administrative agencies employed chiefly in the redistribution of wealth among the nation's inhabitants increased the predominance over other Administrative operations, which they had acquired under the New Deal. The extent of this predominance may be noted from the proportion that the sums appropriated for expenditure intended mainly to provide support to private individuals in the fiscal year that began on July 1 bore to the whole budget for that year. Such appropriations totaled about \$5,000,000,000, inclusive of sums for the benefit of veterans and their families; expenditures for other Federal activities, exclusive of the service of the debt, approximated \$2,700,000,000. Thus, about 65 per cent of Federal operating appropriations for the year went into providing or augmenting the livelihood of the poorer classes. These classes were mainly the veteran group (whose claim to special aid rested on precedents dating back almost through the whole life of the nation), the great class of indigents able to work but lacking gainful employment in private enterprise, the young unemployed who had failed as yet to find jobs, people working in regular trades but insufficiently employed to make their normal incomes, the greater part of the farmers, and the classes specially handicapped or passing beyond the age for employment. These groups received, respectively, aid from the WPA, the NYA, the CCC, the PWA, the AAA (with its various adjuncts), and the Social Security system.

Operation of the WPA. The number of the persons receiving "subsistence" wages from the Works Progress Administration throughout the country increased at a rapid pace through the spring and summer, until it surpassed 3,100,000 early in September. This was well above twice their total of a year earlier, when the count reached 1,458,830. The increase, natural to a time of extensive unemployment and attendant destitution, was met by the provision made by Congress for more extensive distribution of public support to the needy. This provision, however, coinciding with the advent of a campaign for the election of members of Congress, a matter of great concern to the Administration, offered obvious opportunity for the use of the WPA, among the other Federal dispensaries of money, as means to secure the voting allegiance of a great part of the population. Through the summer and autumn controversy raged as to whether the WPA deliberately sought to use its distributions for partisan advantage. The Senate's special committee dealing with condemned practices in the election of members of the Senate paid particular attention to charges against the WPA; it prepared a report on its investigations, but the report awaited the convening of Congress

at the beginning of 1939. The situation differed from that in 1936, in that though the stakes of the campaign of 1938 were nominally less, there was a more efficient opposition to the use of money by the WPA for political advantage. The widespread and systematic attention given to the subject rendered it difficult, even if intended, to use the WPA in the campaign on an effective scale.

The number of the unemployed, according to a Federal estimate cited by the President in February, had increased by 3,000,000 in the previous three months. Additions to the WPA's payroll, however, came only gradually. The number of recipients early in February was about 1,950,000. From July 1 on, the expenditures of the WPA rose to a much higher scale. The monthly total, nearly \$150,000,000 for July, went on increasing to such an extent that it became a question whether available appropriations would last until February so as to cover the seven months for which the President had estimated that they would serve. In addition to its payments in money wages, the WPA, using a sum allotted to it by the President out of an appropriation in his control, spent about \$15,000,000 to buy garments for distribution among its clients in the autumn. The chief part of these purchases consisted of unsold stocks of ready-made clothing that clogged the market for the output of the garment-makers' industry and thus caused unemployment; the aim was to put the garment-makers back to work and by the same expenditure to furnish needy people with apparel. With another part of the money, several thousand unemployed garment-makers were hired to make clothing for needy wearers. The WPA also acted as distributor for supplies of products that the Federal Surplus Commodities Corporation had bought up in ridding markets of gluts. The policy of putting the clients of the WPA at work, as far as feasible, on construction financed by the PWA, was kept up. The National Youth Administration, connected with the WPA but having a separate appropriation, and the Civilian Conservation Corps, separately directed, continued to supply occupation and support to needy young people.

The PWA's Renewed Activity. The Public Works Administration had been restricted in 1937 to financing undertakings already approved. Until the President launched, in April, 1938, his new program of aid for "relief and recovery," this agency was comparatively inactive. On April 16 it started again to allot grants and loans, the first being out of remaining available funds, in advance of further appropriation. The appropriation act of June 21 provided it with \$965,000,000, plus the remainder of previous appropriations, but restricted the allotments so that they should not exceed stated totals for different sorts of enterprises. The PWA worked at high speed in order to enable a great amount of construction to start in the shortest possible time; it still had in its files a great number of applications that had been held in abeyance; and thus on August 13 it was able to announce that it had approved proposed contracts by which it stood ready to finance, through loans and grants, 3028 undertakings, in addition to those previously approved. It was thus ready to supply the means for \$1,205,000,000 of construction, of which \$196,000,000 was Federal and \$1,009,000,000 non-Federal. This speed had for its incentive the desire to bring many projects to the stage of execution without the delays that had marked previous efforts to start subsidized construction. With the same end in view, applicants were encouraged to put into their con-

tracts promises of special rewards for architects and engineers who should advance dates of construction. There occurred some disappointments; some former applicants no longer wanted to execute works for which they had formerly asked money. The PWA announced on August 25 that work had started on 80 per cent of the Federal share of the program, but doubt remained as to how much of the total allotted to finance construction other than Federal had been expended up to the end of the calendar year. Much of the proposed stimulation of industry and employment was to occur through activity in industries that would supply materials and equipment for construction—an activity widely ramified and difficult to determine in detail.

As the dispensation of Federal money by the PWA worked more slowly than that by the WPA, it drew less attention as to its possible political effect in the year's campaign. The President, on his visit to Maryland early in September to oppose the Democratic renomination of Senator Tydings, gave the people of that State expectations of early action on the part of the PWA to finance bridges over the Susquehanna at Havre de Grace and over the Potomac at Morgantown; and financing for one of these bridges was soon afterward approved. Administrator Ickes announced (July 30) that the PWA was to grant \$26,000,000 outright toward the public construction, in Pennsylvania, of a 162-mile toll highway between Harrisburg and Pittsburgh, the Reconstruction Finance Corporation lending the rest of the total projected cost of \$58,000,000.

The PWA had power, under the appropriation act of June 21, to make loans and grants to municipalities for their purchase or construction of public systems for the distribution and, if needful, the generation, of electricity. The Supreme Court's decision of January 8, in the utilities' cases, denied the companies' objections to the grants and loans. Thus came forward anew the issue as to whether the Government was to furnish capital with which electric systems under public ownership would compete with and possibly drive to the wall privately owned systems obliged to meet their own capital debts and pay taxes. Mr. Ickes, in accordance with an informal assurance from the President, declared a policy of allowing no money to a municipality to equip it for competition with a privately owned company, unless reasonable efforts had been made in good faith to buy the company's property. Although the main purpose of the PWA at the time was to generate employment by putting construction under way, and was consequently not the financing of mere changes of ownership, negotiations with private owners were made a requirement, as a preliminary to aid from the PWA, where private companies were involved. In the absence of stated and specific standards for setting offers to owners, some of the negotiations were protracted and difficult.

Aid to Farmers. Federal support for farmers, until after the crop of 1938, followed mainly the methods provided in statutes of prior years. Marketing control (restriction of farmers' sales) was, however, applied to the 1938 crops of cotton and three types of tobacco, in accordance with the Agricultural Adjustment Act of 1938 and after a ratifying vote, in March, cast by the farmers of each of the crops affected. Wheat was ranked as a soil-depleting crop under the old law and thus qualified to receive a Federal distribution at 12 cents a bu. to farms approved as co-operating in conserving the soil. The Crop Insurance Corpora-

tion was organized, under the new law, to insure the farmer a normal yield of wheat, starting with the crop of 1939. Insurance due on his crop's deficiency was to be payable alternatively in the requisite quantity of wheat or in cash to such wheat's current value; the premium was payable either in cash worth a percentage of the normal crop, or in the form of a warehouse receipt for wheat to such percentage.

Federal cash payments made directly to farmers in 1938 were predominantly those for soil conservation and the loans granted on unsold crops of certain products. The Government's lending on wheat was so liberal, in proportion to the value of the grain on the farm, as to cause expectation of the surrender of the hypothecated wheat to the Government later on unless the market should rise considerably. A similar condition prevailed in cotton.

The year's chief problem for the Government, in its efforts to assure support to farmers, lay in surpluses caused by two successive years of abundant crops. There was no longer question of killing off livestock for lack of feed nor importing cereals, as had been done on occasions of crop failures still recent. Things had gone toward the opposite extreme; the Federal efforts were therefore bent toward keeping the superfluity off the domestic market, paying the growers in one way or another enough to make up their loss from a low market, and finding ways to rid the country of the farmers' superabundance. Special devices to promote exports came again into favor. The Red Cross arranged in September to send 60,000 barrels of domestic flour to Spain for the use of that country's destitute refugees, with free shipping supplied by the Maritime Commission. About the same time the Department of Agriculture announced plans to buy wheat and sell it abroad and to pay to exporters of flour an "indemnity" equal to the amount that they would lose by selling abroad. In spite of these and other measures taken on their behalf farmers of some important groups displayed considerable dislike for the new Agricultural Adjustment Act after it went into force. Objections centered on the intended compulsory restriction of their acreages and marketings of leading crops, such as wheat, cotton, and corn, in accordance with the so-called system of market quotas. Elections, required by the act, were held in December among the respective growers of cotton, rice, and three leading types of tobacco, for the ratification of proposed plans of crop-control for 1939. It required in each case a vote of two-thirds to ratify. The cotton growers ratified by a vote of 84 per cent; the growers of the three types of tobacco failed in each case to ratify, giving insufficient majorities; and the growers of rice gave an adverse majority. The evidence of strong opposition, among farmers, to the proposed Federal restrictions on their crops, gave impetus to plans to amend the act. The votes in December, as compared with those that had been cast in March, prior to experience of compulsory restriction of the farmer's sales of crops, suggested that this system had lost friends as it became better known.

Secretary of Agriculture Wallace, in connection with a decision of the Supreme Court as to his regulation of business in the Kansas City Stock Yards, made a public criticism of the Court's position as to review of procedure in administrative regulation of business (see *Judiciary*, below). In concert with the authorities of New York State, the AAA established (September 1) a system,

approved by vote among some 60,000 dairy farmers in several States, imposing minimum prices for their sales of milk in the New York market. The Farm Security Administration dispensed subsistence to a relatively small group of destitute farming people to the extent of about \$1,000,000 a month; it continued to aid the system of "subsistence" homesteads by which the defunct Resettlement Administration had given a limited number of farmers a new start.

Social Security's Wards. The Social Security Board, administering Federal grants to States, toward support for the needy elderly, blind, and children, was much occupied with its consequent function of enforcing reasonable efficiency and honesty in the States' distributions to these groups (see OKLAHOMA and OHIO). The appropriations for the Board's grants to the States in the fiscal year starting with July 1 exceeded \$300,000,000; this was about \$70,000,000 more than the appropriations for the fiscal year ended on June 30, 1938, and about \$150,000,000 above the total expended in the fiscal year 1937. The rise conformed with persistent increase in old-age assistance among the States, due to greater demand for it and to more liberal laws. See OLD-AGE PENSIONS.

Met mainly by payments not budgeted as Federal expenditure, there was a sharp rise during the year in the States' distributions on account of unemployment compensation. These ran to about \$180,000,000 for the six months ending with June 30. The increase in their rate was due in part to the great number of the newly unemployed and in part to the addition of 21 States, including New York and Pennsylvania, to the number making these distributions. The funds out of which these payments were made, while in the charge of the Federal Treasury, accrued mostly from the States' taxes for the purpose and were therefore mainly not a burden on the Federal budget. The main part of the Federal distributions for Social Security was the matching of the States' payments for support to the elderly poor.

The fund for the old-age annuities, eventually to give retirement on pension to employed workers in general, under the Social Security system, continued to accumulate, with as yet relatively slight outgo; the similar Federal fund for the pensioning of railroads' employees, independent of the Social Security system, afforded one of the minor Federal distributions of wealth. See OLD AGE PENSIONS.

The Promotive Enterprises. Apart from Federal activities explicitly represented as designed to dispense money or goods to the population, the Government carried on numerous activities that, while some of them redistributed wealth to an appreciable extent, as in creating work, were regarded as mainly advancing the well-being of the population in other ways. The U.S. Housing Authority (USHA), Home Owners' Loan Corporation, Federal Housing Administration, Farm Credit Administration, and Export-Import Bank accomplished their purposes by granting or facilitating credit; the Tennessee Valley Authority and the Federal electric development on the Columbia River took the form of public productive enterprises.

Aid to Housing for the Poor. The U.S. Housing Authority, created by an act of 1937, had as its task the granting of credit and of some sorts of subsidy for the creation of living quarters, essentially multiple dwellings in cities, for about a million persons. Its original appropriation

of \$500,000,000 was augmented to \$800,000,000 by the appropriation act of June 21, 1938. This was done in accordance with a recommendation in the President's "recovery and relief" message of April 14. While this recommendation was made on the plea of providing new work for the unemployed, the appropriation was popular with a widespread group convinced of the appropriateness of Federal aid for affording the urban poor better quarters than the slums which were the best that their incomes would allow them. The USHA was set to the task of exhausting its appropriation within the calendar year. Its Administrator, Nathan Straus, was able to announce on December 8 that \$647,575,000 had been allotted in 60-year loans at the rate of 90 per cent of the cost of the housing to be erected. The unused balance, somewhat over \$150,000,000, was to be held as a margin of safety, to make sure of possible requirements, on existing commitments, that could not be predetermined. The allotted money was placed about the country in accordance with a system of set quotas and was accordingly widely distributed; the loans were scattered among local housing authorities in 155 communities, situated in 31 States. Loans to a total of some \$500,000,000 remained unmade because the appropriation did not suffice for them. As in the case of the PWA, the total of money actually paid for work and materials out of the allotted loans during the year was uncertain. A forecast issued on July 1 anticipated that \$204,000,000 would be thus spent in the ensuing year.

Discord over the TVA. Dissension among the three members of the Tennessee Valley Authority, first conspicuous in 1937, afforded one of the chief matters of conflict between the New Deal and its critics in 1938. The original difference was that between Dr. Arthur E. Morgan, Chairman of the Authority, and David E. Lilienthal, Director in charge of electrical development; the third Director, Harcourt A. Morgan, took the side of Lilienthal, opposing his own namesake, Chairman Morgan. The dispute, originally over Lilienthal's antagonistic policy toward the privately owned enterprises for purveying electric current in the market entered by the TVA, spread to other issues. In particular, it embraced the relations of Lilienthal and his ally to efforts made by Senator Berry of Tennessee to obtain high compensation for the alleged value of deposits of marble in lands in which the Senator had an interest, and which the TVA had taken.

Chairman Morgan had opposed the Berry claims as an attempt to obtain unwarranted compensation from the Government. There followed, late in 1937, an inquiry by a Federal commission to determine the merit of these claims. Chairman Morgan gave before this commission testimony adverse to the claims and to the position of his two fellow-Directors thereon. The commission held (March 1) that the deposits on which the claims were based had no commercial value. Chairman Morgan promptly issued (March 2) a demand for an investigation of the TVA by a joint committee of the House and the Senate, thus virtually appealing over the head of the President and breaking wholly with the Administration.

The President responded by removing Chairman Morgan from office. By preliminaries to the removal he established ground for his action. He first gave out to the press (March 4) a complaint of Lilienthal and Director Morgan charging Chairman Morgan with having made unsupported attacks on their integrity and competence, and

with helping private companies to oppose their proceedings. Next, the President announced (March 8) that he had summoned the Directors to his office to give him facts substantiating charges on either side. He held hearings (March 11 and 18), at which Chairman Morgan, fearing that the President's investigation would forestall and abort that by Congress, refused to particularize. Charging him with "contumacy," the President removed him from office (March 22) and made Harcourt A. Morgan chairman in his place.

In the Senate, meanwhile, Bridges of New Hampshire and other members of the opposition denounced the record of Lilienthal, creating a definite trend of sentiment that rendered it difficult to omit or to milden the investigation that Dr. Morgan had demanded. A joint committee was created, having Senator Donahey of Ohio as chairman. One of its first acts was to order (May 18) that Dr. Morgan have access to the TVA's papers, which he said had been denied him.

Dr. Morgan's testimony was given at various times thereafter, through the summer. He represented the other Directors as having made incorrect reports to the President and to Congress, as having wasted money or jeopardized it by injudicious construction and contracts (as that with the Aluminum Co. of America), and of having failed properly to determine the cost of the production of electricity (in which the TVA, according to the President's phrase, was to have provided the nation with a "yardstick"). The committee looked into the records of the Berry claims, originally for \$5,000,000. It brought to light a report thereon, made by the Authority's geologist, Edwin C. Eckel, in November, 1934, raising the doubt of these claims' good faith, and other reports, to the effect that the marble involved in the claims lacked commercial value. Director Lilienthal admitted having agreed, in a private conference with Berry in March, 1936, to a meeting of Berry's and the TVA's experts, with a view to conciliating differences over the claims; he defended this course by pointing out that the claims might thereby possibly have been settled for \$20,000, a sum much less than the cost of subsequent proceedings. The committee's report on its investigation was to go to Congress in 1939.

The TVA made some progress during the year in negotiations with private enterprises with which its sales of electricity brought it in competition. A plan put forward in May on its behalf proposed a division of territory, by the TVA's purchase of electric properties within a defined area and the confinement of Federal competition to corresponding bounds. (See also *TENNESSEE*.)

The Bonneville hydroelectric development on the Columbia River, the first part of a Federal undertaking distinct from the TVA but of similar character, was made ready for operation about the end of June. Its control was shared by a Columbia River Administrator and other administrative agencies, under an act of 1937 (see 1937 YEAR BOOK, p. 756). Its advent in the market for electricity stirred discussion as to whether it would tend, like the TVA, to appropriate the customers of the private purveyors in its area.

Work of the Regulative Agencies. Within the Department of Labor, the Wage and Hour Division (Elmer F. Andrews, Administrator) started, in July, to regulate hours and wages of labor under the Act of 1938 (see Congress, below); the depressed state of industry throughout the country limited opportunity for its action, and it

did not at the outset take a leading role in the Federal regulative system. The National Labor Relations Board continued the active prosecution of the line of conduct that it had taken in 1937, supported by mainly favorable decisions of the Supreme Court noted under *Judiciary*, in this article); the NLRB was still opposed by the A.F.L. as partial to the C.I.O. The Maritime Commission carried on a multiple role, aiding and regulating private shipping, operating Federally controlled vessels, and handling labor problems on the latter.

The exceedingly enfeebled financial condition of most of the railroads offered the Interstate Commerce Commission a dilemma, transferred by the President to a special committee of three Commissioners. The Securities and Exchange Commission promoted radical changes in the government of the New York Stock Exchange, received the submission of the generality of the great holding companies in the electrical field to the statute for their modification or dissolution, and performed a great many investigations of individual cases of questionable practice in the markets for securities, some of which led to Federal or State prosecutions. The Federal Communications Commission, after three years' investigation of the American Bell Telephone system, issued (April 1) a report adverse to that system with regard to its charges and profits.

The Bituminous Coal Commission (established in May, 1937), countermanded, early in 1938, a schedule of minimum prices for soft coal, varying with grades and areas, that it had issued in December, 1937. This action quieted lawsuits brought by parties maintaining the set prices to be prejudicial to them. But as no new schedule was issued during the year, the soft coal industry was left as a whole to face risk of considerable loss on operations under the existing system of wages.

Course of the NLRB. The extensive scale of the NLRB's operations appeared in a report (March 26) showing that it had, since its outset late in 1935, handled 12,485 cases, affecting 3,247,678 employees; 9150 of the cases had been closed, over 55 per cent of them by the parties' agreement, 15 per cent by dismissal, 24 per cent by the petitioning unions' withdrawal, and 5 per cent by compliance with decisions; 1069 elections had been held, to settle questions as to who should represent employees in negotiations with employers; and 1113 strikes had been terminated. On the other hand, the Business Advisory Council, a body of business men organized to advise the Secretary of Commerce, recommended (February 17) that the Labor Act be amended to prevent the coercion of employees "from any source"; that any party to a labor dispute (instead of employees alone) be allowed to take a case before the NLRB; that no labor organization be favored over another; and that the rights of all parties before the Board be defined.

An order of the Board (April 6) required the Inland Steel Co. to sign a written agreement with a union in the C.I.O., covering the company's labor relations; the ruling held that a signed agreement was an "integral part" of the process of bargaining required by the Labor Act and set at naught employers' contention that they could not be required to sign an agreement with a union, a party that could not effectually be held responsible at law for performance of the signed obligation. The Board's order of April 16 set aside an employees' election that the Board itself had held,

at the Carrollton Metal Products Co. (Ohio), and which a union in the A.F.L. had won. In June, a case against the Bank of America was taken up at Los Angeles, an indication of the Board's disposition to include banking employment in its field. The Board granted (June 22) exclusive jurisdiction, in the Pacific Coast area, to the International Longshoremen's and Warehousemen's Union, led by Harry Bridges and a C.I.O. affiliate; a count reportedly had shown about three-fourths of the affected employees to be connected with this union, but the A.F.L. had protested that the Board must set up a bargaining unit not greater than the employed group under one employer. The Serrick Corporation (of Muncie, Ind.) was ordered (July 28) to give up a contract with employees in the A.F.L. for a closed shop, and to reinstate 18 employees who had not become affiliated; the C.I.O. had failed in 1937 in a strike to win control of the employees of this company. In August the Board's attempt to hold hearings at the seat of the C.I.O. strike at the Maytag works in Newton, Iowa, was thwarted by Governor Kraschel's intervention with troops (see Iowa). In the case of the Muskin Shoe Company (Maryland) the Board ordered the employer to desist from distributing to employees copies of an anti-C.I.O. speech, despite the invocation of the employer's alleged right of free speech; a similar action was taken in the case of the Mock-Judson-Voehringer Co. in Greensboro, N. C.

As to Aid for Railroads. The railroads, already enfeebled, lost ground alarmingly early in the year. The Erie R.R. passed into the control of the Federal District Court at Cleveland (January 18) by way of the Bankruptcy Act. In February the railroads as a whole, though not universally, failed to earn the cost of current operation, which in turn did not include interest on debt. Their credit fell too low to permit of their borrowing from the Reconstruction Finance Corporation. For months their earnings continued below the level of self-support and cut down steadily many systems' margins of solvency. They early asked of the Interstate Commerce Commission immediate permission to increase their tariffs on freight throughout the classifications by about 14 per cent; the Commission granted (March 8) less extensive increases on some but not all classifications, designing to furnish \$270,000,000 of additional yearly income. Traffic increasing only gradually, the carriers' difficulties persisted, as was foreseen at the time when the higher freight rates were granted. The President (March 17) appointed Commissioners Splawn, Eastman, and Mahaffie of the ICC as a committee to propose to Congress a plan for dealing with the railroads' trouble. The committee's report, published April 11, proposed that the RFC devote \$300,000,000 to loans to the railroads for equipment and lend them, beside, during the next 12 months, what they might need to pay their fixed charges; further recommendations favored the creation of a Federal Transportation Authority, for advising railroads how to check waste and how to consolidate or co-ordinate with one another, and asked for the ICC the power to compel lines to pool their earnings and traffic. The proposals were not warmly welcomed; the President submitted them to Congress without specific recommendation, and Congress did not legislate on the subject.

The representatives of the railway employees' unions rejected (April 15) a request of the railroad executives that the unions consent to tem-

porary reduction of the employees' pay. The lines formally ordered in May a wage-cut of 15 per cent; and in July the unions were sounded again, without avail, on a proposal that would have limited the temporary reductions to the suspension of a 7 per cent increase that had been obtained in August, 1937. The unions prepared to strike when the order for the cut should go into effect on October 1. The President then put the matter into the hands of a board of National emergency, and the wage-cut was finally abandoned. The ICC granted the lines a rise of $\frac{1}{2}$ cent a mile in passenger fares early in the year, but the higher rate cost them so many lost fares that some of the railroads returned voluntarily to the 2-cent rate by the end of the year. See LABOR ARBITRATION.

Federal Maritime Policy. The Maritime Commission had its share of difficulties bred by economic relapse. Ships recently laid up, as reported on May 1, numbered 79 in Atlantic and Gulf ports alone; unemployed seamen in these ports, about 11,000, or one-fifth of the total for the seamen's group. The Commission, under these circumstances, took to buying shipping that had financially come to grief in the hands of private companies. It assigned to the South American Atlantic route three vessels that had been forced to give up the domestic coast-to-coast route; by agreement of August 19 it acquired 90 per cent of the voting stock of the insolvent Dollar Steamship Lines, Inc. Its policy antagonized the maritime employees' unions within the C.I.O.; Mervyn Rathborne, leader of one of these, issued (August 28) an accusation that the Commission had adopted a policy of taking over and operating ships with a view to "eliminating the maritime unions" therefrom by making the employees servants of the Government, thus depriving them of their advantages under the National Labor Relations Act. The issue as to maintaining a degree of discipline on unionized vessels had been in controversy for some time; Joseph P. Kennedy, outgoing chairman of the Commission, advised the Senate's committees on commerce and on labor (February 16) that legislation to prevent strikes on ships was urgently needed, while on the other side, unions claimed that they and not ships' masters had the right to punish infringements of discipline by members of crews.

The Maritime Commission established (March 13) a system for carrying cadets on merchant vessels and training them for officers, somewhat after the practice in certain foreign merchant marines.

Other Administrative Matters. Administrative Government in the older and narrower sense continued to be overshadowed by the extensions that the Administration had added to it. The Treasury, dealing with the monetary policy and the task of obtaining the means for expenditure, formed an exception. It changed policy as to the monetary metals by adding a great sum in recently imported gold to the total of gold against which it had issued to the Federal Reserve system its gold certificates; also, it lowered further its price for foreign silver, and, in response to the Mexican Government's seizures of Americans' properties, it suspended its undertaking to purchase Mexican silver. While the addition of more gold to the monetary base raised the limits of possible increase in the paper currency, there was no real blossoming of inflation. As to further devaluation of the dollar in terms of gold, the avoidance of moves in this direction, according as it did with evidence that the original devaluation of the dollar

had failed to lift permanently the domestic price level, improved confidence in the immediate outlook for the fixity of the dollar. The Administration's foreign policy changed in tone, if not in principle, with regard to Americans' rights in several countries where these were judged to be invaded or threatened by dictators. The policy of participation, on a great scale, in the prevalent increase of the Nations' naval armaments, was definitely adopted and translated into legislation, a course that not only added to the importance of naval and, in lesser degree, of military affairs, but lent accompaniment to the representations made to other governments. Efforts made through the banking system and the Reconstruction Finance Corporation to generate an outflow of credit to private undertakings as a stimulant to impaired economic health brought no conspicuous result. The Department of Justice, in connection with an incipient drive to establish medical care on the basis of fixed relations between medical men and co-operative groups organized to insure medical services to their members, instituted proceedings against the American Medical Association, regarded as a center of the medical profession's opposition to such change, and there followed (December 20) an indictment of the Association and some of its officers, under the anti-trust law.

Proceedings of the Treasury. The Treasury had in January agreements requiring it to buy 5,000,000 oz. of Mexican silver a month and, in addition, to purchase gradually from time to time an accumulation of 35,000,000 oz. held for Mexico in London. The reported object of these agreements was to maintain the peso at 27.8 cents in dollar exchange. Mexico, in financial straits, decreed the virtual confiscation of foreign investments (American included) in the production of petroleum, and diplomatic efforts to obtain compensation for Americans met with refusal. Secretary of the Treasury Morgenthau announced (March 27) that purchases of Mexican silver under the existing agreements would cease April 1. It was explained later that the Treasury made no attempt to exclude silver of Mexican origin when buying, as was its practice at the time, silver from abroad at 43 cents an ounce, but nevertheless, the Mexican peso dropped from its previous exchange value of 27.8 U.S. cents and gradually reached the neighborhood of 20.5 cents about the end of the year. The Treasury's price for purchasing foreign silver was lowered to 43 cents, from 45 cents an ounce, late in March.

The Treasury was carrying, in February, about \$1,200,000,000 of gold recently brought in from abroad, which it had purchased but had not used as the basis for further issue of gold certificates. It announced (February 14) that it would issue such certificates against all gold to be received from abroad thereafter in excess of \$100,000,000 in any quarter. Soon changing its policy further, the Treasury, in accordance with the President's proposal in his "Relief and Recovery" message, proceeded (April 14) to "deteriorate," or issue certificates against, all the gold, then nearly \$1,400,000,000, held in the non-monetary category. While this resembled renegation of the Treasury's former praise of sterilized gold as a "cushion" against inflation, it put the currency that the gold had cost back into the Treasury. At the same time it brought to mind the possibility of another devaluation, by which the Treasury might be further replenished. Secretary Morgenthau formally denied

(June 20) current rumors of impending devaluation.

As to Federal revenue, the total receipts as stated by the Treasury for the fiscal year ended with June 30, 1938, attained about \$6,241,600,000; this exceeded by about \$948,000,000 those for the previous year and surpassed those for any prior year but 1920. Income taxes made up nearly two-fifths of the gain for the year and the special, new taxes for the purposes of the Social Security Act provided nearly one-half. Despite record-breaking income, the fiscal year 1938 ended with an annual deficit of nearly \$1,460,000,000, the eighth Federal deficit in annual succession. This deficit included the cost, \$200,000,000 approximately, of statutory retirement of debt. It was not affected by the issue of paper money against dewatered gold, but this helped the Treasury's cash standing and restricted the year's rise in the gross debt. Increasing by \$740,000,000, the gross debt attained \$37,164,740,315. The fiscal year's expenditures, exclusive of debt retirement, approximated \$7,701,000,000. The revenues were from taxes on incomes made largely in 1936 and on business largely as it had been prior to the swift collapse late in 1937; expenditure showed only the beginning of the cost of Federal aid to people in the later destitution.

The Government's income and outgo for the last six months of the calendar year 1938 (the first half of the fiscal year 1939) had a different complexion. The Treasury's statement for December 30 showed, for six months, receipts of about \$2,927,000,000, expenditure of \$4,529,000,000, and a consequent half-year's deficit of about \$1,602,000,000, considerably exceeding the deficit for all the fiscal year 1938. Gross debt on December 30 stood at \$39,427,183,902.

Occurrences in Foreign Relations. Relating to Mexico's seizure of American-owned properties, the Department of State persisted for several months, without success, in sending the Mexican Government diplomatic notes calling for the compensation of the owners. Exercising a claim of rightful possession to Canton and Enderbury Islands (See CANTON ISLAND, ENDERBURY ISLAND; PHOENIX ISLANDS.) in the Pacific Ocean, the U.S. Government announced their occupation in March.

The German annexation (*Anschluss*) of Austria was formally recognized (April 6) in a note delivered by U.S. Ambassador Wilson to the German Foreign Minister; Secretary Hull called on the German Government to assume the late Austrian Government's debts to the United States and in a note written June 9, rejected a reported German view that Austria but not its debts had been annexed. The German and Czechoslovak governments were urged (May 28) in a public statement by Secretary Hull to compose their differences in accordance with the Kellogg-Briand treaty against war. The further sale of helium gas for the use of German airships was refused in May. Myron C. Taylor was appointed (April 30) to be a member of an inter-governmental committee for aiding the emigration of refugees from German territory. Japan yielded to protests of the Department of State on a number of secondary matters, agreeing to terminate the intrusion of Japanese fishing vessels in the salmon-stocked waters off Alaska and apologizing for a Japanese soldier's blow of the hand upon the face of a secretary of the U.S. Embassy at Nanking. Secretary Hull announced (June 11) that the Government was discouraging American sales of airplanes to Japan because of Japanese bombing of the Chinese population.

The tone of relations both with Germany and with Japan became more serious toward the end of 1938. The harshness of the treatment of Jews in Germany having increased early in November, the President ordered (November 14) the immediate return of Ambassador Wilson to Washington. Wilson was called ostensibly to report on the situation in Germany; yet the President, in a statement on the following day, declaring the purpose of the summons, expressed himself with such sharpness on the German occurrences as to give the order to Wilson the plain aspect of rebuke. Germany responded by calling home Ambassador Dieckhoff from Washington (November 18), likewise to report. The U.S. Embassy in Berlin remained open and was occupied with insuring the immunity of Jewish-American citizens from anti-Semitic measures.

Ambassador Nelson T. Johnson, in turn, was called from China (December 8) to report to the President on conditions there. The implications in this case were different. Japan's occupation of the chief cities of the Chinese coast had brought forward the question of the future Japanese policy toward other nations' trade with China, the United States' trade in particular. It was reported from Tokyo (December 9) that the Japanese foreign minister had intimated to the American and British ambassadors the prospect that the equal opportunity for nations to trade with China, as assured by the Nine-Power Treaty, would cease. There followed the reported granting of a loan of \$25,000,000 from the Import-Export Bank to the Chinese Government and the Treasury's extension (December 19) of the arrangement made with the Central Bank of China in 1937 to assure it of credit in dollars, against gold deposited in the United States. Both these measures opened possibilities of future purchases by China that might help its resistance to Japan.

CONGRESS

75th Congress, Third Session. Convening on January 3, the Congress held its second regular annual session, or its third session, counting the special session held late in 1937. The session of 1938 lasted a few days over five months and adjourned on June 16.

The composition of both houses remained substantially the same that it had been in 1937. The Democratic majority in the Senate gained one member at the expense of the Republican opposition, when Steiwer of Oregon resigned, and his place was filled by Alfred Evan Reames, an interim appointee. Copeland (q.v.) of New York died in June, but not till the session had ended. Moore of New Jersey left the Senate about a fortnight after the start of the session, to take office as Governor; in his place he named John Milton, a fellow-Democrat.

The Democratic party kept its superabundant majorities of over 3 to 1 in the House and about 4 to 1 in the Senate. Discord among the Democratic members seriously blunted the working edge of this superiority. While the factional opposition to some of the President's proposals, after the revolt of 1937, did not take the form of organized

and continuous resistance all along the line, it sufficed to cause the delay, the partial sterilization, and even the rejection of some measures that he particularly advocated. No measures of importance running directly counter to the purposes of the Administration were passed, save possibly the joint resolution for the investigation of the TVA, which the President had apparently sought to avert but did not directly oppose. The session worked fewer nation-wide changes than had most of its predecessors from 1933 through 1936. In this respect it even fell behind the regular session of 1937, despite a moderation in the tone of the inter-Democratic conflict.

Chief Results of the Session. Congress was liberal in appropriating further great sums for poor-aid in the form of paid employment through the WPA, for public works to be financed by the PWA with a view to reviving prosperity, and for naval expansion likely to have similar effect; the approach of Congressional elections tended to aid the passage of such appropriations, and the grants were not formidably opposed, though effort was made to limit the Administration's powers over the dispensation of the money. In the field of social reform, a new Agricultural Adjustment Act was passed, to permit of further administrative measures toward restoring farmers' income, again disturbed by low prices; a revenue bill was enacted, but its original provisions for the punitive taxation of income retained in closely held corporations were in great part removed; the principal new departure in social legislation, a bill to set minimum wages for private employment and for limiting hours of work, was enacted with modifications brought about chiefly by Southern members, rendering it possible to keep the minimum of wages lower in some regions than in others. The President sustained his most serious defeat in the rejection of the bill (originally presented to the special session of 1937) for reorganizing the administrative departments. Legislation to help the railroads, threatened with general insolvency by reason of lack of income to meet fixed charges, was not definitely attempted.

Regulation of Employment. The *Fair Labor Standards Act* (popularly the Wages and Hours Act), signed June 25, dealt with employers engaged in interstate commerce or in enterprise affecting it. These were required to pay each employee so engaged at least 25 cents an hour in the first year of application, at least 30 cents in the next six years, and at least 40 cents thereafter, save as prescribed by an Administrator. This Administrator, created by the act, might set a lower minimum hourly rate of pay, but not below 30 cents after the first seven years. His own pay was to be \$10,000 a year, and he was to head a Wage and Hour Division in the Department of Labor. He was to appoint an industry committee for each industry engaged in interstate commerce or in producing goods therefor. On the recommendation of such a committee the Administrator might set a minimum wage lower than 40 cents an hour for employees of a classification as to which a higher rate would tend to curtail employment or prove detrimental in other specified ways. The act limited a worker's weekly time of employment to 44 hours for the first year of the limit's application, 42 hours for the second year, and 40 hours thereafter. It made exception for overtime allowed at $1\frac{1}{2}$ times the normal pay, for seasonal industries, and for some types of contracts with employees, certified by the NLRB. Remedy for a person injured by

an order of the Administrator was to be sought in a review of the order by a Circuit Court. Special provisions were made as to child labor, apprentices, and handicapped workers. The act was implemented with penalties for infractions.

New Aids to Farmers. The *Agricultural Adjustment Act of 1938* (signed February 16) continued and amplified the existing Soil Conservation Act, on which it superimposed a great aggregate of new provisions. Among these, in addition to the benefit payments, to be made to farmers under the elder act, for conserving and increasing the fertility of their soil, the new act entitled the farmer to "parity payments." The parity payments were to be so calculated as to make up any deficiency in the grower's income arising from a decline in the purchasing power of the unit of his product as compared with what it would buy at the average of the years 1900-1914; these payments were to be made with regard to wheat, corn, cotton, tobacco, and rice. The old soil-conservation payments were to continue in modified form, their rate being increased to recipients of less than \$200 a year from this source and limited at the upper end to a maximum of \$10,000. The division of such payments between landlord and tenant was made subject to regulation by the Secretary of Agriculture.

A third source of Federal money for the farmer was provided in the form of the commodity loan, a type of crop loan to be obtainable from the Commodity Credit Corporation; in particular, the Corporation was required to make such loans on wheat, cotton, or corn, in case of the domestic supply's exceeding a normal year's consumption and export, or in case of the commodity's dropping a specified percentage below its determined parity as to purchasing power. Members of agricultural co-operative bodies were in such cases to be allowed to borrow more on their crops than non-members. As an indirect aid to agricultural income, cotton was added to the list of commodities of which the export might be subsidized.

As a safety valve to check overproduction of crops for the purpose of obtaining these various proffers, the measure set up a system for limiting the cultivation and marketing of products of the farm. The Secretary of Agriculture was to establish a marketing quota for any of certain crops exceeding the normal year's consumption and exports as follows: Corn, when 117.7 per cent of normal; wheat, 135 per cent; cotton, 149.8 per cent; rice, 121 per cent; tobacco, 288.75 per cent of domestic consumption and 173.25 of export. He was then to allot acreage for corn, wheat, cotton, tobacco, or rice, calculated to produce a sufficiency if the crop made a normal yield to the acre. Products marketed in excess of the producer's quotas were subjected to stated fines (15 cents a bushel in the cases of wheat and corn); and no quota was to have effect if opposed by more than one-third of the farmers voting in a referendum upon it.

Crop insurance was provided, for the growers of wheat only. For this purpose was created a Federal Crop Insurance Corporation, affiliated with the Department of Agriculture and having ultimately a capital of \$100,000,000 (initially, \$20,000,000). It was to sell growers insurance for their wheat, against loss to the crop from unavoidable causes, including drought, flood, insect pests, and disease of the plant. The insured was to be allowed to pay his premium in wheat.

The session inherited from the previous autumn's special session uncompleted legislation in the realm

of this act. The earlier session had left in the hands of a conference committee two unlike bills passed respectively by either house. This committee set to work on January 3 and wrote a measure which, as was charged, contained new matter. The House of Representatives, on receiving this bill from its conferees, passed (February 8) by a rising vote of 186 to 99 a special rule limiting debate on the 121-page bill to 4 hours, and passed the measure under these conditions, by a vote of 263 to 135, on the following day. The opposing minority, mainly Republican, had a chance to state in a laconic way, during the brief debate, objections to the "regimenting" of agriculture, to the "doctrine of scarcity" (through crop limitation) as the cure for farmers' poverty. The Senate passed the bill (February 14) after a limited time of debate, by vote of 56 to 31, exclusive of 4 pairs. Largely on account of the limitation of the farmer's acreage in certain crops, the National Grange (one of the farmers' organizations) opposed the measure to the end. The act made no appropriation for the parity payments that it allowed the farmers.

Modifications in Taxes. The *Revenue Act of 1938* became a law May 27, without the President's signature. It was chiefly notable for amendments mitigating the severity of the predecessor act's taxation of corporations' undistributed yearly income; for a recasting of the taxation of capital gains; and for the exclusion of provisions, sought by the Administration, for particular punitive taxation of the undistributed yearly income of closely held corporations, such as "family" corporations. All provisions of the new act as to income tax were made to apply to taxable years beginning after the end of the calendar year 1937. The existing normal taxes and surtaxes on individuals remained unchanged. Husband and wife, if making a joint return, were to become jointly and severally liable for payment for the tax thereon. Joint returns were prohibited where either spouse was a non-resident alien.

As to corporations, the method of taxing undistributed net income, set up in the act of 1936, was given up, for taxable years starting after Dec. 31, 1937. Instead, ordinary corporations that earned over \$25,000 in a year were taxed at 19 per cent of adjusted net income, but were allowed a credit of $2\frac{1}{2}$ per cent of the amount that they paid out during the year in dividends, up to $2\frac{1}{2}$ per cent of all adjusted net income. Under the predecessor act corporations were liable for progressive punitive taxes running up to 27 per cent on the ultimate fraction of income if undistributed. The new plan was made to apply only to taxable years beginning not later than Dec. 31, 1939; this limitation was imposed by the opponents of the tax on undistributed earnings, who hoped to remove later the remaining vestige of this kind of taxation. Special provisions were made as to the taxes of corporations having but slightly over \$25,000 of income in a year, and for those having less than that total, as well as for those of other categories separately treated in the earlier act.

The taxation of capital gains was altered by subjecting those realized by an individual, on assets held over 18 months, to taxation at a flat rate of 30 per cent of a fraction of the gain, varying with the span of time for which the assets had been held: for assets held between 18 months and 2 years, this fraction was $66\frac{2}{3}$ per cent; for those held over 2 years, 50 per cent. The individual had the option of treating long-term capital gain either as ordinary income or as capital gain subject to

the flat tax. Some new provisions were made as to net capital loss. Capital gains on assets held less than 18 months were to be treated as ordinary income. No extensive change was made in existing law as to taxing the capital gains of corporations.

The taxes on decedents' estates and on gifts remained as before, but the allowable time for payment on estates was extended to 10 years, as against the previously allowed 8, subject to administrative permission; interest charged in the interval was reduced to 4 per cent, from 6. The system of taxing "excess" profits as calculated on the value of declared and taxable value of stock of a corporation was recast, the tax on value of capital stock being set at \$1 per \$1000 (with adjustment for foreign companies), and the tax on profits running at the rates of 6 per cent of profits over 10 per cent on the declared capital stock and of 12 per cent of profits exceeding 15 per cent thereon.

Excise taxes were removed from tooth pastes, toilet soaps, furs, phonographs, sporting goods, cameras, chewing gum, brewer's wort, and malt syrup, crude petroleum and the refining thereof, sales of produce for future delivery, and matches (except some special types). The tax on theater tickets was made to apply only to the price actually paid, if a ticket were sold at the box office at a reduced rate. The tax on transfers of stocks and bonds was removed from transfers between custodians and owners. Radio messages to the press were exempted from tax. All changes as to excise taxes were to become effective June 30, 1938.

The course of this act through Congress brought into play keen opposition between the administration and its adversaries. The original bill, prepared for the committee on ways and means by a subcommittee of Representatives headed by Fred M. Vinson, with the advice of leading officers of the Treasury, followed in the main the fiscal doctrines of the Administration. The tax on undistributed profits was retained, in somewhat curtailed form; the general system of the existing taxation of individuals' capital gains as income, in proportions reduced in accordance with the time that the gain-yielding assets had been held, was retained also; and a new specific tax on undivided profits of closely held corporations, sought by the Administration, was included. The bill went to the House on March 1; here a strong group attacked the plan for the taxation of closely held corporations as tending to drive enterprises out of the hands of managing owners, thus sacrificing them to "absentee ownership" and trusts. The House defeated this feature of the bill (March 9) by a counted but unrecorded vote of 180 to 124, and efforts to restore it were unavailing. The Senate, receiving the bill, amended it by putting the taxation of capital gains on a flat basis, doing away with the surtax on the undistributed income of corporations in general, and making other less sweeping changes. A conference committee eventually made the composite of the House bill and the Senate's, and this composite was enacted. The President, in an address at Arthurdale, W. Va., condemned as "undesirable features" of the act its treatment of capital gains and corporate undistributed income and declared that he would let the act, because of its more acceptable features, become a law, without his signature; Senator Harrison of Mississippi, pro-Administration Democrat, made a sharp rejoinder to the speech.

Defeat of Reorganization Bill. The House of Representatives recommitted (April 8), by a

close vote of 204 to 196, a reorganization bill designed to give the President great power to re-group or reshape the parts of the administrative organization. He had first sought this power more than a year before, in a message delivered Jan. 13, 1937, and he had asked it of the special session in his message of Nov. 16, 1937. The Senate passed (March 28) in the session of 1938 a reorganization bill allowing the President to consolidate, co-ordinate, and rearrange executive agencies of the Government; but exception was made of certain quasi-judicial agencies, and changes were rendered subject to veto by Congress through a vote of two-thirds, while the bill imposed certain changes, including the substitution of a single Commissioner for the existing Civil Service Commission, the creation of a Department of Public Welfare, and the substitution of an Auditor-General for the powerful existing Comptroller-General. When the bill went to the House the desks of many members were showered with letters of protest from constituents and others; some of the supporters of the bill declared later that some of their acknowledgments of such letters had been returned in the mails because the addressees could not be found, but no specific intrigue to deceive was established. The House voted enfeebling amendments, one of them to let Congress veto administrative alterations by simple concurrent resolution, requiring only a majority's vote. Motives, such as unwillingness to surrender legislative power, distrust of the timeliness of strengthening executive sway, fear in some cases for patronage, and in others Democratic anti-New-Deal sentiment, and, particularly, signs of the measure's unpopularity among constituents, combined to create a strong Democratic opposition. Thus a move to recommit the bill to the reporting committee was brought about. The vote for recommitment was mainly a Democratic vote: it was cast by 108 Democrats, 88 Republicans, 6 Progressives, and 2 Farmer-Laborites. Thus laid aside, the bill was revivable during the session, but it was not again brought out. Its rejection occurred in the face of reported warning from the pro-Administration leadership that such a step would be regarded as a vote of lack of confidence in the President.

Measures Against Unemployment. The chief of the measures to give paid occupation to the unemployed, whose number had again augmented greatly in the severe economic setback then current, was the *Work Relief and Public Works Appropriation Act of 1938* (signed June 21). It appropriated about \$3,750,000,000; in new appropriation, \$2,915,605,000, and the rest in divers unexpended balances reappropriated. All applied to the fiscal year ending with June 30, 1939. Of the total, \$1,425,000,000 in new appropriation plus remaining balances still available was allotted to the Works Progress Administration; some other Federal organizations designed to dispense employment to special groups (such as the National Youth Administration) received appropriations. The sum newly appropriated to the WPA was limited as to uses to be made of it: For work on highways and streets, expenditure was not to exceed \$484,500,500; on public buildings, parks, public utilities, sewers, transmission lines, airports, etc., not over \$655,500,000; on a group of enterprises not involving construction, not over \$285,000,000; however, a transfer from other groups to increase the allotment of any group by not over 15 per cent was permitted, and the President was empowered to allow the Works Progress Administrator to divert \$25,000,000 to

provide direct aid to the support of needy individuals. For the Public Works Administration the appropriation was \$965,000,000 newly appropriated and in all, \$1,465,000,000. The new money was assigned to Federal works of construction, to total not more than \$200,000,000; to grants and loans to States and to public agencies; and to construction of works of divers sorts, which were destined to be leased when finished. Outright grants of Federal funds toward non-Federal undertakings were not to exceed 45 per cent of the cost of any project. The allowed cost of the Federal 3-year program of building was raised to \$130,000,000, from \$70,000,000. The Rural Electrification Administration was authorized to borrow, from the Reconstruction Finance Corporation, up to \$100,000,000 additional, for its loans to groups bringing in electricity. To meet the cost of the farm-parity payments authorized in the Agricultural Adjustment Act (see above), \$212,000,000 was appropriated. The Housing Authority was permitted to increase the total of its 60-year loans for "low-cost" housing to \$800,000,000, from the existing limit of \$500,000,000.

The measure met with some opposition in Congress, partly in the form of the Republican minority's denial of the efficiency of "pump-priming" (Federal spending for the purpose of renewing the flow of income to the people from normal productive industry) and partly from objection in the Senate to giving the Administration the power to lend money to public agencies throughout the country to enable them to compete with previously established privately owned public utilities. The latter difficulty was met by assurance from the President that money would not be thus provided without previous effort to buy out any privately owned utility that would incur competition.

Applying to the then-current fiscal year 1938, a *Deficiency Relief Appropriation Act* passed at the end of February added \$250,000,000 to the sum at the disposal of the WPA. Considerable sums, applying to the fiscal year 1939, were appropriated for public work, in the form of the yearly Federal road-aid and the cost of the Civilian Conservation Corps.

Loans to Private Borrowers. Three acts of the session tended to promote or "prime" a resumption of economic activity by providing or aiding loans to private borrowers. The Commodity Credit Corporation, a corporate agency of the Farm Credit Administration, was rehabilitated by the *Commodity Credit Act* (signed March 8). Through previous operations this corporation had lost almost all its margin of solvency. The Secretary of the Treasury was directed yearly to restore any impairment of the corporation's net worth, bringing it up to \$100,000,000. (Appropriation of \$94,280,000 immediately needed for this purpose was made in the Second Deficiency Appropriation Act, passed at the close of the session.) The Corporation was authorized to borrow up to \$500,000,000 on its obligations, to be guaranteed, principal and interest, by the Government; by this means it was enabled to obtain cash needed for further loans to farmers, as provided in the Agricultural Adjustment Act (see above). The *National Housing Act of 1938* (signed February 3) expanded the Federal Housing Administration's scale of operations in the insuring of mortgages. Mortgages were made eligible for the insurance of payment, up to 90 per cent of the appraised value of the property, on the smaller insured mortgages, to as much as \$6000. The President was authorized to increase

the total of outstanding insurance on mortgages to \$3,000,000,000, half as much again as the already allowed total. Permission was given to insure mortgages on housing built for rent, to replace slums. The growth of the National mortgage associations as lenders on mortgage was encouraged by liberalized provisions as to their financial state. Mortgages to be paid off by partial payments over 25 years, as against 20 years in the pre-existing law, were made insurable, in the cases of the small loans. Builders of apartment houses were enabled to obtain insurance on mortgages when construction had started, instead of when it was finished. A *Farm Loan Act* was passed over the President's veto, prolonging for another year the reduced rate of interest at 3½ per cent on loans made through the National farm loan associations. The *Recovery Loan Act* (signed April 13) augmented the power of the Reconstruction Finance Corporation to make loans to business enterprises, by allowing, for a year, lending for the purpose of promoting economic stability. A measure to furnish loans to the railroads, then threatened with insolvency in many cases, failed of passage.

Naval Expansion Authorized. The *Naval Expansion Act* (signed May 17) authorized a program for the augmentation of the naval fleet over a course of years, on a great scale. The President recommended the increase of the fleet in a special message delivered January 29, citing the renewal of active building of warships in other countries and urging that the building program be increased by 20 per cent and include the starting of two battleships in the calendar year. The act increased the program of construction established under the treaties of naval limitation, by authorizing a list of additions to the authorized composition of the Navy. These raised the tonnage in capital ships by 105,000, to 630,000; aircraft carriers, by 40,000 tons, to 175,000 tons; cruisers, by 68,754 tons, to 412,524 tons; destroyers, by 38,000 tons, to 228,000 tons; submarines, by 13,658 tons, to 81,956 tons. Increase of the force of naval airplanes to 3000 was authorized. The President was authorized, should he find that the tonnage of capital ships under construction elsewhere required it, to build capital ships, each exceeding 35,000 tons, and in such case the addition to the allowed tonnage in capital ships was to be 135,000 tons (the equivalent of 3 units of 45,000 tons each). The expenditure of \$15,000,000 for experimental vessels of under 3000 tons was authorized; also, the expenditure of \$3,000,000 for another rigid airship, of not over 3,000,000 cu. ft. in gaseous capacity. The Second Deficiency Appropriation Act appropriated \$36,000,000 for starting the program. Naval expansion went through despite opposition from an active anti-armament group. As it passed the Senate it would have required the President to determine that another Power was building one of the higher-tonnage battleships before he could proceed to build any; this limitation was attenuated in the bill as finally enacted. A *Naval Personnel Act*, passed late in the session, raised the authorized number of officers of the Navy to 8249, from 6531; as 675 officers in service were in a special classification not among the enumerated 6531, the actual increase was 1043. A *Naval Reserve Act* (signed June 27) dealt with the organization of the Naval Reserve and Marine Corps Reserve, giving a separate classification to those passing directly from the Navy to the Naval Reserve and forming the division thereof known as the Fleet Reserve; regulating assignment to the Fleet Reserve; and

granting certain advantages, such as increased compensation for injury in the line of duty, drill pay for some classes of members, and more openings in the grades above lieutenant-commander.

Further Regulation of Commerce. The *Food, Drug, and Cosmetic Act* (signed June 24) repealed and took the place of the Food and Drug Act of 1906. Cosmetics were put under regulation similar to that of foods and drugs. The introduction into interstate commerce of any food, drug, or cosmetic if either misbranded or adulterated was prohibited, and its seizure was authorized. It was required that new drugs be adequately tested before going on the market (a wholesale poisoning in the South having freshly demonstrated the mischief that untested drugs could work). Adulteration and misbranding were defined in the sense of the act. Deceptions effected by containers and by labels were prohibited. The Secretary of Agriculture, in charge of the enforcement of the act, was vested with enhanced powers to prescribe standards, limit tolerances, etc. Court appeal from his orders was allowed. The general purpose of this act was to modernize regulation in this field in the light of experience. The bill had failed to emerge from conference in the previous regular session.

An act was passed to require that national associations of dealers in securities "over the counter" (outside of the organized exchanges) register with the Securities and Exchange Commission with a view to their self-regulation under the Commission's supervision. The act formulated rules that the Commission was to require such dealers or brokers to follow.

The regulation of commerce with a view to checking monopoly was recommended to Congress as a subject for study, in a message delivered on April 29. The message declared that "the power or a few to manage the economic life of the Nation must be diffused among the many or transferred to the public and its democratically responsible government." It recommended that a study of economic concentration be made by the Federal Trade Commission, Department of Justice, and S.E.C., financed by an appropriation from Congress. The *Monopoly Inquiry Act*, passed late in the session, provided for such an inquiry, but somewhat changed the character of the agency that would conduct it. There was created a Temporary National Economic Committee of 12 members; these were to be 3 members of the Senate, appointed by the President of that body (Vice-President Garner); 3 Representatives, appointed by the Speaker; and 6 persons to be named severally by the heads of the Departments of Justice, Commerce, and Labor, the Treasury, the S.E.C., and the Federal Trade Commission. The committee was directed to make a study of monopoly and concentration of economic power with a view to determining the causes thereof, the effect on the price system, the policies of industry as to prices, and the course of trade, employment, long-term profits and consumption, and the effects of Federal policies as to taxes, patents, and other possible matters of regulation. A preliminary report was to be rendered to the President and to Congress before the assembling of the 76th Congress or as soon thereafter as possible. The committee received the power of subpoena and an appropriation of \$500,000.

Appropriations of the Session. While the Budget for the fiscal year 1939, as presented to Congress on January 5, called for expenditures of \$7,070,558,000, appropriations made by the session added heavily to the total. They increased the

allowance for poor-aid, whether through "work relief" or other means, and for public works and kindred operations by not far short of \$3,000,000. Substantial additional appropriations were made for the current fiscal year 1938. Estimates current in the press put the total appropriations of the session around twelve billions of dollars. This included, for the Post Office, nearly \$800,000,000 recoverable, for the most part, from receipts; also an estimated \$2,719,000,000 in reappropriations and in new appropriations of amounts not likely to be used up in the period to June 30, 1939. The actual provision made for Federal expenditure in that period was therefore uncertain but probably was near ten billions. The totals of the chief appropriation acts were as follows: Work Relief and Public Works Appropriation Act (see above), \$3,750,000,000 approximately; Agricultural Appropriation Act, \$935,395,279, exclusive of \$154,525,000 in "permanent" appropriations; First Deficiency Appropriation Act, \$28,099,038; Second Deficiency Appropriation Act, about \$270,000,000; Treasury and Post Office Supply Act, \$1,403,683,526, of which \$610,912,627 was for the Treasury; Departments of State and Justice Appropriation Act, \$130,589,795; Department of the Interior Appropriation Act, \$129,678,461; and Independent Offices Appropriation Act, \$1,423,098,240; Military Appropriation Act, \$459,401,254; Non-Military War Department Appropriation Act, \$196,962,867; Naval Appropriation Act, \$546,866,494.

Miscellaneous Acts. Among other enactments, the *Flood Control Act of 1938* authorized a set of public works on harbors and on rivers in the Northeast, the Mississippi basin, and the Pacific watershed; the *Merchant Marine Act of 1938* amended the act of 1936, increasing the Maritime Commission's power to regulate standards of labor on ships, making additional provisions as to the Commission's ownership and sale of vessels, and authorizing it to insure mortgages on ships; the *Postmasters' Civil Service Act* required that all subsequent appointments of postmasters of the first, second, and third classes, except for reappointments of incumbents, be made according to the Civil Service Act and the rules made under it; the *Judgeship Act* created four new Federal Circuit Judgeships, a dozen among the District Courts, and provided for the termination of a few existing judicial positions.

Bills Failing of Passage. In addition to the rejected Administrative Reorganization Bill (see above), some strongly backed schemes of legislation were rejected or blocked. The Federal anti-lynching bill, which seemed to have the support of a majority in the Senate, never came to a vote. As had happened the year before, the measure was forced from the top of the calendar by a determined war of obstruction, or filibuster, conducted by Southern members. The filibuster of 1938, however, was much more stubborn and prolonged, as the bill came before the Senate early in the session. It extended over a period of 30 days, the opponents occupying the floor and retaining it every time that the bill was discussed, while advocates, with like persistence, tried to exhaust opposing voices and bring the bill to a vote. Eventually the Senate fell sufficiently behind with its other business to necessitate the bill's giving place to others. The opposition contended that the South had succeeded in reducing the number of lynchings very greatly in the course of years and ought to be left to deal with the subject; it also held that the bill, in subjecting a State's officers of the law to Federal pun-

UNITED STATES

UNITED STATES CONCLUDES TRADE PACTS WITH BRITAIN AND CANADA

Those present at the signing of the treaties in Washington on Nov. 17, 1938, were (front row, left to right): Arnold Overton, of British Board of Trade; Sir Ronald Lindsay, British Ambassador to the United States; President Roosevelt; Prime Minister William Lyon Mackenzie King of Canada; and Secretary of State Cordell Hull. Rear row, left to right: Francis B. Sayre, Assistant Secretary of State; Sir Herbert Marler, Canadian Minister to the United States; O. E. Skelton, Canadian Under-Secretary of State for External Affairs; and Charles Barnes, Treaty Division, U.S. State Department.

ishment for giving a prisoner up to lynchers, would open the way to Federal regulation of the State's police power in many fields. The Ludlow War-Referendum resolution, which had given evidence of strong support in the House in the special session of 1937 (see YEAR BOOK, 1937, p. 757, col. 2), was blocked in the House (Jan. 11, 1938) by a narrow margin of 209 to 188, on a vote to bring the measure out of committee for consideration on the floor; proposing a Constitutional Amendment that would require a popular referendum to be held before the Government could declare war, except in case of invasion, it was strongly opposed by the President, who condemned it in an open letter, and Speaker Bankhead, who took the floor to argue against it. A nascent effort to repeal the widely criticized Neutrality Act was abandoned in consideration of the Administration's view that its consideration would be untimely at a moment when disturbed conditions abroad and the consequent division of sentiment in the United States rendered the subject of neutrality difficult to discuss. A bill to shut out from Federal contracts companies violating the National Labor Relations Act was urgently pressed by John L. Lewis, head of the C.I.O., who asked Speaker Bankhead in vain to let him request the members individually, in the Speaker's room, to vote consent for the measure's being taken from the unfavorable committee on rules, for immediate consideration (June 15).

Investigations. Much the most conspicuous investigation of the year, in Congress, was the inquiry into the affairs of the Tennessee Valley Authority, conducted by the committee of Congress, created by a joint resolution signed April 4. This investigation, closely connected with the controversy over the TVA, is treated above, in this article's section on *Administration*.

The Joint Congressional and Departmental Committee created by the Monopoly Inquiry Act (see above) first met on July 1. Senator O'Mahoney (Dem., Wyoming), who had sponsored the bill to create the committee, was elected chairman. Each member from Congress was paired with a member from a department; the six pairs thus formed were each to take up a different phase of the subject. Besides O'Mahoney, the Senatorial members were Borah of Idaho and King of Utah; the Representative members, Sumners of Texas (Dem.), Reece of Tennessee (Rep.), and Eicher of Iowa (Dem.). It was ruled by the chairman that the committee's power of subpoena did not extend to the summoning of witnesses. Agenda for the inquiry were submitted respectively by the members from the Governmental departments. They included industrial mergers and combinations and industrial price policies (Department of Justice), corporate structures and certain banking and financial matters (SEC), problems of production and distribution (Trade Commission), bids on government contracts and anti-trust laws in the United States and elsewhere (Treasury), data from the experience of the NRA and from the Bureau of the Census (Department of Commerce), and the bearing of business policies on labor, employment, and price levels (Department of Labor). The inquiry in its early stages dealt largely with data, rather than testimony. It was still in progress near the close of the year.

A Senatorial Election Expenditures Committee armed with an operating fund of \$500,000 was formed with the particular purpose of investigating any misuse of Federal or other funds in the

year's campaign for the election of Senators. A great part of its intended function was to detect or to deter the employment, apprehended in some quarters, of Federal dispensations of money (as through the WPA) to influence the elections. Sheppard of Texas was the committee's chairman. This committee condemned practices in the primary contest for the Senatorship in Tennessee, declaring (July 27) that this campaign "pointed sharply toward an election contest in the Senate, regardless of which candidate should triumph." Dealing with a complaint of Senator Tydings (Dem.) of Maryland, running for renomination, the Committee held (September 11), that the Collector of Internal Revenue at Baltimore, by summoning employees of his office and apprising them of his intention to support the rival candidate, had violated the Civil Service Act. It characterized as "unfortunate" a reported speech of Aubrey Williams, deputy WPA Administrator, to a gathering of workers' organizations, in which he voiced the recommendation to "stand by our friends." The most conspicuous activities of this committee had to do with the primaries in the States about to elect Senators, as the Administration's efforts to sway the Democratic nominations gave the primaries a particular importance.

Among other investigating committees, the House of Representatives' committee to investigate un-American activities, headed by Representative Dies, paid particular attention to Communistic participation in some of the more recently organized labor unions. Vice-President John P. Frey of the A.F.L. testified before it to the effect that the strikers' seizures of employers' premises, common among unions in the C.I.O. during 1937, were Communist "contributions." The committee sought to bring about the deportation of the foremost leader of labor organizations on the Pacific Coast, Harry Bridges, on the ground that he was an alien Communist. Secretary of Labor Perkins, asked by Dies to move for Bridges' deportation, rejoined (August 30) that Dies sought to usurp functions of the executive branch and cited a court ruling that membership in the Communist party did not constitute ground for the deportation of an alien. The Committee requested the President (August 24) to direct heads of departments to give it assistance, alleging that departments had carried on their pay rolls investigators for the Senate's committee to investigate the infringement of civil liberties (a committee of opposite tendency) and that the Dies committee was itself authorized by the House to apply to the departments for aid. The Senate's committee on civil liberties, headed by Senator La Follette, continued its investigations in 1938 and put on its records much testimony to the effect that employers had infringed on the civil rights of strikers, in dealing with recent strikes; acts of employers in the course of the C.I.O.'s strike of 1937 against the independent steel companies were particularly a subject of investigation. The Senate's committee to investigate lobbying continued to operate in 1937; among other matters it gave publicity to testimony to the effect that Dr. Glenn H. Frank, discharged president of the University of Wisconsin (see YEAR BOOK, 1937, p. 785, under *Wisconsin*) and currently chairman of the Republican party's program committee, was running a magazine, *Rural Progress*, financed by "great capitalists" to propagandize farmers. Whether by coincidence or by design, much of the Federal legislative investigation done during the year was

of a nature tending to sway votes in one direction or another.

JUDICIARY

Changes in the Supreme Court. Justice Cardozo (q.v.) died on July 9; he had previously been prevented by illness from taking part in the work of the court for several months. Justice Sutherland retired from the bench by his own choice on January 18, and Stanley Forman Reed of Kentucky, the Solicitor-General, reputed one of the ablest legal minds on the staff of the New Deal, was appointed in Sutherland's place and joined the court on January 31. Cardozo's seat, on the other hand, remained vacant for the rest of the year. Since Justice Reed had joined too late to participate in some of the decisions subsequent to his accession and might be considered partial because of his previous participation in suits as the Government's counsel, he commonly abstained from the decisions for some months. Thus decisions were therefore reached by the remaining seven members. As to the effect of this on the Court's attitude toward social changes, the conservative group lost one voice by Sutherland's retirement, but the expected gain of a voice on the liberals' side in Sutherland's successor was hardly yet effective till the end of 1938.

Supreme Court's Rulings. The most widely noted of the Supreme Court's decisions were those confirming unusual powers asserted by several of the new governmental agencies, where the exercise of these powers assertedly harmed private litigants. The cases of the Alabama Power Co. and the Duke Power Co. against the Public Works Administration were decided on January 3, in favor of the PWA, by a unanimous court. The agency's power to lend and to grant Federal moneys to local governmental bodies, thereby enabling them to set up electric plants to compete with the complaining companies to the latter's expected damage, was found valid. Justice Butler gave the opinion. The decision cleared the way for providing \$109,750,000, as already undertaken, to 61 of the local bodies. For previous data on case above, see YEAR BOOK, 1937, p. 758, col. 2. On March 28, by 6 to 1, the Court rejected the effort of the Electric Bond and Share Co., one of the principal holders of public utilities' shares, to invalidate the statutory grant of power to the Securities and Exchange Commission to compel holding companies of its sort to register with the commission and thus perform the first step in compliance with the Federal plan or ridding such companies of the complex capital structure employed for the control of affiliated companies. The Wagner Labor Act and particularly its enforcing agency, the National Labor Relations Board, were approved in numerous decisions. Some of the most widely noted were those denying the District Courts the power to halt the NLRB's hearings by injunction (January 31); upholding orders of the NLRB's orders to employers to reemploy strikers; and permitting the Board to withdraw, for correction of procedural error, an order against the Republic Steel Corporation, to which this company had sought to continue litigation with a view to overthrowing the proceeding against it. On December 5 a decision in the Consolidated Edison Co. case held the Company subject to the NLRB's jurisdiction but invalidated the latter's order requiring the abrogation of a contract with a union in the A.F.L. See LABOR ARBITRATION. In the Kansas City Stockyards case by a majority of 6 to 1 the Court gave a decision (April

25) unfavorable to the Administration, calling forth official public criticism, from Secretary of Agriculture Wallace. In this case Fred C. Morgan *et al.* sought a rehearing on the ground that an order of the Secretary of Agriculture, issued in 1933, setting new maximum rates of commissions on sales of livestock at the Kansas City Stock Yards, had been issued without opportunity for the persons affected to be adequately heard on the findings made by his subordinates. Chief Justice Hughes delivered the opinion, which held the rates set by the Secretary to be invalid. Wallace, after a fortnight's interval, delivered a series of public attacks on the course of the Court in this case; one of these, an open letter to Hughes, charged (May 12) that the Court had by its decision in the case reversed a position that it had taken in 1936; the letter referred to the Court's ruling on an appeal by the same parties at an earlier stage of the proceedings, in which the Court had held it needless for the enforcing agency to issue a preliminary report, on the findings of which the persons affected might be heard in their own defense. Another of Wallace's attacks, a statement made to the press on May 18, spoke of "a great battle" fought "a year ago," to settle "whether the courts would take over the function of determining legislative policy," and declared that "another battle seems to be opening" over the courts' attempted "taking over the rate-making and regulatory functions of administrative agencies." Two days later (May 20) Solicitor-General Jackson presented to the Court a brief demanding a rehearing of the case on the ground that the decision of April 25 had reversed that of 1936. The Court's ruling (May 31) on this demand was by a majority of 6 to 1, Black alone dissenting. The opinion, summarized by Chief Justice Hughes, declared the assertion of the two earlier rulings' inconsistency unwarranted and asserted that the more recent decision had been based, not on the lack of an examiner's report of findings, but on failure fairly to advise the persons prosecuted of the charges and to give them adequate hearing.

The Court held for the Government in a number of cases concerning the power of the Federal Government to tax the incomes of agents of one or another of the States. In the Port of New York Authority case the Treasury's claim to levy taxes on the salaries of officers of the Port Authority, a body set up by the State for public purposes, was upheld (May 23) by 5 to 2; the opinion, by Justice Stone, stated as the criterion, that "the tax neither precludes nor threatens unreasonably any function essential to the continued existence of State government." In the Georgia Football Ticket case, decided simultaneously but separately, tickets to football games of the State University and State School of Technology were found liable to the Federal tax on tickets of admittance, despite Georgia's treating football as part of its system of higher education. In the Wyoming Associated Oil Corporation case, the prevalent 5-to-2 majority held (March 7) that income from petroleum yielded by land leased from the State of Wyoming did not enjoy exemption from a Federal tax; this decision fell in line with another, still recent, as to income from a contract with a State. Lawyers serving State agencies for the liquidation of banks and insurance companies were held liable in like manner (February 28), those in question not being technically State employees. Affecting a constitutional power of the President, his veto, in May, 1936, of a minor measure to compensate an

individual was held (January 17) valid though sent to the Senate when that body was in recess for three days.

Cases Affecting States' Powers. South Carolina's limitation of the width and weight of trucks using the State highways was upheld (February 14). Arizona's license fee and privilege tax imposed on newspapers was found valid (May 2), despite the American Newspaper Association's invocation of the constitutional guarantee of freedom of the press. Indiana's application of its tax on gross receipts to the proceeds of sales in interstate commerce was declared (May 16) to be unconstitutional, as leading to double taxation, repugnant to the Commerce clause, in case Indiana's practice were adopted by other States. New York City's levy of 3 per cent on public utilities' gross income was upheld (March 28).

Other Courts' Rulings. Apart from some earlier decisions in cases noted above as decided in the Supreme Court, the lower Federal courts made a number of noteworthy rulings on matters of National concern. This was particularly true as to the Labor Act; some conspicuous decisions touching upon it are here noted. The Circuit Court at New York upheld (February 14) an order of the NLRB to Remington Rand, Inc., to bargain with a union within the A.F.L. The same court found the Consolidated Edison Co., a public utility serving New York City, subject to the NLRB, as the company served some customers engaged in interstate commerce; it sustained (March 14) the NLRB in voiding the company's contract with an affiliate of the A.F.L. (reversed by Supreme Court; see above). Decisions as to whether companies must re-employ employees who had quit work to strike varied: the Circuit Court at Chicago denied the NLRB's petition (April 28) to force the Columbian Enameling and Stamping Co. to rehire 250 employees discharged during a strike; while among opposite instances, the New York Circuit Court required the Black Diamond Line (February 26) to reinstate strikers. In a case involving the seizure of the employer's plant, an order of the NLRB requiring the re-employment of the men involved, by the Fansteel Metallurgical Corporation was voided by the Circuit Court at Chicago (July 22). The Circuit Court at Philadelphia held (August 3) that a jurisdictional dispute between labor unions was not, in the meaning of the Wagner Act, a labor dispute in which the employer was required to negotiate.

ELECTIONS

Changes in Congress. There were elected (November 8, except for Maine, which held its general election on a different date, September 12), 35 Senators and 435 Representatives to serve in the incoming 76th Congress. According to counts still subject to revision of figures and possible contests in some cases, Republicans gained 81 seats, net, in the House of Representatives and 8 in the Senate. The new House of Representatives as consequently constituted contained 261 Democrats and 169 Republicans, the remainder being 1 Farmer-Laborite, 2 Progressives, and 1 American Labor. The Senate in the new Congress was to contain 69 Democrats, 23 Republicans, 1 Independent, 2 Farmer-Laborites, and 1 Progressive. In addition, 6 Democratic Senators whom the Administration had sought to eliminate from renomination, as antagonistic to its policy, were re-elected, and 1 Democrat, nominated in Idaho in preference to the pro-Administration incumbent, won a seat, so that the anti-Administra-

tion wing of the Senate Democrats was maintained and slightly increased.

On a straight party count the Democratic vote in the next Senate was thrice the Republican, while Democrats in the House exceeded Republicans by 91 votes or somewhat above 3 to 2. The prospect of continued dissension among Democratic members, however, left it in doubt on what majorities, if any, the supporters of the Administration could rely in either house. The numbers of anti-Administration Democratic Senators and Representatives could not be counted, as the individuals were not formally pledged or organized. The Administration's effort to eliminate some of them in the primaries gave the group an incentive to work apart from the pro-Administration wing, as a measure of self-preservation. Thus the election rendered it difficult for the New Deal to carry out any further sweeping advance of social liberalism, yet it offered no clear prospect of extensive repeal of innovations already enacted.

Failure of the Democratic "Purge." The Congressional campaign included an effort, made by the Administration, to defeat non-co-operating Democrats in the nominating primaries. The President took the unusual course of touring the country in advance of the primaries and revealing himself for or against certain members of his own party who sought re-election to the Senate, or in rare cases to the House. In other instances men close to the President spoke for or against Senators' renomination. In all, nine of the Democratic Senators who had opposed in 1937 the President's plan to alter the Supreme Court came up for renomination: Clark of Missouri, Lonergan of Connecticut, Adams of Colorado, George of Georgia, Gillette of Iowa, McCarran of Nevada, Smith of South Carolina, Tydings of Maryland, and Van Nuys of Indiana. President Roosevelt asked at Barnesville, Ga., August 11, that the voters deny a renomination to Senator George; on September 5, at Denton, Md., he asked votes in the primary against Tydings. Candidates were chosen against some of the others, reportedly after conference at the White House. Administrator Hopkins of the WPA advised the nomination of Otha D. Wearin in Iowa, in place of Senator Gillette. All nine of the dissident Senators, however, won renominations. On the other hand, of a number of Senators for whom the President and Postmaster-General Farley respectively had spoken on pre-primary tours, two lost the nominations to other candidates; they were McAdoo of California and Pope of Idaho. In New York State, the President opposed the renomination of Representative John J. O'Connor, Dem., chairman of the committee on rules, who had helped cause the failure of the Administrative Reorganization bill (see section on *Congress*, in this article); O'Connor was defeated for the Democratic renomination, won a Republican nomination, and lost the election to his Democratic opponent. Some of the Senators whom the President had indorsed, moreover, were renominated, notably Barkley of Kentucky, despite the rivalry of Governor Chandler. Of the nine Senators who had opposed the Court bill in 1937, all but Lonergan were re-elected.

UNITED STATES MILITARY ACADEMY. A government institution at West Point, N. Y., for the theoretical and practical training of cadets for the military service of the United States, opened in 1802. On Sept. 1, 1938, the total number of cadets was 1825. There were 279 members on the faculty. The academy is a component part of the Regular Army of the United States and is main-

tained solely by appropriations from the Congress of the United States, which in the fiscal year 1939 amounted to \$3,122,830 for salaries and maintenance of public works. The Library contained 105,508 volumes. New buildings completed during the year were: Addition to the East Academic Building, Cadet Barracks, Quartermaster Garage, Freight Receiving Warehouse, addition to the Gymnasium. Superintendent, Brig. Gen. Jay L. Benedict, U.S.A.

UNITED STATES NAVAL ACADEMY. A school for the education and training of midshipmen in Annapolis, Md., founded in 1845. The total number of midshipmen at the beginning of the academic year 1938-39 was 2312. The faculty numbered 289. The library contained 84,000 volumes. Midshipmen, immediately after graduation, who are found in all respects qualified, are probationally commissioned either as Ensigns in the line of the U.S. Navy or as 2d Lieutenants in the U.S. Marine Corps, to fill existing vacancies. Superintendent, Rear Admiral Wilson Brown, U.S.N., assumed command, Feb. 1, 1938.

UNIVERSALISTS. A religious denomination, existing chiefly in the United States, Canada, Japan, and Korea, which holds as part of its doctrine the universal fatherhood of God, the universal brotherhood of man, the certainty of punishment for sin, and the final harmony of all souls with God. In 1938 there were 24 State Conventions and 1 State Conference. The number of churches was 544; ministers in fellowship, including lay licenses, 536; church members, 52,311, and Church Schools, 340.

The departmental work is carried on by different organizations, including The Women's National Missionary Association, The Young People's Christian Union, The General Sunday School Association, and the Universalist Publishing House. The denominational periodical, the *Christian Leader*, is published weekly. Rev. W. H. Macpherson, D.D., of Joliet, Illinois, is president of the Universalist General Convention. Headquarters of the denomination: 16 Beacon St., Boston, Mass.

UNIVERSITIES AND COLLEGES. Enrollment. The annual study of registrations in 577 approved colleges and universities by Dr. Raymond Walters was published in *School and Society* for December 17. It shows that full-time students numbered 822,890 and that there was a grand total (including part-time and summer students) of 1,259,973. This represents an increase of 6.6 per cent in full-time students over the corresponding enrollments for 1937, and an increase of 6.8 per cent in total enrollment.

Dr. Walters credits these increases to improved economic conditions and to Federal aid to needy students. Regarding the influence of Federal aid he says:

In considering the increase of 6.6 per cent in the enrollment of full-time students for 1938 over 1937, it is pertinent to know that National Youth Administration payments of an average of \$15 monthly for work performed at the institution by undergraduate students and an average of \$30 monthly for work by graduate students are based this year "upon a figure equal to 9.3 per cent of the total number of residents enrolled in the institution" carrying "at least three-fourths of a normal schedule." Last year it was 8 per cent; in 1936 it was 12 per cent.

The study gives comparative figures for freshmen in 516 institutions for 1937 and 1938 in four large fields: Liberal arts, engineering, commerce or business administration, and agriculture. The total enrollment of freshmen in these institutions in the four fields was 196,582, or 4.4 per cent more than in 1937.

The 15 largest institutions with their resident enrollments and ranks are as follows:

<i>Institution</i>	<i>Students</i>	<i>Rank</i>
California	24,809	1
Minnesota	15,148	2
Columbia	14,980	3
New York University	14,257	4
Illinois	13,872	5
Ohio State	13,148	6
Michigan	11,475	7
Wisconsin	11,438	8
U. of Washington	10,393	9
Texas	9,776	10
C. C. of New York	8,628	11
Harvard	8,583	12
Louisiana	7,901	13
Pennsylvania	7,151	14
Hunter	7,000	15

The ranking of the institutions having the largest total enrollments is as follows:

<i>Institution</i>	<i>Students</i>	<i>Rank</i>
New York University	38,744	1
California	29,727	2
Columbia	28,446	3
C. C. of New York	23,252	4
Minnesota	(Position estimated)	5
Northwestern	18,882	6
Ohio State	17,106	7
Texas	16,669	8
Illinois	16,534	9
S. California	15,487	10
Michigan	15,332	11
Wisconsin	15,054	12
Pennsylvania	14,590	13
U. of Washington	14,319	14
Brooklyn	12,882	15

There was a total of 137,502 liberal arts freshmen, or 5.7 per cent more than in 1937. Previously in recent years there has been a decrease in liberal arts freshmen.

There were 28,376 engineering freshmen. This was an increase of 1.5 per cent over 1937. "This is in contrast with the 10 per cent increase of 1937 over 1936 and the 17 per cent increase of 1936 over 1935 for approximately the same institutions."

In commerce or business administration there were 22,139 freshmen, or a decrease of 1.3 per cent from 1937. This decrease is in sharp contrast with the 33 per cent increase in 1937 over 1936, the 14 per cent in 1936 over 1935, and the 12 per cent in 1935 over 1934 in approximately the same institutions.

The agricultural freshmen numbered 8565 or 8.0 per cent increase over 1937. There was a decrease of agricultural freshmen in 1937 but in previous years the increases had been 10 per cent and 30 per cent.

Educational Foundations. Among the educational foundations that have reported during the year are the following: *The Carnegie Corporation* (q.v.) reported that during the fiscal year it had distributed a total of \$3,830,000. This was divided as follows: Library interests \$571,600, adult education \$180,000, the arts \$646,125, research studies and publications \$554,660, and general educational program \$1,877,250.

The General Education Board (q.v.) reported that unappropriated assets available Dec. 31, 1938, were \$28,192,611.85. Approximately \$12,000,000 of this is promised for the board's present program in southern education, and \$7,300,000 has been set aside for contingencies, leaving a free balance of about \$8,700,000. In the 35 years of the board's existence it has appropriated a total of \$225,334,670.

The Rockefeller Foundation (q.v.) reported appropriations amounting to more than \$9,500,000 during 1938. These included medical science \$2,400,000, public health \$2,200,000, social sciences

\$2,000,000, natural sciences \$1,100,000, the humanities \$800,000, and rural reconstruction in China \$400,000.

The trustees announced the removal of restrictions on gifts that had been made earlier. It is provided that 10 years after the date of the gift the income from it may be used for purposes other than that for which the gift was made. Five years after the date of the gift 5 per cent of the fund may be used for purposes other than that for which the gift was made. Ten years after the date of the gift any part or the whole may be used for other purposes.

Gifts and Bequests. The U.S. Office of Education has reported that practically all colleges and universities suffered decreases in receipts from 1929-30 to 1933-34 but that receipts have steadily increased since the latter date.

The John Price Jones Corporation, Fund-raising Consultants, issued a report of gifts and bequests received by 49 of the leading institutions of higher learning. The report shows that from 1920-21 through 1928-29 the yearly average received was \$45,573,053. From 1928-29 through 1936-37 the yearly average was \$45,094,512, an average decrease per institution of only \$9766.

The total gifts to these 49 institutions from 1920-21 through 1936-37 was \$537,089,355 and the total bequests were \$232,824,205 making a total of gifts and bequests of \$770,913,560.

When the gifts and bequests to Harvard, Yale, and the University of Chicago, which amounted to a total of \$165,809,517, are taken from the grand total, the other 46 institutions received a yearly average of \$27,148,662 in gifts and bequests for the years 1920-21 through 1928-29, but only \$19,991,343 yearly from 1929-30 through 1936-37.

The reports of college and university administrators make it evident that they consider the situation regarding gifts and bequests as serious. At the twenty-fourth annual meeting of the Association of American Colleges held in January, and attended by representatives of approximately 300 of the 528 member institutions, the following statement was adopted:

In view of consideration by the present Congress of amendments to the tax law, the Association of American Colleges, comprising 528 member institutions, respectfully urges amendment of the Revenue Act of 1936 to encourage larger philanthropies for education and charity.

The association believes that the downward trend of gifts to endowments of privately controlled educational institutions creates an alarming emergency. The decrease has been more than 50 per cent in the past 10 years (from \$70,000,000 in 1925-26 to \$33,000,000 in 1935-36); furthermore, it seems clear to us that the cumulative effects of the present tax law will create an even more alarming situation.

The association urges the elimination from taxation of gifts from individuals, in excess of the present 15 per cent exemption (with reasonable limitations); and the interpretation of income from donations to revocable trusts for education and charity, as the income of the trust and not of the donor.

Among the larger gifts and benefactions announced during the year were the following:

Amherst College received \$100,000 by the will of the late George Dupont Pratt. Boston University received a gift of \$486,500 from the Charles Hayden Foundation for a new building for the College of Business Administration. The School of Theology of Boston University received a gift of \$100,000 from Rev. Charles H. Atkins, and a like amount from an anonymous giver. Brown University announced a gift of \$914,000 from the Charles Hayden Foundation. The Carnegie Institute of Technology announced early in the year that it had raised \$1,450,000 toward a proposed endowment of \$4,000,000 which is to be duplicated by the Carnegie Corporation if raised by 1946. The Institute also received a gift of \$300,000 from the Maurice and Laura Folk Foundation for the support of a program of education and research in social relations.

By the will of the late Miss Kate S. Buckingham, a

trust fund of \$2,000,000 was established for the Chicago Art Institute. Columbia University received \$135,000 by the will of the late Associate Justice Cardozo for the establishment of a chair of jurisprudence. Columbia also received \$250,000 from the Carnegie Corporation. Of this amount \$150,000 is for endowment of the Melvil Dewey professorship of library service and \$100,000 for the Columbia School of Library Service to be used for general purposes. The Connecticut College for Women announced the gift of a new chapel from Mrs. Edward S. Harkness. By the will of the late Edward Bayard Halstead, Drake University and Johns Hopkins University share equally in a residuary estate valued at more than \$500,000. Also Johns Hopkins is to receive \$200,000 and Drake \$75,000 at the termination of existing trusts.

Lindenwood College announced the gift of a \$200,000 estate left by the late Mrs. Lillie P. Roemer. MacMurray College received a gift of property valued at \$1,000,000 from James E. MacMurray. The Horace H. Rackham and Mary A. Rackham fund established a trust endowment of \$500,000 for agricultural research at the Michigan State College. The College of Medicine of the Ohio State University received \$200,000 by the will of the late Marietta Comly for medical and surgical research. George Peabody College received a gift of \$100,000 from the General Education Board toward the endowment of its library school.

Phillips Academy will receive from Col. Henry L. Stimson an 18-acre estate in Washington, D. C., valued at more than \$300,000. Pratt Institute received \$250,000 by the will of the late George Dupont Pratt. Princeton University announced gifts totaling \$1,011,492 for the three months following Dec. 1, 1937. The Rochester Athenaeum and Mechanics Institute received a residuary estate valued at more than \$150,000 by the will of the late Miss Frances A. Baker. Simmons College received a gift of \$200,000 from the Paul Wilde Jackson Fund. It is required that the income of the gift be used for scholarships for a period of 25 years after which it may be used for such charitable or educational purposes as the governing board of the college may determine. Swarthmore College received a trust fund of \$100,000 by the will of the late Miss Laura Allen. The income of the trust is to be used to pay the salaries of professors of chemistry in the college.

Teachers College of Columbia University received \$500,000 by the will of the late Valentine Everitt Macy. The University of Southern California received from Capt. Allan Hancock a gift of a completely equipped building for scientific research in zoology, botany, and related fields. The gift will be known as the Allan Hancock Foundation for Scientific Research. The University of Chicago received from the Rockefeller Foundation a gift of \$1,500,000 conditioned on the University's securing an additional \$500,000 before 1941. Chicago also received \$150,000 from the Rockefeller Foundation for the support of psychiatric teaching and research over a period of three years. The graduate school of the University of Michigan received \$500,000 from the Horace H. Rackham and Mary A. Rackham Fund, the income of which is to be used for at least five years for sociological research in Flint, Michigan. The University of Pennsylvania announced gifts amounting to \$2,298,514. This was three times the amount of the gifts received during the same period in the previous year. The College of Mines and Metallurgy of the University of Texas received a bequest valued at approximately \$1,000,000 by the will of the late Frank B. Cotton. Vassar College completed an endowment fund of \$1,000,000 for an alumnae house. By the will of the late Neil Gray, Yale University will, upon the death of Mr. Gray's sister, receive a sum estimated at more than \$500,000.

Study of Teacher Education. The American Council of Education has received a grant of \$200,000 from the General Education Board for the purpose of making a five-year study of teacher education. The study, which will consider the problems involved in the training of teachers for elementary and high schools and for colleges and universities, comes at an opportune time. It has become very difficult to fix the boundaries of the field belonging to the liberal arts colleges and that which may be occupied by teacher-training institutions.

There has been a determined effort, since 1920, to improve the quality of instruction in public schools by increasing the training that prospective teachers must secure. Prior to this date, the completion of a two-year normal school course was regarded as adequate preparation for those who expected to teach in elementary school. The curriculum of those earlier normal schools was composed very largely of reviews of the subjects taught in the elementary school and the learning of the

methods that should be employed in teaching them. There was little time left which could be devoted to the cultural subjects such as were offered in liberal arts colleges. At the same time, the teachers for high schools came from the colleges where they received no very direct training for teaching. Under such conditions there was no overlapping of the fields occupied.

The requirements for certification to teach in a number of the states now include the equivalent of one entire year of professional courses and actual and extensive experience in practice teaching. It is very difficult for the smaller colleges to meet either of these requirements. Conditions are such that several scientific associations have taken steps to bring changes. It is asserted that high schools do not employ persons who are competent in the sciences because such persons do not have the lengthy training required for certification to teach. It has been freely stated that the effects of this practice is to be seen in the poor training that high-school graduates have when they enter college. It is charged that in one state it is impossible to obtain one of the advanced certificates unless the candidate offers credits earned in one particular teacher-training institution.

The Association of American Colleges manifests great interest in the proposed study. At its annual meeting in January it passed resolutions that assured the Council of its willingness to co-operate. It also signified its "interests in in-service training of teachers, a fifth year of work beyond the secondary level for prospective teachers, the presentation of subject-matter for professional use, the certification of teachers, selection of candidates for certification, the contact of liberal arts colleges with the public schools and especially the secondary schools, the type of preparation which a teacher of subject-matter in a liberal arts college should have, the relation of professional and subject-matter courses in liberal arts colleges, and a definition of terms used to describe professional courses for teachers.

The period of training for elementary teachers was lengthened to three years, and later to four years. This made it possible for the teacher-training institutions to include cultural subjects. The states also raised the standards of certification of all teachers in the public schools. This forced the colleges whose graduates were to teach in the high schools to include teacher-training courses in their curricula. The definition of fields for the two types of institutions no longer held, and often serious difficulties resulted.

The smaller colleges, many of whose graduates were forced to resort to teaching, often urged that the cultural courses were in their field. They reasoned that the introduction of these courses into the teacher-training institutions would be followed by a decrease in their own student enrollments. The teacher-training institutions would be followed for a time by offering "professionalized subject-matter courses." In these the emphasis was supposed to be upon the teaching aspects of the subjects. This plan did not operate satisfactorily. There were few who could teach such courses, and as time passed only the title remained. These institutions did not and do not generally confer degrees, but their students are able to transfer credits, often at their face value, and obtain regular degrees from prominent institutions.

UPPER VOLTA. See FRENCH WEST AFRICA.
URUGUAY, ū'rōō-gwā or ōō'rōō-gwī'. A South American republic. Capital, Montevideo.

Area and Population. Uruguay has an area of 71,172 square miles and a population estimated in December, 1937, at 2,093,221 (1,937,707 in 1931). About 45 per cent of the people live in cities of 6000 or more. Living births in 1936 numbered 40,755 (19.8 per 1000); deaths, 19,843 (9.7 per 1000); marriages, 12,087 (5.9 per 1000). The people are almost entirely of European descent, with Spanish, Italian, and Portuguese strains predominating. The language is Spanish. The estimated population of Montevideo in December, 1937, was 692,796; of other cities in 1936: Paysandú, 50,000; Salto, 48,000; Mercedes, 34,000; Minas, 30,000.

Education and Religion. About 35 per cent of the adult population is estimated to be illiterate. In 1936 there were 195,228 pupils in 1586 public and private schools, 14,247 in secondary schools, 9453 in 62 evening courses for adults, and 17,122 students in the University of the Republic at Montevideo. During 1937-38, 160 new primary schools and 10 industrial schools were opened and the construction of 8 modern secondary schools in the interior was started. Expansion of the university was also under way. The first "South American Summer School" was held in Montevideo Jan. 10-Feb. 3, 1938, with outstanding authorities from various South American universities lecturing. Roman Catholicism is the prevailing religion but complete religious liberty is guaranteed.

Production. A 1937 estimate placed the annual value of production at about 370,000,000 pesos, with agriculture contributing about 12 per cent of the total, pastoral industries 24 per cent, and the processing and manufacturing industries 59 per cent. About 60 per cent of the total area is devoted to stock raising, 20 per cent to mixed stock and crop ranches, and 7 per cent to crop farms. Livestock estimates for 1937 were: Cattle, 7,127,000; sheep, 17,931,000; swine, 300,000. In the same year 932,266 cattle, 1,152,150 sheep, and 83,513 swine were slaughtered. The wool clip for the year ended Sept. 30, 1938, was 52,356 metric tons. Production of the chief crops in 1937-38 was: Wheat, 15,144,000 bu.; barley, 721,000 bu.; oats, 3,591,000 bu.; corn, 3,011,000 bu.; linseed, 3,728,000 bu.; rice, 1,176,000 bu. Other crops are wine grapes, potatoes, tobacco, and alfalfa. The government has undertaken the development of copper, lead, and gold deposits. The 1937 industrial census showed 11,493 establishments with 88,267 employees and a capital investment of 256,000,000 pesos. The principal manufactures are meat products, flour, shoes, tanned hides, wool textiles, building materials, automobile bodies and tires, petroleum products, alcohol, furniture, and clothing.

Foreign Trade. General imports in 1938 were valued at 74,394,000 pesos (appraised values) compared with 80,393,000 pesos in 1937, and general exports at 96,292,000 pesos (99,152,000 in 1937). The United Kingdom supplied 19.8 per cent by value of the 1938 imports (16.8 in 1937); Germany, 16.8 (11); United States, 12 (13.6); Brazil, 7.7 (6.7). Of the 1938 exports, the United Kingdom took 26.1 per cent (24.1 in 1937); Germany, 23.5 (13.2); Argentina, 9.5 (9.2); France, 7.4 (4); United States, 4 (14.1). The value of the chief 1937 exports was (in U.S. currency): Wool, \$22,960,000; hides and skins, \$6,690,000; preserved mutton, \$3,512,000; frozen beef, \$2,933,000.

Finance. Budget estimates for 1939 placed total revenues at 87,554,000 pesos (86,775,000 in 1938) and expenditures at 87,526,000 pesos (88,195,000 in 1938). Actual expenditures in 1938 were 87,671,000 pesos and receipts about the same (85,110,000 and 88,167,000 pesos, respectively, in 1937). The total

public debt on Dec. 31, 1938, was equivalent to 420,680,000 pesos (funded debt of Republic, 350,170,000; funded debt of Montevideo and interior cities, 70,148,000; Treasury bills outstanding, 362,000). The internal debt amounted to 199,604,000 pesos and the external debt was divided as follows: £14,280,510, U.S. \$57,136,300; French francs (gold) 118,603,000; Uruguayan gold pesos 1,269,935. For conversion of the debt, see *History*. The average exchange rate of the peso was \$0.4173 in the free market in 1938 (\$0.5575 in 1937) and \$0.5697 in the controlled free market (\$0.5595 in 1937). The law of Feb. 2, 1938, devalued the peso to 0.585018 grams of pure gold $\frac{1}{10}$ fine (formerly 0.732328 grams).

Transportation. There were in June, 1937, 1485 miles of privately owned railway line and about 388 miles of state line. The 1937 mileage of roads and highways was about 22,487 miles; number of automobiles on Jan. 1, 1938, 60,922. Airlines operated under the national flag extended 719 miles in 1938. A new air passenger service between Montevideo and Buenos Aires was opened Mar. 12, 1938. Montevideo is also on the American, German, and French international air routes. During 1937, 2036 ocean-going vessels of 9,342,184 net registered tons and 1356 river steamers of 1,002,440 tons entered the ports.

Government. A constitution adopted in 1934 fixes the form of governmental authority; in particular, it does away with the previous constitution's distinctive institution, an elective National Administrative Council of nine members, which formerly had a share of the executive power. The present constitution assigns the executive authority to a President aided by a Council of nine Ministers. The legislative authority rests in a Parliament of two chambers: the Senate, having 30 members, and the Chamber of Deputies, having 99. Males and females 18 years old have the right to vote in the popular elections. Their vote elects quadrennially, at large, the members of the Senate and, by districts, the members of the Chamber of Deputies. The Legislators proclaim, to be President for a term of four years, a candidate of the political party that has obtained the highest popular vote. The members of the Council of Ministers are chosen from the two political parties that have obtained the highest votes in the general elections: from among the party gaining the highest vote, 6 Ministers; from that next highest, 3. President, Alfredo Baldomir (inaugurated June 19, 1938).

History. The election of Gen. Alfredo Baldomir to the Presidency marked the return of political life to a definitely constitutional basis; while President Gabriel Terra had brought the constitution of 1934 into the world and had served his second term under that constitution, his successor gained the office by the expressed preference of the popular vote for him and his party, over other candidates. The popular vote cast on Mar. 27, 1938, out of a total of 357,205 ballots, gave 219,311 to the Colorado Party; and of the vote for this party 121,259 ballots favored Baldomir, while its official candidate, Blanco Acevedo, received 97,998 votes; a candidate of the National Party received 114,506 votes. The system of seeking votes for rival candidates under the same partisan designation, in use in Uruguay, implies that the candidate obtaining the highest personal vote among the candidates within the political party that scored the highest partisan vote may benefit by the ballots cast for others under the same party banner; consequently Baldomir's rivalry with Acevedo was a normal feature of the election. Baldomir's inauguration brought him unusually en-

thusiastic acclaim from the attending public—a demonstration credited, in the press, to Baldomir's having won on his promise to the voters that he would restore democracy and oppose fascism.

A few weeks after the inauguration a multitude thought to number 120,000 marched (July 25) in Montevideo, displaying the national flag, and held an outdoor meeting to demand a new constitution, more in accord with popular views. The sense of recent release from the Terra regime's long-continued restraint of popular action gave additional impulse to the demonstration. Ex-President Terra, however, did not long remain wholly dissociated from the government; the new President and cabinet nominated him in August to be president of the Bank of the Republic, and a law passed in November authorized this bank to stabilize the price of wheat by buying, selling, and exporting for the government's account, in addition to governing foreign exchange. Terra visited Italy late in the year and there negotiated a new Uruguayan commercial agreement with the Italian Government (approved by the cabinet December 16), whereby Italy was to admit a much higher yearly total of some Uruguayan products; wool, meat, cereals, linseed, hides, and other goods were to be admitted in totals that aggregated 179,000,000 lire in yearly value, instead of 58,000,000 set by the pre-existing agreement. The extent of countervailing concessions to Italy was not yet set forth in the news. Politically, however, the prospect of greater trade with Italy armed the supporters of fascism with arguments of self-interest that might have effect on the Uruguayan business world.

Uruguay's position in foreign trade during 1938, and in domestic economy as well, rendered it highly desirable to improve outlets for the agricultural surplus. The country's system of social insurance ran into deficits, attributed in part at least to the original admittance of numerous persons, retiring from active occupation, to public support, although they had not materially contributed to the fund for the payments. The control of foreign exchange, owing partly to the weakness of the peso in terms of the U.S. dollar, was strictly maintained. In April, for instance, quotas of imports were allowed only as to 13 exporting countries, about two-thirds of the allowed total of all the quotas being allotted to Great Britain and to Germany. A small sum outside the quotas was allowed for payment of any imports from other countries, the United States included. In July the co-ordination of imports, exports, and exchange was united in the hands of the Bank of the Republic. It was reported in December that the conversion of the divers issues of Uruguayan external debt had been completed, with resulting lower rates of interest.

Uruguay and Argentina made an agreement, announced January 16, to maintain the status existing on Jan. 1, 1936, with regard to the possession of long-disputed islands in the Rio de la Plata (including Martin Garcia Island). A step important to the Uruguayan social structure was taken by the enactment, in May, of a law on homesteads; these were to be dwellings or farms occupied in each case only by members of one family; a homestead, with its necessary machinery, tools, food, and livestock, might not exceed 5000 pesos in value; it could not be encumbered; once declared a homestead, neither the possession nor any part of it could be attached; it could be sold only under specified conditions.

See also CHACO DISPUTE, SETTLEMENT OF.

UTAH. Area and Population. Area, 84,990 square miles; included (1930) water, 2806 square

miles. Population: Apr. 1, 1930 (census), 507,847; July 1, 1937 (Federal estimate), 519,000; 1920 (census), 449,396. Salt Lake City, the capital, had (1930) 140,267.

Agriculture. Acreage, production, and value of the chief crops of Utah, for 1938 and 1937, appear in the accompanying table.

<i>Crop</i>	<i>Year</i>	<i>Acreage</i>	<i>Prod. Bu.</i>	<i>Value</i>
Hay (tame)	1938	494,000	1,051,000 *	\$8,198,000
	1937	515,000	1,171,000 *	8,900,000
Wheat	1938	287,000	6,573,000	3,221,000
	1937	279,000	5,459,000	4,313,000
Sugar beets	1938	52,000	742,000
	1937	46,000	570,000	2,816,000
Potatoes	1938	13,600	2,244,000	898,000
	1937	12,900	2,128,000	915,000
Barley	1938	62,000	2,542,000	966,000
	1937	61,000	2,379,000	1,356,000

* Tons.

Mineral production. Much the greater part of Utah's yearly production of minerals, totaling \$61,103,970 for 1936, was in gold, silver, copper, lead, and zinc. The value of the yearly production of the five, \$48,836,356 for 1936, had jumped to \$87,897,549 for 1937; for 1938 it receded to \$44,304,023 (U.S. Bureau of Mines' approximation), which was lower than the total of 1936. All five of the metals failed in 1938 to approach their totals for 1937 either as to value or as to quantity. The production of gold diminished to 210,650 oz. (1938), from 322,759 (1937); in value to \$7,372,750, from \$11,296,565. That of silver fell to 9,629,713 oz. (1938), from 12,869,117 (1937), and to \$6,225,629, from \$9,954,262. That of copper sank to 215,798,000 lb. (1938), from 411,988,000 (1937); by value, to \$21,148,204, or considerably less than half of the total, \$49,850,548, for 1937. The output of lead dropped to some 132,076,000 lb. (1938), from 178,916,000 (1937), and to \$6,207,572, from \$10,556,044. That of zinc, to 68,372,000 lb. (1938), from 96,002,000 (1937), and to \$3,350,228, from \$6,240,130. Inactive and oversupplied markets for copper, lead, and zinc led to the curtailment of operations by the mines producing them; the Utah Copper Company shut down for six weeks in the summer, and two leading producers of lead and zinc in the Park City area closed early in 1938. As much of the yield of gold and of silver came from ores mined essentially for copper, lead, or zinc, the production of gold and of silver was sympathetically reduced. The same thing happened in the case of molybdenum, which the Utah Copper Company had produced, in 1937, to a total of 4,912,569 lb. of metal in concentrates.

Finance. Utah's State expenditures in the year ended June 30, 1937, as reported by the U.S. Bureau of the Census, were: For maintaining and operating governmental departments, \$17,174,813 (of which \$3,836,699 was for highways, and \$4,242,849 was for local education); for interest on debt, \$469,451; for capital outlay, \$3,571,523. Revenues were \$24,385,265. Of these, property taxes furnished \$3,670,134; sales taxes, \$7,125,103 (including tax on gasoline, \$3,252,905); income taxes, \$1,550,639; departmental earnings, \$1,695,490; sale of licenses, \$1,577,018; unemployment compensation, \$1,212,732; Federal or other grants-in-aid, \$5,874,021. Funded debt outstanding on June 30, 1937, totaled \$8,742,899. Net of sinking-fund assets, the debt was \$3,901,295. On an assessed valuation of \$524,417,178 the State levied in the year ad-valorem taxes of \$3,146,503.

The State's monopoly of alcoholic beverages had receipts for the year of \$4,023,774, this figure was not included in the State's revenue. Out of profit

the monopoly paid, in the year, \$550,000 to the State; this sum is included in the State's total revenue.

Education. Utah had, as reported for the academic year 1937-38, 144,463 inhabitants of school age (from 6 to 17 years, inclusive). Enrollments of pupils in public schools, to the number of 138,669, comprised 96,612 for elementary instruction and 42,057 in high schools. The year's expenditures for public-school education, capital outlay included, totaled \$12,122,550. The teachers, principals, and supervisors numbered 4618; they were paid, for the year, at the average of \$1313.34.

The popular vote adopted (November 8) an amendment to the State constitution, removing restrictions as to source and amount of revenue for the public schools. This change, supported by the State Teachers' Association, was expected to help the schools to obtain more ample support, particularly as the means need no longer be obtained by the unpopular method of taxing property.

Charities and Corrections. Public support in 1938 for indigents in Utah was mainly administered by the Department of Public Welfare, which among its other activities granted, from proceeds of the sales tax, moneys for general poor-relief. The State institutions for the care and custody of persons were severally governed by their own directing boards. They included the State Prison, at Salt Lake City; Industrial School, Ogden; Training School for the Feeble-Minded, American Fork; School for the Deaf and Blind, Ogden.

The State's resources for poor-relief were heavily burdened. The severe depression in metal mining, mentioned under *Mineral Production*, increased dependency and at the same time brought on a decrease in the yield of the sales tax, the source of the State's means for poor-relief. The temporary payment of aid to persons thrown out of employment, under the system of unemployment compensation, was in force, but the Unemployment Insurance Office, in charge of this service, was overburdened.

Political and Other Events. The direct primary for the nomination of the political parties' candidates went into effect in the State. It was first used at the primary elections of September 13. The failure of the Church of the Latter-day Saints (Mormons) in their endeavors of several years to provide for the subsistence of all indigent members was announced (June 5) by Heber J. Grant, head of the church. In a press interview he asserted that the church, while able to provide for all members in need, had been powerless to overcome its dependents' preference for Federal support. The Mormons had established for their poor a system of organized self-help, in which opportunity to produce goods and barter them for other products had been provided instead of a dole or of paid jobs such as those offered by the WPA.

The Utah Copper Company's mines and smelters in the State were shut down (June 1), and remained closed for about six weeks. The suspension stopped the employment of about 3000 persons and thus added to the burden of poor-relief.

An investigation of alleged corruption in the municipal administration of Salt Lake City brought about, in January, the discharge of the Chief of Police and the Manager of the Department of Safety; both were appointees of Mayor E. B. Erwin. Erwin resigned his office early in February. Great Salt Lake was reported to have recovered some of the shrinkage that it had undergone between 1925 and 1935. Its level in June, as stated

by a district engineer of the U.S. Geological Survey, was more than $2\frac{1}{2}$ feet above that of 1935 but was still about $8\frac{1}{2}$ feet below the level of 1925. The salt flats of Utah—level stretches with a smooth salt surface—had meanwhile come into use as a perfect natural course for automobiles trying for the world's record for speed over short distances.

Elections. U.S. Senator Elbert D. Thomas (Dem.) was re-elected, defeating Franklin S. Harris (Rep.). Two Republican Representatives were re-elected.

Officers. Utah's chief officers, serving in 1938, were: Governor, Henry H. Blood (Dem.); Secretary of State, E. E. Monson; Auditor, John W. Guy; Treasurer, Reese M. Reese; Attorney-General, Joseph Chez; Superintendent of Public Instruction, Charles H. Skidmore.

Judiciary. Supreme Court: Chief Justice, William H. Folland; Associate Justices, Ephraim Hansen, David W. Moffat, James H. Wolfe, Martin M. Larson.

UTAH, UNIVERSITY OF. A State institution of higher education in Salt Lake City, founded in 1850. The enrollment for the autumn quarter of 1938 was 4023. The 1938 summer session had an attendance of 1278. In extension courses, 2250 students were enrolled. The faculty numbered 227. The income for 1937-38 was \$1,211,501. The library contained 137,336 volumes and 35,049 pamphlets. Carlson Hall, new residence hall for women, and a new biological laboratory and greenhouse were opened in the fall of 1938. President, George Thomas, Ph.D.

UZBEK SOVIET SOCIALIST REPUBLIC. One of the 11 constituent republics of the U.S.S.R., according to the constitution adopted Dec. 5, 1936. It includes the Kara-Kalpak Autonomous Soviet Socialist Republic. Area, 66,392 square miles; population (Jan. 1, 1933), 5,044,300. Tashkent, the capital, had 565,000 inhabitants on Jan. 1, 1936. Other important cities are: Samarkand, 154,600 inhabitants; Andijan, 97,700 inhabitants; Kokand, 84,700 inhabitants; Bokhara; Khiva; Namangan.

Production, etc. Chief products are cotton, fruit, wool, silk, oil, sulphur, coal, leather, and cement. In 1938 there were 43,345 acres of spring sowing, by collectives, of chief grain crops. There is a well-developed air line which serves all of Central Asia. See SOVIET CENTRAL ASIA; UNION OF SOVIET SOCIALIST REPUBLICS.

VALDÉS, ARMANDO PALACIO. See PALACIO VALDÉS, ARMANDO.

VANDERBILT UNIVERSITY. A nonsectarian institution of higher learning for men and women, in Nashville, Tenn., founded in 1872. The enrollment for the autumn term of 1938 was 1700. The faculty numbered 416. The amount of endowment was \$22,770,000; the annual income, \$1,600,000. Volumes in the library numbered 209,462. Chancellor, since July 1, 1937, Oliver C. Carmichael, B.Sc. (Oxon.).

VANDERVELDE, vān'dēr-vēl'de, EMILE. A Belgian Socialist, died in Brussels, Dec. 27, 1938. Born at Ixelles, Jan. 25, 1866, he was educated at the University of Brussels where he later became professor of law, and in 1924 professor of political economy. Upon graduation he joined the Socialist Party and was elected a deputy in 1894. During the World War he served as a member of the Patriotic Service Committee, and subsequently was a member of the War Committee (1917-18), minister of civil and military provisioning (1918), and minis-

ter of justice (1919-21). He was an ardent supporter of reduction in military expenditures and armaments, and fought for universal suffrage and reforms in the prison system. Asked to form a cabinet in the spring of 1925, he refused, but on June 17 became minister of foreign affairs in a coalition cabinet, which post he held until Nov. 31, 1927. On June 14, 1936, he became minister of public health, but resigned in January, 1937, because the Government failed to support the Loyalist Government in the Spanish War. Vandervelde was Belgian delegate to the Paris Peace Conference (1919), and played an important part at the Lorcarno Conference (1925).

He was the author of many historical and economic works, among which may be mentioned *L'Evolution industrielle et le collectivisme* (1896; Eng. trans., *Collectivism and Industrial Revolution* 1901); *La Régime Socialiste* (1906); *La Socialisme et la Religion* (1907); *La Belgique et le Congo* (1911); *Le Socialisme contre l'État* (1918); *Le Parti Ouvrier Belge 1885-1925* (1925); *Le Marxisme a-t-il fait faillite* (1928), and, with his wife, *Le Pays d'Israel* (1929).

VASSAR COLLEGE. A nonsectarian institution for the higher education of women in Poughkeepsie, N. Y., founded in 1861. The enrollment for the autumn of 1938 was 1246. The faculty numbered 185. The endowment amounted to \$9,400,000; the income from funds was approximately \$400,000; endowments and trust funds for scholarship aid, including fellowships, amounted to \$1,300,000, yielding an income of approximately \$45,000. The library contained 208,400 volumes. The trend in instruction was toward smaller classes, individual conferences, and independent study by the students.

An interdepartmental major field in drama was set up under the administration of a Division of Drama separate from the Department of English. The Vassar Brothers Laboratory, which had become unsuitable for further use without costly repairs and alterations, was demolished. The Department of Psychology and certain courses in Botany and Sociology, previously taught in this building, were transferred to Blodgett Hall of Euthenics, thus completing the fulfillment of its donor's hopes for bringing together under one roof all the courses particularly concerned with the science and art of living well.

Jean C. Palmer House, named for an alumna and former warden of the college, was opened as a home for a group of self-help students engaged in a co-operative housekeeping project formerly housed in Blodgett Hall.

Through the generosity of Mrs. Charles M. Pratt the art gallery in Taylor was reconstructed to provide greater exhibition space and better lighting for both the permanent collection of paintings and loan collections and her gift of more than 600 pieces of rare Oriental pottery was placed on display in a room especially designed for it. The Classical Museum in Avery Hall was also entirely remodeled and equipped with modern cases and modern lighting to further the enjoyment and study of the college's valuable collection of classical antiquities. President, Henry Noble MacCracken, Ph.D., LL.D., L.H.D.

VATICAN CITY. A sovereign State, officially known as the State of Vatican City, established within the city of Rome as the seat of the Papacy on June 10, 1929, in accordance with the Italo-Vatican (Lateran) Treaty of Feb. 11, 1929 (see 1929 YEAR BOOK, p. 417). Sovereign in 1938, Pope

Pius XI (Achille Ratti), born May 31, 1857, and elected Supreme Pontiff Feb. 6, 1922.

The area of Vatican City is 108.7 acres, including St. Peter's Square, and in addition 13 ecclesiastical buildings outside of its limits enjoy extraterritorial rights. It has its own coinage, import duties, railway station, and its postal, telegraph, and radio facilities. The census of Dec. 31, 1932, showed 1025 inhabitants, including 853 Italians and 121 Swiss, the latter mostly members of the papal gendarmery. Under the Constitution of June 7, 1929, the Pope exercises full legal, judicial, and executive powers. Executive authority is delegated by the Pope to a governor. Governor in 1938, Marquis Camillo Serafini. He is assisted by a Counselor General, a General Council of Government, and other officers. The legal system is based on canon law and ecclesiastical rules. The cardinals serve as the Pope's chief advisors and they elect his successor upon his death. They are appointed by the Pope as vacancies occur. Foreign relations are conducted by the Secretary of State (Eugenio Cardinal Pacelli in 1938). The Holy See maintains diplomatic relations with 40 foreign governments and has unofficial relations by means of Apostolic Delegates with a number of other countries, including the United States.

See ROMAN CATHOLIC CHURCH; AUSTRIA, GERMANY, ITALY, SPAIN, and YUGOSLAVIA under *History*.

VENEZUELA, vĕn'ĕ-zwĕ'là; *Amer. Sp. pron.*, vā'nā-swā'lā. A Republic of South America, consisting of a Federal District, 20 States, and two Territories. Capital, Caracas.

Area and Population. The area is 352,143 square miles and the population at the census of 1937 was 3,451,677, including 100,670 Indians (aboriginals) and 23,254 Venezuelans living abroad. The population is composed of whites, Indians, Negroes, and mixtures of all three races. Living births in 1936 numbered 106,690 (32.7 per 1000); deaths, 58,261 (17.9 per 1000). The populations of the Federal and five largest State capitals in 1937 were: Caracas (Federal District), 203,342; Maracaibo (State of Zulia), 110,010; Barquisimeto (Lara), 50,774; Valencia (Carabobo), 49,963; Maracay (Aragua), 29,255; and San Cristóbal (Táchira), 22,058.

Education and Religion. At the 1926 census about 57 per cent of the adult population was illiterate. The school enrollment in 1937 was 204,450 (elementary, 202,179) and the average attendance was 150,868. In his message to Congress of Apr. 29, 1938, President Eleazar López Contreras reported that 10 rural missions were laying foundations for rural normal schools and farm schools in various parts of the republic. He also announced the establishment of the first camp for undernourished school children, a school for nurses, the Artigas experimental school, the Audio-Visual Institute of Education, the Polytechnic Institute combining the Institute of Tropical Medicine and Experimental Surgery with the pedagogical extension service, and the Institute of Geology. An advanced school of agriculture, a school of veterinary science, several schools for farm overseers, an experiment station for rice culture, and seven cattle-raising experiment stations also were inaugurated during the previous year (also see *History*). Roman Catholicism is the prevailing religion, but other religions are granted freedom of worship.

Production. The principal industries are agriculture, stock raising, petroleum mining, manufacturing, pearl fishing, and the exploitation of forests. Estimated production of the chief crops was:

Coffee, 67,000 metric tons in 1937-38 (71,600 in 1936-37); cacao, 36,671,000 lb. in 1936-37; cane sugar, 24,500 metric tons in 1937-38 (25,000 in 1936-37). Other crops are tobacco, cotton, corn, beans, fruits (especially bananas), potatoes, coconuts, rice, and wheat. Livestock estimates for 1936-37 showed 3,091,000 cattle, 356,000 swine, 62,000 sheep, 194,000 horses, mules, and burros, and 615,000 goats. Mineral production for 1937 included 199,407,000 bbl. of petroleum (164,977,000 in 1936), 116,512 fine oz. of gold, 6585 metric tons of coal, and 26,299 metric tons of salt. Petroleum refining is the only large-scale manufacturing industry. Caracas has a cotton mill, cement plant, and glass factory and there are cotton mills at Valencia, Maracay, and Cumaná. There were 935 industrial establishments with 12,861 employees and an invested capital of 128,221,190 bolívares in the Federal District (including Caracas and La Guaira) in 1936.

Foreign Trade. Including bullion and specie, general imports in 1937 totaled 304,634,000 bolívares (211,590,000 in 1936) and general exports 871,463,000 bolívares (768,463,000). The chief imports in 1937 were cotton fabrics, automobiles, trucks and accessories, iron and steel and their manufactures, and wheat flour. The value of the chief exports was (in U.S. currency): Crude petroleum, \$164,647,000; green coffee, \$10,122,000; fuel oil, \$6,314,000; gold (excluding coin), \$3,753,000; cacao beans, \$2,921,000. The United States in 1937 supplied 52.8 per cent of the imports by value (47.4 in 1936); Germany, 13.6 (15.2); United Kingdom, 9.3 (10.1). Of the 1937 exports, 39.6 per cent (petroleum for refining) went to Aruba, 32.6 per cent (petroleum) to Curaçao, 13.7 per cent to the United States, and 5.4 per cent to the United Kingdom. United States trade figures for 1938 showed imports from Venezuela of \$20,034,983 (\$22,769,879 in 1937) and exports to Venezuela of \$52,277,887 (\$46,444,651 in 1937).

Finance. For the calendar year 1937 actual revenues totaled 312,101,000 bolívares (220,792,000 in 1936) and expenditures 304,875,000 bolívares (257,378,000). The 1937 surplus of 7,226,000 bolívares was added to the treasury reserve, which totaled 65,587,000 bolívares on Apr. 15, 1938, exclusive of about 15,000,000 bolívares held in special account from oil concessions. The budget estimates for the fiscal year ended June 30, 1939, balanced at 335,261,000 bolívares (254,632,000 for 1937-38). The internal public debt on Dec. 31, 1937, was 2,685,000 bolívares. Sufficient funds had been deposited abroad to cancel the 122,000 bolívares of unredeemed foreign debt. The average bank rate for the bolívar was 3.19 to the U.S. dollar in 1938 (3.42 in 1937) and the average open market rate was 3.26 in 1938 (3.56 in 1937). Par value of the bolívar, \$0.3267.

Transportation. Exclusive of industrial railways, Venezuela has 589 miles of railway line (government, 119 miles). Roads and highways extended 5667 miles in 1937 (number of automobiles, 21,350). An all-weather oiled road and pipeline over 125 miles long was under construction by an oil company in 1938 from El Tigre (Oficina) to Puerta La Cruz-Guanta, which was expected to prove of great economic benefit to eastern Venezuela. In 1938 there were 2197 miles of airlines under the national flag. In 1937 the government-owned Línea Aeropostal system reported 1309 flights totaling 1607 hours. The Pan American Airways planes touch at Caripito, Guanta, La Guaira, Coro, and Maracaibo. Dutch Airways (K.L.T.) provides a service between La Guaira, Aruba, and

Curaçao. Modernization of the ports of La Guaira and Puerto Cabello was virtually completed in 1938. See *History*.

Government. A constitution adopted on July 11, 1936, is the basis of the government. The President is elected by the Congress, to serve a term of five years; he cannot succeed himself. The Congress consists of a Senate of 40 members and a Chamber of Deputies, having 85 members. Each of the States of Venezuela elects two members of the Senate; the two are chosen by the State Legislature. Members of the Chamber of Deputies are elected by municipal councils' popular vote, on the approximate basis of one for every 35,000 of the population, but a State having fewer than 35,000 inhabitants is entitled to one Deputy. The popular vote, cast by literate males 21 or more years old, elects the State legislatures and the municipal councils. The constitution prohibits communism and anarchism. President, Gen. Eleazar López Contreras (elected by Congress, Apr. 25, 1936, after having served a short while as provisional President).

History. President López Contreras had little worry from his political opponents in 1938 and devoted his attention to bringing into play bold plans for the social and economic upbuilding of Venezuela by concerted application of public authority in many related directions. These projects were grouped as a three-year plan, treated below. With regard to the violent political conflict that had preceded the President's establishment in power, it was faintly echoed in 1938 by occasional incidents—the arrest of nine persons, including one Senator, in February, for acts or expressions of disrespect for the public authorities; the extension for a year of the decree of exile for Communists, originally issued in 1937; the suspension, in May, of the journal *Diario del Pueblo*, for statements deemed subversive to the social order; and the granting, in November, of 2,397,000 bolívares, to meet additional payments of indemnity for the damage done at Maracaibo during the civil violence of Dec. 21, 1935.

The Three-Year Plan. President López Contreras announced in a New Year's address his intention to set up for Venezuela a plan of national tasks to be performed in the remaining three years of his administration, to start with July, 1938. The purpose of these tasks was to improve the nation's wellbeing; the proposed ways to this end were largely or mainly through material development, but also through social activities, diplomacy, and organized governmental study. Changes in commercial treaties were to improve foreign trade; lower marine freight rates and improved services for shipping were to stimulate it; study of immigration and of the development of scantily inhabited regions, combined with governmental co-operation with immigrants, were to give the country a more numerous and productive population; hotels and other facilities were to bring tourists, desired as a source of additional revenue; more schools, sanitary works, nurses, and hospitals were to improve the health and education of the industrial employee and the farmer.

On May 7 López Contreras presented the three-year plan in greater detail to the Congress, which promptly accepted the proposal in principle and thereafter passed a number of acts providing for certain of its features. Details of the plan as stated May 7 included a declared purpose to lower the cost of economic production of the necessities of life; the creation of a system of visiting nurses, school nurses, and rural sanitation brigades as an imple-

ment for rendering the population healthy; to the same end, the building of waterworks for 100 cities and towns, of sewers for Caracas and 15 other cities, and the construction of health centers and hospitals, and a national factory for preparing serums and medical compounds; for the comfort of the poorer inhabitants, the continued building of cheap and improved housing; to promote immigration, the creation of an Institute of Immigration and Colonization, equipped with a grant of 12,000,000 bolívares; for education, 300 more rural schools; for agriculture, experimental and demonstrating stations and a number of works of irrigation; for internal transportation, measures to lower cost and appropriations for the construction or improvement of 23 airports; for transportation by water, aid to the Venezuelan Navigation Company and grants for completing works at Puerto Cabello and for dredging in the Rio Uribante. The prospective cost of the three-year plan approximated 1,210,148,000 bolívares. The estimate for the budget of 1938–39 put expenditure, inclusive of the year's part of the three-year plan, at 364,515,722 bolívares, of which about 55 per cent, the excess over anticipated revenue, must come out of Federal borrowing. One of the earliest novel features of the plan to go into effect was the construction of two manufacturing plants of cement (at San Cristóbal and on the Island of Taos), designed to provide for the needs of the program of building.

Government-Built Housing. The government had brought its project of building houses for the poor into effect in advance of the three-year plan but gave it place in the general scheme. A decree of March 11 lent the Banco Obrero 3,500,000 bolívares for the cost of quarters under construction in Caracas, Maracaibo, San Cristóbal, Carúpano, and Cumaná; and in the summer this bank, the government's agent in such construction, opened for occupancy 186 houses at Caracas and 200 elsewhere. The kindred though different public enterprise of colonizing immigrants was carried on by the Institute of Immigration and Colonization; established by a decree of September 15, this agency had power to expropriate private property where necessary; but the relative abundance of public lands limited the likelihood of sweeping resort to that process. In advance of the creation of the new agency a group of Danish families set out in June from their native country to start a colony in the State of Carabobo.

Economic Policy. As to the expenses imposed by the early stage of the three-year plan, the government fortunately had current income to cover at least a considerable part. The revenue was estimated in September as currently exceeding that of the year before by 32 per cent. Nevertheless, a bad agricultural season marked by destructive rains tended to cut down agricultural exports about the end of 1938 and to thrust the cost of living sharply upward. Under these conditions the government had to rely more than ever on the great revenue that it derived from the companies taking petroleum from Venezuelan territory. These companies, unusually active, were reported to have paid the government the equivalent of \$47,820,000 in the first 8 months of 1938, or nearly as much as in all 12 months of 1937. For new concessions to take petroleum the government stiffened the price that it exacted in percentage of the production. An active foreign demand for the Venezuelan product was expected to give the producers a sufficient incentive even under the higher handicap.

As to general foreign trade Venezuela definitely

joined the list of countries limiting foreign commerce by the system of quotas. A decree of April 12 established the restriction of imports to specified quotas, in the cases of individual countries; the measure was reportedly for retaliation upon countries so restricting their own importations from Venezuela. Later a decree of October 2 granted subsidies for exports of the chief agricultural products; these ran at 22 bolivares for 46 kilograms of coffee, 15 for 50 kilograms of cacao, 10 for the quintal of sugar, and at ad-valorem rates for many other products.

Negotiators for Venezuela and the United States agreed, May 12, that the two should stand in the mutual relation of most-favored nation in a new commercial agreement yet to be concluded. In December the U.S. Legation at Caracas was elevated to the rank of Embassy; Frank P. Corrigan, Minister to Panama, was made Ambassador to Venezuela. To settle the question of the Brazilian boundary Venezuela named in May its members of a joint commission. On December 7 Venezuela and Brazil signed two treaties—one of conciliation and nonaggression, the other for extradition. See BRAZIL.

VERMONT. Area and Population. Area, 9564 square miles; included (1930) water, 440 square miles. Population: Census of Apr. 1, 1930, 359,611; Federal estimate for July 1, 1937, 383,000; census of 1920, 352,428. Burlington had (1930) 24,789 inhabitants; Montpelier, the capital, 7837.

Agriculture. Acreage, production, and value of the chief crops of Vermont, for 1938 and 1937, appear in the accompanying table.

Crop	Year	Acreage	Prod. Bu.	Value
Hay (tame)	1938	927,000	1,096,000	\$10,083,000
	1937	949,000	1,147,000	10,552,000
Corn	1938	78,000	3,120,000	2,246,000
	1937	74,000	2,960,000	2,427,000
Potatoes	1938	15,700	1,884,000	1,507,000
	1937	16,500	2,194,000	1,382,000
Oats	1938	56,000	1,736,000	764,000
	1937	55,000	1,540,000	724,000
Apples	1938	475,000	522,000
	1937	1,175,000	1,152,000

* Tons.

Education. Enrollments of pupils in the public high schools for the academic year 1937-38 numbered 16,048. Those in the lower schools numbered 51,883. Despite evidences of a falling tendency in the number of pupils—a change common among the States—expenditure for public-school education in Vermont continued upward; it attained, for the year 1937-38, \$5,353,523. Teachers' salaries as fixed for the year averaged \$951.74. Guidance programs were started in the high schools.

Among developments in 1938, noted by the *Journal* of the National Education Association in Vermont's educational system, were the initiation of a program for the promotion of health, and the increase in the time of required preliminary training to four years for teachers of music and five for high-school principals.

Political and Other Events. The Rutland Railroad, chief carrier west of the Green Mountains, from Bennington to the Canadian border, was put under a Federal receiver in May. Trustees for its bondholders, understanding that the continued operation of the line was going on at a loss of \$2400 a day, proceeded in July for a foreclosure, with the design of abandoning the line. Court and receiver having failed to bring the unionized employees of the line to consent to reduced pay and

money for further operation being nearly gone, the affected area learned with alarm that it might soon lose the railroad's service. A public agitation was carried on in the Rutland's area in the autumn in the effort to win for the line some sort of assistance sufficient to keep up operation.

The New England hurricane passed northward through the western part of the State on the night of September 21, killing eight persons. It threw down much standing timber suitable for lumbering, blew the partly ripe crop of apples from the trees in many orchards, and broke or uprooted so many of the bearing sugar maples that a cut of 40 per cent in the commercially important yield of syrup and sugar was feared. A co-operative association was formed, to promote the lumbering of fallen timber and its storage while awaiting a market.

See CHILD LABOR.

Elections. Despite disquiet and hardship in many localities, brought on by the Rutland Railroad's situation and the hurricane, the State remained firmly Republican and anti-New Deal. Gov. George D. Aiken (Rep.) was re-elected by a vote about twice that for Fred C. Martin (Dem.), who had made a campaign promise of old-age assistance at \$30 a month as the minimum. Ernest W. Gibson (Rep.), re-elected U.S. Senator, defeated John McGrath (Dem.). The Republican U.S. Representative, Charles A. Plumley, was re-elected.

Officers. The chief officers of Vermont, serving in 1937, were: Governor, George D. Aiken (Rep.); Lieutenant-Governor, William H. Wills; Treasurer, Thomas H. Cave; Secretary of State, Rawson C. Myrick; Auditor, Benjamin Gates; Attorney-General, Lawrence C. Jones; Commissioner of Education, Francis Bailey.

Judiciary. Supreme Court: Chief Justice, George M. Powers; Associate Justices, Leighton P. Slack, Sherman R. Moulton, John C. Sherburne, John S. Buttles.

VERMONT, UNIVERSITY OF, AND STATE AGRICULTURAL COLLEGE. An institution of higher education in Burlington, Vt. The University of Vermont, founded in 1791, and the Vermont Agricultural College, founded in 1864, were combined in 1865 as the University of Vermont and State Agricultural College. The 1938 autumn enrollment was 1431; the summer school enrollment, 949. The faculty numbered 222. The endowment amounted to \$3,411,470, while the income for the year was \$973,195. The library contained 147,700 volumes. President, Guy W. Bailey, LL.D.

VETERANS OF FOREIGN WARS OF THE UNITED STATES. An organization chartered by Congress in 1936, composed of American citizens who have served honorably in the Army, Navy, Marine Corps, or Coast Guard of the United States, in hostile waters or on foreign soil during any foreign war, insurrections, or expeditions, in such service as the United States has officially designated as campaign service and for which it has authorized a campaign badge. (For further details of the organization, see the *NEW INTERNATIONAL YEAR BOOK*, 1937.)

There are 50 charters of state departments located in each of the 48 states, in the District of Columbia, and in the Canal Zone. Local posts exist in every state, the District of Columbia, the Canal Zone, Hawaiian Islands, Alaska, Philippine Islands, and in France and China. The "Ladies' Auxiliary, Veterans of Foreign Wars of the United States" is a subsidiary organization, with a National Headquarters, with state departments, and with more than 2000 local units. The member-

ship eligibility to the Ladies' Auxiliary is limited to the mothers, wives, widows, sisters, daughters, and foster daughters, not less than 16 years of age, of those deceased veterans whose military service would have made them eligible for membership, and of those living veterans whose service makes them eligible for membership.

Among the major activities of the V.F.W. during the year 1937-38 was its sponsorship, in the 75th Congress, of S.3912, a proposal to take the profits out of war by taxing the profits out of war. S.3912 was introduced in Congress on Apr. 27, 1938, V.F.W. Americanization Day, by 27 Senators, representing every political group in that body. Only one bill, the Cancer Clinic bill of 1937, ever was introduced in the Senate with a larger number of joint authors.

Simultaneously with the introduction of S.3912, the V.F.W. presented to Congress, in ceremonies on the steps of the Capitol at Washington, D. C., a "Keep America out of war" petition, signed by more than four million American citizens in a nationwide campaign sponsored through the 3700 local posts of the V.F.W. The petition called upon Congress to adopt policies which would preserve peace for America, supported by a strong national defense.

Continuance of its campaign to find suitable, gainful employment for all employable war veterans also marked 1937-38 in V.F.W. activities. The organization co-operated with the Veterans' Administration, the United States Employment Service, and other agencies in a veteran unemployment registration throughout the country, designed to check unemployed veterans, their disabilities, if any, their training and experience, and other data necessary to their placement in industry. Largely through the efforts of the Veterans of Foreign Wars of the United States, the co-operation of the National Association of Manufacturers was obtained among its respective membership, to stress the economic importance of retaining in employment men over 40 years of age.

Gratifying progress also was made in the V.F.W. efforts to liberalize certain existing veteran welfare laws, and to equalize others. *Public 514* extended the eligibility for pensions to certain World War widows and orphans; the V.F.W. resolution of many years' standing, to have November 11 of each year, Armistice Day, established as a national legal holiday dedicated to the cause of world peace, became *Public No. 510*, and *Public No. 541*, also obtained with V.F.W. co-operation, liberalized the provisions of existing laws concerning pensions for Spanish-War veterans.

The 1938-39 program of objectives of the Veterans of Foreign Wars of the United States includes: Adequate provision for America's disabled veterans; pensions for needy widows and orphans of all war veterans; jobs or pensions for all war veterans; unalterable opposition to Communism, Fascism, or Nazism in the United States; maintenance of our Constitutional rights of free speech, a free press, religious freedom, and rights of petition and assembly; a national defense that will guarantee security for America; enactment of a measure to take the profits out of war; and neutrality for the United States in disputes between other nations.

At the annual National Encampment held at Columbus, Ohio, in August, 1938, Eugene I. Van Antwerp, Detroit, Mich., was elected Commander-in-Chief for the ensuing year. Other officers were: Otis N. Brown, Greensboro, N. C., Senior Vice

Commander-in-Chief; Dr. Joseph C. Menendez, New Orleans, Junior Vice Commander-in-Chief; R. B. Handy, Jr., Kansas City, Mo., Quartermaster General; Wilbur J. Bernard, Newark, N. J., Judge Advocate General; Dr. John L. DeMayo, Washington, D. C., Surgeon General, and the Rev. J. H. Deemer, Lorain, Ohio, National Chaplain. The National Headquarters of the organization is located at Kansas City, Mo., and the official publication is *Foreign Service*.

VETERINARY MEDICINE. The continued exclusion of epizootic diseases of livestock that threaten to invade the United States and deplete its herds; the progress made in eradication of the cattle tick, tuberculosis, and Bang's disease of cattle, and of scabies of livestock; and the advance in therapeutic measures, were outstanding in 1938 in the field of comparative medicine. The year saw the establishment of a Poultry Regional Research Laboratory at East Lansing, Mich., in the work of which the Federal Department of Agriculture and the Agricultural Experiment Stations of 25 North Central and Northeastern States are co-operating. This was of particular importance since the development of effective control measures for fowl paralysis, a disease widely distributed, which has been estimated to cause about one-half of the \$100,000,000 annual loss from poultry diseases in these States, is one of the first projects to be investigated.

Bang's Disease Eradication. In the fifth year of the eradication campaign against infectious abortion of cattle agglutination blood tests were applied to more than 7,800,000 animals in some 671,300 herds in 48 States and Puerto Rico, of which 4.1 per cent reacted, indicating the presence of the disease. There was an increase over the preceding fiscal year ended June 30 of about 43 per cent in the number of herds and about 22 per cent in the number of cattle placed under supervision. By November 18 per cent of the breeding cattle in the United States over six months of age were under supervision in this project. During the 54 months from July 1, 1934, when the co-operative work to control the disease was commenced, to Dec. 30, 1938, a total of 28,936,869 animals in 2,283,216 herds had been blood tested of which 6 per cent reacted. A map issued in June by the U.S. Department of Agriculture revealed Virginia in the lead on May 1 in the control work with 78.9 per cent of the breeding cattle of the State over six months of age under supervision, closely followed by Oregon with 75.5 per cent and Washington (State) with 70.7 per cent.

Bighead of Sheep. A disease of sheep that has caused large losses on the range in the Intermountain States, known as bighead, has been shown to be caused principally by feeding on little-leaf horsebrush (*Tetradymia glabrata*) and spineless horsebrush (*T. canescens* and *T. canescens incrimis*). While these range plants are unpalatable they are eaten when more desirable forage plants are lacking and death results from consumption of relatively small quantities.

Encephalomyelitis, EQUINE. The year was marked by the appearance of the sleeping sickness of the horse and mule known as encephalomyelitis in epizootic proportions over extensive areas from which it had not hitherto been reported. A record of reported cases in the United States kept by the Federal Department of Agriculture has revealed the occurrence of 23,000 in 1935; 4000 in 1936; 170,000 in 1937 in 30 States; and over 100,000 cases in 1938 in 39 States. In the first three of these years the mortality was 25 per cent; in 1938 it was 21 per cent. The usefulness of the animals that survive

has been greatly impaired. Thus far only the eastern type of the virus has been found in nine Atlantic seaboard States and only the western type of the virus west of the Appalachian and Blue Ridge Mountains. The mortality from the eastern type of the disease is very high, that from the western type relatively low. In addition to the outbreaks of this disease in the United States simultaneous epizootics of the disease have occurred in three provinces of Canada, several South American countries, Russia, India, and Japan. Horses in Argentina were attacked by the western type. Viruses identical with both the eastern strain and the western strain were isolated from cases of the disease in man. The disease, normally at its height during the late summer and early fall, is known to be transmitted by several species of mosquito and possibly by other blood-sucking insects. The work of the year indicated that the horse may be a reservoir for the virus. The finding that the virus had caused a fatal disease among pigeons in Massachusetts in the area where it was prevalent among horses, and also in the ring-necked pheasant in Connecticut, has complicated the problem of control in that such fowl and even migratory birds may be shown to act as disseminators of the virus. An advance was made toward control of the disease through the development of the new chick embryo vaccine, the immunizing properties of which are far superior to those of the old brain tissue vaccine. It was reported in September that the Massachusetts State Division of Livestock Disease Control was planning to push the immunization of horses with the hope of having every horse in the State immunized by June 1, 1939. The revelation that the causative virus of this disease of the horse and mule, as represented by both types, is transmitted to man was perhaps the most startling development in this field. During the course of an outbreak among horses in southeastern Massachusetts cases of encephalomyelitis appeared among children which upon investigation was conclusively shown to be due to the same virus. This finding has been confirmed by other investigators and reports have also revealed the pathogenicity of the virus for man in several other States, including Minnesota and California.

Foot and Mouth Disease and Rinderpest. The United States continued free from what are probably the two most important livestock plagues of the world, namely, foot and mouth disease and rinderpest. The devastating outbreak of foot and mouth disease, which has raged over Western and Central Europe among cattle, sheep, and swine, subsided somewhat in places but it took in new territory and increased in other areas. It has added to the demand for a practical means of protection through vaccination. Work leading to this end that has been under way in Denmark and in Germany has given promising results. Five of the countries in northern Europe continued free at the end of June. All of Africa, aside from South Africa where there was a small outbreak in December, was infected with foot and mouth disease or rinderpest. In South America, Colombia, Venezuela, and the Guianas only, continued free from foot and mouth disease. Most of Asia was infected with one or both of these diseases.

Leucosis of the Fowl. Fowl leucosis, the term used most commonly to include leukemia and leukemia-like diseases, occurs in several different types some of which have been shown to be transmissible. With the mounting loss from this source increased attention has been given to its investigation. Through a careful program of culling, sani-

tation, and breeding for resistance carried out in 35 flocks under supervision in Iowa, the incidence of fowl leucosis with its various manifestations was reduced in five years from about 25 to 1 per cent.

Pullorum Disease of Poultry. In the control work with pullorum disease conducted by the various States through testing the blood to detect the infection, New Hampshire, where the work began in 1918, led with 547,000 birds, or nearly one-half of the entire poultry population of the State, examined. Of these only .06 per cent were found infected. In New Hampshire, where the State Department of Agriculture co-operates with the State Agricultural Experiment Station, experienced men collect from 1200 to 1500 blood samples per day. These are received at the testing laboratory within 12 hours where as many as 8000 are tested daily.

Scabies Eradication. In the course of control work with sheep-scabies, 14,767,490 inspections were made and 1,235,022 dippings supervised. Flocks in which infection was found included 50,000 sheep, a slight increase over the preceding year. Except for the reappearance of the disease in northern New Mexico and western South Dakota, all the range areas remained free. Many cases continued to appear in the midwestern farm region, particularly in Iowa and eastern South Dakota. In the co-operative cattle-scabies eradication work, considerable progress was made in Nebraska where the greater part of the remaining infection exists. Outbreaks in Oklahoma and Colorado were promptly eradicated. It is believed that scabies of horses formerly present in Montana has been entirely eliminated.

Shock Disease of the Hare. An affection that occurs about every 10 years and has caused a high mortality among the snowshoe hare population of Minnesota and neighboring States to which the name "shock disease" is given, was shown to be hypoglycemic in character with death usually due to an abnormally low blood sugar content. Hares suffering from this disease appear perfectly normal until they are suddenly stricken with convulsions and die in the seizures or abruptly sink into a fatal coma. So far as has been determined a degeneration of the liver is the basis of the disease.

Therapeutics, VETERINARY. The new drug sulfanilamide (Prontylin, Prontosil), the use of which in the last three years has resulted in marvelous recoveries from some of the most serious afflictions to which man is subject, especially those due to the Beta hemolytic streptococci, and micrococci, has been employed in the treatment of diseases of the domestic animals. It has been found to be of value in the treatment of mastitis of cattle and swine; metritis of cattle and equines; pneumonia of calves and Bang's disease of cattle; polyarthritis, septicemia, and omphalophlebitis (navel-ill) of foals; fistulous withers, poll evil, influenza, and purpura hemorrhagica of the horse; infectious abortion of swine; distemper of the dog and cat; otitis media of the dog; and pseudomembranous enteritis, cystitis, endometritis, acne, articular wounds and laryngitis of the cat.

Tick Fever and Cattle Tick Eradication. Continued progress was made in the eradication campaign against the cattle tick with 25,128,317 inspections or dippings of cattle and 2,897,082 inspections or dippings of horses and mules made during the fiscal year ended June 30. In Puerto Rico, where the tropical variety of the cattle tick is prevalent, it was also necessary to treat the sheep and goats on infested premises and 571,973 inspections or dippings of these animals were conducted.

During the fiscal year all or parts of 3 counties in Florida and 12 counties in Texas were released from Federal quarantine. The aggregate of the released area was 12,088 square miles. As an offset parts of 3 counties in Florida with a total area of 2248 square miles were requarantined. Satisfactory headway was made in removing ticky deer from game preserves in 4 of the 6 counties of Florida in which they are located with good prospects for the early completion of tick eradication on these preserves. At the end of the fiscal year the area remaining under Federal quarantine in continental United States had been reduced from 985 counties to 27 counties or 4 per cent of its original size and is now confined to Florida and Texas. The work in Florida and Puerto Rico was accelerated through assistance received in the allotment of funds from the Works Progress Administration and the Puerto Rico Reconstruction Administration and on December 1 the Federal quarantine was withdrawn from 9552 square miles of territory in Florida, Texas, and Puerto Rico. This included part of 1 county in Florida, 8 whole counties and parts of 6 counties in Texas, and the western one-third of Puerto Rico where 300 dipping vats had been constructed the preceding fiscal year. This represents the first gain made in tick eradication in Puerto Rico.

Tuberculosis. AVIAN. The control of avian tuberculosis conducted as a separate project additional to that of tuberculosis in cattle progressed in the Midwestern and North Central States where it is most prevalent. In the course of the survey of farm poultry flocks containing 14,838,911 birds in 11 States, about 6000 farms were found infected. The actual number of birds dying of tuberculosis on farms usually is not very great, however, since they are disposed of before the losses occur. This loss is not limited to the fowl alone for approximately 85 per cent of tuberculosis in swine in the United States results from the avian infection. In addition to the mortality, loss results from a reduced egg production and the lower price received for fowl when disposed of for meat.

Tuberculosis Eradication. BOVINE. The work of eradicating tuberculosis from livestock in the United States commenced in 1917 was continued by the Federal Department of Agriculture in co-operation with State and county officials and livestock owners. With the addition of South Dakota to the modified accredited area on July 1 California alone remained to attain this goal and at the close of December but 10 counties in that State remained that had not been placed in the modified accredited area. Retesting was under way in all of the 47 free States to prevent any possible cases from spreading the infection to healthy cattle. Altogether 14,108,871 tuberculin tests were applied to cattle during the fiscal year ended June 30 and only 89,000 or 0.6 per cent found to react, nearly one-half of which were in California. The regular Federal appropriation for tuberculosis work was \$1,603,000; emergency funds for the work amounted to about \$1,775,000. The combined State, Territorial, and county appropriations amounted to about \$4,000,000. At the close of 1938 both Puerto Rico and the Virgin Islands were ready for official designation as modified accredited areas—having less than $\frac{1}{2}$ of 1 per cent of infection among the cattle. The tuberculin testing in Puerto Rico covered 77 municipalities with more than 500,000 head of cattle. In the Virgin Islands 12,000 animals were tuberculin tested and not a single reactor was found.

VICTORIA. An Australian State. Area, 87,884 square miles; population, exclusive of full-blood aboriginals, 1,865,957 (Mar. 31, 1938, estimate), as compared with 1,820,261 (1933 census). During 1937 there were 29,731 births, 18,613 deaths, and 16,226 marriages. The capital city of Melbourne had 1,024,000 inhabitants on Dec. 31, 1937. Other important cities (with 1936 estimated populations) are Geelong, 39,730; Ballarat, 38,160; Bendigo, 29,770; Warrnambool, 9050; Mildura, 6900. At Dec. 31, 1935, there were 2606 State primary schools with a total enrollment of 256,564 scholars, 148 State intermediate and secondary schools with a total enrollment of 32,595 pupils, and 28 senior technical schools with a total enrollment of 20,008 pupils. Trinity, Ormond, Queen's, and Newman Colleges are affiliated with the University of Melbourne. In 1936, 670 students matriculated, and 3451 students attended lectures.

Production. Wheat (1937-38 estimated production, 48,173,000 bu.), oats, barley, potatoes, hay, and grapes are the chief agricultural products. The principal dairy products for 1936-37 were butter, 154,769,391 lb.; cheese, 13,350,124 lb.; bacon and ham, 17,571,792 lb. Livestock in the State (Mar. 31, 1938, estimate): 18,863,467 sheep, 1,880,429 cattle, 359,106 horses, and 285,259 pigs. Wool (greasy) produced 1937-38 was estimated to total 179,400,000 lb.

The estimated value of mineral production for 1937 was 1,832,019 Australian pounds, of which gold accounted for £A1,266,507, and coal for £A497,319. In 1936-37, from the 9165 factories, with 191,383 employees (including working proprietors), the estimated net value of production was £A58,712,281 (Australian £ averaged \$3.9594 for 1936; \$3.9394 for 1937).

Government. For the year ended June 30, 1938, revenue totaled £A27,617,000; expenditure, £A27,587,000; public debt, £A177,228,000. Budget (1938-39): Revenue, £A26,069,000; expenditure, £A26,057,000. Due to the serious conditions brought about by the drought in 1938, the receipts from settlers and railways caused an estimated deficit of £A825,000 in the 1938-39 budget. The Government was forced to apply to the Loan Council for an addition of £A825,000 to its loan program. The executive authority is vested in a governor, assisted by a responsible ministry. Parliament consists of a

legislative council of 34 members elected for 6 years (17 elected every three years) and a legislative assembly of 65 members who are elected for 3 years by universal adult suffrage. The legislative assembly, elected on Oct. 2, 1937, is made up of the following parties: United Australia, 21; Labor, 21; United Country, 20; Independents, 3. Governor, Capt. Lord Huntingfield (assumed office, May, 1934); Premier, A. A. Dunstan. See AUSTRALIA.

VIRGINIA. Area and Population. Area, 42,627 square miles; included (1930) water, 2365 square miles. Population, Apr. 1, 1930 (census), 2,421,851; July 1, 1937 (Federal estimate), 2,706,000; 1920 (census), 2,309,187. Richmond, the capital, had (1930) 182,929 inhabitants; Norfolk, 129,710.

Agriculture. Acreage, production, and value of the chief crops of Virginia, for 1938 and 1937, appear in the accompanying table.

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1938	1,391,000	34,775,000	\$21,213,000
	1937	1,480,000	37,740,000	25,663,000
Tobacco	1938	130,600	105,459,000 ^a	20,364,000
	1937	142,000	109,769,000 ^a	21,252,000
Hay (tame)	1938	1,052,000	1,138,000 ^b	12,859,000
	1937	1,060,000	1,206,000 ^b	14,954,000
Apples	1938	10,080,000	7,056,000
	1937	18,000,000	9,380,000
Wheat	1938	609,000	8,526,000	5,968,000
	1937	648,000	9,720,000	10,303,000
Potatoes	1938	79,000	10,349,000	6,209,000
	1937	91,000	10,920,000	6,334,000
Peanuts	1938	157,000	146,010,000 ^a	5,110,000
	1937	151,000	183,465,000 ^a	6,054,000
Sweet potatoes	1938	34,000	3,570,000	2,142,000
	1937	39,000	5,070,000	3,042,000
Cotton	1938	40,000	15,000 ^c	645,000
	1937	66,000	43,000 ^c	1,800,000

^a Pounds. ^b Tons. ^c Bales.

Mineral Production. Of Virginia's total yearly value of the production of native minerals, \$37,499,991 for 1936, coal supplied the greater part. The output of coal rose to 13,558,000 net tons for 1937, from 11,661,636 (value, \$20,278,000) for 1936. Zinc was mined; the yearly total figure of its production was combined with that for Tennessee (q.v.).

Education. For the academic year 1937-38 the number of inhabitants of school age was reported as 731,043. The year's enrollments in public schools numbered 583,556; this comprised 468,168 in elementary study and 115,388 in high schools. Expenditures for public-school education totaled \$26,586,570. Teachers numbered 17,249. The teaching salaries averaged, for the year, \$792; the salaries of teachers, principals, and supervisors, taken as one group, averaged \$886.

Completing the expenditure of \$5,000,000 in the construction of school buildings, Virginia started in 1938 on a program for the expenditure of \$11,000,000 more in the same manner in the next two years.

Legislation. The General Assembly met in regular session in January and adjourned on March 13. It voted a general appropriation bill that carried about \$160,000,000 for the needs of the State government through the ensuing two years. There was enacted a measure providing somewhat over \$3,000,000 to be dispensed by the State as assistance to dependents of divers classes, the aged poor included. Before this appropriation, the State had been the only one in the Union having no State pensions to support the aged poor. The permissible working hours for women in industrial employment were shortened. The members of the bar were put under the regulation of the Supreme Court of Appeals. The pay of the judiciary was increased.

Railroads and steamship companies were allowed to own and operate motor vehicles and lines of airplanes. The prohibition of sales of wine and beer on Sunday was made a subject of local option. The minimum sentence of one month in prison was required as the penalty for illegal sale of liquor. Its sale to persons under 21 years of age was prohibited. The sum of \$2,000,000 was provided for distribution among the eight highway districts in proportion to their respective unfinished mileages of previously planned primary highways.

Political and Other Events. Nine Democrats were elected U.S. Representatives at the general election on November 8; all but two were the actual incumbents. The State offices in general did not come up for election. See LYNCHINGS.

Officers. Virginia's chief officers, serving in 1938, were: Governor, James H. Price (Dem.); Lieutenant-Governor, Saxon W. Holt; Secretary of the Commonwealth, R. S. Jackson; Treasurer, Edwin B. Jones; Auditor, S. McCarthy Downs; Attorney-General, Abram P. Staples; Superintendent of Public Instruction, Dr. Sidney B. Hall.

Judiciary. Supreme Court of Appeals: President, Preston W. Campbell; Associate Justices, John W. Eggleston, H. W. Holt, E. W. Hudgins, H. B. Gregory, George L. Browning, C. Vernon Spratley.

VIRGINIA, UNIVERSITY OF. A nonsectarian institution of higher education at Charlottesville, Va., founded in 1819. The enrollment for the autumn session of 1938 was 2854. In the extension division were 1204 students. The 1938 summer session had an attendance of 1335. The faculty numbered 177. The productive endowment amounted to \$10,000,000 and the income for the year, \$2,300,000. The library contained approximately 303,502 books. President, John Lloyd Newcomb, B.A., C.E., LL.D., Sc.D.

VIRGIN ISLANDS. An insular possession of the United States; situated about 60 miles east of Puerto Rico, these islands are bordered by the Caribbean Sea on the south and the Atlantic Ocean on the north. While the Virgin Islands, in American designation, include only the part of the group held by the United States, the name is elsewhere understood to include also adjacent islands under the British flag. The American Virgin Islands have an area of 132 square miles and a population (1930) of 22,012; the chief of these islands are St. Thomas (area, 28 sq. m.; population, 9834 in 1930); St. Croix (area, 84 sq. m.; population, 11,413 in 1930); and St. John (area, 20 sq. m.; population, 765 in 1930). The population of the islands was, in 1930, 78 per cent Negro, 12 per cent of mixed race, and 9 per cent white. The capital is Charlotte Amalie, which for a time prior to Mar. 1, 1937, bore the name of St. Thomas.

Production, etc. The island of St. Croix suffered the failure of half of its expected crop of sugar cane in 1938 by reason of a prolonged drought. Unfavorable conditions, chiefly on St. Croix, reduced the annual total of the production of sugar in the islands to 4362 tons, for 1938, from 8211 tons for 1937. By reason of a lower average price the production of 1938 brought only about 40 per cent of the total value of that of 1937. Deficiency in production caused the exports of cane sugar to the United States to drop to some 3900 tons, for 1938, from 7800 tons for 1937; by value, the total fell to \$236,016, from \$545,600. The shipments of rum, which had begun, in 1937, from the first matured stock of the governmental distillery (Virgin Islands Company), declined to 127,322

gallons for 1938, from 163,693 for 1937; by value of the yearly export, to \$224,789, from \$329,541. The aggregate value of all exports of products of the Islands decreased to \$821,708 for 1938, from \$1,002,887 for 1937. There was in either year a considerable additional exportation listed as United States' products returned; for 1938 it amounted to \$398,798, a sum nearly half as great as that year's exports of native products to the United States. The total value of yearly imports from the United States diminished to \$2,358,548 for 1938, from \$2,976,146 for 1937. Foods and fuels accounted for about \$1,000,000 of the total for 1938. The obvious disparity between exports and imports afforded an indication that the efforts of the United States Government to raise the islands' productivity to a level with their economic needs had not yet reached the goal. The Governor's report for 1938 made note, in this connection, that while the Federal sugar act of 1937 had augmented the islands' allowable shipments of sugar to the Union, to some 9200 tons a year, from 5400, an export tax of \$6 a ton was still imposed on the islands' sugar, and the islands did not participate in the benefit payments that the sugar act provided to other growers of sugar under the American flag.

Government. Governor, Lawrence W. Cramer. The existing system of government in the Virgin Islands rests mainly upon the Organic Act of 1936. Executive authority is held by a governor appointed by the President of the United States, who also appoints a Federal district judge and a district attorney. A Legislative Assembly, composed of the municipal council of St. Thomas and St. John and that of St. Croix, has authority to make laws on subjects particular to the islands. Each of the two municipal councils has authority in its own area. The members are elected by popular vote. Suffrage was bestowed on adults in general by the act of 1936, in a provision that went into effect on Jan. 1, 1938; by earlier enactment (1927) all the population of the islands were made citizens of the United States.

The public finances of the islands included a relatively small revenue and expenditure of the central government, and the separately kept revenues and expenditures of the municipality of St. Thomas and St. John and that of St. Croix. The Federal Government, in addition to making appropriations toward all these agencies' expenses, spent money in the Islands in its own name, through the WPA. The municipality of St. Thomas and St. John collected (fiscal year 1938) revenues of \$213,982, largely in income taxes; expended \$276,793; and received from the United States an appropriation of \$60,000, about covering its deficit. St. Croix collected revenues of \$191,816; expended \$264,033; and received from the United States an appropriation of \$50,000 to cover part of its deficit. The islands lacked in 1938 a system of taxation toward the support of the operations of their central government. Congress appropriated for such operations, to cover the fiscal year 1938, \$151,000, of which \$116,000 was for the central administration and \$35,000 to support an agricultural experiment station and vocational school. The WPA expended, in the year, \$392,800, mainly in building or improving roads, streets, and sewers.

The enrollments of pupils in public schools totaled 3374 in 1938; the governor advocated the modernization of the school laws.

History. The serious political difficulty that arose at the end of 1937, from the Legislative Assembly's refusal to let the Governor introduce bills

for its consideration, remained unsettled through 1938. The Assembly, before adjourning, voted an appropriation to pay salaries to the members for their attendance at the session. Governor Cramer, vetoing this appropriation, declared (Jan. 19, 1938) that the Assembly had done nothing to provide for the essential requirements of the public services, and he severely characterized the legislators' bestirring themselves for the sole purpose of rewarding their own services. Another view, expressed in March by Charles W. Taussig, noted that the Assembly had followed the principle of "representation without taxation"; that members had been elected on a pledge that they would not impose any tax laws, and that they had kept their promise to the voters. It was not, of course, strictly the case that the voters were for no taxation at all; taxation by the two municipalities was a well established actuality, and the issue was as to whether there should arise in addition a system of taxation for the needs of the central administration. As an incident to the legislative deadlock, the old and reportedly antiquated school laws remained unaltered.

In addition to the WPA, already mentioned, several Federal agencies engaged in operations for the benefit of the people of the islands. The Civilian Conservation Corps completed the drainage of areas of swamp near Frederikstad, a former source of malaria; it also started the planting of several forests: At Calabashboom, hardwoods; at Sandy Point, coconut palms; at the eastern end of St. Croix, mahogany. The Soil Conservation Service made a study, prompted by the St. Croix drought, of possible means of conserving water for the land. The Federal enterprise of agrarian resettlement of part of the population remained restricted to some 400 homesteaders who had previously been established, largely as sugar-cane growers, on St. Croix. The U.S. Housing Authority delegated to the insular government the administration of its three completed small groups of living-quarters for rent at low cost.

VITAL STATISTICS. According to provisional tabulations made by the U.S. Bureau of Census, there were 2,201,609 registered births for the year 1937, in the United States. This figure is an increase of 56,819 over the 2,144,790 reported for 1936. The increase in the number of births produces a corresponding increase in the birth rate from 16.7 to 17.0. This provisional rate for 1937 is slightly higher than the lowest birth rate recorded in the history of the Bureau of Census birth registration area, a rate of 16.5 for 1933. The increase for the whole United States is reflected in the individual states. Thirty-two states and the District of Columbia showed an increase in rates, 14 states showed a decrease, and in 2 states there was no change. Greatest increases were in Nevada, Arizona, California, Oregon, Colorado, and Mississippi. Highest birth rates are: New Mexico, 31.4; Mississippi, 25.8; Arkansas, 25.5; Utah, 24.5, and West Virginia, 22.7. Lowest birth rates are: New Jersey, 12.6; Delaware, 13.1; Massachusetts, 14.0; Missouri, 14.3; New York, 14.4.

There were 1,450,715 registered deaths during 1937 in the United States. This figure is a decrease of 28,513 from the 1,479,228 reported in 1936. The 1937 provisional crude death rate is 11.2, which is a decrease from the rate of 11.5 for 1936. Although the 1937 rate is a decrease from 1936, it is still appreciably higher than the lowest death rate recorded for the United States registration area, a rate of 10.7 for 1933. Thirty-three states and the

District of Columbia showed decreases, six states showed no change, and nine states showed an increase in rate. Greatest decreases for 1937 occurred in Nevada, Kansas, Georgia, and Tennessee, but in all of these states the 1936 rates were higher than usual. Highest death rates are: Arizona, 16.8; New Mexico, 15.2; District of Columbia, 13.9; and Maine, 13.4. Lowest rates are: North Carolina, 7.7; Oklahoma, 8.4; South Dakota, 8.6; and Arkansas, 9.0.

VIZETELLY, viz'e-těl'y, FRANK (FRANCIS) H (ORACE). An American lexicographer and editor, died in New York, Dec. 20, 1938. Born in London on Apr. 2, 1864, the son of Henry Richard Vizetelly, he was educated at the Lycée Baudard, Nogent-sur-Marne, France, and at Arnold College, Eastbourne, England. Entering the firm of Vizetelly & Co., publishers, in 1883, he was associated with them until 1891, when he left for the United States. Soon after his arrival he joined Funk & Wagnalls Co., publishers, and for 47 years he was associated with the *Standard Dictionary*, as associate editor (1891-1903), managing editor (1905), and the *New Standard Dictionary*, managing editor (1908-13) and editor, 1913 to his death.

As a member of the Funk & Wagnalls editorial staff from 1891, Dr. Vizetelly edited many miscellaneous publications on English, mental efficiency, history, travel, etc.; was one of the editors of *Hoyt's Cyclopædia of Practical Quotations* and of

1916); *A Practical Standard Dictionary* (1922); *The New Standard Encyclopedia of Universal Knowledge* (25 vols., 1931; 1935); *The New Standard Encyclopedia Course of Study and Index* (1936); *A Daily Guide to Knowledge* (1936); *The New Comprehensive Standard Dictionary* (1937); and the NEW INTERNATIONAL YEAR BOOK and *New Standard Year Book* from 1932.

Interested in radiobroadcasting, he made his first appearance on the air in 1924, speaking over Station WOR. Thereafter he was heard on WNYC (1926-29), WEAF and WJZ (1929-30), and WABC (1930-31). A frequent contributor to newspapers and magazines, Dr. Vizetelly was an associate editor in the compilation of *Merck's Index of Chemicals and Drugs* (1895, 1906), revising editor of the *Columbian Encyclopædia* (40 vols., 1897) and of the *Cyclopædia of Classified Dates* (1899), and associate editor of *Better English* (1938). His own works, which dealt mostly with the use of English, included *The Preparation of Manuscripts for the Printer* (1905); *Desk-Book*

of *Errors in English* (1906; 1920); *The Development of the Dictionary of the English Language* (1915); *A Dictionary of Simplified Spelling* (1915); *Essentials of English Speech and Literature* (1914; 1917); *Desk-Book of 25,000 Words Frequently Mispronounced* (1917; 1929); *Idioms and Idiomatic Phrases* (1921); *How to Use English* (1932); *How to Speak English Effectively* (1933), and *Our Color-Box of Speech* (1933).

Dr. Vizetelly became a citizen of the United States in 1926, was a fellow of the American Geographical Society, and received the honorary degree of LL.D. from St. John's College, Annapolis, Md. For an appreciation of his work in the field of philology, see *PHILOLOGY, MODERN*.

VLADECK, B(ARUCH) CHARNEY. An American journalist and politician, died in New York City, Oct. 30, 1938. Born Baruch Charney in Dukor, Minsk, Russia, Jan. 13, 1886, he was educated in Jewish schools and early became identified with revolutionary activities and in 1904 and 1905 was imprisoned. Again arrested and jailed, he was released when he went on a hunger strike, and in 1908 he left Russia for the United States, where for four years he lectured on social, political, and economic subjects. In 1912 he joined the staff of the *Jewish Daily Forward* as branch manager of the Philadelphia office, and while there studied at Teachers College, University of Pennsylvania. In 1916 he was transferred to the New York office as city editor of the paper and in 1918 he was made general manager.

Becoming a naturalized citizen of the United States in 1915, it was natural that he should turn to politics, and in 1917 he was elected to the New York City Board of Aldermen as a Socialist. Re-elected in 1919, he was defeated in 1921. During his membership in that body he opposed a resolution urging the support of war savings stamps and introduced a resolution for the revision of the City Charter. Mr. Vladeck ran for Congress several times but failed of election. With the formation of the American Labor Party in 1935 he became one of its sponsors, and in 1937 he sought a seat, as the candidate of that Party, in the newly formed City Council under the revised Charter. Upon election he became the spokesman of a coalition bloc in the Council composed of Fusion and American Labor Party members and when this group lost control of the Council, he voluntarily relinquished this post. His term was to end Dec. 31, 1939.

An advocate of proportional representation, under which plan he was elected to the Council, and long a leader in promoting social justice, Mr. Vladeck was primarily interested in low-cost housing and in 1934 Mayor La Guardia appointed him a member of the New York City Housing Authority, from which he resigned upon his election to the Council. He was a director of the Amalgamated Dwellings Corporation and of radio station WEVD, and vice-president of the Amalgamated Housing Corporation, an affiliate of the Amalgamated Clothing Workers of America. Other of his interests were the American Ort Federation, of which he was elected president in 1932; the Jewish Labor Committee, of which he was chairman from 1934; the American Civil Liberties Union, the HIAS Immigrant Bank, and the Labor Chest for the Relief and Liberation of Workers of Europe.

In 1915 Mr. Vladeck edited a two-volume "social anthology" of poetry entitled *From the Depths of the Heart*, and a collection of his essays was published in 1936.

WAKE ISLAND. An island in the North Pacific (19° N. and 166° 20' E.), 2130 miles west of Hawaii, annexed by the United States in 1898. Area, about 2600 acres; the population consists of a few men in charge of the airport. Wake is a typical coral atoll, with a shallow, enclosed lagoon. During 1935 the island became a base for the trans-Pacific air service of Pan American Airways. The U.S. Dept. of the Navy exercises jurisdiction over the island.

WARREN, GEORGE FREDERICK. An American economist, died at Ithaca, N. Y., May 24, 1938. Born in Harvard, Neb., Feb. 16, 1874, he was educated at the University of Nebraska (B.Sc., 1897) and after five years of educational work, he entered Cornell University for post-graduate studies (B.A.S., 1903, M.S.A., 1904, Ph.D., 1905).

After taking his doctorate, he joined the New Jersey Experiment Station as a horticulturist, and in the following year returned to Cornell to become assistant professor of agronomy. Thereafter he was assistant professor of farm crops, 1907-09; professor of farm crops and farm management, 1909-11; professor of farm management, 1911-20, and professor of agricultural economics and farm management and head of the Department of Agricultural Economics and Farm Management in the New York State College of Agriculture, Cornell, from 1922 until his death. He had intended to retire as administrative head of the Department on June 1, 1938.

For Cornell University Agricultural Experiment Station, Dr. Warren conducted surveys on the apple orchards in Wayne County (1905) and on agricultural conditions in Tompkins County (1911), the latter being published under the title *An Agricultural Survey, Townships of Ithaca, Dryden, Danby, and Lansing, Tompkins County, New York* (1911). In 1922 he took a leave of absence from the University to reorganize the Bureau of Markets and Crop Estimates of the U.S. Department of Agriculture, and subsequently he served the State of New York by membership on the reforestation commission and on the state agricultural advisory commission.

A specialist in agricultural education and farm management, at first Dr. Warren was interested only in aiding the farmer to raise better crops and breed better stock, but later he turned to the study of the economical factors involved in agriculture, and he became known for his studies on the relationship between the price of gold and economic conditions. During the early New Deal days, he

played an important role in shaping the Administration's monetary policy and he was partly responsible for the gold-buying policy adopted in October, 1933. He advocated the devaluation of the dollar, and appearing before the Senate Banking and Currency Committee (December, 1933), he said in defense of this program,

By cutting the gold content of the dollar we raise prices. By raising prices it becomes easier for men to pay their debts. By raising prices, business starts and profits accrue. It becomes easier to pay taxes. Raising prices, since it starts business, starts employment. Everyone, in consequence, would benefit: home owners, farmers, all debtors, holders of life insurance.

A member of the leading scientific societies, including fellowships in the American Statistical Association and the American Association for the Advancement of Science, Dr. Warren was the author of many books on agricultural economics, among the more important being, *Elements of Agriculture* (1909); *Laboratory Exercises in Farm Management* (1910); *Farm Management* (1913), and in collaboration, *Dairy Farming* (1916); *The Agricultural Situation* (1924); *Inter-relationships of Supply and Price* (1928); *The Physical Volume of Production in the United States* (1932); *Prices* (1933), and *Gold and Prices* (1935).

WASHBURN COLLEGE. A coeducational institution in Topeka, Kans., founded in 1865. Enrollment for the autumn session of 1938 was: Liberal arts and fine arts, 592; law, 125; music, 70. The faculty numbered 53 full-time members and 30 part-time. The endowment was \$1,156,484, and the plant assets, \$1,934,890. The library contained 35,520 volumes. President, Philip C. King, A.M., D.D.

WASHINGTON. Area and Population. Area, 69,127 square miles, exclusive of State's waters in Gulf of Georgia and Strait of Juan de Fuca, but including (1930) other water, 2291 square miles. Population: Apr. 1, 1930 (census), 1,563,396; July 1, 1937 (Federal estimate), 1,658,000; 1920 (census), 1,356,621. Seattle had (1930) 365,583; Spokane, 115,514; Tacoma, 106,817; Olympia, the capital, 11,733.

Agriculture. Acreage, production, and value of the chief crops of Washington, for 1938 and 1937, appear in the accompanying table.

Crop	Year	Acreage	Prod. Bu.	Value
Wheat	1938	2,188,000	51,643,000	\$23,756,000
	1937	2,317,000	50,824,000	38,118,000
Apples	1938	31,100,000	27,990,000
	1937	30,450,000	18,694,000
Hay (tame) .	1938	940,000	1,707,000 ^a	14,851,000

	1937	61,000	2,074,000	1,161,000
Pears	1938	6,278,000	2,825,000
	1937	5,600,000	4,615,000

^a Tons. ^b Pounds.

Mineral Production. The yearly production, in Washington, of gold, silver, copper, lead, and zinc increased in value to \$5,414,000, approximately, for 1938, from \$2,253,054, for 1937. The rise occurred largely in the item of gold, to a total of \$2,569,000 for 1938, from \$1,270,850 for 1937. Increase of equipment at the Holden mine of the Howe Sound Co. and in mines of the Metaltine

Falls area was said to have brought the greater production of the metals.

Finance. State expenditures of Washington in the year ended Mar. 31, 1937, as reported by the U.S. Bureau of the Census, were: For maintaining and operating governmental departments, \$54,576,470 (of which \$12,580,386 was for highways, \$12,794,092 was for charities, and \$15,355,151 was for local education); for interest on debt, \$678,923; for capital outlay, \$15,777,379. Revenues were \$74,740,244. Of these, property taxes furnished \$4,066,731; sales taxes, \$38,563,931 (including tax on gasoline, \$14,334,264); departmental earnings, \$3,515,764; sale of licenses, \$6,777,705; Federal or other grants-in-aid, \$14,374,742. Funded debt outstanding on Mar. 31, 1937, totaled \$14,588,000. Net of sinking-fund assets, the debt was \$12,546,893. On an assessed valuation of \$1,083,329,750 (made in 1935) the State levied for the fiscal year 1937 ad-valorem taxes of \$3,651,375.

The State's monopoly of alcoholic beverages, keeping separate accounts, expended in the year \$1,239,596 for operation and \$36,089 for outlays; made \$3,153,578 in gross earnings; and paid \$1,816,039 into the general revenue of the State.

Education. Enrollments of pupils in the public schools in the academic year 1937-38 numbered 339,977; this comprised 213,810 in elementary study, 93,259 in high schools, and 32,908 in junior high schools. As compared with the year before, elementary registration was lower, but the loss was more than offset by increase in the number passing into the high and junior high schools. The year's expenditures for public-school education totaled \$29,155,808. Teachers numbered 10,826. Their salaries for the year averaged \$1589.78.

More than three-fourths of the teachers in the public schools of Washington had by the end of 1938 become participants in the State's lately established system for their endowed support after retirement.

Political and Other Events. Antagonism between labor unions and some other strong groups in the State continued, and the rivalry of the C.I.O. and the A.F.L., among the unionized group, remained unsettled. Difficulties between unions interfered with maritime activity at the port of Seattle in January and later. In the spring the refusal of unions in the A.F.L. and the C.I.O. to co-operate caused the departure of vessels for the Alaska salmon fishery to be delayed until long after the usual time. A municipal election in Seattle (March 8) was won by Arthur B. Langlie, elected Mayor, who defeated Victor A. Meyers, Lieutenant-Governor and partisan of the C.I.O. A previous municipal nominating primary (February 21) had eliminated the candidacy of Mayor Dore, the A.F.L.'s candidate. Dore died shortly after the election and the city council elected Langlie Mayor for the brief remainder of Dore's term, thus putting him into office sooner by several weeks. Langlie's inauguration gave the city a government free from the domination of either group of unions. See STRIKES.

Meyers, defeated for Mayor of Seattle, remained Lieutenant-Governor. He sought to employ the powers of this office for the objects of his supporters. In April, when both he and Governor Martin were absent from the State, Meyers hurried back from California and issued a summons, as Acting Governor, for a special session of the Legislature. Governor Martin, however, had received warning of the move; he hastened home, taking a specially chartered airplane from Chicago, and re-entered the State at the time, within a few minutes, when

Meyers (April 20) delivered his proclamation at the office of the Secretary of State. Martin revoked the Meyers proclamation and directed the Legislature not to convene.

Elections. U.S. Senator Homer T. Bone (Dem.) was re-elected (November 8), defeating Ewing D. Colvin (Rep.). The six incumbent U.S. Representatives, all Democrats, were re-elected. An initiated measure to require an authorizing vote of unions' members and a lapse of 30 days before the declaration of a strike was defeated by unionists' opposition.

Officers. Washington's chief officers serving in 1938 were: Governor, Clarence D. Martin (Dem.); Lieutenant-Governor, Victor A. Meyers; Secretary of State, Ernest N. Hutchinson (died in office) and Belle Reeves (appointed successor); Auditor, Cliff Yelle; Treasurer, Phil H. Gallagher; Attorney-General, G. W. Hamilton; Director of Education, Stanley F. Atwood.

Judiciary. Supreme Court: Chief Justice, William J. Steinert; Associate Justices, Walter B. Beals, George B. Simpson, John F. Main, O. R. Holcomb, Bruce Blake, J. M. Geraghty, W. J. Millard, John S. Robinson.

WASHINGTON, THE STATE COLLEGE OF. A coeducational institution for higher learning at Pullman, Wash., founded in 1890. The enrollment for the autumn of 1938 was 3833. The 1938 summer session had an attendance of 862. There were 238 teaching faculty members. The land-grant endowment amounted to \$4,017,875, while the income for the year was \$2,142,060. The library contained approximately 360,000 volumes. A foundry building and four greenhouses have been added, as well as paving, cement sidewalks, and landscaping, totaling \$210,000. A new highway approach to the college is also being constructed at a cost of \$250,000. President, Ernest O. Holland.

WASHINGTON, UNIVERSITY OF. A State institution of higher education in Seattle, Wash., founded in 1861. The enrollment for the autumn of 1938 was 10,905. The 1938 summer session had an attendance of 4238. There were 539 members on the faculty (not including 204 teaching fellows, graduate, and undergraduate assistants, etc.) during the autumn of 1938. For the biennium 1937-39 the estimated amount of endowment and income combined is \$6,761,000 (comprising all estimated receipts including building funds).

The University library contains 340,919 volumes and the Law Library 82,694 volumes. President, Lee Paul Sieg, Ph.D.

WASHINGTON AND JEFFERSON COLLEGE. An institution for the higher education of men in Washington, Pa., which had its origin in the Washington Academy, founded in 1780 and chartered in 1787. The enrollment for the fall semester of 1938-39 totaled 544 undergraduates and 8 graduate students. The faculty numbered 44. The productive funds of the college amounted to \$1,624,000, and the income from all sources was approximately \$281,700.41. The library contained over 56,000 volumes. President, Ralph Cooper Hutchison, Ph.D., D.D.

WASHINGTON AND LEE UNIVERSITY. A nonsectarian institution for the higher education of men, in Lexington, Va., founded in 1749. The enrollment for the autumn of 1938 was 950. There were 60 members on the faculty. The productive funds of the university amounted to \$3,001,105, and the income for the year was \$402,632. The number of volumes in the library

was approximately 100,000. President, Francis Pendleton Gaines, Ph.D.

WASHINGTON CONFERENCE ON CAUSE AND CURE OF WAR. See PEACE.

WASHINGTON UNIVERSITY. An institution of higher learning for men and women, in St. Louis, Mo., founded in 1853. For the fall semester of 1938-39, the enrollment was 6780; for the summer session of 1938, 1338. Faculty, including emeriti and those on leave of absence, numbered 635. Mary Institute, a preparatory school for girls operated under the charter of Washington University, had an enrollment of 320 as of Nov. 1, 1938. Funds under the control of the University totaled \$37,250,773 as of June 30, 1938, including current funds, \$803,320, and endowment funds, \$21,930,020. Total expenditures during the budget year 1937-38 were \$2,361,551. Gifts reported at the June, 1938, convocation totaled \$259,101, including additions to endowments of \$104,341. The libraries contained 314,391 volumes. The University recently established the George Warren Brown Department of Social Work on a graduate basis, and in 1938 a grant from the Rockefeller Foundation made possible the establishment of a new department of neuropsychiatry in the School of Medicine. Chancellor, George R. Throop, Ph.D.

WATER POWER. During 1938 construction in the field of water power was confined principally to governmental projects. About 750,000 h.p. went into service, making the present total installed hydro-electric capacity in the United States, private and public, about 18 million h.p. of which over 1,600,000 h.p. is in Federal developments. In addition to this, equipment now on order for the Government totals around 1,400,000 h.p. The ultimate capacity of these public projects, according to present plans, will be about 8½ million h.p., which will then account for about one-third of the total hydro-electric capacity of the country, assuming that no private developments of appreciable magnitude are made in the interim. Private capacity added during the year was approximately 200,000 h.p.

Of the Federal projects, the largest at present is Boulder Dam, with 752,000 h.p. already installed, an additional 230,000 h.p. on order, and an ultimate capacity of 1,835,000 h.p. planned. The Grand Coulee development in the State of Washington is laid out for an ultimate capacity of 2,742,000 h.p., of which 478,000 h.p. is now on order, but the lack of a market for additional power in that region may defer for some time its full development.

The seven plants of the TVA will account for an ultimate capacity of 1,882,000 h.p. of which 592,000 h.p. is installed and 290,000 h.p. on order. Among numerous other governmental projects now under construction, the more important are Bonneville of 665,000 h.p. ultimate capacity with 285,000 h.p. installed or on order, the Shasta Dam in Northern California of 500,000 h.p. planned capacity, the Santee-Cooper development in South Carolina, projected for 200,000 h.p., the Colorado-Big Thompson project of 135,000 h.p., the Fort Peck Dam in Montana of 100,000 h.p., and the Pensacola Dam in Oklahoma of 100,000 h.p. Several others are under 65,000 h.p. each.

Despite this activity in hydro-electric construction by the Government, the kilowatt-hours generated by water power has maintained about the same relation to total power generated during the last 18 years, namely, between 35 and 40 per cent, the remainder being generated by steam and a small amount by internal-combustion engines. An

important factor having bearing on this is that steam-plant efficiency has increased during recent years and unit-installation costs decreased to an extent that challenges the economics of hydro-electric power in many localities. This is illustrated by the present construction of a large high-pressure steam plant at Oswego, N. Y., in a region largely served by water power where the company controls several water-power sites that could be developed. Several similar examples could be noted.

WATERWORKS AND WATER PURIFICATION. The Six-Year Water Control Plan of the Water Resources Committee of the National Resources Committee transmitted to President Roosevelt early in the year, calls for the execution of 2678 water-supply projects costing \$567,000,000. The average annual cost would compare with \$161,000,000 a year, expended in 1925-36. It was proposed that most of this expenditure should be met locally. In addition, \$33,495,000 for rural water supply was proposed, to be carried out as Federal projects. PWA water supply projects, in 1938, according to official records, numbered 573, costing \$105,200,000, including filtration plants. Corresponding figures for the years 1933-38 were 2353 projects costing \$302,000,000. The number of plants treating water for municipal supply early in 1938, according to a privately made summary published in April, was 2120, with a combined normal capacity of $7\frac{1}{2}$ billion gallons. Only 17 of these plants were of the slow sand or English type. Of 141 plants built in 1937, with a total capacity of 205 million gallons, half in number and over half in combined capacity were for filtering surface water, 30 for softening, 12 for softening and iron removal, and 29 for iron removal only. Of the 30 softening plants, 19 used the lime-and-soda process and 11 the zeolite process. (See *Engineering News-Record* [New York], Feb. 10 and Apr. 21, 1938.)

Technical Advances. For the transmission and distribution of water, cast-iron pipe still dominates, except that for large conduits steel or either plain or reinforced concrete are largely used. Distributing mains of moderate size are chiefly of either old-style pit cast iron, the tensile strength and flexibility of which has been increased, or else of centrifugally cast or spun iron. The latter is now made in diameters of 4 to 30 in., and in lengths up to 20 ft. Its high tensile strength makes thinness of shell practicable, diminishing tonnage, breakability, and the number and cost of joints. Asbestos-cement pipe, very light and highly resistant to acid soils, is gaining in use. Remote control of pumps by changes in water level or pressure is gaining. So is automatic control for filters of the pressure type and for water softeners using zeolite. Gravity filter operations are being made partly automatic. For disinfection, both of filtered and unfiltered water, chlorine gas still leads and its use is being continually extended. Following pioneer work at Springfield, Ill., in the precipitation of carbonates by the upward flow of treated water through a "sludge cloud," this practice will be used at the 120-million gallon water softening plant being constructed for Minneapolis. Purification of the water supplies of cities on the Great Lakes is making unnecessary the construction of long intakes to reach clear water when new intakes are built to supply purification plants. Intakes reaching beyond gross pollution suffice—and sewage treatment is lessening pollution. The somewhat turbid water near shore is more easily coagulated than the cleaner water from distant intake cribs.

Major Projects. The Massachusetts Metropol-

itan District Water Supply Commission was preparing plans and letting contracts in mid-November for an aqueduct to connect the masonry portion of the Wachusett Aqueduct with the Metropolitan District, thus reinforcing existing aqueducts. The new aqueduct will be about 18 miles long. It is expected that three miles of it will be a 14-ft. tunnel, and the rest concrete pressure pipe, with 2 miles $12\frac{1}{2}$ ft. and 13 miles $11\frac{1}{2}$ ft. in diameter. The whole length must be completed by June 30, 1940. It is expected that the 415-billion gallon Quabbin Reservoir will be ready to store the waters of Ware and Swift Rivers by late 1939. Water from the Ware and Swift is already being delivered to Boston and vicinity. Lawrence, Mass., completed a purification plant late in the year, noteworthy because it will give pre-treatment to the polluted water of the Merrimack River before it goes to the slow sand filters built 35 years ago. The pre-treatment will consist of coagulation, sedimentation, and rapid filtration. Chlorination will be continued. Progress is being made on the Delaware River Aqueduct, to bring to New York City 540 million gallons a day to supplement existing supplies. A 20-million gallon filtration plant has been planned for Atlantic City, N. J. It will treat the present supply of surface and ground water, mixed. The water will be coagulated in two-story basins before rapid filtration. The chief object of the plant is reduction of color, taste, and odor in the surface supply and iron in the well water. At Baltimore a 12-ft. pressure tunnel, $6\frac{1}{2}$ miles long, is being built to convey impounded surface water from the Loch Raven reservoir to the Montibello filters. The water-softening plant for Owensboro, Ky., constructed in 1910 and one of the earliest softening plants in the United States, is to be remodeled. Rehabilitation and enlargement of the Cincinnati water treatment plant has been completed. The original plant, completed in 1907, was one of the early rapid filtration plants designed in accordance with the teachings of extensive experiments there and at Louisville. The old plant had a nominal daily capacity of 112 million gallons, but it became necessary to use a higher rate. Ultimately, the rehabilitated plant will treat 200 million gallons a day. At Toledo, Ohio, the source of supply is being changed from the Maumee River to Lake Erie. The project, which will cost \$9,000,000, includes an intake and low-lift pumping station at the lake, a 13-mile pipe line to the city, a filtration plant, a main pumping station, and reinforcement of the distribution system. After long agitation and several years of experimentation and plan preparation, Chicago has started on a large unit of filtering and metering water supplied to the South Side. On August 3 the City Council accepted the terms set up by the PWA for a Federal grant of \$5,416,000 for partial installation of filters and meters estimated to cost \$20,935,000. The initial filter installation will have a daily capacity of 312 million gallons. A 200-million gallon filtration plant for Milwaukee was completed late in the year and was expected to be put in operation January 1. Notable features are two-story sedimentation basins and surface wash by jets from just above the filter beds, applied after the usual upward-flow wash has loosened and slightly lifted the sand bed. For Wichita, Kan., a ground-water supply is being developed some 35 miles north of the city for conveyance to the city at a cost of \$2,000,000. The city is doing the work but will sell the water wholesale to the local water company for delivery. A new supply for Little Rock, Ark., was put in opera-

tion early in the year, but the treatment plant had not been completed. Water is brought 35 miles by gravity. (See McDonnell, *Little Rock Enjoys Pure Soft Water*, in *Water Works Engineering* [New York], Mar. 30, 1938.) By raising the O'Shaughnessy Dam, at the head of San Francisco's Hetch Hetchy Aqueduct, to a total height of 430 ft., the storage capacity of the reservoir has been increased 154,000 acre-feet. The largest city water-supply project ever undertaken, the Colorado River Aqueduct system, was 90 per cent completed at the end of the year, according to official information from the engineering department of The Metropolitan Water District of Southern California, which is constructing the works for Los Angeles and nearby cities. Practically the whole length of the aqueduct was completed, except the 13-mile San Jacinto Tunnel, and that was already holed through. The Parker Reservoir on the Colorado River was nearly filled, two of the five pumping stations that lift the water by stages for 1600 ft. were in operation, and a third was ready for operation; two reservoirs were receiving the water pumped and a third was ready to store water; the terminal reservoir at the city end of the aqueduct and the main distribution conduits were under construction. Preparation of plans for a water-softening plant with an initial capacity of 100 million gallons daily, have been authorized. Delivery of water through the aqueduct into the Cajalco Reservoir by the middle of 1939 and to a number of cities by the end of the year was expected. The main aqueduct is 239 miles long and the various distributing mains have a total length of 80 miles. Ultimately the aqueduct system will supply one billion gallons daily. (For articles on many elements of the Colorado River Aqueduct, by its engineers and administrative officers, see *Engineering News-Record* [New York], Nov. 24, 1938.)

WELLESLEY COLLEGE. A nonsectarian institution for the higher education of women in Wellesley, Mass., chartered in 1870. The enrollment for the academic year 1938-39 was 1526. The teaching staff numbered about 180. Permanent endowment funds for 1937-38 amounted to \$8,829,267. The income was \$1,164,434. The library contained approximately 184,000 volumes. President, Mildred H. McAfee, LL.D., L.H.D.

WELLS COLLEGE. An institution of higher learning for women in Aurora, N. Y., founded in 1868. The enrollment for the autumn of 1938 was 313. The faculty numbered 46 active members and 7 Emeriti. The endowment amounted to \$1,441,837, and the income for the year from invested funds, tuition, etc., was \$447,754. There were 85,684 volumes in the library. President, W. Ernest Weld, Ph.D.

WESLEYAN UNIVERSITY. A college of liberal arts for men located at Middletown, Conn., founded in 1831. The 1938 autumn enrollment was 765,738 undergraduate and 26 graduate students. The faculty numbered 79 active members. The productive funds of the university on June 30, 1938,

amounted to about \$7,940,000, and the total income for the year was \$811,057. Gifts amounting to \$180,000 were received, and Mr. and Mrs. George W. Davison donated their collection of etchings and engravings, valued at over a quarter of a million dollars. The library contained about 230,000 accessioned volumes. President, James L. McConaughy, Ph.D., L.H.D., LL.D.

WESTERN AUSTRALIA. An Australian State. Area, 975,920 square miles; population, exclusive of full-blood aboriginals, 458,453 (Mar. 31, 1938, estimate), compared with 438,852 (1933 census). During 1937 there were 8609 births, 4065 deaths, and 4169 marriages. The principal cities are Perth (capital) with 215,700 inhabitants on Dec. 31, 1937, including Fremantle (26,031 on Oct. 31, 1936) and other suburbs; Subiaco, 17,510 (1936); Kalgoorlie, 10,650 (1936); Boulder, 7250 (1936).

Production. Wheat (35,868,000 bu. estimated in 1937-38), oats, barley, hay, wine, raisins, apples, and potatoes are the main agricultural products. Livestock in the State (1937 estimate): 745,929 cattle, 150,156 horses, 64,062 pigs, and 8,717,780 sheep. The principal dairy products for 1936-37 were butter, 12,482,196 lb.; cheese, 1,032,077 lb.; bacon and ham, 4,098,448 lb. Wool (greasy) produced during 1937 was estimated to total 63,700,000 lb.

The estimated value of mineral production for 1937 was 9,171,372 Australian pounds, of which copper accounted for £A986; tin, £A12,421; coal, £A340,444; gold, £A8,688,921; silver and lead, £A27,844. In 1936-37, from the 2032 factories, with 22,711 employees (including working proprietors), the estimated net value of production was £A7,946,697 (Australian £ averaged \$3.9594 for 1936; \$3.9394 for 1937).

Government. For the year ended June 30, 1938, revenue totaled £A10,819,000; expenditure, £A10,830,000; public debt, £A93,712,000. Executive authority is vested in a governor, assisted by an executive council of responsible ministers. Parliament consists of a legislative council of 30 members elected for 6 years, and a legislative assembly of 50 members elected for 3 years by universal adult suffrage. Governor (vacant); Lieutenant-Governor, Sir James Mitchell (July, 1933); Premier, John Collings Willcock. See AUSTRALIA.

WESTERN RESERVE UNIVERSITY. A non-sectarian institution for the higher education of men and women in Cleveland, Ohio, chartered in 1826. There were enrolled in the 13 colleges and schools in 1938, 3297 full-time students and 6901 part-time students. The summer session (1938) had an attendance of 1148. The faculty numbered 714. The endowment was \$9,349,161, and the income for 1937-38, \$2,497,849. The library contained 510,000 volumes. The President was Winfred George Leutner, Ph.D., LL.D.

WESTOVER, MAJ. GEN. OSCAR, U.S.A. An American Army officer and Chief of the U.S. Army Air Corps, died in an airplane accident at Burbank, Calif., Sept. 21, 1938. Born in West Bay City, Mich., July 23, 1883, he was graduated from the local high school and enlisted in the U.S. Army as a private in 1901. He served until 1902 when he received appointment to the U.S. Military Academy, graduating with the rank of 2d lieutenant in 1906. After promotion through the ranks, he was transferred to the Signal Corps in September, 1917, with the temporary rank of Major and served (1917-18) at the Military Academy as assistant professor of drawing.

In March, 1918, he was placed in charge of the Signal Office at the Port of Embarkation at Hoboken, N. J., and in June was placed in charge of the Storage and Traffic Department, Bureau of Aircraft Production. Promoted to lieutenant colonel in the air service on Aug. 14, 1918, on November 19 he was named assistant executive in the Bureau of Aircraft Production in Washington, and then in the office of the Director of Air Service there. He received emergency promotion to colonel of the Air Service on May 24, 1919, and in the following July was named executive, Air Corps, Washington, D. C., and Chairman of the U. S. Claims Board, during which tour of duty he relinquished the wartime rank of colonel in the Air Service and reverted to his Regular Army status of major in the Aviation Section of the Signal Corps on July 1, 1920, and then, on Aug. 9, 1920, in the newly organized Regular Army Air Service. For his War services Westover received the Distinguished Service Medal, the citation reading in part, "His services were of inestimable value to the government in a position of great responsibility."

During 1921 Major Westover studied at the Balloon Schools at Ross Field, Calif., and in the following year at the Airship School, where he received the ratings of balloon observer and airship pilot. In the National Balloon Race of 1922, held at Milwaukee, Wis., he took first place, landing at St. Jerome, Canada, a distance of 866.5 miles. As a result he was the Army entrant in the International Balloon Race at Geneva, Switzerland, in August, where he took third place.

He served as Director of Air Corps Production in Washington in 1922 and in 1924 graduated from the Advanced Flying School at Kelly Field, where he received the rating of airplane pilot and, subsequently, aerial observer, one of the few officers in the service to hold all four ratings. Appointed executive officer at Langley Field, Va., in 1924, later in that year he was made commanding officer of that post and commandant of the Air Corps Tactical School there. After two years he entered the Tactical School as a student and was graduated in 1927, when he entered the Command and General Staff School at Fort Leavenworth, Kans. He was graduated in 1928 and was retained as a member of the faculty.

Promoted to lieutenant colonel in 1930, two years later Westover received his appointment as Assistant Chief of the Air Corps with the rank of Brigadier General. On Dec. 24, 1935, he was promoted to Major General and named Chief of the Army Air Corps. During his service as Assistant Chief of the Air Service, he directed the flying of the air mail by the army in 1934 after the Government canceled contracts held by private companies. General Westover was on a two weeks' inspection trip when, flying from Los Angeles to Burbank, his Northrop attack plane, which he himself was piloting, crashed from an altitude of 400 feet while he was attempting to land. His mechanic, who accompanied him, was also killed.

WEST SIBERIAN TERRITORY. See RUSSIAN SOVIET FEDERATED SOCIALIST REPUBLIC.

WEST VIRGINIA. Area and Population. Area, 24,170 square miles; included (1930) water, 148 square miles. Population: Apr. 1, 1930 (census), 1,729,205; July 1, 1937 (Federal estimate), 1,865,000; 1920 (census), 1,463,701. Charleston, the capital, had (1930) 60,408 inhabitants; Huntington, 75,572; Wheeling, 61,659.

Agriculture. Acreage, production, and value of the chief crops of West Virginia, for 1938 and 1937, appear in the accompanying table.

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1938	477,000	12,640,000	\$ 8,595,000
	1937	518,000	14,245,000	10,684,000
Hay (tame) ..	1938	684,000	802,000 *	8,100,000
	1937	665,000	741,000 *	7,558,000
Apples	1938	4,800,000	3,360,000
	1937	10,004,000	4,816,000
Potatoes	1938	32,000	2,720,000	2,176,000
	1937	32,000	3,264,000	2,513,000
Wheat	1938	156,000	2,340,000	1,685,000
	1937	171,000	2,736,000	2,873,000

* Tons.

Mineral Production. The total value of the yearly production of West Virginia's native minerals as stated by the *Minerals Year Book* in 1938, attained \$285,138,297 for 1936. Two-thirds of the amount came from the mining of coal and over one-sixth from the output of natural gas. The mines' production of coal rose slightly to 118,450,000 net tons (1937), from 117,925,706 tons (value, \$193,443,000) for 1936. The yield of natural gas increased to 153 billion cu. ft. (estimate for 1937), from 138,076 million cu. ft. (value, \$54,788,000) for 1936. Clay products, for 1936, were valued at \$15,904,886. Coke ovens, mainly of the byproduct type, produced 2,095,776 net tons of coke in 1937, as against 1,933,441 tons in 1936. The value of the production of coke, \$5,997,669, did not enter the yearly aggregate value of native minerals produced. The output of pig iron (likewise not accounted a native mineral) attained 685,086 gross tons (1937) and a value of approximately \$14,000,000.

Finance. West Virginia's State expenditures in the year ended June 30, 1937, as reported by the U. S. Bureau of the Census, were: For maintaining and operating governmental departments, \$36,352,022 (of which \$7,153,259 was for highways and \$13,545,502 was for local education); for interest on debt, \$3,680,859; for capital outlay, \$9,627,969. Revenues were \$60,456,016. Of these, property taxes furnished \$1,746,176; sales taxes, \$26,170,614; departmental earnings, \$2,661,948 (exclusive of \$2,745,024 from the State's monopoly of alcoholic beverages); sale of licenses, 7,469,476; unemployment compensation, \$5,098,525; Federal or other grants-in-aid, \$6,583,528. Funded debt outstanding on June 30, 1937, totaled \$84,055,600. Net of sinking-fund assets, the debt was \$76,018,846. On an assessed valuation of \$1,737,625,670 the State levied in the year ad-valorem taxes of \$1,310,287.

Education. For the academic year 1937-38 inhabitants of school age (from 6 to 20 years) were reported as 547,935. The year's enrollments of pupils in public schools numbered 443,789; this comprised 320,344 in elementary study and 123,445 in high schools. In addition, 2798 enrolled in parochial schools. The year's expenditure for public-school education totaled \$25,011,438. Teachers numbered 16,129; their salaries for the year averaged \$1120.93.

West Virginia had before it in 1938, according to the *Journal* of the National Education Association, a still unsolved problem of how to provide the cost of sufficient fundamental teaching throughout the public schools without diminishing the services of schools in the more favorably circumstanced communities.

Political and Other Events. The State experienced, to some degree, the same economic ad-

versity as its neighbors, Pennsylvania and Ohio. Sentiment in favor of liberal political policies was impaired in the highly industrialized northern end of the State's area.

In the general election (November 8) none of the elective State offices were due to be filled. A Republican was elected U.S. Representative from the first district, breaking into the completely Democratic character of the delegation to the House, as it had been; the Democratic incumbents were re-elected to the other five seats.

Officers. West Virginia's chief officers, serving in 1938, were: Governor, Homer A. Holt (Dem.); Secretary of State, William S. O'Brien; Treasurer, R. E. Talbott; Auditor, Edgar B. Sims; Attorney-General, Clarence W. Meadows; Commissioner of Agriculture, J. B. McLaughlin; Superintendent of Schools, W. W. Trent.

Judiciary. Supreme Court of Appeals: President, Haymond Maxwell; Associate Judges, J. H. Hatcher, Jo N. Kenna, J. B. Riley, Fred L. Fox.

WEST VIRGINIA UNIVERSITY. An institution for the higher education of men and women maintained by the State of West Virginia at Morgantown, founded in 1867. The 1938 summer session had an attendance of 1156. In the autumn of 1938 the enrollment was 2961. The faculty numbered 240. The library contained 182,000 volumes. The total income for 1937-38 from State appropriations and Federal grants was \$2,321,723. Charles E. Lawall, Acting President.

WHEAT. The 1938 wheat production of 40 countries reporting to the International Institute of Agriculture was estimated at 4,230,636,000 bu. and the acreage at 260,786,000 acres. The production was 18.4 per cent greater than in 1937 and 24.9 per cent above the average for the five years 1932-36 and the acreage 4.4 per cent above the 1937 area and 11.8 per cent larger than the average for the five-year period. The yields of the leading countries not including the United States and the Soviet Republics, were estimated as follows: India 402,453,000 bu., Canada 350,010,000 bu., France 345,385,000 bu., Italy 297,317,000 bu., and Germany, including Austria 214,723,000 bu. For the Soviet Republics an average yield of 1,029,686,000 bu. for the five years 1932-36 was reported. The 1938-39 crop of Argentina was placed at 315,991,000 bu.

The 1938 production of wheat in the United States, as reported by 40 States, was estimated by the Department of Agriculture at 930,801,000 bu., about 6 per cent above the 1937 crop and nearly 24 per cent above the average for the 10 years 1927-36. The harvested acreage was estimated at 70,221,000 acres, compared with 64,422,000 acres in 1937 and the 10-year average of 55,325,000 acres. The average yield per acre, 13.3 bu., was slightly under the acre yield in 1937 and the 10-year average. The production of the leading States was reported as follows: Kansas 152,184,000 bu., North Dakota 79,839,000 bu., Montana 72,349,000 bu., Oklahoma 58,322,000 bu., and Nebraska 55,714,000 bu.

The 1938 winter-wheat production of 38 States reporting was placed at 686,637,000 bu., only 813,000 bu. more than was produced in 1937 but over 25 per cent above the 10-year average of 546,396,000 bu. The harvested acreage was 49,711,000 acres, remaining after an abandonment of 11.8 per cent of the area sown. The average yield per acre, 13.8 bu., was less than a bushel under the yield per acre in 1937 and the 10-year average. The production of the leading States was reported as follows: Kansas 152,114,000 bu., Oklahoma 58,-

322,000 bu., Nebraska 52,824,000 bu., Ohio 46,332,000 bu., and Illinois 41,995,000 bu.

The 1938 spring wheat production, including durum wheat, as reported by 24 States, was 244,164,000 bu., the largest crop since 1932 and nearly 29 per cent larger than the 1937 yield, and over 18 per cent above the 10-year average. The harvested acreage in 1938 was 3,066,000 acres greater than in 1937 and 2,466,000 acres above the average for the 10 years. The average yield per acre, 11.9 bu., was 1 bu. above the 1937 acre yield and .8 bu. above the average. The yields of the leading States were reported as follows: North Dakota 79,839,000 bu., Montana 47,768,000 bu., Minnesota 35,465,000 bu., South Dakota 26,201,000 bu., and Washington 19,324,000 bu. These States produced over 80 per cent of the 1938 spring wheat crop. The durum wheat producing States reported the following yields: North Dakota 31,050,000 bu., South Dakota 7,875,000 bu., and Minnesota 1,520,000 bu.

During the fiscal year ended June 30, 1938, the United States exported 83,740,000 bu., over 80,000,000 bu. more than in the preceding fiscal year, 3,437,000 bbl. of flour made wholly from United States wheat, 1,518,000 bbl. of other wheat flour, 1,499,000 lb. of cereal foods made from wheat, and 1,946,000 lb. of wheat semolina and imported 598,000 bu. dutiable at 42¢ per bu., 4000 bu. unfit for human consumption dutiable at 10 per cent ad valorem, 7000 bbl. of flour dutiable at \$1.04 per bbl., 23,000 bbl. free in bond for export, 4,062,000 lb. yeast-leavened bread, 1,330,000 lb. of macaroni and similar products, and 70,000 tons of wheat bran, shorts, and like feeds.

WHITE RUSSIAN SOVIET SOCIALIST REPUBLIC. One of the 11 constituent republics of the U.S.S.R., according to the constitution adopted Dec. 5, 1936. Area, 49,022 square miles; population (Jan. 1, 1933), 5,439,400. Minsk, the capital, had 186,500 inhabitants on Jan. 1, 1936. Other important towns are: Vitepsk, 127,300 inhabitants; Gomel, 121,200 inhabitants.

In 1938 there were 2,353,910 acres of spring sowing, by collectives, of chief grain crops. See UNION OF SOVIET SOCIALIST REPUBLICS.

WHITNEY, RICHARD, & Co. See FINANCIAL REVIEW.

WILLIAM AND MARY, COLLEGE OF. An institution for the higher education of men and women at Williamsburg, Va., founded in 1693. The enrollment for the autumn of 1938 was 1272. The 1938 summer session had an attendance of 535 students. The faculty numbered 90 at the College, 17 in the Norfolk Division, and 15 in the Richmond Division. The endowment income for the year was approximately \$78,000. The library contains about 125,000 volumes. President, John Stewart Bryan, A.M., Litt.D.

WILLIAMS COLLEGE. A nonsectarian college for men in Williamstown, Mass., founded in 1793. The enrollment for the autumn of 1938 totaled 817. There were 86 members on the faculty. On June 30, 1938, the endowment amounted to \$11,196,321, and the gross income from all sources for the same period amounted to \$907,434. The number of volumes in the library was 166,565. President, James Phinney Baxter, 3d, Ph.D., LL.D.

WINDWARD ISLANDS. A group of islands in the British West Indies, comprising Grenada, St. Lucia, St. Vincent, and the Grenadines. Total area, 521 square miles; total population (1937), 211,020. The sugar quota for 1938-39 was set at 10,050 long tons. The seat of the government is

at St. George's in Grenada. There is one governor for the three islands but there is no common legislature and each island has its own institutions. Governor and Commander-in-Chief, Sir Henry Popham (appointed, Jan. 19, 1937). See GRENADA, ST. LUCIA, and ST. VINCENT; JAMAICA; LEEWARD ISLANDS, BRITISH.

WINROD, GERALD B. See FASCISM.

WIRT, WILLIAM ALBERT. An American educator, died at Gary, Ind., Mar. 11, 1938. Born near Markle, Ind., Jan. 21, 1874, he was educated at De Pauw University (Ph.B., 1898; Ph.D., 1916) and did post-graduate work there and at the University of Chicago. Entering the educational field, he became superintendent of schools at Redkey, Ind., from 1895 to 1897; instructor in mathematics at the high school at Greencastle, Ind., 1897-99; superintendent of schools at Bluffton, Ind., 1899-1907, and thereafter superintendent at Gary, Ind.

While at Bluffton, Wirt worked out some experiments in educational administration and pedagogy that attracted attention throughout the country, and which led him to be invited to Gary, where he developed these experiments still further, and the system became known as the "Gary System." His one aim was to secure the maximum of efficiency with a minimum of expenditure, and by his plan, scholastic studies, vocational work, manual training, and recreation were so timed as to afford classroom accommodation for all pupils in school-houses of limited capacity.

In 1914 when the school system of New York City was reorganized, Dr. Wirt was engaged by the City to serve as a special adviser. He introduced his plan in two large public schools and being found satisfactory it was subsequently introduced in 120 schools. In 1918 the Board of Education of New York City abandoned this system, and it gradually lost in popularity, although at the time of Mr. Wirt's death, it had regained some of its popularity, being used to advantage during the depression years when funds for education were often curtailed.

In April, 1935, Dr. Wirt precipitated a Congressional investigation when he charged that the Roosevelt "Brain Trust" was engaging in revolutionary activities and that the schools were being used to disseminate Communistic propaganda. The Congressional investigation committee found that there was no basis for the charge, but two Republican members issued separate reports in which they claimed that no thorough investigation had been made.

Mr. Wirt, who had made a detailed study of schools abroad, was a specialist in school administration, and an expert in the organization of the platoon school system.

WISCONSIN. Area and Population. Area, 56,066 square miles, exclusive of the State's part of the Great Lakes; included (1930) other water, 810 square miles. Population: Apr. 1, 1930 (census), 2,939,006; July 1, 1937 (Federal estimate), 2,926,000; 1920 (census), 2,632,067. Milwaukee (1930) had 578,249 inhabitants; Madison, the capital, 57,899.

Agriculture. Acreage, production, and value of the chief crops of Wisconsin, for 1938 and 1937, appear in the table on the next column.

Mineral Production. Iron ore shipped yearly from mines in Wisconsin rose to 1,419,810 gross tons (1937), from 918,935 tons (1936); by value, to \$4,473,942, from \$2,568,129. The ore came chiefly from one mine in the Gogebic range, which extends into the State from Minnesota. Zinc was

^a Tons. ^b Pounds.

mined to the total (1937) of 6938 short tons of recoverable metal in ore, and to the metallic value of \$1,030,678. The State's total yearly value of production of native minerals, \$15,788,440 for 1937, was made up mainly by clay products, stone of the less valuable grades, and sand and gravel.

Finance. Wisconsin's State expenditures in the year ended June 30, 1937, as reported by the U.S. Bureau of the Census, were: For maintaining and operating governmental departments, \$61,364,375 (of which \$14,735,848 was for highways and \$6,771,195 was for local education); for interest on debt, \$82,859; for capital outlay, \$18,036,681. Revenues were \$94,524,321. Of these, property taxes furnished \$6,174,144; income taxes, \$10,807,251; sales taxes, \$21,767,569 (including tax on gasoline, \$18,894,681); departmental earnings, \$6,694,823; sale of licenses, \$18,646,273; unemployment compensation, \$11,292,090; Federal or other grants-in-aid, \$10,096,113. Funded debt outstanding on June 30, 1937, totaled \$1,183,700. On an assessed valuation of \$4,816,473,651 the State levied in the year ad-valorem taxes of \$6,601,839.

Education. As reckoned for the academic year 1937-38 inhabitants of school age (from 4 to 20 years) numbered 846,769. Enrollments of pupils in the public schools totaled 540,431. This comprised 393,020 in elementary study and 147,411 in high schools. The year's expenditure for public-school education totaled \$49,689,549. Teachers, 21,422 in number, received for the year an average salary of \$1378.

Advantages granted to Wisconsin's public-school system by legislative acts of 1937—protection for teachers' tenure of positions, a higher minimum for their salaries, the requirement of at least nine months of instruction, and State aid for high schools—were in force in 1938. Much progress was reported in the construction of school houses.

Charities and Corrections. The control of State institutions for the care and custody of persons was much shifted about in accordance with a reorganization of the State's administrative government, authorized by a special session of the Legislature in 1937. A new statutory Board of Mental Hygiene was organized and took over from the Board of Control the management of two State mental hospitals, at Mendota and Winnebago, and two colonies for epileptics and the feeble-minded, as well as supervision over county asylums. A statutory Board of Corrections, on the other hand, remained unorganized for the time being. Schools for the deaf and for the blind were transferred to the existing Department of Public Instruction; two State sanatoria and supervision over county sanatoria, to the Board of Health; and the State Public School, to a Board of Social Adjustment,

created by the Governor's order. Thus the Board of Control, formerly in charge of the State institutions of care and custody in general, retained under its authority, at the end of 1938, one State hospital and the six institutions for criminals and for delinquents. For matter on the State's old-age assistance, see under *Events*, below.

Political and Other Events. Governor La Follette's plan of creating in Wisconsin a great system of public ownership of properties for the production and distribution of electricity was curtailed by the State Supreme Court in January. This Court's unanimous decision, in a suit brought against the scheme, held the Legislature's creation of the Wisconsin Development Authority unconstitutional, as delegating to the Authority, a private corporation, undue powers. The Authority, created by an act of 1937, was designed to play a part analogous to that of the TVA in the Federal New Deal. The State's constitution, however, prohibited the State government's engaging in works of internal improvement, and the act attempted to escape this prohibition by acquiring and presumably by building properties through a separate corporate body. A later decision (June 21) modified the Court's original stand by permitting the Authority to promote and encourage electrical co-operative associations and to conduct research and educate the public as to the use of electric power; but promotion and agitation of municipal construction or acquisition of electric properties were held unlawful. In July the State administration applied to the PWA for a Federal grant of \$26,000,000 to be used by another, projected, Wisconsin corporation, the Wisconsin Hydro Authority, in building dams on the Wisconsin River and a diversion canal to the Fox River.

The act of 1937 for reorganizing the State's administrative government was put to use. By authority of an interim committee of the Legislature the collection of the annual fees for licenses, of the tax on gasoline, and of emergency taxes on telephone companies passed from the State Treasurer to the Tax Commission (February 1); the State institutions for the tuberculous were transferred from the Board of Control to the Board of Health. (See also above under *Charities*.)

State-and-Federal Relations. While the application already noted was made for a great Federal grant of money, the State administration broke away, in other matters, from its former close accord with the New Deal. Governor La Follette, in an address by radio (April 21), declared against the Federal policy that he described as "paying millions of men and women not to produce." The State Pension Department published data (April 17) adverse in some respects to the system of old-age assistance (support for the elderly poor), a cardinal point of the Federal program known as social security; it was represented that of 39,000 persons in Wisconsin who received such assistance, only 12,000 had previously obtained support of any sort at public expense; that the grant of monetary support to the elderly in Wisconsin had failed to reduce materially the maintenance of elderly paupers in the county homes; and that old-age assistance had created a new and numerous class of recipients and seekers of public aid. Governor La Follette announced (April 28) the formation of a new political party, the National Progressives of America, designed to step in where the New Deal had failed, and restore social and economic equilibrium on a liberal basis. Liberals' immediate reception of this proposal, whether in Wisconsin or elsewhere, was

not sufficiently friendly to give the new party importance in the elections of 1938; but the State administration's break with Washington was followed by a slump in Wisconsin voters' support of liberal candidates in general.

Other Public Matters. The formerly prosperous North Shore R.R., an interurban electric line, ceased operation in July, unable to pay its organized employees their wages on the old scale or to gain their consent to a reduction. According to a report in the press of October 2 there was no near prospect of the line's resuming. Milwaukee experienced an epidemic of gastroenteritis in February. An investigation made by the State Board of Health brought forth a finding that the city's supply of water, drawn from Lake Michigan, was at least in part responsible—a conclusion denied by the city's commissioner of health. See *CHILD LABOR*.

Elections. Julius P. Heil (Rep.) was elected Governor at the general election (November 8), by 543,675 to 353,381 (official count) for Gov. Philip F. La Follette (Progressive), defeating also Harry Bolens (Dem.). Alexander Wiley (Rep.) was elected U.S. Senator, defeating Herman L. Ekern (Progressive) and the incumbent Senator, F. Ryan Duffy (Dem.). Heil, an industrialist and politically a conservative, had campaigned as an advocate of economy in State expenditure and a critic of some of the chief recent acts of the Legislature. Duffy, the defeated Democratic Senator, had been elected in 1932 with Senator La Follette's support, had won the approval of the President, and had lost Progressive aid in 1938 when the La Follettes' organization, having broken with the New Deal, put up a candidate of its own.

Officers. Wisconsin's chief officers, serving in 1938, were: Governor, Philip F. La Follette (Progressive Party); Secretary of State, Theodore Dammann; Treasurer, Solomon Levitan; Attorney-General, Orland S. Loomis; State Superintendent of Schools, John Callahan.

Judiciary. Supreme Court: Chief Justice, Marvin B. Rosenberry; Associate Justices, Chester A. Fowler, Oscar M. Fritz; Edward T. Fairchild, John D. Wickhem, George B. Nelson, Joseph Martin.

WISCONSIN. THE UNIVERSITY OF. A State institution of higher education in Madison, Wis., founded in 1848. The enrollment for the autumn term of 1938 was 11,416. In the summer session the enrollment was 4757. The faculty numbered 1742. The endowment as of June 30, 1938, was \$1,499,136, while the net income for 1937-38 was \$9,126,079. The library contained 1,010,000 volumes and more than 400,000 pamphlets. During the year additions were made to several buildings and new units were added to the Men's Dormitories and the Women's Dormitories, and a Cancer Research Building was erected. President, Clarence Addison Dykstra, B.A., LL.D., L.H.D., Litt.D.

WISTER. OWEN. An American author, died at North Kingstown, R. I., July 21, 1938. Born in Philadelphia, Pa., July 14, 1860, his education was received abroad, at St. Paul's School, and at Harvard University (A.B., 1882). Upon graduation he went to Europe to study music, intending to make that his life work, but recalled by his father to take up a business career, he returned in 1883. After several years in business he decided to enter the law, but his health failed and he was compelled to go West. Returning to the East, he entered the Harvard Law School (LL.B., 1888) and in 1889 was admitted to the Philadelphia bar. In 1891 Mr. Wis-

ter left the law and devoted all of his time thereafter to literary pursuits.

From his first visit he had loved the West and thereafter he made frequent visits to that section of the country that formed the background of his better-known works. In 1896 the first of these appeared under the title *Red Men and White*, and, although it was not the first book from his pen, he having published *The New Swiss Family Robinson* (1882) and *The Dragon of Wantley—His Tail* (1892), it was the first to appeal to a wide public. He followed it with *Lin McLean* (1898); *The Jimmy-John Boss* (1900), and in 1902, *The Virginian*, his most famous work. Made into a play and a motion picture, this story won a public that the others failed to achieve, and had the further distinction of containing that famous line, "When you call me that, smile." This group of Western stories, which like all his works were skillfully and entertainingly written, saved for the future a picture of American frontier life that is no more. In 1929 he received the Roosevelt Medal for Distinguished Service in recognition of his work as a historian of the West.

Before and after the World War, Mr. Wister published several volumes of propaganda, namely: *The Pentecost of Calamity* (1915); *The Ancient Grudge, or a Straight Deal* (1920); and *Neighbors Henceforth* (1922). Other of his works were *U. S. Grant, A Biography* (1900); *Oliver Wendell Holmes* (1902) in the "American Men of Letters Series"; *Philosophy Four* (1903); *Benjamin Franklin* (1904) in the "English Men of Letters Series"; *Journey in Search of Christmas* (1904); *Lady Baltimore* (1906); *The Simple Spelling Bee* (1907); *Mother* (1908); *The Seven Ages of Washington* (1907); *The Members of the Family* (1911); *Padre Ignacio* (1913); *Indispensable Information for Infants* (1921); *Watch Your Thirst* (1923); *When West Was West* (1928); and *Roosevelt—The Story of a Friendship* (1930). Also, he collaborated with George B. Grinnell (q.v.) and Caspar Whitney on *The Musk-ox, Bison, Sheep, and Goat Family* for "Whitney's Sportsmen's Library" in 1904.

Mr. Wister was a member of the American Academy of Arts and Letters and a Fellow of the American Academy of Arts and Sciences.

WITTENBERG COLLEGE. A nonsectarian coeducational institution in Springfield, Ohio, founded in 1845. The number of students enrolled for the autumn term of 1938 was 1246, of which 572 were men and 674 were women. Of these, 851 (447 men and 404 women) were enrolled in the College of Liberal Arts. The summer session of 1938 had an enrollment of 393. The faculty numbered 83. The productive funds of the institution amounted to \$2,016,215 and the operating income for the year was \$406,070. The library contained 60,868 volumes. President, Rees E. Tulloss, Ph.D.

WOLFE, THOMAS (CLAYTON). An American writer, died in Baltimore, Md., Sept. 15, 1938. Born in Asheville, N. C., Oct. 3, 1900, he was educated at the University of North Carolina (A.B., 1920) and Harvard University (M.A., 1922). At the latter institution he was a member of Professor Baker's Forty-Seven Workshop and his early work was written mostly for the theater. Failing to find a producer for his plays, he joined the faculty of Washington Square College, New York University, as an instructor in English in 1924, retaining this post until 1930 when he received a Guggenheim Foundation fellowship for a year's study

abroad. During these six years he made several visits to England, France, and Germany.

His first novel, which won him distinction in the field of letters, was *Look Homeward, Angel*, published in 1929. In this novel, which was partly autobiographical, he drew upon the everyday life of a small Southern city but wrapped it in a mysterious, all-permeating prose. The time covered in this first novel was between 1884 and 1920, and in *Of Time and the River* (1935), which treated the same theme, he covered the next five years. Both were intended as a part of a series in which he hoped to tell the history of an era of American life. Shortly before his death he delivered to his publishers the manuscript of his third long novel, wherein were described the great cycles of experience in the life of every man.

One of the most interesting of contemporary writers, Wolfe gave promise of great genius, although undisciplined and unpredictable, but whether or not he would have been caught in the bog of his own verbosity or have been able to harness the power he possessed to carry him to the heights only the future could tell. Compelled to write by an inner urge for expression, he said in *The Story of a Novel* (1936), "I wrote at times without belief that I would ever finish, with nothing in me but black despair, and yet I wrote and wrote and could not give up writing."

Besides stories printed in magazines, Mr. Wolfe also published *The Web of Earth* (1932) and *A Portrait of Bascom Hawke* (1932), both short novels, the latter of which was co-winner of *Scribner's Magazine* prize for the short novel; *From Death to Morning* (1935), short stories; and "I Have a Thing to Tell You," an article about Nazi Germany printed in *The New Republic* in 1937.

WOMAN'S CHRISTIAN TEMPERANCE UNION, THE NATIONAL. A nonsectarian and all-partisan organization which has as its purpose the protection of the home and the abolition of the liquor traffic. Organized in 1874 it has an approximate membership of 600,000 in 10,000 local unions found not only in every state of the Union but in Alaska, Puerto Rico, Hawaii, and the Philippines. In August, 1937, the annual convention was held in San Francisco. One feature of this meeting was the dedication of a memorial marker presented to and accepted by the city. It was placed near the Palace of the Legion of Honor on the spot where Frances Willard stood in the year 1883 when she had the vision of a world-wide organization of women. At this convention Mrs. Ida B. Wise Smith was re-elected president and Mrs. Anna Marden DeYo, corresponding secretary. Interest centered in the completion of the Million Dollar National Temperance Education Fund being used for alcohol education as one feature of the observance of the Centenary of Frances Willard in 1939. National Headquarters of the organization are at 1730 Chicago Avenue, Evanston, Illinois, and a legislative office is maintained at 100 Maryland Avenue, N.E., Washington, D. C.

WOMEN IN INDUSTRY. See MINIMUM WAGE.

WOMEN'S BUREAU, THE. A Bureau in the U.S. Department of Labor, which by its organic act is charged with the formation of standards and policies which shall promote the welfare of wage-earning women, improve their working conditions, increase their efficiency, and advance their opportunities for profitable employment. The Bureau obeys its official mandate by rendering the following services:

- I. Collection of foundation facts necessary for the analysis of women's current economic problems.
- II. Development, upon the bases of established facts, of feasible programs of action to eliminate economic maladjustments of women and to improve working and employment conditions continuously.
- III. Wide dissemination of its factual interpretations and its corrective recommendations.
- IV. Consulting service for persons in position to make application of Bureau's recommendations.
- V. Study guidance service for women workers, homemakers, and various groups.
- VI. General information service.

Response to demands for assistance in the wage-hour program throughout the country, particularly with regard to the minimum-wage phases, consumed much of the time and energy of the Women's Bureau throughout 1938. Special note may be made of the following activities: Assisting the States in setting up their minimum-wage machinery, particularly in the direction of a standardization of procedure; acting as a clearing house for information on all minimum-wage matters; preparing a considerable body of information on the distribution of women at work in the various States in certain important woman-employing industries for the use of States in the setting of minimum-wage rates in such industries; co-operating in the revision of the Standard Minimum-Wage Bill for Women and Minors. During the year a report was published covering the effects of minimum-wage laws, based on conditions in adjoining States—one having and one not having such legislation. It covers the power-laundry industry in New York and Pennsylvania and the dry-cleaning and dyeing industry in Indiana and Ohio.

During the past two years the Women's Bureau made investigations of wages and hours for the use of the Public Contracts Division of the U.S. Department of Labor which establishes minimum labor standards in industries manufacturing articles for Federal consumption. Thirteen of these surveys covered various branches of men's wear—work clothing, work shirts, dress shirts, knit underwear, woven cotton underwear, seamless hosiery, welt shoes, raincoats, sport jackets, caps and cloth hats, neckwear, work and knit gloves, and handkerchiefs. Several of the reports in this series were published in 1938 and the rest will follow next year. Also procured and analyzed for the Division of Public Contracts were wage and hour data for milk condenseries, for plants manufacturing drugs and medicine (including certain toilet preparations), and cereal preparations.

One extensive survey during 1938 was made in co-operation with the Millinery Stabilization Commission, the United Hatters, Cap, and Millinery Workers' International Union, and the several associations of employers of the industry for the purpose of diagnosing the ills connected with this type of manufacturing and developing plans for its rehabilitation. After repeated conferences with various groups concerned, the Bureau undertook the survey of manufacturing methods and employer-employee relationships, leaving to investigators from the Federal Trade Commission the study of wholesale and retail distribution. Field work was done in 14 States and the report is now being written.

Another comprehensive study was that of collecting wage, hour, employment, and unemployment data for the canning and dried-fruit-packing industry, the figures from which will be used also by the Federal Public Contracts Board, the Federal Wage and Hour Division, the Unemployment Compensation Division of the Social Security Board, and State minimum-wage commissions.

Other continuing and expanding activities include the analysis of the trends of women's employment and earnings, the legal status of women in the 48 States and the District of Columbia, industrial accidents and diseases, the economic status of Negro women workers, the share of family support borne by women in this country; the compilation of labor laws; the improvement of conditions in household employment; and the advancement of workers' education and vocational education in general.

Early in 1938 permission was secured for the mimeographed News Letter, inaugurated in 1920 at the request of State labor officials and issued periodically ever since, to become a bimonthly printed publication. Entitled *The Woman Worker*, this bulletin of news notes and brief articles on current problems and conditions pertaining to women and their employment, is available for a small charge.

A motion picture produced by the Bureau in 1937 and made available in sound in 1938 is entitled "What's in a Dress?"

WOMEN'S CLUBS, GENERAL FEDERATION OF. An organization founded in 1890, and granted a charter by the United States Government in 1901, "for educational, industrial, philanthropic, literary, artistic, and scientific culture, and to bring into communication with one another the various Women's Clubs throughout the world." In 1938 it was composed of approximately 14,500 clubs in the United States, and 81 clubs outside the mainland of the United States; affiliated with it were 12 national organizations. The official publication is *The Clubwoman GFWC*. At the May, 1938, convention in Kansas City, Mo., Mrs. Saidie Orr Dunbar was elected president for the ensuing triennial period. Mrs. Dunbar's program has been built around the administration theme, "Adjusting Democracy for Human Welfare." Headquarters are at 1734 N Street, N.W., Washington, D. C.

WOODS, CYRUS E. An American lawyer and diplomat, died in Philadelphia, Pa., Dec. 8, 1938. Born in Clearfield, Pa., Sept. 3, 1861, he was educated at Lafayette College (M.A., 1886), earning his tuition by working for the Pennsylvania R.R. He read law in the office of John G. Johnston in Philadelphia and was admitted to the bar in 1889. After practicing in Philadelphia from 1889 to 1894 he removed to Pittsburgh, where he became general counsel to the Pittsburgh Coal Co. and various Mellon interests.

A Republican in politics, he was elected to the Pennsylvania State Senate in 1900, serving until 1908 and acting as president *pro tem* during 1905-08. In 1912 he resigned his post in the coal company to accept appointment as minister to Portugal. He retired on Aug. 19, 1915, to become Secretary of the Commonwealth of Pennsylvania, and on June 7, 1921, he resigned this office to accept the appointment of ambassador envoy and plenipotentiary to Spain, offered to him by the newly elected president, Warren G. Harding.

On Mar. 3, 1923, Woods was promoted to the Japanese ambassadorship. In the earthquake of Sept. 1, 1923, he narrowly escaped injury, but remained at his post to take charge of relief activities, the only foreign envoy to do so. He enlisted the aid of the Asiatic fleet in order to help the suffering and homeless and made an appeal for funds for clothing, food, and medical supplies. His work in charge of Red Cross Relief during and after the catastrophe endeared him to the Japanese people as did his stand on the Immigration Act of 1924, the

exclusion clause of which, whereby Japanese immigration to the United States was halted, he believed would impair Japanese-American relations. Convinced of the error of this Act, Mr. Woods retired July 21, 1924.

He then returned to the practice of law, and on Dec. 20, 1926, President Coolidge appointed him a member of the Interstate Commerce Commission, but Congress refused to ratify the appointment, claiming that the fact of his being a Pennsylvanian might influence him to favor Pennsylvania in a transportation fight between the soft coal fields of that State and other coal-producing States. On Jan. 18, 1929, he received the appointment of attorney general of Pennsylvania, but resigned on Nov. 1, 1930, and retired to private life. Mr. Woods received honorary degrees from Lafayette College and the University of Pennsylvania.

WOOL. The large wool imports and reduced mill consumption of 1937 resulted in a large carry-over of wool into 1938. Wool prices were about 45 per cent lower in the spring of 1938 than in the spring of 1937. The Federal Government Loan Program had an important stabilizing effect on domestic prices in the early months of the marketing season, but fortunately not sufficient to encourage imports.

Although wool consumption and prices declined in foreign markets, the declines were not as great as in the United States. Imports of only about 31,000,000 lb. of apparel wool and 72,000,000 lb. of carpet wool in 1938 were compared with approximately 150,000,000 and 172,000,000 lb., respectively, during 1937.

Because of the low rate of consumption in the early months of the year mill consumption of wool in the United States on a scoured basis was 13 per cent smaller in 1938 than in 1937. Improvement was indicated for mill consumption in the United States and several foreign countries in the late winter and spring of 1939.

The trade agreement between the United States and Great Britain did not change the duty of 34 cents per lb. on raw wool, but duties were reduced on wool manufactures.

Wool supplies in most foreign importing countries, except Japan, were larger in 1938 than in 1937. Wool supplies in the southern hemisphere exporting countries, Argentina, Uruguay, Australia, New Zealand, and Union of South Africa, were estimated as about 8 per cent smaller in Dec. 3, 1938, than a year earlier. A large carry-over into the current season was offset by a decline in production in Australia and by larger exports from most of these countries.

An artificial wool having higher heat-retaining properties than natural wool was manufactured successfully from casein in Italy and the United States.

WORCESTER POLYTECHNIC INSTITUTE. A nonsectarian institution for the technical education of men in Worcester, Mass., founded in 1865. The enrollment for the fall semester of 1938 totaled 687. The summer session of 1938 had

89 students. The faculty for 1938-39 numbers 71. The endowment for 1937-38 amounted to \$3,749,674, and the income for the year was \$349,496. There were about 24,000 volumes in the library. President, Ralph Earle, D.Sc., D. Eng., LL.D., Rear Admiral, U.S. Navy, ret.

WORKMEN'S COMPENSATION. State Legislation in 1938. Amendments to the basic workmen's compensation acts or supplementary legislation were adopted by the legislatures of eight jurisdictions during the year 1938. *Benefits.* In New Jersey, a person having paid the cost of burial could be reimbursed in an amount not exceeding \$150. In Virginia, the maximum weekly benefits for disability and death were increased from \$14 to \$16 and a total aggregate amount which could be paid for disability was increased from \$5600 to \$6000. *Coverage.* In Massachusetts, coverage was extended to include employees of independent contractors and subcontractors injured on public highways. In Virginia, employers who had regularly in service less than 11 employees were exempted from the Workmen's Compensation Act. *Occupational Diseases.* In New York, the Board of Standards and Appeals was required to establish rules and regulations for protection of employees against silica dust and other dust hazards. *Third-party Liability.* In Kansas, an injured employee, his dependents, or a personal representative of a deceased employee, might take compensation and also sue the third party causing the injury or death. *Insurance.* In Louisiana, non-resident employees were made subject to Workmen's Compensation liability and were required to insure in private companies or provide self-insurance if they do not own property in the State valued at \$25,000. In New York, the State Insurance Fund was to be administered by eight commissioners. The industrial commissioner was to be ex-officio a commissioner of the fund, and the advisory committee of the State Insurance Fund was abolished. An amendatory act was passed empowering commissioners to appoint an executive director and other officers of the State Insurance Fund. The commissioner of taxation and finance was to be custodian of the funds. *Investigative commissions.* A resolution was adopted in Massachusetts creating a special commission to investigate workmen's compensation insurance, including coverage for silicosis and other hazardous employment and the subject of self-insurance.

Benefit Payments under Workmen's Compensation. It was pointed out by a writer in the *Monthly Labor Review* for September, 1938, that while during the past 25 years the main effort of labor in the field of workmen's compensation legislation had been to obtain increased benefits, little attention was paid to the basis upon which expert and stable administration could be inaugurated. However, during the years 1930-35, as a result of depression experiences, it became apparent that workers were beginning to express more and more interest, not only in the percentage of wages allowed as compensation, but in the way compensation and insurance officers calculated the wage basis and in the way supervision was provided to make certain that the worker actually received the payments to which he was entitled under the law. As a result of such scrutiny, since 1935, workmen's compensation legislation has definitely been improved, largely for the purposes of broadening the legal basis of payment for compensation and lifting to higher levels the benefit scales. The upshot has been that in several jurisdictions lifetime benefits

* Examples of use of table: The figures on total benefits for Georgia and New York are 0.717 and 1.000, respectively. This indicates that, on the basis of this table, the ratio of Georgia benefits to New York benefits for all kinds of injury is $\frac{.717}{1.000}$ or that Georgia benefits average $\frac{.717}{1.000}$ of the New York benefits. The figures on permanent total disability for Colorado and Montana are 0.644 and 0.359, respectively. This indicates that on the average, and on the basis of this table, the Montana benefits for permanent total disability are $\frac{.359}{.644}$ of the corresponding Colorado benefits.

^b Defined as the loss or loss of use of a hand, arm, foot, leg, or eye and the loss of hearing in both ears. Also partial loss of use is related to the benefits for total loss of use.

^c Defined as loss or loss of use of thumb, finger, toes, etc.

^d A figure based on actual experience has been substituted for the Oklahoma fatal value. This departure was necessary because of peculiarities in the law.

were now being paid for permanent disabilities at a rate of not less than 66⅔ per cent of wage loss or impairment to earning capacity. But because compensation legislation in the United States was on a Federal rather than a national basis, a wide diversity of levels continued to persist, indicating the further need for pressure upon legislatures. Thus, in connection with permanent disabilities, it was to be noted, as contrasted with the superior practices of some jurisdictions that in others payments were made only during a brief period and in some cases only up to 50 per cent of wages.

The benefit provisions of the early compensation laws were experimental, in view of the fact that it was generally being charged that the cost of the new system of caring for injured workers would be overwhelming. In consequence the early benefit scales were not only low, but the laws were sometimes without such features as medical aid. The developments that have taken place since the early experimental years have come in part through the

comprehensive and intelligent development of the system and in part through alteration of one item or another, regardless of its relation to the statute as a whole.

The writer in the *Monthly Labor Review* pointed out that the situation of the injured worker under the compensation statutes was beyond question much better than it was under the common law and the employers' liability acts. Nevertheless, in many cases the benefits obtainable were too low for subsistence and the injured worker had at times become dependent upon private charity or public relief. He said further: "The incalculable aid furnished by the compensation system cannot hide the fact that in a number of States many injured workers would starve, if society left them to depend entirely upon the compensation they receive."

The existence of varying wage bases for the determining of payments was indicated by current practices. For example, during the period 1930-35 when wages were low and employment was inter-

mittent, the use of a part-time wage base led to a good deal of distress. The upshot was that the Third National Conference on Labor Legislation in 1936 recommended, as the wage base for computing compensation, a normal full-time week. With such a provision in the compensation statutes, reinforced by the fixing of a subsistence level below which payments might not fall, a method was created that was much more flexible in reflecting changes in wage scales and living costs than was being employed currently by many jurisdictions.

Another disparity existed in the varying limitations upon weekly and total payments and the periods during which payments were to be made. The table on page 787, prepared by the National Council on Compensation Insurance, shows the wide range of differences existing in American jurisdictions. It gives the approximate relative values of the benefit provisions of the various compensation laws based upon an index of 1,000 for New York. It will be noted that in the scale of total benefits the range runs from 0.578 for Vermont to 1.145 for Wisconsin.

WORLD COURT. On Nov. 2, 1937, the Court received from the Republic of Estonia an Application instituting proceedings against the Government of the Republic of Lithuania. The case as set forth by the Estonian Government, in its Application, was:

Shortly after the proclamation of its independence, the State of Lithuania seized the Panevezys-Saldutiskis railway line and has operated it ever since. The proprietors and concessionnaires of this line are, however, the "Esieme Juurdeveo Raudteede Selts Venemaal" company, a former Russian joint stock company transformed into an Estonian joint stock company by the treaty of peace between Estonia and Russia of Feb. 2, 1920, and by Estonian legislation. The Estonian Government, having without success attempted to persuade the Lithuanian Government through diplomatic channels to recognize the rights of the Company, now submits the case to the Court, requesting the Court to adjudge and declare the Lithuanian Government has wrongfully refused to recognize the rights of the Company and to compensate them for the illegal seizure and operation of this line; and that the Lithuanian Government is under an obligation to make good the prejudice thus sustained by the Company.

The Estonian Government's Application, which relies upon the declarations of Estonia and Lithuania adhering to the optional clause of Article 36, paragraph 2, of the Court's Statute, was at once communicated by the Registry of the Court to the Lithuanian Government. The Estonian Government appointed as its agent before the Court in this case, Prof. Baron Boris Nolde, Member of the Institute of International Law, and the Lithuanian Government appointed as its agent, Prof. André Mandelstam, Member of the Institute of International Law.

Availing itself of its right under Article 31 of its Statute, the Court nominated as judge ad hoc M. Mykolas Römeris, Rector of the Vytautas the Great University at Kovno, which nomination was not objected to by Estonia. This Government for its part nominated M. Otto Strandmann, Estonian Minister in Paris, as judge ad hoc. The Lithuanian Government did not object to this nomination.

On Jan. 26, 1938, the Court received from the Belgian Government an application instituting

proceedings against the Bulgarian Government. The application asked the Court to declare that the Bulgarian Government had failed in its international obligations owing to the fact that certain Bulgarian authorities (administrative, judicial, and legislative) have taken measures injuriously affecting the rights of the Electricity Co. of Sofia and Bulgaria which holds a concession from the Municipality of Sofia for the electric lighting of that city and which is a company registered under Belgian law. The Court was also asked to order that the necessary reparation be made for the measures complained of which have been taken by the Bulgarian authorities. The Belgian Government's application which adduces the declarations of Belgium and Bulgaria adhering to the Optional Clause of Article 36 of the Court's Statute and the Treaty of Conciliation, Arbitration, and Judicial Settlement, concluded between the two countries on June 23, 1931, was communicated to the Bulgarian Government. Belgium appointed as its agent before the Court for this case M. deRuelle, legal adviser to the Ministry for Foreign Affairs in Brussels, and Bulgaria nominated as judge ad hoc M. Theohar Papazoff, former member of the Court of Cassation at Sofia.

On June 14, 1938, the Court delivered judgment in the case concerning phosphates in Morocco which was brought before it by Application from the Italian Government against the French Government and in regard to which the latter Government had filed preliminary objections. Adjudicating upon these objections, the Court decided that the application of the Italian Government could not be entertained. The Court's judgment was adopted by 11 votes to 1, that of Jonkheer van Eysinga, Judge, who appended a separate opinion to the judgment. Another judge, Mr. Cheng Tien-Iisi, while in agreement with the operative clause of the judgment, appended a separate opinion.

The application of the Italian Government instituting proceedings, which was filed in March, 1936, was founded on the declarations of Italy and France acceding to the optional clause of Article 36 of the Court's Statute (compulsory jurisdiction). The facts with regard to which the dispute arose, as set out in the documents submitted by the parties in the course of the proceedings and more particularly in the application, may be summarized as follows:

The General Act signed at Algeciras on Apr. 7, 1906, provides (Article 112) that the conditions for the granting of concessions and for the working of mines and quarries in Morocco will be determined by Sherreefian firman. According to the provisions of the General Act and of the Franco-German Convention of Nov. 4, 1911, concerning Morocco, to which the Italian Government acceded, the regulations thus made were to respect the general principle of economic liberty ("the open door"). The regulations came into force on Jan. 19, 1914, the date on which were promulgated two mining dahirs of which one laid down the mining regime and the other established an Arbitration Commission to adjudicate upon rights arising out of acts dating from before the new regulations. From Nov. 3, 1914, to June 9, 1918, the right to apply for mining prospecting licenses was suspended. In 1918 and 1919 new dahirs and decrees laid down the conditions governing the deposit of applications for mining prospecting licenses and prospecting operations, etc. with especial reference to phosphate deposits.

On Jan. 27, 1920, a dahir was promulgated reserving to the Maghzen the right to prospect for and to work phosphates. This dahir took account of vested rights and a special procedure was laid down for obtaining recognition of such rights. Another dahir, dated Aug. 7, 1920, established a State monopoly (*regie*) known as the Sherreefian Phosphates Office, which was responsible for prospecting and for working phosphates in Morocco. This Office carried on the prospecting work which had been undertaken by the Moroccan Mines Department since 1917, commenced the working of deposits and between 1933 and

1934, participated in the formation of the North African Phosphates Cartel.

Between October, 1918, and April, 1919, 33 prospecting licenses in reserved areas had been issued by the Mines Department of Morocco to French citizens. The rights of the latter (or certain of their rights) were ceded to an Italian citizen, M. Tassara. The latter, in October, 1921—i.e. after the promulgation of the dahirs reserving to the Maghzen the right to prospect for and to work phosphates—applied to the Moroccan Mines Department for recognition of his rights. On Jan. 8, 1925, his application was rejected. Subsequent representations were made by him or by his successors to the Shereefian and French authorities. The Italian Embassy in Paris lent its offices. Later, the Italian Government took up the case in behalf of its nationals and proposed to the French Government that the question should be referred to arbitrators or to the Permanent Court of International Justice.

On Mar. 10, 1934, the French Government gave a negative answer. After making further representations which proved fruitless, the Italian Government decided to bring the case before the Court by Application, which was filed on Mar. 30, 1936. It asked the Court to declare that certain measures taken by the Shereefian and French authorities in connection with prospecting for and working phosphates in Morocco are inconsistent with the international obligations of Morocco and of France and should for that reason be annulled; alternatively, that the decision of the Mines Department of Jan. 8, 1925, was inconsistent with the international obligation incumbent on Morocco and on France to respect the rights acquired by Italian nationals. The French Government presented preliminary objections, submitting that the Italian Application could not be entertained. The Court's Judgment was delivered upon these objections.

In its judgment, the Court first of all observed that the facts and circumstances out of which the dispute originated are set out in the Italian Application. Without expressing any opinion upon the divergencies of view to which they gave rise, the Court for the purposes of its judgment which was limited to the question of its jurisdiction confined itself to considering those the existence and date of which were not disputed. Among the French objections is one which contests, in regard to the Application as a whole, the compulsory jurisdiction of the Court as established between France and Italy by their declarations acceding to the optional clause. The Court therefore must first adjudicate upon this objection in order to satisfy itself as to the grounds of its jurisdiction.

In its declaration, of which the ratification was deposited on Apr. 25, 1931, the French Government accepts as compulsory the jurisdiction of the Court, "... in any disputes which may arise after the ratification of the present declaration with regard to situations or facts subsequent to such ratification." The French Government, relying on this passage, maintains that, as the situations and facts out of which the present dispute arose date from before the crucial date, namely, the date of its acceptance of the compulsory jurisdiction, the Italian Government's Application could not be entertained. The Italian Government, on the other hand, argued that the dispute arose from factors subsequent to the crucial date, first because certain acts, which considered separately are in themselves unlawful international acts, were actually accomplished after the crucial date; secondly because these acts, taken in conjunction with earlier acts to which they are closely linked, constitute as a whole a single, continuing, and progressive illegal act which was not fully accomplished until after the crucial date; and lastly, because certain acts, though carried out prior to the crucial date, nevertheless, gave rise to a permanent situation inconsistent with international law which has continued to exist after the said date.

Interpreting the limitation contained in the French declaration, the Court observed that this limitation is twofold. It relates in the first place to the date on which the dispute arose. It is not

denied that in this case the dispute arose after the crucial date; there is, therefore, no need to consider that point. The second limitation related to the situations and facts with regard to which the dispute arose. The declaration is quite clear on this point; the only situations or facts falling under the compulsory jurisdiction are those which are subsequent to the crucial date and with regard to which the dispute arose, that is to say, those which must be considered as being the source of the dispute. The intention of the French Government in stipulating this limitation is also quite clear: it intended to deprive the acceptance of the compulsory jurisdiction of any retroactive effects, in order both to avoid, in general, a revival of old disputes and to preclude the possibility of the submission to the Court by application of situations or facts dating from a period when the State whose action was impugned was not in a position to foresee the legal proceedings to which these facts and situations might give rise. Accordingly, the situations and facts have to be considered from the point of view both of their date in relation to the date of ratification and of their connection with the birth of the dispute. Situations or facts subsequent to the ratification could serve to found the Court's compulsory jurisdiction only if it was with regard to them that the dispute arose. The question whether a given situation or fact is prior or subsequent to a particular date is one to be decided in regard to each specific case, just as the question of the situations or facts with regard to which the dispute arose must be decided in regard to each specific case. In answering these questions, the Court declared the will of the State which only accepted the compulsory jurisdiction within specified limits, and consequently only intended to submit to that jurisdiction disputes having actually arisen from situations or facts subsequent to its acceptance. It would be impossible to admit the existence of such a relationship between a dispute and subsequent factors, which either presume the existence or are merely the confirmation or development of earlier situations or facts constituting the real causes of the dispute.

The Court then considered whether the dispute forming the subject of the Italian Government's Application arose with regard to situations or facts subsequent to the crucial date. The subject of the dispute has been presented by the Italian Government under two separate aspects: first, a general aspect, which is referred to as the "monopolization of the phosphates."

This monopolization is described as a regime instituted by the dahirs of 1920, which, by reserving to the Maghzen the right to prospect for and to work phosphates, established a monopoly inconsistent with the international obligations of Morocco and of France; this regime, being still in force, is said to constitute a situation subsequent to the crucial date and one which therefore falls within the Court's compulsory jurisdiction. The second aspect of the dispute is more limited: it relates to a decision given in 1925 by the Moroccan Mines Department rejecting the application of M. Tassara, an Italian citizen, and to the alleged denial of justice to him and his successors. These acts are also included under the general designation of the monopolization of phosphates, but are put forward here as contrary to the international obligation to respect the vested rights of the Italian nationals.

As regards the first of these aspects, the Court held that the alleged inconsistency of the monopoly regime with the international obligations of Morocco and of France is a reproach which applies first and foremost to the dahirs of 1920 establishing the monopoly. These dahirs are the facts which really gave rise to the dispute regarding the monopolization; but, by their date, these dahirs fall outside the Court's jurisdiction. The Italian Government, however, presented the monopolization as a continuing and progressive action which has only been completed by certain acts subsequent to the crucial date; the denial of justice suf-

ferred by M. Tassara and his successors in 1931-33, and the participation of the Moroccan Phosphates Administration in the North African Phosphates Cartel in 1933-34. The Court holds that the participation of the Moroccan Phosphates Administration in the Phosphates Cartel did not alter the situation which had been established ever since 1920 by the monopoly. The monopoly alone could form the subject of complaint in this connection; it may have made the participation in the Cartel possible, but this participation does not in any way affect the legality or illegality of the monopoly.

The Court next considered the dispute from the second aspect.

The Italian Government did not disclaim that the alleged dispossession of M. Tassara resulted from the Mines Department's decision of 1925 which, by reason of its date, falls outside the Court's jurisdiction. But it contended that that decision constituted only an uncompleted violation of international law and that this violation only became definitive as a result of the final refusal of any redress—which refusal was subsequent to the crucial date.

The Court, however, held that acts subsequent to the crucial date cannot be regarded as factors giving rise to the present dispute. The alleged denial of justice merely results in allowing the alleged unlawful act to subsist: it exercises no influence either on the accomplishment of the act or on the responsibility ensuing from it. As regards the argument that the dispossession of M. Tassara and his successors constituted a permanent illegal situation which, although brought about by the decision of the Mines Department, was maintained in existence at a period subsequent to the crucial date, the Court considers that the complaint of a denial of justice cannot be considered separately from the decision of 1925. For the Court could not regard the denial of justice as established without first satisfying itself as to the existence of the rights of the private citizens alleged to have been refused judicial protection. And this it could not do without calling in question the decision of 1925. It follows that an examination of the justice of this complaint could not be undertaken without extending the Court's jurisdiction to a fact which, by reason of its date, is not subject thereto.

Accordingly, whatever aspect of the question is considered, it is the decision of 1925 which is always found, in this matter of the dispossession of the Italian nationals to be the fact with regard to which the dispute arose.

In conclusion, the Court found that the dispute submitted to it

whether it was regarded in its general aspect, represented by the alleged monopolization of the Moroccan Phosphates, or in its more limited aspect, represented by the claim of the Italian nationals, did not arise with regard to situations or facts subsequent to the ratification of the acceptance by France of the compulsory jurisdiction, and that, in consequence, it has no jurisdiction to adjudicate on this dispute. It did not accordingly feel called upon to adjudicate on the other objections submitted by the French Government.

For these reasons, the Court decided that the Italian Government's Application could not be entertained.

On Sept. 26, 1938, M. Rafael Waldemar Erich (Finland) was elected by the Assembly and Council of the League of Nations as a member of the Court to fill the vacancy caused by the death of M. Hammarskjöld (Sweden). M. Erich has accepted his election.

WORLD LEAGUE AGAINST ALCOHOLISM. An international organization for education on the alcohol problem, established at Washington, D. C., in 1919, by representatives of national temperance organizations from 11 countries. Membership in this League is limited to temperance organizations that are national in the scope of their operations. In 1938 the membership consisted of 53 such national temperance organizations in 32 countries. During the past year, the general offices of the League have kept in touch with the alcohol situation and the temperance movement on every continent. The League continuously supplies factual material to secretaries and other officers of temperance organizations in practically every country; it furnishes to editors and publishers of temperance periodicals worth-while data, facts and figures, news items, etc., dealing with the anti-alcohol movement. It supplies valuable source ma-

terial to schools, colleges, and universities; furnishes temperance periodicals and scientific data to many high-school and college students; and maintains a large reference library about the subject of alcohol. The executive offices are at Westerville, Ohio, and Washington, D. C. All the activities of the League are under the direction of the General Secretary, Ernest H. Cherrington.

WÜRTEMBERG. See GERMANY.

WYOMING. Area and Population. Area, 97,914 square miles; included (1930) water, 366 square miles. Population, Apr. 1, 1930 (census), 225,565; July 1, 1937 (Federal estimate), 235,000; 1920 (census), 194,402. Cheyenne, the capital, had (1930) 17,361 inhabitants.

Agriculture. Acreage, production, and value of the chief crops of Wyoming, for 1938 and 1937, appear in the accompanying table.

<i>Crop</i>	<i>Year</i>	<i>Acreage</i>	<i>Prod. Bu.</i>	<i>Value</i>
Hay (tame)	1938	801,000	933,000 *	\$6,158,000
	1937	787,000	982,000 *	6,972,000
Sugar beets	1938	54,000	687,000 *
	1937	47,000	612,000 *	3,005,000
Potatoes	1938	18,000	1,080,000	648,000
	1937	25,000	2,400,000	1,224,000
Dry beans	1938	48,000	470,000 ^b	849,000
	1937	59,000	649,000 ^b	1,606,000
Wheat	1938	354,000	4,515,000	2,348,000
	1937	266,000	3,060,000	2,785,000
Corn	1938	240,000	2,880,000	1,382,000
	1937	261,000	2,480,000	1,488,000

Mineral Production. Wyoming's annual production of native minerals, as estimated by the *Minerals Year Book* in 1938, attained \$33,977,409 for 1936. Coal and petroleum made up the bulk of the amount. The yield of petroleum climbed to 18,703,000 bbl. for 1937, from 14,582,000 bbl. (value, \$13,700,000) for 1936. Salt Creek, still the foremost producing district, declined as it had steadily for several years, but the Lance Creek district, where another petroliferous formation was discovered, and the Medicine Bow both bettered their yields conspicuously. The production of natural gas, largely in the same districts as that of petroleum, attained 35,702 million cu. ft. for 1937, as against 29,322 million cu. ft. (value, \$4,564,000) for 1936. Production of coal increased to 5,930,000 net tons (1937), from 5,780,590 tons (value, \$11,200,000) for 1936. Iron ore was mined, to the quantity (1937) of 707,907 gross tons.

Finance. Wyoming's State expenditures in the year ended Sept. 30, 1937, as reported by the U. S. Bureau of the Census, were: For maintaining and operating governmental departments, \$7,021,287 (of which \$1,310,373 was for highways and \$1,336,041 was for local education); for interest on funded debt, \$140,273; for capital outlay, \$5,999,269. Revenues were \$14,009,888. Of these, property taxes furnished \$631,048; sales taxes, \$4,033,651 (including tax on gasoline, \$1,833,131); departmental earnings, \$448,502 (exclusive of \$341,861 from the State's alcoholic monopoly); sale of licenses, \$1,193,615; unemployment compensation, \$579,999; Federal or other grants-in-aid, \$5,644,615. Funded debt outstanding on June 30, 1937, totaled \$3,215,000. Net of sinking-fund assets, this debt was \$3,214,885. There was also a floating debt of \$670,827. On an assessed valuation of \$308,500,347 the State levied in the year ad-valorem taxes of \$617,000.

Education. For the academic year 1937-38, inhabitants of school age (from 6 to 21 years) were reckoned at 73,249. Enrollments in public schools

totalled 57,259; they comprised 41,624 in elementary study, 15,408 high-school pupils, and 227 otherwise classified. The year's expenditure for public-school education totalled \$5,950,161. The 2725 teachers received pay averaging, for the year, from \$1350 in high schools to \$650 in the rural schools.

A trade school was established in 1938 at the University of Wyoming. There occurred during the year considerable restoration of public-school teachers' salaries that had been cut earlier in the decade. Teachers, according to the National Education Association, engaged in a campaign for the enactment in 1939 of provision for their retirement, with support, at the end of their years of service.

Charities and Corrections. In addition to providing support for certain groups of the indigent, in accordance with the system of Social Security, Wyoming had in its care or custody over 1500 persons in State institutions. These institutions were governed by the Board of Charities and Reform. Their names and respective approximate numbers of inmates in 1938 were: Wyoming General Hospital, at Rock Springs, 65; State Children's Home, Casper, 82; Wyoming Girls' School, Sheridan, 82; State Penitentiary, Rawlins, 295; State Hospital (mental), Evanston, 576; Wyoming Tuberculosis Sanatorium, Basin, 27; State Training School, Landed, 370; Industrial Institute (boys), Worland, 63; Wyoming Soldiers' and Sailors' Home, Buffalo, 18.

Political and Other Events. The waters of the Yellowstone basin, capable of supplying irrigation to areas both in Wyoming and in Montana, were a subject as to which an understanding between the two States was desired. Governor Miller of Wyoming appointed (May 3) a commission to confer with authorities in Montana with a view to drawing up such an agreement. The State's Public Service Commission granted railroads an increase of 10 per cent in rates on freight transported wholly within the State. An effort of the Board of Equalization to collect the State's sales tax on gasoline transported by companies through their own pipe lines was overruled in a District Court's decision (June 9). Platinum City, a mining community 30 miles west of Laramie, that had enjoyed a boom between 1926 and 1930, was sold off at auction (June 2) to meet taxes.

Elections. Nels H. Smith (Rep.) was elected Governor, defeating Governor Leslie A. Miller (Dem.). F. O. Horton (Rep.) was elected U.S. Representative, to succeed the Democratic incumbent.

Officers. Wyoming's chief officers, serving in 1938 were: Governor, Leslie A. Miller (Dem.); Secretary of State, Lester C. Hunt; Treasurer, J. Kirk Baldwin; Auditor, William Jack; Attorney-General, Ray E. Lee; Superintendent of Public Instruction, Jack R. Gage.

Judiciary. Supreme Court: Chief Justice, Fred H. Blume; Associate Judges, Ralph Kimball, W. A. Riner.

WYOMING, UNIVERSITY OF. A State institution of higher education at Laramie, founded in 1886. The enrollment for the autumn term of 1938 was 2047. The 1938 summer session had an attendance of 1382 (890 first term; 492 second term). The faculty numbered 135. The productive funds amounted to \$2,759,812. There were 93,576 volumes in the library. President, Arthur Griswold Crane, Ph.D.

YACHTING. See SPORTS.

YAGODA, HENRY G. A Russian Soviet politician, executed Mar. 14, 1938. Born in 1891, he joined the Social Democratic Party in 1907, and like other adherents of that organization, his life, until 1917, was a series of arrests, imprisonments, and exiles. After the success of the Revolution he became associated with the military organization of the Bolshevik Central Committee. In 1926, after the death of Dzerzhinsky, he became deputy chief of the GPU (Government Political Administration) and under his command it was extended in scope and an almost unexampled system of spying and informing was developed. He was the organizer of many of the trials at which the prisoners confessed and accused themselves and others, especially the Savinkoff (1924-25), the Donets mining engineers (1928), the Mensheviks (1931), the British engineers (1933), and the Zinoviev (1936) trials. In 1934 the GPU was made a part of the newly created Commissariat of Internal Affairs and in 1935 Yagoda was made the Commissar. After the Zinoviev trial in 1936, he was demoted and named to succeed Rykov (q.v.) as Commissar of Communications. Arrested in April, 1937, for having committed "crimes of office," with Bukharin (q.v.) and Rykov he was executed after a mass trial, for an account of which see UNION OF SOVIET SOCIALIST REPUBLICS under *History*.

YAKUT AUTONOMOUS SOVIET SOCIALIST REPUBLIC. See RUSSIAN SOVIET FEDERATED SOCIALIST REPUBLIC; SIBERIA.

YALE UNIVERSITY. A nonsectarian institution for higher education in New Haven, Conn., founded in 1701. The enrollment for the autumn of 1938 was 5748. Of the candidates for degrees or certificates, 708 were in the Graduate School, 1612 in Yale College, 475 in the Sheffield Scientific School, 270 in the School of Engineering, 854 in Freshman Year, 227 in the School of Medicine, 247 in the Divinity School, 381 in the School of Law, 318 in the School of the Fine Arts, 91 in the School of Music, 55 in the School of Forestry, and 137 in the School of Nursing. There were 428 others not candidates for degrees. The faculty numbered 958. The endowment of the University amounted to \$110,039,614 and the income for the year was \$7,909,047. The libraries contained more than 2,600,000 volumes. President, Charles Seymour, Ph.D., Litt.D., LL.D.

YAP ISLAND. See JAPANESE PACIFIC ISLANDS.

YEMEN. See ARABIA.

YESHIVA COLLEGE. A college of liberal arts and sciences for men, under Jewish auspices, founded in New York City in 1928, as an integral part of the Rabbi Isaac Elchanan Theological Seminary, which was incorporated in 1896, later absorbing the Yeshiva Etz Chaim, the oldest Yeshiva on American soil, founded in 1886. The enrollment for the autumn of 1938 was 189; for the summer session, 22. There were 36 faculty members. The endowment for the year amounted to \$141,175, and the income was \$127,465. The library contained 30,500 volumes. President, Bernard Revel.

YONKERS, N. Y. See MUNICIPAL GOVERNMENT.

YOUNG MEN'S CHRISTIAN ASSOCIATION. An educational, social, physical, and spiritual movement among men and boys, which originated in London in 1844 under the leadership of George Williams. According to the latest figures available there were in 54 countries of the world, 10,375 local associations, unions, or fellowships

with a membership of 1,827,178. These associations employed 5592 officers and owned and occupied 1651 buildings. In 1937 the United States had the largest membership (1,184,722) and the largest number of Y.M.C.A. buildings, representing a property value of \$212,424,900. Local associations numbered 1154, with 3808 employed officers and 145,563 directors and committee men.

The general board of the associations in the United States is the National Council of the Young Men's Christian Associations, with headquarters at 347 Madison Avenue, New York City. Eskil C. Carlson, president; John E. Manley, general secretary. The National Council is one of 33 national movements of federated local associations which constitute the World Alliance of Young Men's Christian Associations, with headquarters at 52 rue des Paquis, Geneva, Switzerland. The president in 1937 was Dr. John R. Mott, of New York City. Tracy Strong, of Geneva, was general secretary.

YOUNG WOMEN'S CHRISTIAN ASSOCIATION. An organization whose purpose is to advance the physical, social, intellectual, and spiritual interest of young women. The first Association was formed in New York City in 1858. By 1938 there were throughout the United States 1009 Associations, affiliated in a national organization whose active body is the National Board of the Young Women's Christian Associations. Of these, 419 are in cities, towns, and rural communities, and 590 on college and university campuses. There are also 467 Registered Y.W.C.A.'s in rural centers, 62 branches and centers for colored girls and women, and 19 International Institutes for foreign-born women and girls. During the past year there have been more than 3,000,000 women and girls served by the Y.W.C.A. of this country or taking some part in its programs. Of these 3,000,000, about 494,000 are members, of whom 40,000 are students.

The organization employs 2699 professional workers, of whom 2563 are connected with local Associations, 107 are on the national staff, and 29 are American secretaries serving in foreign countries. Working as volunteers, as board and committee members, and as advisers in local Associations are 98,984 women. The last biennial convention was held in Columbus, Ohio, Apr. 22-28, 1938. Mrs. Austin L. Kimball of Buffalo, N. Y., is the president of the national organization. Mrs. John French of Greenwich, Conn., is the president of the National Board, to which is entrusted the work of the national body during the interim of conventions. Headquarters of the National Board are at 600 Lexington Avenue, New York City, with Miss Emma P. Hirth as general secretary.

YUGOSLAVIA. A kingdom in the Balkans. Capital, Belgrade (Beograd). Sovereign in 1938, Peter II, who succeeded to the throne under a regency upon the assassination of his father, Alexander I, on Oct. 9, 1934.

Area and Population. Yugoslavia has an area of 95,576 square miles and a population estimated at 15,400,000 on Jan. 1, 1938 (13,934,038 at the 1931 census). About 80 per cent of the population is rural. Living births in 1936 numbered 435,600 (28.9 per 1000); deaths, 240,824 (16 per 1000); marriages, 108,571 (7.2 per 1000). The 1931 census populations of the chief cities were: Belgrade (Beograd), 241,542; Zagreb (Agram), 185,581; Subotica, 100,058; Sarajevo, 78,182; Skopje, 64,807; Novi Sad, 63,966; Ljubljana, 59,768.

Education and Religion. The 1931 census showed 45 per cent of the population to be illiterate. School attendance in 1937-38 was: Ele-

mentary, 1,363,167; secondary, 108,337; university, 14,145. At the 1931 census 48.7 per cent of the population were members of the Serbian Orthodox Church; 37.45 per cent were Roman Catholics; 11.2 per cent Moslems; 1.66 per cent Protestants; .49 per cent Jews, and .32 per cent Greek Catholics.

Production. About 85 per cent of the population are supported by agriculture. There were in 1936, 18,431,000 acres of arable land, 1,572,000 acres of orchards, vineyards, and gardens, 15,422,000 acres of meadows and pasture, and about 20,396,000 acres of forests. Yields of the chief cereals in 1938 (in metric tons) were: Wheat, 2,746,200 (2,347,000 in 1937); barley, 412,900 (382,100 in 1937); rye, 229,900 (209,400 in 1937); oats, 320,700 (295,500 in 1937); corn, 4,407,100 (5,335,900 in 1937). Other leading crops in 1937 were: Potatoes, 59,896,000 bu.; sugar beets, 405,000 metric tons; beet sugar (1937-38), 37,000 metric tons; tobacco, 45,816,000 lb.; wine, 77,843,000 gal.; prunes (export), 19,820,000 lb.; hemp fiber, 110,047,000 lb.; flax fiber, 24,403,000 lb. Livestock statistics for 1937 showed 4,169,000 cattle, 3,180,000 swine, 9,909,000 sheep, 1,901,000 goats, 36,000 buffaloes, and 1,392,000 horses, mules, and asses.

The value of mineral production in 1937 was 2,037,473,000 dinars. The output of the chief minerals in 1937 was (in metric tons): Brown coal and lignite, 4,574,000; bituminous coal, 428,000; copper (smelter), 39,410; lead (smelter), 4039; zinc (smelter), 4912; bauxite, 357,818; iron ore, 618,497; chrome ore, 59,863. The principal industries are flour milling, brewing and distilling, cotton spinning and weaving, tanning, boot-making, pottery- and iron-working.

Foreign Trade. In 1937 imports for consumption were valued at 5,233,772,000 dinars (4,077,009,000 in 1936); exports, 6,272,403,000 dinars (4,376,153,000 in 1936). The leading 1937 imports were: Iron and steel, yarn and thread, woven fabrics, machinery, and raw cotton. The value of the chief exports was (in U.S. currency): Wood for building, \$20,472,000; corn, \$16,118,000; wheat, \$12,946,000; crude copper, \$11,330,000; swine, \$9,793,000. Germany supplied 32.4 per cent of the 1937 imports (26.7 in 1936); Czecho-Slovakia, 11.1; Austria, 10.3; Italy, 8.2 (2.5 in 1936); United Kingdom, 4.7. Of the 1937 exports Germany took 21.7 per cent (23.7 in 1936); Austria, 13.5; Italy, 9.4; Czecho-Slovakia, 7.9; United Kingdom, 7.4. United States exports to Yugoslavia in 1938 were \$2,472,445 (\$2,656,581 in 1937); imports from Yugoslavia, \$3,836,622 (\$6,247,786 in 1937).

Finance. Budget returns for the fiscal year ending Mar. 31, 1938, showed receipts of 11,987,000,000 dinars and expenditures of 11,083,100,000 dinars. The budget estimate for 1938-39 balanced at 12,180,000,000 dinars. The total debt on Mar. 31, 1936, was 30,278,500,000 dinars. The average exchange value of the dinar was \$0.0231 in both 1937 and 1938.

Transportation. With 5825 miles of line, the railways in 1936 carried 44,411,977 passengers and 16,848,402 metric tons of freight. The gross receipts were 2,060,000,000 dinars. The highway mileage in 1937 was 26,184; number of automobiles on Jan. 1, 1938, 14,784. Excluding operations of international lines, the civil air statistics for 1937 were: Miles flown, 267,411; passengers, 5576; mail, 6241 lb.; newspapers, 239,805 lb.; baggage and express, 24,729 lb. The merchant marine on June 1, 1938, comprised 179 vessels (of 100 tons or over) with a capacity of 386,587 gross tons. Entrances at Yugoslav ports in 1936 totaled

100,166 vessels of 19,423,155 net tons. The government on May 19, 1938, adopted an extensive program of port construction and improvement at Ploce-Aleksandrovo, Split, Sibenik, Susak, Dubrovnik, and Zelenika.

Government. The Constitution of Sept. 3, 1931, declared Yugoslavia a constitutional monarchy, in which legislative power is vested jointly in the King and Parliament and executive power in the King, acting through a ministry which is not responsible to Parliament. Parliament in 1938 consisted of a Senate of 92 members (46 elected and 46 appointed by the Crown), and a Lower Chamber (Skupstina) of 317 members, excluding 68 Croat Deputies elected in 1935 who refused to take their seats on the ground that the elections were unfairly conducted. The Regency appointed to govern during the minority of King Peter was composed of Prince Paul, a cousin of the late King Alexander; Radenko Stankovitch, and Dr. Ivan Perovitch. Premier in 1938, Dr. Milan Stoyadinovitch, who assumed office June 24, 1935. He headed a cabinet representing the Yugoslav Radical Union party.

HISTORY

Stoyadinovitch Retains Power. Despite widespread opposition to Premier Stoyadinovitch's quasi-dictatorial regime, it managed to capture a parliamentary majority in the elections held Dec. 11, 1938. According to the official returns, the government bloc led by the Premier won 1,656,519 votes (58.9 per cent of the total) against 1,336,823 (40.21 per cent) for the united Serb-Croat opposition bloc and 30,310 (0.89 per cent) for the pro-Nazi Reunion (Zbor) party. Under the election law authorizing the majority party to fill three-fifths of the seats in Parliament, the government ticket captured 304 of the 371 seats. The opposition, however, charged that the government had influenced the voting, which was oral and public, through terror and had falsified the electoral returns. It claimed to have captured 1,734,241 votes against 1,433,600 cast for the government. Ignoring these charges, the Premier called the new Parliament into session for Jan. 16, 1939.

The election was fought largely on the issue of democracy versus dictatorship. The opposition Serb-Croat bloc called for the abrogation of the 1931 Constitution, election of a constituent assembly to draft a new basic law granting autonomy to Croatia, Serbia, and Slovenia on a Federal basis, and the formation of a democratic government that would co-operate with France and the other democratic powers of Europe (see 1937 YEAR BOOK, p. 795 for the organization and full platform of this bloc). Dr. Stoyadinovitch, on the other hand, opposed federalization and declared that if elected he would continue his policy of friendship toward the states grouped about the Rome-Berlin axis. This policy, he pointed out, had enabled Yugoslavia to emerge from the European crisis over Czechoslovakia in September without mobilization and with its finances unimpaired.

Factors in the election were the decision of the leaders of the German minority of some 460,000 persons to support the Stoyadinovitch candidates, and the arrest on October 26 of D. Lyotitch, founder and leader of the Nazi Reunion movement, and many of his associates. The latter maneuver was apparently designed to prevent a split in the Serb vote that would favor the opposition bloc. Joint action by the Germans marked the first time they had formed a united front on a Yugoslav political question. The religious issue, fanned by the opposi-

tion of the Serbian Orthodox Church to the projected concordat with the Vatican, also played a part (see 1937 YEAR BOOK, p. 795). The government's decision not to submit the concordat to the Senate was confirmed in January, 1938, and shortly afterward amnesty was extended to persons arrested during the 1937 riots over the concordat issue. The Vatican protested the government's action on February 15.

Reorganization of Cabinet. Following his electoral success, Premier Stoyadinovitch offered his resignation on December 21. Prince Paul, the senior regent, immediately asked him to form another government. He complied, drastically reorganizing his ministry. It was indicated that the Premier intended to permit a restricted amount of self-administration by the Croats but that strong-arm methods were to be resumed to force Croat acceptance of the existing Constitution and the principle of a unitary state under Serb dominance.

Croat Autonomy Movement. In view of the virtual unanimity with which the Croats supported their leader, Dr. Vladimir Matchek, in their demand for autonomy and their growing impatience at Serb overlordship, the Premier's policy portended further trouble in Croatia in 1939. The English authority on the Balkans, R. S. Seton-Watson, estimated that over 90 per cent of the electorate in Croatia and Dalmatia was behind Dr. Matchek. In addition he had the backing of the pro-democratic Serbian groups.

Matchek's popularity and power were repeatedly displayed during the year. In support of his autonomy demand, he issued handbills throughout Croatia early in May, urging depositors to withdraw their funds from government-controlled banks. A run on the banks started on May 3 that the Yugoslav authorities controlled with difficulty. Fifty thousand anti-government Serbs joined with many thousand Croats in giving Matchek a tumultuous welcome when he visited Belgrade on August 14-15 to confer with leaders of the Serbian opposition on mutual campaign plans. He received another great demonstration upon his return to Zagreb, the Croat capital. At Matchek's demand, homeowners throughout Zagreb on December 1 defied a government order to fly the Yugoslav flag in observance of the anniversary of the union of Croatia and Serbia. In a conference with Prince Paul in the autumn and in an announcement on the eve of the elections, the Croat leader reiterated that the Croat deputies would not take their seats in Parliament, regardless of the outcome of the voting, until a new Constitution was adopted by a freely elected constituent assembly. In November and again in December, Serb gendarmes fired on armed groups of Croat peasants who defied orders to surrender their arms and disperse.

Economic Developments. Although some departments of Yugoslav economy showed moderate improvement in 1938 over 1937, business in general remained in a depressed state and the poverty of the peasantry was in no way lessened. The government on April 14 authorized a 6 per cent internal loan of 4,000,000,000 dinars, to be used for stimulating economic activity, as follows: 1,500,000,000 dinars for railway construction, 1,500,000,000 for national defense, 500,000,000 for highway construction, 250,000,000 for public buildings, and 250,000,000 for reclamation works and other improvements including sanitary projects. The government also undertook to strengthen the armament industry and promote industrialization by establishing a state-owned steel industry in Bosnia based upon the

merger of the Zenica steel mills, the Vares iron mines and foundry, the iron works at Ljubija, and the Zenica and Breza coal mines. Lacking high-grade coal for steel making, the industry was obliged to use imported coke. The government-controlled corporation, *Yugoslavenski Celik* (Yugoslav Steel), was registered on August 19.

Foreign Relations. Yugoslavia, like the other states that benefited from the break-up of the Austro-Hungarian Empire, was gravely threatened during 1938 by the rapid progress of the German-led drive for revision of the territorial status quo in Europe as established by the World War peace treaties. The annexation of Austria by Germany in March gave Yugoslavia a new neighbor that was too powerful in both a military and economic sense to be entirely welcome. It was followed by increased German economic domination of Yugoslavia, which had been growing rapidly in preceding years. In the first half of 1938, Germany took nearly half of all Yugoslav exports and provided about the same proportion of Yugoslav imports. The Germans made the most of Yugoslavia's economic dependence upon the Reich by forcing her to take German goods that she did not need in payment for the Yugoslav products purchased by Germany. However, Premier Stoyadinovitch announced March 16 that Hitler had given his pledge to respect the Yugoslav frontier.

The great majority of Yugoslavs resented this so-called "colonial relationship" to the Reich and demanded that the Stoyadinovitch Government avoid the danger of German political dictation by concluding trade agreements with Britain and France and restoring the policy of close collaboration with France, abandoned in 1936. But the failure of France to fulfill her treaty obligations to Czecho-Slovakia in September and Britain's role in the crisis between Czecho-Slovakia and Germany took the ground from under the feet of the pro-democratic opposition. The partition of Czecho-Slovakia made the Stoyadinovitch policy of friendship with Germany and Italy even more essential. It shattered the Little Entente (q.v.), made what was left of Czecho-Slovakia a German satellite, and whetted Hungary's appetite for her lost territories in both Yugoslavia and Rumania.

The Yugoslav people were overwhelmingly sympathetic to Czecho-Slovakia during the September crisis, but the government followed a policy of neutrality toward Germany. However, when Hungary threatened to invade Slovakia, Premier Stoyadinovitch warned the Budapest Government that Yugoslavia would attack Hungary in fulfillment of the Little Entente treaties if the invasion took place. In doing so he defied Italian pressure, exerted on behalf of Hungary. Reflecting the anxiety aroused by Hungarian revisionist demands, the Premier announced in November that Yugoslavia's frontiers were "cut out with a sword and drawn in blood" and that they "cannot be changed except through the same methods."

The final months of the year were marked by the active negotiations conducted by Prince Paul and Premier Stoyadinovitch in an effort to check German domination of Yugoslavia and the Balkans through a united front of Balkan states and through Franco-British financial, economic, and political aid. Prince Paul visited London for several weeks in the latter part of November and early December. The Yugoslav leaders conferred repeatedly with King Carol of Rumania, King George of Greece, and King Boris and Premier Kiosseivanov of Bulgaria. The groundwork for collaboration

with Bulgaria had been laid in preceding years. The rapprochement inaugurated by King Alexander culminated in the treaty of friendship and peace signed by Bulgaria and the members of the Balkan Entente, July 31, 1938.

See AUSTRIA, BULGARIA, CZECHO-SLOVAKIA, GERMANY, HUNGARY, ITALY, and RUMANIA under *History*; BALKAN ENTENTE; LITTLE ENTENTE.

YUKON, yōō'kōn. A territory of northwestern Canada. Area, 207,076 square miles; population (1938 estimate), 4000 as against 4230 in 1931. Dawson, the capital, had 828 inhabitants in 1932; Whitehorse, 540. The mining of silver, lead, and gold was the main occupation of the people. In 1937 the total mineral output was valued at \$3,784,528, of which silver (3,958,504 fine oz.) accounted for \$1,775,719; gold (47,982 fine oz.), \$1,678,890; lead (6,440,454 lb.), \$329,107. The territory had 58 miles of railway, 324 miles of wagon roads, and 978 miles of sled roads and trails. For the year ended Mar. 31, 1937, revenue totaled \$197,795; expenditure, \$210,785. The Yukon, which has been a separate political unit since 1898, is governed by a controller and a territorial council of three elected members. It elects a member to the House of Commons of the Canadian parliament at Ottawa. Controller, George A. Jeckell.

ZANZIBAR PROTECTORATE. A British protectorate in East Africa, comprising the islands of Zanzibar (640 sq. m.; pop., 137,741) and Pemba (380 sq. m.; pop., 97,687). Total population (Dec. 31, 1937, estimate), 243,135 compared with 235,428 (1931 census). Zanzibar (capital) had 45,276 inhabitants.

Production and Trade. The production of cloves approximates 83 per cent of the world's supply. There were over 3,000,000 clove trees on 48,000 acres in Zanzibar and Pemba. The supplies of cloves in 1937-38 totaled 47,457,067 lb. In normal years practically all cloves are exported, but due to the boycott of cloves in the Indian market in 1937, exports were far below the average, only 14,537,025 lb. of cloves having been exported during the season of 1937-38. Coconut-bearing palms were estimated to total 3,500,000. In 1937 imports were valued at £1,229,831; exports, £873,828. In 1937, 366 ocean-going vessels (1,696,941 tons) entered the Port of Zanzibar; coasting vessels, 319 (200,384 tons); native vessels, 2777 (57,084 tons). There were 243 miles of roads in 1937.

Government. For 1937 revenue totaled £494,000; expenditure, £486,000. Public debt, nil. Revenue for 1938 was estimated at £468,440; expenditure, £466,288. A proclamation issued on Jan. 2, 1936, provided that the East African shilling was to supersede the rupee as legal tender in Zanzibar on Apr. 6, 1936. The nominal ruler is the Sultan, Seyyid Sir Khalifa bin Harub (succeeded, Dec. 9, 1911), but actual control rests with a British Resident. British Resident, John Hathorn Hall (assumed office, Oct. 5, 1937).

French Capitulatory rights in Zanzibar were abolished by agreement with the British Government in 1937. The Clove Decree, 1938, came into operation on August 1, replacing the Clove (Purchase and Exportation) Decree, 1937, in which a single licensee, only, was permitted to export, or to deal locally in, cloves. According to the 1938 decree, the public generally, under license, is given freedom of purchase and exportation. The government, however, through the Clove Growers' Association, maintains control over prices obtainable in foreign markets.

ZINC. The statistical record for zinc in 1938, as compiled by the U.S. Bureau of Mines, indicates that the industry experienced an unsatisfactory year. Compared with 1937, smelter production from domestic ores declined 21 per cent, apparent consumption was a third less, producers stocks at the end of the year nearly doubled, and the average price at St. Louis, Mo., declined almost two cents per pound.

The production of distilled and electrolytic zinc at primary zinc reduction plants in the United States in 1938 amounted to 477,954 short tons, valued at \$45,884,000, decreases of 21 per cent in quantity and 42 per cent in value from the production of 608,458 tons, valued at \$79,100,000 in 1937. Of the total for 1938, 436,007 tons were primary metal from domestic ore, 10,334 tons were primary metal from foreign ore, and 31,613 tons were redistilled secondary metal. Of the total output of primary material in 1938, 93,272 tons were electrolytic zinc, of which 77,638 tons were produced in Montana and 15,634 in Idaho. Of the primary retort output 139,897 tons were produced in Pennsylvania, 68,000 each in Oklahoma and Illinois, and the remainder in Arkansas, Texas, and West Virginia.

The supply of new zinc available for consumption in the United States in 1938 amounted to 375,004 tons, a decrease of 34 per cent over the available supply of 570,219 tons in 1937.

Imports of zinc for consumption, according to the U.S. Bureau of Foreign and Domestic Commerce, amounted to 15,431,732 lb. in 1938, and of zinc in ore 9,719,047 lb. In the same period exports of slab and rolled zinc were 11,471,135 lb. In 1937 imports of zinc amounted to 76,663,114 lb. and zinc in ore 6,689,288 lb. Exports of zinc totaled 498,948 lb. and of rolled zinc 11,623,804 lb.

World zinc production, excluding the United States, by primary metallurgical works according to the American Bureau of Metal Statistics for 1938, was 1,254,111 short tons.

The outstanding event of the year in the United States was the announcement of a 20 per cent reduction in the tariff on zinc and zinc ores effective Jan. 1, 1939. Under the Canadian trade agreement, signed Nov. 17, 1938, the new duty on slab zinc was fixed at 1.40 cents per pound, a reduction of 0.35 cents from the previous rate of 1.75 cents in effect since 1922.

ZIONISM. See **JEWIS**; **PALESTINE**.

ZONTA INTERNATIONAL. An organization established in 1919 to "work for the advancement of understanding, goodwill, and peace through a world fellowship of executive women in business and the professions, united in the Zonta ideal of service." In 1938 there were 137 clubs in the United States, Hawaii, Canada, Denmark, and Sweden, with a membership of approximately 4000. Membership is limited to one outstanding representative for each business or profession in the community, who pledges herself to co-operate with others in its civic, social, and commercial development. The official monthly publication is *The Zontian*. Headquarters are at 59 East Van Buren Street, Chicago, Ill.; Dr. Helen Pearce, Salem, Oregon, president; Miss Harriet C. Richards, executive secretary.

ZOOLOGY. **General.** Earlier **YEAR BOOKS** have called attention to the fact which is worth repeating here, that for the past half century Zoology has gradually shifted its point of view from that of an observational science, content merely to describe what it saw, to one which attempts to

discover the forces which underly life manifestations. Since many of these manifestations are dependent upon chemical and physical reactions, biochemistry and biophysics have become important adjuncts to zoology and indeed it is sometimes difficult to decide whether a particular paper, published as a contribution to zoology, should be classified there rather than in chemistry or physics. In another direction the embryologist is not content merely to observe the stages in the developing animal but subjects it to various mutilations or transplantation treatments in an endeavor to discover why and how the various parts of the embryo arrange themselves in their proper order. In still another direction Genetics has enormously extended its field, particularly in the study of chromosomes, gene arrangement, and structure. Results obtained along all of these lines are highly technical, the explanations sometimes controversial and often intelligible only to specialists. Since this present article is intended for the general reader, little attempt will be made to cover these more technical results, but it is important to remember that a large part of research work in present-day zoology is along these lines.

It was reported (*Science* 87, p. 407) that the Tring Museum bequeathed to the British Government by Lord Rothschild had cost the donor more than £500,000. It is especially rich in mammals, birds, and insects and it was hoped that funds would be available from the British Government for its upkeep. Duke University announced (*Science* 87, p. 454) the opening of a marine laboratory at Piver's Island, N. C., to be conducted with especial reference to the advanced undergraduate work at the University. After much delay due to financial difficulties the continuance of *Biological Abstracts* has been assured, the first part of vol. xii having gone to press in April.

The British Association for the Advancement of Science met at Cambridge in August under the presidency of Lord Rayleigh. Kemp, as President of the Section of Zoology, discussed (*Nature* 142, p. 777) the question of the fluctuations sometimes enormous in extent, which from year to year appear in the numbers of given species of animals, especially fishes. The discussion hinged largely around the fluctuations in the North Atlantic, a question of economic importance because of the fisheries. No very definite conclusion could be reached from the data at hand. The American Society of Zoologists met at Richmond, Va., in connection with the American Association for the Advancement of Science (q.v.) in the last week in December, with M. H. Jacobs as President.

Sex Selection. Although it played an important part in Darwin's exposition of the theory of evolution, sexual selection has been very largely discredited by later writers. Huxley (*Am. Nat.* 72, p. 416), discussing this theory, showed that very few characters really conform to Darwin's definition of such a process and thought that the term "Sexual Selection" as used by Darwin should be replaced by two terms "epigamic selection" and "intra-sexual selection." The former applies to display characters common to both sexes while the latter applies to all selection involving competition between the individuals of one sex in the struggle for reproduction. His idea seems to be that display and similar activities may act as stimuli to earlier laying in birds while social gatherings as well as display have a psycho-physiological stimulative function. Sparring, which seldom results in actual fighting, may have the same function. Noble (*Biol.*

Rev. 13, p. 133) found evidence for sexual selection in fishes, since the female jewel-fish would select the most highly colored male. Noble broadened the idea of sexual selection to include colors that intimidate rivals, or that may emphasize gestures that are essential to the formation of the nuptial bonds or that in any way increase the efficiency of the mating behavior. Also in this list would be included coloring that enables the young to recognize their parents as distinct from other species. In most territory-guarding fishes the males are conspicuously colored. These nuptial colors act as stimuli to quickly lead the females into the later courtship phases.

Genetics. The "gene" has played a most prominent part in genetic discussions of recent years, it being considered the active agent in the transmission of hereditary qualities. As originally held, a gene is a definite particle, occupying a definite locality of the chromosome and capable of being transferred to a different locality as a discrete object. Goldschmidt (*Proc. Acad. Nat. Science* 23, p. 621) combats this notion, holding that a "gene" is merely a locus on a chromosome and that mutations, etc. are really due to chromatin rearrangement. Gates (*Am. Nat.* 72, p. 340) agrees with Goldschmidt in considering a gene as merely a difference which has arisen at a particular region of the chromosome. Chromosome changes are of two kinds—in number and in structure, ultimately to be explained by gene changes, this conclusion not being affected by a difference of opinion as to the exact meaning to be given to the "gene" concept. Stern (*Am. Nat.* 72, p. 350) was unable to reach any very definite conclusion as to the time when genes produce their effect on the cytoplasm of the cell. Ephrussi (*Am. Nat.* 72, p. 5) thought that genes produce their effects by means of hormones which are highly specific in their effects, the latter being proportional to their degree of concentration.

Species. As indicated in the YEAR BOOK for 1937, there is evidence in zoological literature of a renewed interest in the question of species from the standpoint of reaching a better definition of what is meant by the term. This formed the subject of a discussion at the 150th anniversary celebration of the Linnaean Society of London (*Nature* 141, p. 998). The various speakers approached the subject from different points of view and there seemed to be no final general agreement. Ramsbottom stated that Linnaeus really did not believe that representatives of all species were created at one time, this being the commonly held interpretation of his position. Gates (see *Genetics* above) thought that mutations are constantly occurring, some of which produce interspecific sterility. The older belief has been that mutual sterility between species was the result of a longer or shorter period of species separation and occurred at the end of this process. Gates thinks this sterility may appear at the very beginning through mutation and thus immediately separate the species.

Group Activities. In some animals as in fireflies when they are flashing and in chirping insects, it happens that when they are in groups instead of being solitary, the activity is definitely synchronous and sometimes rhythmical. Buck (*Quart. Rev. of Biol.* 13, p. 301) discussed flashing of fireflies, where these two activities occurred at the same time. After a review of various proposed explanations, none of which he found entirely adequate, it was concluded that the "follow the leader" explanation is the most nearly correct. Welsh (*Quart. Rev. Biol.* 13, p. 123), speaking of diurnal

rhythms which occur in some animals, noted that these may be experimentally modified or that they may persist for long intervals of time in the absence of the stimulations that called them out. It was assumed that an internal regulating process must be involved although no explanation of what this is or how it works was attempted.

Origin of Man. McBride (*Nature* 142, p. 97), as a contribution to the question of the origin of man and the higher apes, discussed the Gondwana Ice Age, usually described as Permo-Carboniferous, covering the Deccan in India, South Africa, and South America, and extending toward but not including Antarctica. McBride thought that in Pliocene times there began a northern drift of Africa and the Deccan which, impinging on the tableland of central Asia, caused an uplift which became the Himalaya Mts.; and this divided the ape population, the southern part living in a forest and their descendants persist as chimpanzees, gorillas, apes, and gibbons, while the northern portion, living in a colder climate, had to hunt on the ground, and here man developed.

Protozoa. Kitching (*Jour. Exp. Biology* 15, p. 143) concluded that the function of the contractile vacuoles of the protozoa is to maintain the normal difference of osmotic pressure across the surface of the animals. In the Foraminifera a distinction is usually made in classification between "megalospheric" and "microspheric" phases. Calverz (*Archiv de Zool. Experimentale* 80, p. 163) decided that this is not a valid distinction, and we should speak only of "schizodonta" reproducing by fission and "gamonta" reproducing sexually. Gamete formation is very variable in its character, the gametes being formed from gametocytes.

Lackey (*Ecological Monographs* 8, p. 501) found that the ecological factors which limit the distribution of some species of protozoa do not affect others and that some species may be truly cosmopolitan while others will have only a limited distribution. In some natural waters a wide range of hydrogen ion concentration will be tolerated.

Coelenterates. *Craspedacuta sowerbii* is a fresh-water jelly fish noted for its wide distribution and its sudden appearance in new localities. Fantham and Porter (*Nature* 141, p. 515) reported it from several localities near Quebec, this being the most northerly station known for the animal. Powers (*Science* 88, p. 498) found it in large numbers in a lake near Knoxville, Tenn., this being the only recorded case of its occurrence in that state. It is generally known that the jelly-fish body has a very high percentage of water. Hyman (*Science* 87, p. 166), as a result of careful tests, stated that in ordinary sea water the jelly-fish body water content varies from 95.5 per cent to 96.1 per cent, while in brackish water the percentage may rise to 98 per cent.

McConnell (*Zool. Anzeiger* 123, p. 11) stated that the hydroid *Pelmatohydra oligactis* would hatch in the laboratory in an average time of 59 days. A hatching ferment softens the surrounding theca and allows the young animal to emerge. Cnidoblasts originate from interstitial cells in the primitive ectoderm and are carried out on to the tentacles, the latter arising in the peristomial ectoderm.

Flatworms. A detailed description of the anatomy of *Stylochus inimicus*, a polyclad found in Florida waters, was given by Pearce and Wharton (*Ecological Monographs* 8, p. 605). This flatworm, known locally as the "oyster leech," is of consider-

able economic importance because of the damage it does to oysters along the Florida coast. The female may lay as many as 20,000 eggs which are brooded by the parent. Maturity may be reached in two months. The worms crawl into the shell of the oyster and feed on its flesh. One protective measure is that the worm may be overlaid by a layer of shell and completely covered. It has been thought that they feed only on dying or weakened oysters but the authors believe that they also attack perfectly healthy ones. Corrective measures are difficult to devise.

Annelids. Fox (*Nature* 141, p. 163) reported that sabellid annelids in tubes would live under conditions of oxygen deficiency that would kill naked worms. Contact of the body of the worm with the tube causes a stimulus which leads to a peristaltic movement, keeping a current of water flowing through the tube; and apparently this prevents the formation of a layer of stagnant water next to the animal's body. A well-known phenomenon is the "swarming" of some species of annelids at the breeding season, the times of swarming having some not at all understood connection with the moon's phases. Aryer and Panniker (*Proc. Indian. Acad. of Sci. Ser. 5*) described this swarming in a species of a *Platynereis* in Madras Harbor. In March, June, and September this animal swarms between 7 and 10 p.m. on the day of full moon and a day or two before and after this time. Wolf (*Ecology* 19, p. 233) found that an earthworm does not necessarily avoid dry surfaces but reacts in this way to them if they have dehydrating properties. Relative efficiencies of reactions would be: to wet paraffin 10, to dry paraffin 4, and to dry cardboard 1.

Crustacea. The "decorator crab" has the habit of attaching bits of sea weed or other objects to the upper part of its shell, one interpretation of its purpose being that it serves to camouflage the animal when in its natural surroundings. Jones (*Ecology* 19, p. 81) found that sea weed is attached in this fashion in three ways—the weed leaf is punctured and held by the spines on the shell—there are minute hooks which clasp the weed—and rhizoids of the alga attach themselves to the shell.

Mollusks. Galtsoff (*Biol. Bull.* 75, p. 286) reported that physiologically mature oysters could be induced to spawn either by raising the temperature or by the addition of sperm. Cole (*Nature* 141, p. 161) described sense organs on the borders of the mantle in young oysters, presumably of practical value to the animal though their precise use was not stated. The mollusk body must originally have been bilaterally symmetrical, but in most snails there is a twisting of organs giving rise to "dextral" and "sinistral" form of shell distinguished by the fact that in the former the lip of the shell opening is at the right of the observer when viewed from in front and in the sinistral the reverse is the case. This is correlated with changes in internal anatomy, the right gill disappearing in dextral and the left in sinistral animals. In the snail *Campeploma rufum*, there is a reversal of asymmetry, the number of sinistral animals decreasing after they leave the uterus of the parent. Savage (*Am. Nat.* 72, p. 160) found that this reversal involves the inner, soft parts of the animal as well as the shell. In a number of mollusks such as the common quahog, there is a sex reversal (see YEAR BOOK, 1937), in which an animal is at first male and later becomes female. Coe (*Biol. Bull.* 75, p. 274) stated that in a number of mollusks in which this "protandry" occurs the association of the male with the female

prolongs the male phase. Stimuli from the female causes the formation of hormones in the body of the male. Coe (*Biol. Bull.* 74, p. 64) found that local races of the oyster along the Atlantic coast differ from one another in this sex alternation, this probably being due to a hereditary difference. In a gasteropod mollusk *Crucibulum spinosum* found on the California coast, Coe (*Jour. Morph.* 63, p. 345) described a sex alternation. The male phase may appear when the animals are not more than from 3 to 7 mm. long and these then look for older females in the sex phase. Those males that mature later are apt to remain solitary, but in this case lose their male phase sooner than do those who have mated. An unfavorable environment prevents sexual maturity. The transition from male to the sexual phase is considered by Coe to be comparable to metamorphosis from immature to mature in other animals. Costello (*Jour. Morph.* 63, 319) found that the nudibranchs of Monterey Bay, Calif., have definite limited breeding seasons. The eggs are laid in an anti-clockwise spiral band. Nelson (*Jour. Morph.* 63, p. 1) finds in the developing oyster, during the first week after the attachment of the larva, the formation of a "promyal" chamber having to do with the respiratory and feeding flow of water through the shell. These are especially developed in deeply cupped oysters and enable them to live in turbid waters. Flatter oysters live in clear water and have these chambers less well developed.

Insects. The YEAR BOOK for 1937 reported observations from which it was concluded that insects might fly with a velocity of 400 yds. per second. Langmuir (*Science* 87, p. 184) analyzed the data from a mathematical point of view and demonstrated that this would be an impossible speed. Ewing (*Science* 87, p. 14) cited experiments which gave varying results. The maximum speed reported was that made by a dragon fly, which reached nearly 60 m.p.h. Frankel and Herford (*Jour. Exp. Biol.* 15, p. 266) reached the unexpected conclusion that in spite of the hard outer shell of insects there is a very considerable amount of respiration through the skin. Insect eggs can develop only if there is an absorption of water during the developmental period. Since the chitinous cuticle of the grasshopper is extremely impervious to water, how is development possible? Sliifer (*Quart. Jour. Micros. Science* 80, p. 437) found that at one end of the egg there is an area in which are cells which evidently secrete water into the egg. If these cells are covered by some impervious substance the egg will not develop.

Observations by Freeman (*Nature* 142, Suppl. p. 153) indicated that insects occur at various heights in the atmosphere, his observations covering data from different levels up to 277 feet. These are mostly wind borne. An economic importance is attached to this fact, since this mode of distribution might complicate problems of insect control.

The gills of mosquito larvae are commonly regarded as respiratory organs but Hopkins (*Nature* 142, p. 482) concluded that their chief function is for the absorption of chlorine. Their size is inversely proportioned to the chlorine content of the water. In predaceous larvae that get their chlorine from their food the gills are very small. Hungate (*Ecology* 19, p. 1) showed that the termite *Termitopsis* can digest about one third of its cellulose food material without the aid of protozoa, being dependent on the latter for the remaining two thirds. An important book on the termites is "Termite City" by Emerson and Fish, covering their

natural history and ecological relationships. The fifth of a series of international conferences on locust control held by representatives of countries where the locust problem is acute was held in Brussels in 1938.

Earlier work by Minnich and others has shown that the receptor organs of many insects for such sensations as correspond to taste and smell are located on the leg joint. Deonier (*Jour. Exp. Zool.* 79, p. 489) noted a difference of opinion among earlier workers as to whether the housefly has both taste and smell organs, and concluded from his own experiments that it is doubtful if it has any olfactory sensations. "Olfactory" pores that have been described on the tarsal joints of the fly must be able to function as taste organs or there are other organs for this purpose, since the fly certainly reacts to taste stimulation. In vol. xcvi, no. 4 of the Smithsonian Contributions Schmitt gives a detailed description of the arrangement of muscles which by their contraction cause the unrolling of the lepidopteran proboscis.

Iseley (*Ecology* 19, p. 370) tried by feeding experiments with birds, to determine whether the coloration of grasshoppers has any concealing or other protective function. His conclusion was that it has such a function and he thought he found "warning coloration" also in the markings of the insects. Slifer (*Jour. Morph.* 63, p. 181) gave renewed evidence that in the grasshopper *Melanoplus* a hatching enzyme, which destroys the white cuticle, is secreted by the first pair of abdominal appendages.

Emerson (*Ecological Monographs* 8, p. 247), from a comparative study of nest building in a series of termite families, was able to trace the evolution of these sometimes very complex structures. Since the nests are built entirely by sterile workers, Emerson argued that there could be no question of a Lamarckian inheritance and some form of natural selection was the only evolutionary explanation reasonable. In some cases he found evidence of convergent evolution. This natural selection acts upon the colony rather than upon the individual termite and hence exhibits a parallelism to what is going on in the evolution of a multicellular organism.

Echinoderms. Because of its ability to open the shell of the oyster and digest the contents, the starfish is one of the worst enemies with which oyster growers have to contend. Earlier control methods, such as dredging the starfish and throwing them on land to die, have not proved satisfactory. Loosanoff and Engle (*Science* 88, p. 107) described the results of experiments at the Federal laboratory at Milford, Conn. The breathing organs of the starfish are small bladder-like structures on the surface and experiments indicated that crystals of calcium oxide scattered through the water would fall on these organs and cause the death of the starfish. So far as could be determined, this treatment caused no serious injury to other forms of life.

Fish. It is an established tradition that it is unwise to make any noise while fishing because it will alarm the fish. On the other hand the claim has been made that fish are deaf and reactions to noises are really what is called "false audition" or reaction to vibrations set up by the noise-making agency, but carried mechanically through the ground rather than true sound vibrations sent through the air. Parker, a number of years ago, decided as a result of experiment, that fish hear some noises but that their condition may be com-

pared to that of a color-blind person with respect to colors. Von Frisch (*Nature* 141, p. 8) found that they react very definitely to sounds. The lowest sounds are perceived only by the skin, those of a frequency of 25 to 130 vibrations per second, by the skin and inner ear, from 130 to the upper limit only by the labyrinth—nearly the same reaction as with human hearing. The swim bladder apparently functions to increase sensitiveness. V. Frisch comments on the fact that some fish make noises as indicating ability to hear. It is generally agreed that some noise making is purely accidental and has no significance in the life of the animal.

Huntsmen (*Nature* 141, p. 421) said that there is no evidence that the Canadian salmon go to any great distance in the ocean and that even the immature ones go up the rivers, not being influenced in any way by the example of the adults. Whatever may be the facts leading to the habit of ascending rivers they are obscured by the concept of the spawning urge. Harris (*Jour. of Experimental Biol.* 15, p. 143) showed that the paired fins of fishes are concerned chiefly with vertical forces and thus principally affect the rising and falling movements. Foerster (*Jour. Biol. Board of Canada* 3, p. 32) stated that the records indicate that from 3.5 per cent to 11.7 per cent of the marked sock-eyed salmon that migrated at Cullis Lake, B. C., returned to their starting point.

Amphibia. Smith (*Jour. Exp. Biol.* 15, p. 1) showed that the clasping reaction shown by the male frog at mating may be induced electrically at any time of the year by appropriate electrical stimuli. Coonfield and Goldin (*Trans. Am. Mic. Soc.* 57, p. 54) note the fact that while most vertebrate organs are bilaterally symmetrical, the spiracle of the tadpole is not. Their observations showed that the development of the operculum, the external gills, and the region just behind the gills probably combine to produce this asymmetry. In many amphibia is a condition of "germinal localization" or a condition in which the fertilized egg is made up of a number of definite areas, each of which is destined to make up a definite part of the embryo. Tchou-Su (*Comptes Rendus* 207, p. 599), as a result of centrifuging experiments, decided that this localization is as definite in the unfertilized as in the fertilized egg.

Birds. Emlen (*Ecology* 19, p. 264) studied the wintering crow colonies in New York State and reported that in the winter of 1932-33 there were 20 of such "territories" containing in all some 225,000 birds. The boundaries of these territories have not changed in the past 50 years. He was unable to discover any evident correlation between the location of these territories and any ecological factor and decided that they had been delimited at some time in the past when perhaps the ecological conditions were different from those of the present time and a "homing" faculty established at that time has been inherited in spite of the changes. Witschi and Miller (*Jour. Exp. Zool.* 79, p. 475) found that changes in the color of the bill which occur in the starling at the breeding season are due to definite hormones set free from the ovaries and testes.

Mammals. Bradt (*Jour. Mammalogy* 19, p. 139), from a study of beaver colonies in Michigan, reported that the number and size of beaver dams gives little indication as to the number in the beaver population. A typical beaver family consists of the two parents, the yearlings of last year and the kits of the current year. There is one litter per year, with three to four cubs per litter. One acre

of poplar will support an average beaver colony for from one to two and a half years, cutting between two and three hundred trees per year. Carr (*Nat. Hist.* 42, p. 100) combated the popular belief that because they cut trees and flood lands, beavers are necessarily destructive, pointing out that they build dams and form ponds often of economic importance. He cited cases where the beaver dams had broken and the animals had abandoned the area, but the layer of humus left was so fertile that it grew grass and sedges which formed an important food for deer. Ruedemann and Schoonmaker (*Science* 88, p. 523), stated that much rich farm land in the northern United States had been formed by silting behind beaver dams which for thousands of years had been built on non-navigable streams. The Federal government has recently imported beavers to stop stream erosion in a number of the northwestern states, the estimated value to the government of the work of each beaver being \$300.

Hiner (*Jour. Mammalogy* 19, p. 317) found that beavers will travel as much as 450 ft. from the water, the distance being in part determined by the slope of the land.

In 1900 Sir Harry Johnson discovered in the Belgian Congo a giraffe-like animal, the Okapi, previously unknown, whose relationship to other mammals has been very uncertain. Colbert (*Jour. Mammalogy* 19, p. 47) thought it is truly a living fossil, in many ways more primitive than the earliest of the fossil giraffes.

Recent experiments have shown that birds and mammals exposed to an unusual amount of light, will become sexually mature earlier than under usual conditions. Bissonette and Cseh (*Jour. Mammalogy* 19, p. 342) reported that raccoons subjected to experimentally increased lighting in early fall would breed in December instead of February, the latter being their normal time. This has a practical application in commercial breeding of these animals, in that these earlier-produced young would become sufficiently mature to be set loose before the following winter, thus saving the expense of carrying them over a second winter. Rowan (*Biol. Rev.* 13, p. 374) investigated the

reason for this influence of extra light on hastening sexual maturity and decided that it operates on animals that have a short reproductive period by operating through the pituitary body and will not operate if the pituitary has been removed. He was inclined to the belief that light falling on the eye stimulates the pituitary and this leads to more rapid gonadal development. It is possible, however, that by keeping the animal awake the light acts as a general stimulant, and thus the final result is produced. In the striped skunk, Selks (*Jour. Mammalogy* 19, p. 320) stated that temperature is the chief, though not the only, inciting cause of hibernation and that in warmer regions they may not hibernate at all. The European wild boar was introduced into Tennessee some years ago and has become acclimated. According to Stegeman (*Jour. Mammalogy* 19, p. 279), there has been some crossing with native pigs and there has been no serious conflict between these boars and other game species. Soper (*Jour. Mammalogy* 19, p. 290) verified earlier reports that the black-tailed prairie dog occurs in western Canada.

Evans (*Am. Nat.* 72, p. 473) experimented on hibernating bats and found that occasionally they spontaneously awaken during the winter but that ordinarily they must be stimulated for from 30 to 60 minutes before they will move. The big brown bat mates in the fall but the sperm remains inactive for several months.

Various attempts have been made (e.g. by Donaldson in the Dry Tortugas) to establish wild colonies of white rats, but these have met with little success. Minckler (*Science* 87, p. 460) described such a colony which has been established at Missoula, Montana, in a dump ground. These have survived over two winters. It is possible that absence of predatory animals may have been an important factor in their survival.

ZULULAND, zōō'lōō-lānd'. A territory in the province of Natal, Union of South Africa. Area, 10,427 square miles; population (1936 census), 361,938 (6142 Europeans, 351,938 natives, 2599 Asiatics, and 1259 of mixed race), compared with 258,356 (1921 census). Capital, Eshowe.
